I will ever try to accomplish an education, and hope when I leave this school, to go out and instruct those who are in the dark, and not enlightened. Having learned that you are assisting and aiding this valuable school, I venture to assure you that I shall strive to do all I can, sincerely thanking you for your kindness.

Yours truly, M.

THE following letter from an undergraduate to a kind friend of the school, who permits its publication, is given as an indication of the spirit which we believe animates most of those who pass through their three years' course.

HAMPTON, *Nov.* 10, 1877.

Miss J.—My dear friend:

I cannot refrain from writing to you when I come to think of all the favors I have received through you when I had no claim upon you and no reason in myself why you should so favor me. Surely the Lord has blessed me since I have been connected with this school with unnumbered blessings. When I first came to this school, I did not have any idea how I should get along, but I came depending on the promises of Jesus. Because I believed I was undertaking something that was not going to be good to myself alone but that in coming here I would be fitting myself to help others. Since I have been here I have studied hard, tried to improve myself, and succeeded in being promoted from the different classes till now I have reached the Senior class. But to-day I would not have been a member of that class if it had not been for the kindness of such friends as you.

Though the time is coming that I must

leave this dear school and many of my friends | is not only the spice of life; it is the necessity, | THE RIGHTS AND DUTIES OF CITIZENS. | zens are equal before the law; their rights and duties are the same, but it is the colored man's

leave this dear school end many of my friends and schoolmates I shall never forget their kindness and the kindness of those that help to carry on the school. I thenk yon especiel- ly for your goodness toword me and for those nice papers and other presents.

After school closed last summer, I went to Old Point to work during the summer because it was near the school and saved the expense of travelling. I got on very well there and my employers seemed to be very well pleased with me. I had a very nica time but I was glad when it was time to return to school, and conid see my teachers and schoolmates. The scholars came in very fest and the school is larger this year than it has ever been. Perhaps Miss H—— told you that e gen- tleman in Boston has been paying for me these two years what I was not able to work ont. If it had not been for that I should have been obliged to stay out and work last term, as my mother (who is a widow) is not able thess hard times to meet my monthly bills. I am so thenkful that I was able this summer to make money enongh to clothe myself, so that I do not have any cause to be anxiona about money matters this term. Don't you think I should be grateful?

I do not wish to weary you with my mneh writing, because if I write thres times as much as I have written, I could not expresa my gratitnde.

From a grateful scholar.

At Home.

GOOD FIFTEEN-CENT DINNERS FOR FAMILIES OF SIX.

Miss Juliet Corson of New York city is de- voting time and money to the good work of helping working men and women solve the problem of living well upon small wages. She has established a cooking school in that city, where cooks can be trained for service, and poor people taught to cook for their own house- holds. She has also published little pam- phlets, for free distribution, containing plain directions and receipts and full bills of fare for a week, with estimated cost, the estimates based on market prices and actual experience. She is a thoroughly practical woman, and work- ing men and their wives cannot do better than to listen to her advice.

But a *good* dianer for six, for fifteen cents! Is such a thing possible? Read her letter and see.

"To the Wives of Workingmen:

In planning how to make the wages of the working man provide his family with the nec- essaries of life, the first point to be considered is the daily supply of food. If this show the laborer's wife how to feed her husband and children upon one-half, or one-third, or even, in times of great distress, upon the whole of his scanty wages, its object will be accom- plished.

The cheapest kinds of faod are sometimes the most wholesome and strengthening; but in order to obtain all their best qualities we must know how to choose them for their freshness, goodness, and suitability to our needs. That done, we must see how to cook them, so as to make savory and nutritious meals, instead of tasteless or sodden messes, the eating whereof sends the man to the liquor shop for consola- tion.

Good food, properly cooked, gives us good blood, sound bones, healthy brains, strong nerves, and firm flesh, to say nothing of good tempers and kind hearts. These are surely worth a little trouble to accure.

The first food of nearly all living creatures is milk, the only entire natural food; that is, the only food upon which health and strength can he sustained for any length of time, without using any other nourishment. For this reason it is the best food you can give the children if you must restrict their diet at all; and it also is a valuable addition to the food of grown per- sons." While this fact about milk is settled, it is generally acknowledged by people who study the subject that we thrive best on a variety. We get wermth and strength from fat meat, wheat, ryo, barley, rice, milk, sugar, fruits, peas, beans, lentils, macaroni, and the roots of vegetebles; we gain flesh from lean meat, unboited flour, oatmeal, eggs, cheese, and green vegetables; and if we want to think clear- ly, wa must use fish, poultry, the different grains, and a good variety of fruit and vege- tables.

The food most generally in use among the masses is just that which meets their require- menta. No hungry man will spend money for what he knows will not satisfy his appetite. For that reason the receipts given in this book treat of tho articles in common use among the working classes. In meals made up of bacon, potatoes, and bread, of corned beef and cab- bage, and of pork and beans, there exists an equal and sufficient amount of nourichment; but if other dishes are added to these, the va- riety will result in better general health and contentment. If we were to live day after day on rice, bread, potatoes, or any one article of food, we would not long ba strong enough for any kind of work. In matters of diet, variety is not only the spice of life; it is the necessity.

In estimeting the cost of these receipts I have naturally supposed that the family con- sists of father, mother, and children of differ- ent ages, and not of six adults; for them the quantities given would, of course, be insuffi- cient. I allow a meat dinner every day; but in order to have this, the meat itself must gen- erally ba used one day, with bread or vegeta- bles, and the next day the breakfast must be the broth or juics of the meat, which, if pre- pared according to my directions, will afford equal nonrishment.

I wish to call your attention to the following important fact. The hardy and thrifty work- ing classes of France, the country where the most rigid economy in regard to food is prac- ticed, never use tea or coffee for breakfast, and seldom use milk. Their food and drink is broth. Not the broth from fresh meat, for they do not often eat that; but that which is made from vegetables, and perhaps a bit of ba- con or salt pork. I ask you to try for dinner, supper, and the next morning's breakfast, the three receipts in Chapter VI. for 'Salt Pot- au-feu,' 'Rice ann Broth,' and 'Bread Broth,' and then let me know how yon like them, and how far they go towards satisfying your hunger, and giving you strength.

In calculating the cost of the receipts I give you, I have used the retail prices asked in Washington market, New York, and in ordi- nary grocery stores, at this season of the year; the everage is about the same as that of past years, and probably will not change much; so that I believe I have not placed too low an es- timate upon them. JULIET CORSON.

New York Cooking School, August, 1877.

Cheap Meat Dinners.

Some of the receipts in this chapter combine several dishes from one source. By using the meat and vegetables for dinner, the rice, or pearl barley cooked in the pot-liquor for sup- per, and the pot-liquor itself, made into broth, for breakfast, you can often bring the cost of a day's meals below forty-five cents; and so save enough during the week to have n pud- ding for Sunday's dinner. The three follow- ing receipts are a good example of my mean- ing.

Salt Pot-au-feu.—Put one and a half pounds of salt pork (cost eighteen cents,) in three quarts of cold water; bring it slowly to a boil, and skim it well; when it has boiled a fifteen minutes, put in with it a two or three cent head of cabbage, cut in quarters and well washed, and boil both steadily for half an hour; new cabbage boils tender sooner than old, but you must not cook either after the stalks are tender, or you will waste a great deal of nourishment; when both meat and cab- bage are done, take up the meat with a fork, and the cabbage with a strainer, and use them for dinner.

Rice and Broth.—After dinner carefully strain the pot-liquor, and put it in an earthen pot until an hour before supper. Then put it over the fire, and when it boils throw into it a half a pound of well-washed rice (cost five cents); and boil fast for twenty minutes, or un- til the rice is just tender; try the seasoning, and then pour both broth and rice into a strainer set over an earthen pot or bowl; as soon as the rice drains, shake it out into a dish, and use it for supper.

Bread Broth.—After supper carefully strain the broth and keep it over night in an earthen pot. In the morning heat it; if it is too salt add a little more water; or season it more if necessary; while it is heating toast two pounds of bread, (cost six cents,) cut it in small square pieces, and throw it into the broth. As soon as it is hot use it for breakfast.

These three dishes will cost about thirty cents. Corned beef, fresh beef, and mutton, can be cooked in the same way, using cabbage with the corned beef, potatoes with the fresh beef, and turnips with the mutton; for the supper dishes, peas, beans, and pearl barley; with bread broth for breakfast.

Thus you see you can make three good meals for four diffsrent days, for one dollar and twenty cents, leaving you a good margin for suitable food for young children, such as bread and milk, or oatmeal porridge; or n nice Sun- day dinner, if the children are well grown."

Will some of our graduates or other readers, who are keeping house or living at home, try these three receipts for dinner, supper and breakfast, just as Miss Corson directs, and let us know how they like them. Th any who will do so, we will give, if they would like it, one of Miss Corson's pamphlets, "Fifteen-Cent Dinners for Workingmen's Families," contein- ing all we have alluded to and other excellent suggestions and advice.

An exchango says that the following is An Invaluable Remedy for Rheumatism.—Take a pint of spirits of turpentine, to which add half an ounce of cemphor. Let it stand till the camphor is dissolved; then rub it on the part affected, and it will never fail of re- moving the complaint. Flannel should be ap- plied after the part is well fomented with tur- pentine. Repeat the application morning and evening. It is said to be equally available for burns, scalds, bruises, and sprains, never fail- ing of success.

THE RIGHTS AND DUTIES OF CITIZENS.

SELF-GOVERNMENT.

A citizen's rights and duties are his political debits and credits: the State owes him cer- tain rights, and he owes the State certain du- ties. This word "State" is used in its broad sense, meaning a fixed government, without reference to geographical sub-divisions. So, too, the word "political" is used in its broad sease, as "referring to the nation," and not in its common acceptation, where it is a syno- nym for "partizan."

In despotisms, where sovereignty is exer- cised by one man or a privileged few, thers is no fear of a subject's misunderstanding his po- litical account: it consists almost entirely of debits; it is his duty to do what he is bid- den, and his only right is perhaps that of ex- istence. In a republic like ours, however, a citizen's political account is more perplexing; for with us, every citizen is, at once, one of the ruled, and one of the ruling. His is both sovereign and subject; and every act does in one capacity reacts directly or indi- rectly, on him in his other capacity. The stability of the State can only be secured by a nice adjustment of these rights and duties: if ths State takes more than it gives, we drift toward Despotism; if the State give more than it takes, Anarcby is close before us.

In our form of government, "a government of freemen by freemen," every citizen is a part of the State, and the goodness of the State can only equal the average goodness of its citizen parts. In no other country is the in- dividual of so much importance: for every citizen with us, is either sound timber or a rotten stick in our political fabric. The fun- damental idea of our government is, that we govern ourselves; that we need no King, Czar, or Kaiser, hence the conclusion is forced upon us, that *Self-government is the first duty of our American citizens.*

Self-government means action; not repose: it is not alone in the not doing of hurtful things that self-government consists, but in the doing of all helpful things. Within every man, there is a constant struggle between what he would bike to do and what he ought to do: and the scale of battle turns as he throws his manhood on one side or the other. When duty wins, the man is a freeman, fit to help in ruling freemen; but when duty loses, the man confesses his duties are too great for him; and if the duties are too great, so are the rights that spring from the performance of such du- ties. Hence it is fair to conclude, that as cit- izens leave their duties unperformed, so will their rights diminish: in other words, the aur- est way for n citizen to loss his rights, is to neglect his duties; remembering, that his first duty is to govern himself.

A good citizen, one who is self-governed, holds his rights and duties with an equal grasp: both reverently. Such citizens are political capitalists. All capital springs from self-denial; from the abstaining from present pleasure, that the means of greater enjoy- ment in the future may be possessed. A wise capitalist uses his capital, not only to supply immediate wants, but in such a way that his capital will increase: so, too, the self-governed citizen performs his duty to the State; not only so as to enjoy present rights but in such a way thet he may reasonably look for great- er rights in the future.

A bad citizen, one who is not self-governed, holds his rights and duties in a very different estimation: he acizes his rights with both hands, leaving not a finger with which to perform his duties to the State. He exercises his rights to the utmost, doing meanwhile no duty that will bring him fresh rights: he is a political spendthrift, living on his capital. If a majority of citizens are like this political spendthrift, political bankruptcy awaits the nation. Heaven forbid that such should be the case:—hnt to avoid even the possibility of such a contingency, is it not time that every citizen asked himself, whether or not he is doing his whole duty to the State; whether he is acting the part of a political spendthrift or n political capitalist?

No observer of passing events can fail to notice how many of our citizens neglect their first duty to the Stats; nor how this neglect of self-government out crops in the actions of the Stats. Individual defalcations are of al- most daily occurrence; in Savings Banks, and similar institutions, breaches of faith are com- mon; the interest on State debts is unpaid, and repudiation as an idea no longer stinks in the public nostril: indeed, many of our so- called statesmen boldly favor the payment of public creditors in dollars of sophistry, in- stead of dollars of gold.

The majority of our white citizens hold their political rights by inheritance: their forefath- ers rendered grave duties to the State, and re- ceived great rights in return. With the col- ored citizens of the United States tha case is different: the State bestowed great rights on them before a single duty was demanded: thus our colored citizens began their citizen- ship as heavy debtors to the State, and no thinking colored man will deny that his race owes duties to the State that only generations of good citizenship can discharge. All citi- zens are equal before the law; their rights and duties are the same, but it is the colored man's privilege to show the world, that the State made no mistake when it entrusted him with citizenship. Remember how the colored men were made citizens: fresh from the shackles of slavery, with no probation demanded, pow- ers were entrusted to them, that comparas- tively few people in the world possess. They passed without e pause from chattelhood to manhood: yesterday, things in the eyes of the law; to-day, men helping to make the laws. The narrative of such a political tran- sition seems more like a tale of fiction than a page from history; and it is mentioned only to urge the point of how careful every colored citizen should be in the performens of his duties to the State. His duties are due to the State, to ths sovereign people of whom he is one, and not to any man, or to any party of men.

Various as his duties are, his rights are equally various: and his greatest right—the right to "life, liberty and the pursuit of hap- piness," depends on self-government.

Agricultural.

Profitable Orchards.—The Rural Home describes the apple orchards in Parma, Mon- roe Co., N. Y., showing the profitable charac- ter of the business in that favorable locality, on the South borders of Lake Ontario, and north of the city of Rochester. Among others, the orchard of John Collamsr is men- tioned, which contains 1,100 trees, mostly of the Baldwin and Twenty Ounce. From this orchard $3,000 worth of fruit was sold in 1876, the price being rather high at that time. Another farmer by the name of Tinney, has two acres of the Bartlstt pear, barren some- times, but the annual crop from which has averaged from $500 to $700. John Tinney, a son, has 1,400 bearing apple trees. From his Twenty Ounce trees alone he sold 700 bar- rels in 1876. All these orchards are well cul- tivated; that of Mr. Collamsr without any other crop.

Profitable Raspberries.—The Burlington County (N. J.) Agricultural Society awarded to Wm. Parry the premium raspberries, for on his ten acres of the Brandywine, whicb yield- ed 26,300 quarts—over 82 huahels per acre—affording a net profit of $280 per acre. The gross sales were $4,338; expenses, $1,538. Hair manure only was used, at e cost of $10 per acre.

Potatoes.—Those emateurs who are with- out hot manure or any fermenting material may still have Potatoes quite a month earlier than they otherwise could, by the use of a frame made of 1 in. boards and covered over- head with mats, either straw or bast. A frame of this sort some 10 ft. or 12 ft. long and 6 ft. broad will hold a quantity of Pota- toes, which will he found very useful. Select for planting here some good hardy kind, such as Early Rose; they ought, to be immediately put in shallow boxes, having in the bottom 2 in. of soil, in which set the Potatoes, keep- ing the sprout ends upwards and putting a little soil between them; they ahonld then be placed where they can receive a little warmth under n greenhouse stage or in a warm room. Until they begin to grow the light shanld be kept from them. When they commence growth let them have plenty of light to keep them stout; treated in this way they will make favorable progress. They may occasion- ally he sprinkled with a little water to encour- age them to sprout; they can be planted out when the aprouts are 2 in. or 3 in. long.

—Instead of asking, "What will people think or say, if I do thus or so?" you hed far better ask, "Is it right for me to act so?—what will Jesus think of me if I do it?"

We are not very apt to do wrong if we try to please Jesus in all things.

"Maryland—D. Lothrop & Co., Boston, publishers; 50 cents per year, is a gem for the babies, with large type, and pictures which fill the little ones with glee. Let the little, ones have papers of their own and they will appreciate them, and learn rapidly most pleasant and wholesome lessons."—*The (San Francisco) California Patron.*

NEWS OF THE MONTH.

FOREIGN.

Pope Pius IX. died Feb. 7th in his palace of the Vati- can in Rome, where for more than seven years, ever since the occupation of Rome as the capital of Italy, by King Victor Emanuel, he has stayed, refusing to go out and insisting upon calling himself a prisoner. He died at the age of 86, after holding the office of Pope for thirty-two years. He was a very popular ruler, genial and kind in disposition, and charitable to the poor, and a man of vigorous mind, though placing himself at the head of opposition to all modern ideas of progress in civilization which are held even by Catholic countries, and declaring the supremacy of the church of Rome against freedom of speech, of thought, of education, and of religious belief.

The Conclave of Cardinals met for the election of a new Pope on the 18th, and on the 20th elected Cardinal Pecci, who thus becomes Pope under the title of Leo XIII. He is 68 years old and said to be a man of good life, vigorous mind, and more liberal ideas than his predecessor.

Stanley, the great African Explorer, has arrived in London, and been most cordially received by the Lon- don Geographical Society. In accomplishing his great journay across the continent of Africa, he was obliged to fight his way through hostile tribes, sometimes with great blood-shed. STANLEY, the great African Explorer, has arrived in London, and been most cordially received by the London Geographical Society. In accomplishing his great journey across the continent of Africa, he was obliged to fight his way through hostile tribes, sometimes with great blood-shed. For this he is severely criticized, as having no right as a private citizen to enter into war even with savage tribes. Some members of the Geographical Society wished on that account to withhold his welcome. It was decided, however, to give him a reception and a chance to speak for himself, and he is said to have satisfied all that heard him of his innocence of going farther than the necessity of self-defence obliged him. He is but 36 years old, but the hardships of his terrible journey have turned his hair silver gray.

SEVENTY millions of people, nearly double the population of the United States, are in a state of starvation in China. There is no record of any other as great a famine.

The Chinese have recently signalized their hostility to railroads by purchasing and tearing up the first line ever laid down in the Empire. It was but a few miles long, extending from Shanghai to Woosung. The want of rapid communication between the provinces makes it almost impossible to get relief to them.

EARTHQUAKES in South America, and a great tidal wave along the coast.

CONDITIONS of peace have been agreed upon between certain of the leaders of the Cuban insurgents and certain representatives of the Spanish government. How far these negotiators are authorized, does not appear. The conditions are amnesty for past political offences, free transportation for insurgents who wish to leave Spaniland, political privileges for Cuba like those of Porto Rico, and ir-edom for all slaves. The report that this is an official settlement of the Cuban question is denied.

THE Eastern question still agitates Europe. England sent a fleet of war through the Dardenelles, avowedly to protect British subjects and with only peaceful intentions. The Czar of Russia, however, declared that this action would oblige him to take possession of Constantinople. All Europe is waiting to see whether he will do it and what will happen next. Meanwhile, the peace negotiations drag their slow length along, and the Conference of the Powers to talk the trouble over is still in the future.

POLITICAL.

THE Comptroller of the State of Georgia reports, that the colored population of that State, numbered 84,164, in the year 1877, that they own 457,835 acres of land, valued in the tax list, 1,244,000 dollars; personal property of the value of $488,582; City property valued at $1,190,725; his estimate being that altogether the property owned by the colored people may be valued at $5,000,000.

CHARLESTON, Feb. 23d.—Two regiments of the National Guard, a colored volunteer organization, were to-day reviewed by Governor Hampton. The display was the finest the colored troops have ever made in Charleston, all the companies appearing with full ranks, well armed and equipped, and handsomely uniformed. Several colored bands were in the column, and the field and staff, as well as line officers, were all colored. At the close of the review the companies were massed in front of the City Hall, where Gov. Hampton addressed them briefly, congratulating them on the improvement in their organization and efficiency during the last year, reminding them of his pledge, previous to his election, that the colored should enjoy full and equal rights under the law with the whites, and calling upon them as citizens to co-operate with him in carrying out his pledge. The speech was received with enthusiastic cheering.

THE bill known as the Bland silver bill passed the Senate the 15th inst., by a vote of forty-eight, nays twenty-one, with amendments omitting the provision for free coinage, and directing the Secretary of the Treasury to purchase silver bullion at the market price, not less than $2,000,000 nor more than $4,000,000 per month, and cause to be coined the same into dollars. It is also to accrue to the Treasury. The bill includes a provision that the President shall invite European governments to a conference to adopt a common ra. to between gold and silver. The bill was returned to the House for action on the amendments.

The House concurred in all the amendments, on the 20th, by a more than two-thirds vote, and the bill was sent up to the President.

A JOINT resolution has passed both Houses, declaring that a reduction of the tax on distilled spirits is inexpedient. The Senate has also passed the joint resolution of thanks to H. M. Stanley, the explorer; a bill to remit taxes on insolvent savings banks; and a bill amending the laws granting pensions to soldiers and sailors of the war of 1812, restoring to the pension rolls those who were stricken off for disloyalty. The House passed a bill recognizing the Woodruff scientific expedition around the world; the Military Academy appropriation bill; and a resolution directing the Committee on Commerce to investigate the loss of the steamer *Metropolis*.

GENERAL ANDERSON, convicted by a New Orleans jury of fraudulent acts as member of the Returning Board, and sentenced to a two years imprisonment, has been denied the privilege of a new trial for which he appealed. It is the general belief of Republicans that he was dishonestly convicted. Secretary Sherman, Senator Matthews and Representatives Hale and White have sent him assurances of their faith in him. It is hoped that Gov. Nicholls will interfere to pardon him. President Hayes at a Cabinet meeting declared his intention to give the Naval and other members of the Returning Board such moral and official support as he may be able.

THE Senate, Feb. 12th, passed a bill making Feb. 23d a legal holiday. The Senate and House united in the formal reception of the painting of "Lincoln signing the Emancipation Proclamation," by the N. Y. artist, F. B. Carpenter. Speeches were made by General Canfield and Mr. Alexander H. Stephens.

FEB. 26.—THE President vetoed the Silver Bill, and it was passed over his veto by both Houses, thus becoming the last of the law.

DOMESTIC.

MISS EMMA THURSBY, the well known singer, with Mr. Carlton and the other ladies and gentlemen of her company, who have been delighting Norfolk with their concerts, visited Hampton Institute recently with a Boston gentleman who is a friend of the school. Miss Thursby, with the amiability for which she is noted, sang twice for the students, who greatly enjoyed the rare treat of listening to such rare powers of execution and vocalization.

SEVERAL members of the City Council and other citizens of Richmond, visiting the Soldiers' Home recently, made Hampton Institute a call, and after looking through the school and farm, met the students in the Assembly room. Judge Meredith, President of the Council, and Hon. L. D. Crenshaw, addressed the school, expressing great pleasure in what they saw, and the kindest interest in the welfare and progress of the students and their race. Such visits and expressions of feeling are indicative and promotive of cordial good will and friendly relations between the two races whose deepest interests are really in common.

MRS. Sarah Satterthwaite and Mrs. Hannah Thistlethwaite are two ladies of the Friends' Society in England who have come to this country on a religious visit, and—like the Friends generally—are much interested in the work among the freedmen. They are personal friends of Mr. George Dixon of Hampton, and on their way North visited the Institute, and the Butler School, and very kindly addressed the students. Their words of encouragement and advice will not be forgotten.

PETER Cooper, the venerable New York philanthropist has decided to found at Warm Springs near Spartanburg, S. C., an art academy for women, similar to the Cooper Institute in New York, to give free instruction to young women in the useful arts, designing, drawing, music, &c.

THE official estimate of the cost of the war with the Sioux Indians is $4,312,531.

GREAT floods in California.

DANIEL WEBSTER'S old home at Marshfield has been destroyed by fire. Fortunately most of the relics it contained were saved.

HON. ORNON WELLES, Secretary of the Navy throughout the war, and General Conrad, Secretary of War under President Fillmore, both died on Feb. 11th. Mr. Welles was highly valued by President Lincoln, and his calm judgment and decision of character made his administration of his department in the stormy time of war, very efficient and popular. He was also a literary man and well known as a writer.

THE United States frigate Constitution, famous in the war of 1812, has been entirely rebuilt, and is to transport the American exhibits to the Paris Exhibition. After her return she will be used as a school-ship.

IT can not be said that the work of the evangelists whose names have become well known throughout the country, is less effective this than the preceding winters. The latest created by Mr. Moody's visit to Hartford has spread to Meriden, South Windsor, Bloomfield, Manchester, and many other towns. The people of New Haven are putting up for him a building, to be used in March, which will seat 4000 persons. In Providence, the Music Hall was filled nightly for eight weeks. Mr. Hammond has had great success in Parkersburg, Virginia. Moody has now visited five of the six New England States.

FACTS have proved not only that the American Indians are not decreasing in numbers, but that they are advancing rapidly in civilization. Of the entire number estimated at 275,000, 94,000, or about one-fifth, receive rations from the government. The numeer of rations issued is steadily diminishing; for instance, 12,000 rations now given to the Navajos will cease to be issued next year. About 70,000 Indians are living under constitutions and written laws adopted and administered by themselves. There are 124,993 who wear citizens' dress; these occupy 22,199 houses. There are maintained among these tribes 226 schools, in which are 11,915 scholars; 148 out of $267,879 is expended on education, and 40,397 have learned to read. The number of acres of land cultivated by Indians within the jurisdiction of the United States is 299,550; the total of bushels of wheat raised by them in 1877 was 683,278; of corn, 4,956,905. The horses and mules owned are 216,286; the cattle are 217,883; and the sheep 587,444. These facts are proof that the peace policy of the national government is far from being a failure. Dr. Clark, one of the secretaries of the American Board, has expressed the opinion that our Indians have made more progress in civilization in the last decade than during the preceding fifty years.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that the afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

FREE A VALUABLE INVENTION.

THE WORLD RENOWNED

WILSON SEWING MACHINE

In workmanship is equal to a Chronometer Watch, and as elegantly finished as a first-class Piano. It received the highest awards at the Vienna and Centennial Expositions. IT SEWS ONE-FOURTH FASTER than other machines. Its capacity is unlimited. There are more WILSON MACHINES sold in the United States than the combined sales of all the others. The WILSON MENDING ATTACHMENT for doing all kinds of repairing, WITHOUT PATCHING, given FREE with each machine.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every State of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

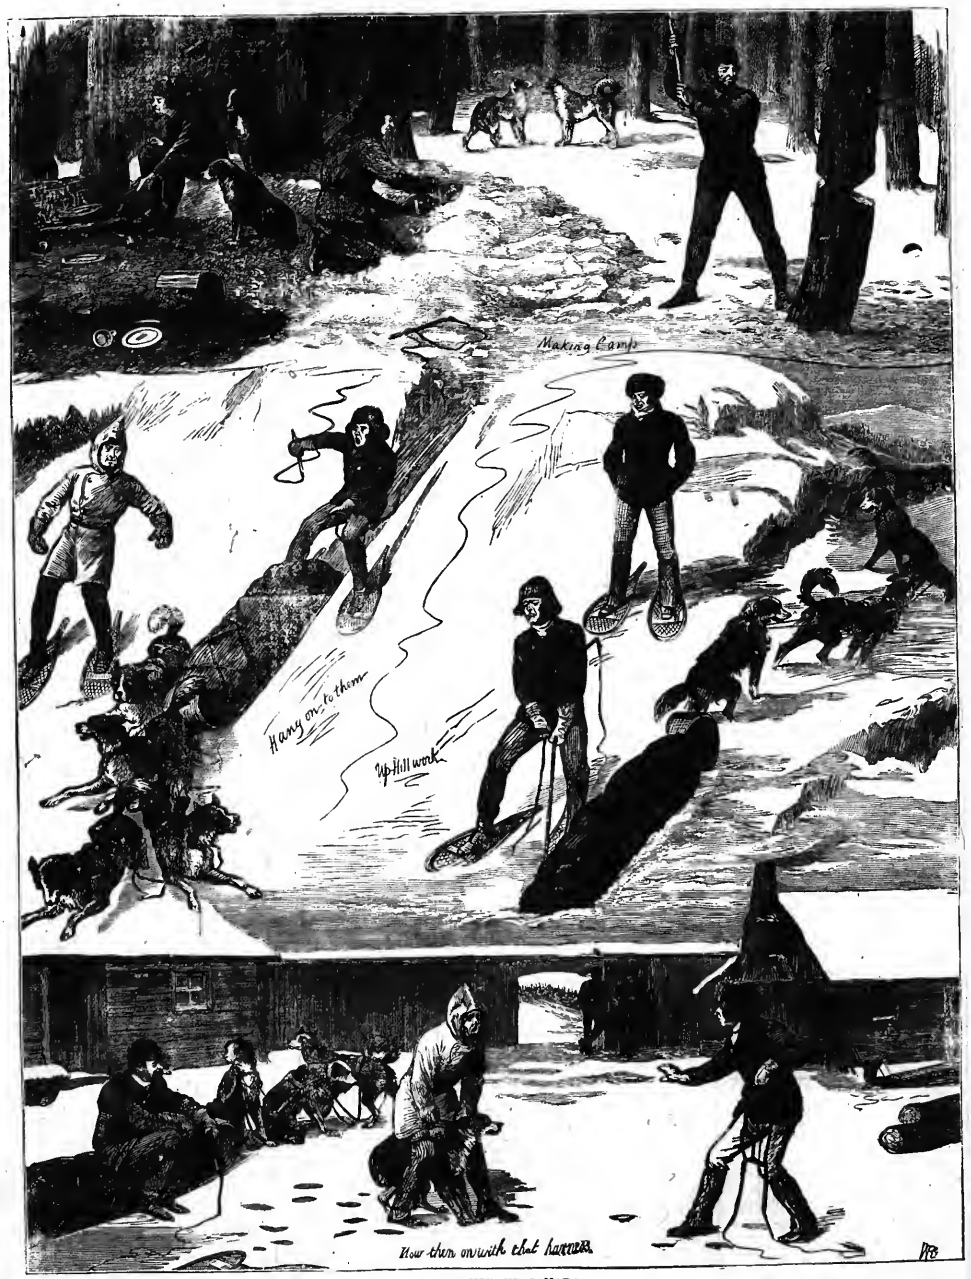
SOUTHERN WORKMAN
SUPPLEMENT.

MARCH EDITION, 1878.



LUMBERING IN CANADA.

LUMBERING IN CANADA.

the whisky barrel or rum puncheon was considered as necessary a part of the stores as the

LUMBERING IN CANADA.

The life of a lumberman in the Northern woods, in Maine, or Michigan, Wisconsin, Oregon or Canada, is a life of hardship and sturdy toil, not without its excitements and pleasures. The work is done in the winter season when the logs can be most easily drawn to the rivers to wait for the spring freshets which shall carry them down to the saw-mills in the lake-port and sea-port towns, from which, transformed into boards, railroad ties, and shingles, they can be shipped to all quarters.

Our picture gives four spirited scenes from the lumbermen's life. At the bottom, we see them making ready to start from some little settlement on the frontier of civilization, for the real wilderness. The curious sled—tobogan our Canadian cousins call it—is already packed with provisions wrapped carefully in skins. The toBogan is simply a piece of birch or bass wood a quarter inch thick, from five to eight feet long by one or two broad, bent up in front like a dash-board of a sleigh, with traces of wood and catgut. The Indians, who invented and named it, used it to drag furs and provisions. The Canadians use it also for the sport of riding down hill. It cannot upset like a sled on runners, and will go over soft snow where runners would sink. Our lumbermen use it for work, not play, and it is to be drawn by a four-in-hand team of strong dogs. All are ready except one, and he doesn't seem to enjoy the prospect before him, as his impatient master shouts, "Now, on with that harness!

Up hill work, the poor fellows find it, as we see in the next scene. The snow looks soft, and even the broad tobogan sinks in it. The sturdy dog-team tugs away, but the dogs do not wear snow shoes, and one of the men, who are better provided, has to come to the rescue, and give it a lift.

These snow shoes, also an Indian invention, are most admirably contrived for walking over soft snow. A glance at the picture will show you how they are made. A strip of light ash, about half an inch thick, is bent to an oval and fastened closely with catgut where the ends meet. Cross strips of flat wood strengthen the frame. It is then woven across with catgut. On this the foot rests, and the weight of the body thus distributed over a broader base is supported where a foot would sink. It is exactly on the same principle that a board laid on weak ice enables a man to go safely to the help of one who has broken through it. The Indians and Canadians attain great facility in using the snow shoes, and one favorite sport is to run races on them, though a beginner is almost sure to tumble down, and lie helplessly kicking and calling for help to rise. The shoes are from two to six feet long and from ten to twenty inches broad.

The left-hand sketch shows the team going down hill. The driver now has to go behind and hold on to the rope to keep the sled off the dogs' heels. A sudden lurch or pull has broken the rope, and the looker on seems to find it funnier than the driver does.

The sketch at the head of our picture shows the lumbermen, arrived at their destination, beginning to prepare their camp. Fires must be built, tents pitched, beds of boughs made ready, and—most important of all, three of the party seem to think, supper cooked.

The "Northwestern Lumberman," a newspaper published in Michigan, gives this interesting account of the work before them.

"An average camp consists of about three hundred men—all men During the Winter this camp will cut a section of about three miles square, 'harvesting' a crop of about 60,000 logs, which will yield when converted into lumber about 10,000,000 feet. The work begins at daylight and ends at dark. On the river when the drive is started, work begins at three o'clock in the morning and ends at nine in the evening, the men having five meals—breakfast at six, lunch at nine, dinner at twelve, supper at five, and tea at nine. The meals consist of pork and beans, corn bread, molasses cake, and tea or coffee.

A camp of 300 men will consume daily four barrels of beans, half a barrel of pork, one barrel of flour, half a barrel of meal, one-quarter of a barrel of sugar, and five gallons of molasses. The men are encamped in tents, making their beds of boughs, while their extra clothing, a pair of duck overalls, a woolen shirt, and two pair of woolen socks, is kept in an old grain sack, and used as a pillow at night.

Sunday in the woods is always a day for sharpening axes, mending sleds, repairing boots and clothes, setting out a new tenting spot, handier to cutting in the woods, and all the odd chores which would grow out of the congregation of so large a body of men. All well regulated camps exclude liquor. The consumption of axes and handles is enormous, an axe lasting a month, and a handle about three weeks."

Did you notice that one little sentence:—"All well regulated camps exclude liquor"?

Another paper says:

"In Canada the same Winter life in the woods as described above falls to the lot of a great number of strong men, and in old times the whisky barrel or rum puncheon was considered as necessary a part of the stores as the pork and flour barrel. The Temperance reformation revealed the complete fallacy of this idea. To endure hard work or great cold, spirits of any kind are a hindrance rather than a help, a source of weakness rather than of strength. It is the fattest of pork and the best of flour, with beans and peas, that shanty-men want (*chantier* is the French word for a lumber-men's camp), and the reason is plain; they need heat-forming as well as muscle-forming food."

GOOD FOR EVIL.

"'Mamma,' said my little Charley, 'now that I have a *new* sled what shall I do with the old one?' His face wore a puzzled look for a little while; when a thought struck him. 'Mamma, there's a chance to do something,—real good too. What's the use talking so much about a thing, and never doing it?'

"'What, Charley?'

"'Well, mamma, if there's any boy in the world that I *hate*, that boy's Sim Tyson. He's always plaguing and teasing me and all the other little boys, either taking our things from us, or pretending that he's going to. It never does any good to get *cross*, for that's just what he likes: but, better even than this, Sim *does* like a sled; and—well, maybe its foolish—but I've half a notion to give that old sled to him. It might make him *think*, and so do him good. Mightn't it mamma?'

"'Yes, it *might*,' said the mother.

"So Sim got Charley's sled, which pleased and touched him beyond everything; and they do say he is kinder, not only to the little boys, but to everybody, than he was before."

Clara.

THE COLORED GLASS.

A little boy ran to his mother, saying, "O mother I have such a pretty thing! It is a piece of glass, and it is all red. When I look through it every thing looks red too—the trees, houses, green trees your face, and even your blue eyes."

"Yes, John," replied his mother, "it is very beautiful; and let me show you that you can learn a lesson from this pretty thing. You Remember the other day you thought everybody was cross to you. You said father, sister, and I, were all the time finding fault with you. Then you were like this piece of glass, which makes every thing red because it is red. You were cross, so you thought everybody was cross too. But when you get up in the morning in a good humor loving and helping everybody, they, too, will seem kind and loving towards you.

"Now remember, my boy, and always be what you wish others to be—kind, gentle, loving; and they, seen through the color of a kind disposition, will seem more beautiful than ever."

Children's Banner.

GOOD ADVICE TO BOYS.

Rev. C. H. Spurgeon, the great London preacher, gives the following bit of good advice:—"Do not imagine that you cannot now be Christians: the gifts of our heavenly Father's love are not reserved for a certain age: boys may be saved, boys may be workers for Jesus, boys may bring great glory to God. Hence it is that just now, at this particular turning-point in your lives, we are anxious to see you resolute for the right way. May the Holy Spirit incline you to resolve to be the Lord's! Others may despise your conscientious choice, and make mirth of your holy carefulness, but what matters it? Some of us have been laughed at for these twenty years, and are none the worse for it; we have had all manner of evil spoken falsely of us for Christ's name's sake, but we are all the happier for it. O boys, if you are renewed in heart, and become for life and death the Redeemer's, none can really harm you; all must be right with him who is right with God. Hold on, then, to the Sabbath-school, and when you cease to be taught, become teachers. Hold on by the Sabbath services and all the ordinances of the house of the Lord, and say, like Ruth to Naomi, 'Thy people shall be my people, and thy God my God.'"

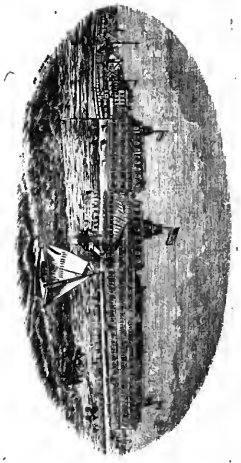
Purify the Fountain.—If you lived in the country, and had a stream of water running through your place, and it became so impure you could not use it, what would you do to purify it? "Dam it up." That would not purify it, or stop its flow. "Cleanse the fountain or spring." That's correct; for as long as the fountain is impure the stream will be also. In Prov. iv: 23 we read: "Keep thy heart with all diligence; for out of it are the issues of life."

Our hearts must be cleansed, made new—that's the first thing; for as long as the heart is defiled by sin all our words and acts will be defiled. Jesus says, "We must be born again."

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

H. PHOEBUS, PROPRIETOR.



This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the harbor of Hampton Roads, commanding a view of the Chesapeake Bay, Fortress Monroe, Newport News, Norfolk, Old Dominion Steamship Company's wharf, and the entrance to the Roads. It is accessible from New York, or by rail from that city and Philadelphia to Baltimore and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, Hampton, Newport and Archibald Schools, the National Military Home, Fortress Monroe, Old Point Comfort Lighthouse, one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years, as taken by the Surgeon of the Hygeia Hotel, Archibald Schools, the National Military Home, Fortress Monroe, Old Point Comfort Lighthouse, one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years, as taken by the Surgeon of the Hygeia Hotel, is as follows: Spring months, 45° 65° 85°; Summer, 65° 75° 85°; Autumn, 45° 65° 85°; Winter, 35° 50° 65°.—Open for guests all the year.

TERMS: Transient, $3.00 per day, $17.50 per week and upwards, according to location, &c.

New York Enamel Paint Co.,

178 PRINCE ST., New York.

third of the income from all vested property must go to the support of government. Two per centum out of six per centum is a grievous burden. And now we are asking the reason why. The ignorance upon the subject is appalling. It is no easy matter to get at the facts which underlie this civil service baseness. The politicians do not proclaim their methods on the house-tops. Few men have the leisure, the pluck, to reach the facts. When the New York "Ring" was in power, there was doubt expressed as to its honesty. The "Ring" generously asked Mr. Astor, Mr. Roberts and another, all wealthy citizens, to examine the financial condition of the city. These men reported that it was "most satisfactory." At that very time frightful frauds covering millions of dollars had been committed. These men did not find them out because they did not know how to find them out. At another time two "reformers" appeared. They protested against fraud, wrote articles about municipal economy, and issued tracts about reform in general. The "Ring" only laughed. Finally these men worked themselves into a true knowledge of the evil ways of the politicians. Instantly they were bought, one with a lucrative Judgeship, and the other with an important office. The ranks of the reformers were broken, and good citizens staggered about without skilful leaders.

Politics in the hands of nearly all our present officials is a mercantile business. The ordinary citizen can no more detect the doings of the servants of the people, than they can detect errors in the calculation of a civil engineer as to strength and weight of a railway bridge. If the bridge finally tumbles in, he infers there was an error in calculation. If the "Credit Mobilier" takes up Congressmen as the magnet takes up sand, he infers that there is something wrong. If any man thinks he can reach, at a leap, even a moderate knowledge of wire pulling, he is absurdly mistaken. Politicians deal with men and seldom with principles. They study, almost unconsciously, the weak side of human nature, and their hard-earned knowledge is not freely communicated to every man who asks it. The citizen reads the papers and thinks he is "informed." He who is experienced in public life reads the papers, "between the lines," and laughs at the citizen. The newspaper reporter is called on to say something in his item column. Does any one suppose the politician gives him the secrets of the business? We know a most successful politician who said that, after twenty-five years of public service, he had never known of the appointment of a person to office on the sole ground of his fitness to the place. It may be seriously affirmed that not one-half of one per cent. of the men in public life have been put there without their own personal and persistent efforts. There is no such platform as "take me, if you like me."

The radical weakness of the civil service, national and local, is the uncertain tenure of office. Removal at pleasure means one man in and another man trying to get him out. It is the case of the litter of pigs lying under Professor Tyndall's bed, in the snows of the Alps. The pigs in the centre of the bed were warm enough, but those on the outside were cold; so the latter were always climbing over the backs of their fellows and rooting down into the centre. From sight till morning the outer circle was always shifting over toward the centre, with vast grunting and squealing, to the intense disgust of the wakeful Professor. This is our civil service system.

Put a man with a family in office and then place him upon the trap-door of an uncertain tenure, with the bolt-string in the hands of a local statesman, and you compel the man to make the most of his time and opportunity.

Real Civil Service Reform must be like deep culture in baked, compact ground, running a gang-plough down into, and breaking up, old habits and strong prejudices. In the new soil there is hope for the healthy growth of a service which shall secure to the State the best duty of the office-holder, and for the office-holder the consideration and gratitude of the State.

The curious prevalence of superstition among the colored people of the South has been noticed by Mrs. Stowe, and "Edmund Kirke," and occasional magazine writers, but the extent and significance of it is not appreciated, or generally known, by those who are watching the progress of the freedmen with interest and hope. A firm belief in witchcraft and conjuration is widespread among these people, from Virginia to Florida. Religious faith, even when genuine, does not cast it out. They grow together like tares and wheat in the fertile soil of the negroes' imaginative, excitable nature. The teachers of their own race, who mingle intimately enough with them to get a free expression of their feelings, meet it everywhere as an obstacle to their work, and, sometimes, but rarely emancipated themselves from its dominion, find it too much for them.

We have made a special effort lately to collect reports upon this subject from the students and graduate teachers of Hampton, representing a very wide extent of the Southern country. We give our readers elsewhere a page of these reports; not as a mere curiosity.

If there is anything in comparative ethnology, this tangle of superstition, demonology, and fetish worship they reveal—a combination of Salem and Central Africa—is something more than the illustration of an amusing race trait; it suggests an important factor in the question of the continued existence of the race.

Whether the negroes are dying out or not, it is an undoubted fact that the Sandwich Islanders are, and that, at the startling rate of over a thousand more deaths than births every year. If this rate, constant for the last fifty years, continue for fifty more, nothing will remain of the mild natured Polynesian natives of that lovely island group, with its most salubrious of climates and most productive of soils,—but a memory.

Is there any point of resemblance between the two cases?

The most radical and ineradicable cause of this rapid decay of a nation—the terrible inheritance of vice and exhaustion, leprosy—is fortunately absent in the negro race. But the universal testimony of all intelligent observers of the Hawaiian people at the Islands, missionaries, physicians, and others, is that there is another cause at work, hastening their doom and quite enough of itself to insure it, if as insurmountable as it has proved to be thus far. And this cause is the superstition—especially the belief in witch-doctors and "praying to death"—which prevails from the lowest to the highest, the chiefs themselves being by no means free from it. Some of the best of the white physicians say that they refuse to practice among the natives, because they can never be sure that their directions will be followed, or that some "kahuna," or native witch-doctor, is not secretly administering his own drugs by the wholesale at the same time. A native who has a grudge against another goes sometimes to a "kahuna" and pays him well to "pray to death" his neighbor. Word is conveyed to the offender, who, instead of prosecuting his murderer, quietly fulfills his own doom by dying in a few days, of abject terror, slipping out of life with a facility incomprehensible to an Anglo-Saxon. Every sudden death, or illness or casualty, is of course attributed to the same cause, and so the general faith in it is confirmed.

The parallel between all this and the practice and effects of "conjuration" in the South instantly suggests itself to any one who is familiar with the latter, or who will read the reports of it. The same love of the supernatural, and dense ignorance of the laws of living, is more excitable nature and nearly as loose a hold on life, are the elements which form the soil for a growth of superstition as rank and as fatal as that which is helping to depopulate Hawaii. Excuse enough can be made for it, of course, but the important question is, what is to be done about it?

Any estimate, and any system of effort, which ignores this point in the question of the freedmen's future, will be a failure.

The following extracts are from the letter of a friend in Massachusetts, which was not intended for publication, but which we take the liberty of using, not only because its writer is thoroughly in sympathy with all that is good in our work, but also because it contains the frank criticism which we especially desire:

"Thanks for the Workman, which I had already marked as a first-rate number. You are making a wonderfully good thing of it, and it must tell as an important factor of reconstruction in many ways. I think you are too hard, however, on the Northern farmer as 'utterly without social culture' and so on. The New England farmer's culture takes on a good polish in his sons and daughters, as abundant instances prove. We have an annual 'May Breakfast' here which gathers as nice a crowd of cultivated people from a large vicinity as you will often see, and our young ladies spread tables, not only with a Persian elegance of damask, silver, flowers, etc., but the most exquisite cookery,—and the proceeds, too, for culture in some direction like street improvement, tree planting. On the whole, that article on available emigrants to Virginia was rather discouraging. We would have seat a splendid colony into Virginia or Tennessee soon after the war, I think, if inquiry had not convinced us that we should have been utterly snubbed and ostracised. How long will it be so?

"Now as to the views quoted in your article on Missions. On careful reading, I think the author of the sermon was just about right. Your editorial does not interpret him correctly as declaring 'that Christianity *is not able* to overcome barbarism, &c.' He, evidently enough, has strong faith in Christianity, pure and simple, as the true pioneer of civilization, and including it, as the greater includes the less. 'Preachers, catechists, schoolmasters and the press'—if they are not civilizers, who are? Wake up a heathen's soul and he will want a shirt, and so on to a piano. The writer from whom you quote, it seems to me, is as broad and philosophical as his critic in confining the A. B. C. F. M. to its *primary* business, civilization being 'expected to follow as a secondary result.' His head was level, and your article has only expanded his real thought in the best things it contains.

"We are watching with intense interest your work and its bearing on Virginia, Hayes and time and patience and God over all. Although beating against the wind, and perhaps just now on the losing tack, shall we not bring up on the next?"

In regard to the article upon emigration we must remind our friend that the Northern farmers therein alluded to do not belong to the class whom he describes. It is not the educated, well-to-do, steady-going New England farmer who wants to emigrate, but men, as a rule, of a much lower type, of small means and little or no culture, men who in New England are semi-failures. We should be the last to undervalue the typical New England farmer, with his clear head and thrifty hands, the man who has inherited his rocky acres, along with his mental power and his moral standards, from some Puritan great-grandfather; but the world will take many a turn before these men turn their faces southward.

Our editorial upon mission work does not, we think, misinterpret the author from which we quote, for we nowhere make him appear to say that "Christianity is not able to overcome barbarism." This assertion comes, as our friend, if he will take the trouble to re-read the article, will see, from those critics of the mission who saw that Christianity, as applied at that point, had *not* overcome barbarism, and who, therefore, sweepingly declared that Christianity was not equal to the work which it had undertaken. The point upon which we take issue with the author of the sermon is, that in replying to this accusation, which he himself admits to have been a just one, he takes refuge behind the dogma that the salvation of the soul does not necessarily include the overcoming of barbarism. For the purposes of discussion we propose to confine ourselves for the present to those mission fields of which we have an intimate personal knowledge—and of the particular Polynesian mission to which our editorial refers, and which we believe to be a representative one, we feel bound to say that while it is distinctly not a failure it is just as distinctly not a success. That is, this heathen nation adopted easily, as any emotional race will, many of the externals of Christian civilization; there was no great difficulty in arousing in them a desire for shirts and pianos, their childish natures reached out readily enough after these things,—this mistake is the system seems to have lain in the non-application of the fact that they would never use shirts or pianos or anything else, to the glory of God, until the undeveloped moral qualities of their natures had been strengthened by years of wise and patient training. To claim that they were Christians, as we understand the name, before they had attained to even a low civilization, was a forestalling of results which could and did bring little but disappointment. If we declare that we have saved a man's soul when we have no other proof than the man's own declaration to that effect, we are putting very great confidence in the strength of his moral nature, and we are only justified in doing it when we have thoroughly tested that moral nature by long probation.

We believe that the negro of the Southern States furnishes a good example of our meaning, and an experience of the Hampton system enables us to make some fair comparisons. The negroes are, in the main, more advanced in civilization than the Polynesian natives, and possess an element of progress which is lacking in the latter, and yet the growth of individuals among them is exceedingly slow and can only be made sure by a process of general building up which includes all sides of the character. The emotional nature of the negro, his lack of moral stamina, his inability to understand the relation of things, his environment,—all make it necessary to surround him as an individual with powerful influences for good, to bring to bear on him the whole strength of Christian ethics, to literally build him up, line upon line, and to do this far years before we have any right to claim him as a Christian who can safely be left to himself. And all this, we conceive, holds good in the case of any barbarous or semi-barbarous people, and to say that when the gospel has been preached to such a people that "the missionary's work is done, whether that people be civilized or not," seems to us to involve a serious contradiction, for we believe it rather to be true that the missionary's work is then but just begun. Bishop Patteson's experience touches the heart of the whole matter; he says, in reference to his own work in Polynesia, and no man knew the ground better than he, "Soon I think the great difficulty must be met of teaching the Christian's social and domestic life to people disposed to give up much of their old practices. This is the point at which I suppose most missions have broken down. . . . What a different thing from just going about and teaching them the first principles of Christianity! The second stage of a mission is the really difficult one."

The anomalous condition of Southern affairs since the war, continued so long, that a peculiar type of politician has been produced. The republican policy has existed of late to reward partisanship. The common sense of mere patriots has been overruled, and moderate disinterested men have been given the cold shoulder. A selection of the fittest has been going on for sixteen years, and the result was a harmonious body profoundly and sincerely convinced that party was really synonymous with country; that government could not be carried on without division of its spoils among the saints of one stripe; and that the principles which guided Washington in his selection of subordinates were about as applicable as the sermon on the mount, to modern politics. And when upon this united family dawned the conviction that President Hayes meant to carry out the principles of civil service reform upon which he was elected, nothing but the lonves and fishes could have prevented an Enceladus revolt.

It is, however, felt that this is a time to be silent. Clamor may safely be left to Conkling. The first duty of the party is to hold the fort. Despising the idea of reform, the office-holders believe it will soon run its course. It is better to hide their light till the good old times of Grant come round again.

Looking thus fatuously for a long harvest of golden eggs after these troublesome buzzing reformers shall have caught cold, it is sad that these hidden sons of the prophets cannot see that they themselves have killed the auriferous goose. They seem to forget that the livery of the republican party is tarnished by their own self-seeking. It is by no means only from fear of ostracism that hardly a corporal's guard of intelligent men in Southern cities, able to live without office, are willing to be called republicans. It is because the party organization has not deserved support, that it is ready to perish. The politicians who sneer at President Hayes as a visionary iconoclast, do not realize the strength of the popular conviction, that their maxim about the spoils points directly toward the ruin of all public and private morality, the

failure of the American experiment, the abandonment of all reverence for patriotism in the past, and of all hope for purity in the future. We regret to believe that such arguments are lost upon the Southern republican leaders as a class, who, while ostensibly representing the administration, [illegible] among the most

some by the ingenuity of our people.

"The Commissioner of Agriculture proposes that the farmers of a neighborhood should have their tea gardens, and the leaves be manufactured at a central tea house, just as the cheese factories are used by the farmers around them."

from her native land, where a brief period of "life's merry morn" had passed, she ventured to address some unceremonious lines to Gen. George Washington, in command of the American Army, at Cambridge. Gen Washington replied as follows:

"*Cambridge, Feb. 28th*, 1776.

Miss Phillis: Your favor of the 26th of [illegible]

THOUGHTS FOR THE COUNTRY.

A NEW ENGLAND WOMAN'S EXPERIENCE.

It has always been a matter of surprise to me that so many young persons in their early married life, settle in cities, living in apart-

failure of the American experiment, the abandonment of all reverence for patriotism in the past, and of all hope for purity in the future. We regret to believe that such arguments are lost upon the Southern republican leaders as a class, who, while ostensibly representing the administration, are, with some exceptions, among the most irreconcilable enemies of its cherished purposes of reform. We do not believe that the success of the opposite party would be the triumph of reform. We believe in President Hayes, and hope that he will be able to give life to the grand ideas of the republican party as expressed in the platform on which he was elected, and that to do that he has an important task to perform in the Southern States.

The Hon. John B. Goode, Member of Congress from this Congressional District, is the author of a Bill now before Congress which provides that the proceeds of sales of public lands shall be devoted to education, one-fourth to the State Agricultural Colleges of the various States, and the remainder to common schools.

We trust that a Virginian Representative may have the honor of successfully introducing so wise and patriotic and far-reaching a measure.

Inquiries have from time to time been made of us in respect to the climate of Hampton, Va.

The average temperature for the six coldest months of the year is about 45° Fahrenheit. The winter is two months shorter than the winter in the latitude of Massachusetts. The fall and spring seasons are long and very beautiful. There is no malaria in the well settled portion; it is found in the country. Few Northern immigrants complain of it, and the great majority of people in comfortable condition are not troubled by it. The largest and finest Southern Seaside Hotel is two miles from Hampton, at Fort Monroe. The "Hygeia" is a great success, being enlarged yearly and crowded every season.

Summer Hotels seek healthful localities. Hampton has peculiar marketing advantages. Sheep raising is the most promising industry of the region.

The "Industrial Home Company" at Ionia, Fairfax County, Virginia, have organized under a Charter and By-Laws and have issued a Prospectus.

They mean to solve the great problem "How the idle can be employed," in a practical way. They will have a large farm and raise every variety of produce. They intend to build a large "Unitary dwelling or home," built expressly for two or three hundred people, which will provide every convenience including Library and Reading-Room, Steam Laundry and Lecture-Hall for meetings, concerts and amusements, steam power for sewing machine, etc., and suitable parlors.

There is to be a large dairy and a manufacturing establishment. Col. Edward Daniels of Washington, D. C., is, we understand, the inspiration of this enterprise.

Further details will be supplied to any who will address the "Industrial Home Co., Ionia, Fairfax Co., Va."

HOME-GROWN TEA.

"The Commissioner of Agriculture is determined that if he can bring it about, the people of the United States shall produce their own tea. The finest teas are sold in China at from five to fourteen dollars per pound, so that those sold here at fifty cents must be inferior indeed as compared with the best. It is said that these finer teas will not bear transportation across the ocean.

"We pay an average of $20,000,000 a year for teas. The plant grows readily in South Carolina and some other of the Southern States. Wilmington, Delaware, is in the same parallel of latitude with Peking, one of the best tea districts of China. The difficulty in supplying tea of home production is the cost of labor and want of skill in manufactura. But these are difficulties sure to be overcome by the ingenuity of our people.

"The Commissioner of Agriculture proposes that the farmers of a neighborhood should have their tea gardens, and the leaves be manufactured at a central tea house; just as the cheese factories are used by the farmers around them."

EMINENT COLORED PEOPLE.

For the Southern Workman.

PHILLIS WHEATLEY.

The following sketch of this remarkable colored woman, was sent to me for publication by a friend who was not aware that I had any special interest in, or knowledge of, the gifted subject of it. The name of Phillis Wheatley was a household word in my father's family, John Wheatley was my grandfather's uncle, and the story of this talented slave girl is familiar to us all.

Just a hundred years before the opening of the civil war that resulted in the destruction of slavery in the United States, Mrs. Wheatley bought in the slave-market, in the good old city of Boston, a slender, weakly girl, who had something so gentle and modest in the expression of her dark countenance that her heart was drawn towards her and she selected her in preference to several others who looked more robust. She had no clothing except a piece of dirty carpeting about her. Kind treatment speedily brought health, and she soon learned to speak English. She could remember nothing about Africa except that she used to see her mother pour out water before the rising sun. Almost all the ancient nations of the world supposed that a Great Spirit had his dwelling in the sun, and they worshipped that Spirit in various forms. One of the most common modes of worship was to pour out water or wine at the rising of the sun and to utter a brief prayer to the Spirit of that glorious luminary. The sight of the splendid great orb, coming she knew not whence, rising apparently out of the hills to make the whole world glorious with light, and the devout reverence with which her mother hailed its return every morning, might naturally impress the child's imagination so deeply that she remembered it after she had forgotten everything else about her native land.

A wonderful change took place in the little forlorn stranger in the course of a year and a half. She not only learned to speak English correctly, but she was able to read fluently in any part of the Bible. She evidently possessed uncommon intelligence and a great desire for knowledge, and Mrs. Wheatley's daughter, perceiving her eagerness to learn, undertook to teach her to read and write. She found this an easy task, for her pupil learned with astonishing quickness. At the same time she showed such an amiable, affectionate disposition that all the members of the family became much attached to her. Her gratitude to her kind, motherly mistress was unbounded, and her greatest delight was to do everything to please her, and years afterwards, when she was in England receiving the most flattering attentions from the best of English society, learning that her dear, good mistress was in declining health and wished to see her, she returned to Boston immediately, and remained with her till her death. A very interesting biography of Phillis Wheatley from which most of the foregoing sketch is copied was written by that life-long friend of the slave, Mrs. Lydia Maria Child, and is found in the Freedmen's Book, a series of interesting sketches of eminent Africans, compiled and mostly written by her.

J. F. B. M.

AN AFRICAN WOMAN.

A reader of the "Southern Workman" does not recollect having seen any account of the gifted and honored daughter of Africa named below, and thinking its publication might be both interesting and profitable to your many readers, he sends a brief sketch.

In the year 1761, when slave-stealers sailed from Boston, and brought their living cargoes to that port, a merchant named John Wheatley bought in the market, a "likely girl," six years old, and gave her the name of *Phillis*. The kind Mrs. Wheatley, finding her a docile and intelligent servant, taught her to read and write, until she acquired a very full knowledge not only of English, but of Latin. *Phillis* wrote a great deal of poetry which was justly admired by all who read it. In her nineteenth year she was sent to England for her health, and was introduced into society, where her talents and amiability made her welcome. A volume of her poems was published in London in 1773, and was dedicated to the countess of Huntingdon.

On her return to Boston she found the city in arms, at the breaking out of the Revolutionary war. Incited by patriotic sentiments toward the land that had forcibly torn her from her native land, where a brief period of "life's merry morn" had passed, she ventured to address some encouraging lines to Gen. George Washington, in command of the American Army, at Cambridge. Gen Washington replied as follows:

"*Cambridge, Feb. 28th*, 1776.

Miss Phillis: Your favor of the 26th of October did not reach my hands till the middle of December. Time enough you will say to have given an answer ere this. Granted. But a variety of important occurrences continually interposing to distract the mind and withdraw the attention, I hope will apologize for the delay, and plead my excuse for the seeming but not real neglect. I thank you most sincerely for your polite notice of me, in the elegant lines you enclosed; and however undeserving I may be of such encomium and panegyric, the style and manner exhibit a striking proof of your poetical talents. * * * * If you should ever come to Cambridge, or near my headquarters, I shall be happy to see a person so favored by the muses, and to whom nature has been so liberal and beneficent in her dispensations. I am with great respect, your obedient, humble servant,

George Washington."

Phillis married a worthless man named Peters, of her own color, who made her life so sad, that she died in 1784, very poor, at the age of thirty-one, leaving three children.

The noble letter of Washington, alike honorable to the writer and to the receiver, is given in Sparks' Collection of the "Writings of Washington."

What an acquisition it would be to the Hampton Institute Library if some friend can send to it the "*Life and Poems of Phillis Wheatley*." What a "*footstep on the sands of time*," to remind the hundreds of Afric's children who would see it that they "can make *their* lives sublime."

The following is a specimen of the author's style.

Lines on the death of the Rev. George Whitfield.

He charged the youth that every grace divine
Should with full lustre in their conduct shine,
That Saviour, which his soul did first receive.
The greatest gift that even a God can give,
He freely offered to the numerous throng
That on his lips with listening pleasure hung.
"Take Him, ye wretched, for your only good,
Take Him, ye starving sinners, for your food;
Ye thirsty, come to this life-giving stream.
Ye preachers, take Him for your joyful theme;
Take Him, my dear Americans," he said.
"Be your complaints on His kind bosom laid;
Take Him, ye Africans, He longs for you;
Immortal Saviour, is His title due:
Washed in the fountain of redeeming blood,
You shall be sons, and kings, and priests, to God."

Favored students of the Hampton Institute, take a lesson of encouragement from the bright example set by Phillis Wheatley.

A Friend.

Norfolk, Va.

REV. DANIEL SEATON.

Already, the length of this admonishes me that the sights of Cairo must be devoted to a second letter before the series of the ascent of the Nile commences, but previous to closing I must write of a fellow countryman, regarding whom the colored citizens of Philadelphia will be delighted to hear. His name is Rev. Daniel Seaton, of Chester, but better known in our city from his prominent leadership in the African Methodist Episcopal Church. He is a guest here at the Grand New Hotel, the first colored American who ever visited Egypt, and will visit the Holy Land as a gentleman. Tonight, at dinner, I sat on his left, and, although unknown to him, the Polish Prince Sapieha was on his right. Opposite was an English lord, farther up a Belgian count, and a little farther still an American admiral. There is no Civil Rights bill in Egypt, to my knowledge, yet no one, either by look or word, objected to the colored man's presence. In intellect I am satisfied he was the peer of four out of five at the long table. In fact, the object of his journey is to write a work on the Holy Land, and deliver lectures before his people. Dr. Seaton is a graduate of the Howard University, of Washington, and presents a good example of American liberality to an oppressed people, in contrast with those wretchedly ignorant and impoverished of his race who are compelled to recognize as masters the corrupt and immoral government of the Khadiva. Egypt's monuments and tombs prove, with unerring accuracy, the extent of her present degradation, while the American Union, with but a century's existence, has exalted itself to a leading power by fostering education and inexpensive government. Let the fire-eating Democrat and the radical Republican travel through Europe and the East to learn the difference between a citizen and a subject; let them see the immorality, extravagance and parade of royalty; let them compare their estates with all excepting the favored few abroad; let them do all this, and both will return home earnest in their determination for the integrity of the Union first; the triumph of party second.

Agricultural.

THOUGHTS FOR THE COUNTRY.

A NEW ENGLAND WOMAN'S EXPERIENCE.

It has always been a matter of surprise to me that so many young persons in their early married life, settle in cities, living in apartments, or boarding-houses, with no domestic life, as it would seem, instead of forming for themselves a home, however small, in the country, around which so many associations would cluster, endearing it to them more and more as the years roll on. That many are deterred by the expense, I doubt not; and I therefore venture to lay before such persons a statement of my own experience, showing what may be done with very limited means. I shall be only too glad, if any words of mine shall prove the means of inducing others to make a like trial, and trust that they may be rewarded by as much happiness and content therefrom as I have found in my simple country home.

I purchased four years since, within half an hour's distance of New York, a piece of land, 25 feet wide by 200 feet deep, at a cost of $1,600; I put up on this a house 22 feet wide by 38 feet deep, at a cost of $0,400 or $8,000 in all—this includes gas, furnace, bath-room, set tubs, in short, all the comforts and conveniences, in miniature, of a city house—a much less expensive one, of course, could be built if desired. It stands 30 feet from the road; 20 feet back of the house are reserved for drying clothes,—leaving 112 feet by 25 feet for my garden, in which I planted the small fruits, such as blackberries, black and red raspberries, currants and grapes, and a few flowers to please the eye. The small fruits gave me at the lowest estimate last summer, 125 quarts. As the grapes were an after-thought, I can only give the result of the second year, which was much less than it will be another summer, say 10 to 15 lbs. in all. At one time I reserved a small space in the lower part of my garden for tomatoes, and had enough from a few plants to supply my table three times a day during the summer, and an abundance of green ones during the autumn for pickling. The space in front of the house is made attractive and pretty by different creeping vines, such as wisteria, honey-suckle, scarlet runner, morning glories and nasturtiums. These climb gracefully over the balcony and fences or are trained over frames and stumps of trees. I also planted borders of migsionette, geraniums, etc. A friend gracefully contributed to our pleasure by sending us a quantity of tulip bulbs, so that we had all through the spring, a beautiful display of these brilliant flowers.

A year or two after I had completed my house and planted my small garden, I was fortunate enough to obtain possession, temporarily, of a lot of land adjoining my own, which I planted in vegetables, and though this was not included in the original plan, I make mention of it, as the whole amount of land is not greater than the means of many to whom I write, would permit them to own. My new piece of land is 175 feet wide by 200 feet deep. I give the result and cost of one year's farming. It was ploughed once in the early autumn at an expense of $6.00, and again in the following spring for the same price ($6.00), twenty-five loads of manure, at $1 per load, were put over the land. A strawberry bed of 500 plants was set out. The first year we had only a return of 4 or 5 quarts, the second, was picked considerably over 100 quarts. A barrel and a half of "early rose" potatoes were used for planting; they yielded enough to supply my own family of ten persons, and my son's of six, during the entire summer, and we had fifteen barrels over for our winter supply.

The other vegetables, etc., were green peas, string beans, lima beans, beets, carrots, white and yellow turnips, parsnips, onions, corn, summer squashes, spinach, cucumbers, lettuce, celery, parsley, melons, rhubarb, cabbages, egg plants and tomatoes in the greatest abundance. The number of egg plants was a constant surprise—there were enough tomatoes to supply six families during the summer, besides leaving a large quantity of green ones for pickling in the autumn. We sold $15 worth of cabbages after giving them away liberally during the entire season. I now sum up the cash:

Ploughing twice,	$12.00
Manure,	25.00
Potatoes for planting,	3.00
Seeds,	10.00
Egg plants,	1.00
Rhubarb,	2.00
Tomatoes,	2.50
Lettuce,	.75
Strawberry bed,	5.00
Extra labor,	10.00
	$71.25

The weeding, hoeing, etc., was done by a boy of eighteen whose wages are $10.00 a month. He lives in our family the year round; doing all the out-door work of the house.

With this simple statement of facts, I close, hoping that some few, at least, may be induced to do likewise.]

TO THE HAMPTON GRADUATES.

I will now tell you something of the place [illegible] is an old set- in God the Father Almighty, &c.—the Apostles' Creed.) Then I read a chapter in the likely to be any trouble about her getting a situation, in fact, they wanted her at several places

TO THE HAMPTON GRADUATES.

My dear young friends:—

I regret that the pressure of many claims upon my time and strength have prevented me from writing to you during the past winter as frequently as I intended, but you have been daily the object of my thoughts, and very often of my prayers for your temporal and spiritual welfare. Several subjects have presented themselves to my mind in thinking about you, but at this time I can offer only one for your consideration.

While looking at the map on which are marked the places where you are teaching, the inquiry has arisen in my mind, "How many of these schools might be made permanent?" Some of you, I am pleased to find, are teaching the same school year after year, while many, perhaps most, of you take a new school every year with the expectation of obtaining a better position. It is certainly reasonable and proper to do this when there is no prospect of improving your condition by remaining; but I wish very much you could induce the inhabitants of the town where you are teaching to take such an interest in your school that they will make it worth while for you to continue the charge of it year after year and try to raise it from one of Primary or Secondary grade to that of a Grammar or High School. If the State should be unable to pay you during more than four or five months of the year, I wish you could persuade the parents of the children to pay something for their education, and others of the citizens to contribute to the support of the school, so that it might be kept up for nine, or at least eight, months in the year. If your friends in the North believed that such a school would be maintained permanently, they would, I have no doubt, help you in the purchase of maps and simple apparatus, and in gradually forming a small library of books to be lent to your pupils. You could yourselves collect specimens of objects in Natural History,—such as minerals, shells, insects, plants;—by the aid of which you could give object lessons that would be useful to your pupils in stimulating their curiosity and improving their habits of observation. They would become interested in making such a collection, bringing you for specimens the leaves and fruit of different kinds of trees, a piece of the bark, and a small neatly cut piece of the wood, etc. This would be more easily accomplished by those who teach country schools, but boys who live in towns love to walk in the neighboring woods, and the pleasure of their rambles would be increased by a useful aim.

A still stronger incentive to continuing to teach in one place is that parents and children become more attached to a good teacher the longer he is with them.

Do not suppose that I wish you, my dear young friends, to be so self-sacrificing as to remain year after year in a community where you have no hope of enlightening the people or securing them from their apathy. Your superior education entitles you to expect support and encouragement from the inhabitants of the place where you teach, and sufficient appreciation of your work to offer you inducements to remain with them. You shed a bright light in many a dark place; you dispel many mists of error, ignorance and superstition, and through trials and disappointments you are surely, although in some instances more slowly than you wish, elevating the minds of people who have been hitherto debarred from the blessings of education. Your efforts may sometimes fail to be duly appreciated, and your pecuniary reward may fall far short of your desert; but your record is on high, and, if you follow the path of duty faithfully to the end, your recompense will be sure from Him who notices every effort and every sacrifice made in His name and for His sake.

I am your sincere friend,

M. A. L.

P. S. After finishing my letter I received from one of the Hampton graduates a letter which confirms the opinion I have expressed. The writer has taught for several years in one school and gained the esteem and love of the people who would be very unwilling to part from her, and she herself feels assured that she can accomplish the greatest amount of good by the course she has pursued.

M. A. L.

LETTERS FROM HAMPTON GRADUATES.

WAITING FOR EIGHT AORES AND A MULE—EVIL OF INDISCRIMINATE GIVING RECOGNIZED. "CUNNING DOCTORS." WHIPPED FOR SELLING HER OWN PIG. GYMNASTICS IN SCHOOL. FAILURE OF MORAL SUASION.

VA., *Jan.* 30, 1878.

Miss M——, my dear friend:

I received your kind letter some days ago, and should have answered before, but I have been so busy. I did not forgat, nor could I forget for without your aid, I do not know how I would ever get along.

Noah's Ark landed two days ago, and I am a thousand times obliged for your continued kindness.

I will now tell you something of the place where I am teaching. C—— is an old settlement; was settled in 17—. It has about fifty or sixty houses, and the most of the houses look like they had been deserted by the whites. The surrounding country is really handsome; it is a mountainous region and has a great many springs; it looks a little like West Point, N. Y. I do not believe that there has been a house built for forty-one years; so the town is one of *has been*.

You asked me to tell you about my school-teaching. I have got along a great deal better than I expected to as far as I am concerned. I have made quite a success of it. That is, I am satisfied that I could be a school-teacher in this place. But I suppose I have got into the poorest place in Virginia for a teacher. The people here are too poor to send their children to a free school. Forty-five scholars on the roll, and only two that have made a full month, and only one that has had all the books that he or she needed. Everybody knows that if a child is a one day and out two, you cannot teach that child any of much consequence.

I call the roll, mornings—"Well, James, or John, why were you not at school yesterday?" —"I had the baby to attend to," or "I had to bring water, Mother was washing," or "I had tobacco to strip," and all such excuses. So, between the tobacco, water and babies, it knocks the school sky high.

The people have been free fourteen years, and now too poor to send their children to school. The next question is: Why is this? Only one reason I can give, and that is, they are too lazy to accumulate a few dollars. Still looking up to the white man, but he turns a deaf ear to the black man, for the white man has his own child to send to school by the sweat of his brow.

I went to Dr. —— and told him all about the school; he said that all the teachers in the county had made the same complaint, so he told me to go ahead and do the best I could. I can scarcely tell you how ignorant the people are. Some have never been twenty miles from the smoke of their chimney. The colored people will not go to work here because they are waiting for the Yankees to come and give them eight acres of land and a mule, and they have been waiting ever since the fall of Richmond. Some Yankees came here in search of gold, and being disappointed, gave the land to the colored people. This really did more harm than good, because it encouraged the rest to wait.

The white people have treated me real kind so far. They have invited me to dine with them. Dr. ——, the Superintendent, has been very kind indeed. He gave me books and papers.

I got along one month without whipping, but I believe I have whipped enough since to make up for the last time. I have got the children just as afraid of me as if I were a lion, and yet they all seem to love me, some of them too much.

I will now speak of the habits of the people. They all believe in witchcraft or cunning. When one of them gets sick they send for a cunning doctor. He comes with his spade or mattock, and says, "it is right down here," and that will be right in front of the door, and he will dig up a bundle of nails, pins, roots, hair and rags, all tied up together. Then he says "This is it, and I will cure you for ten dollars," and he will get it too, and he seems to be the only man that does get cash for his work. How the things get there I cannot tell, whether he had them in his pocket, or had hurried them some time before. I put them down to the lowest, in my school, but since I came to talk with such good old Christians who I know would not tell a lie, and they told me they have *seen* ground puppies jump out of folk's feet, and lizards and snakes. I have not said a word about cunning since, and never intend to; for they can poison you anyhow, for the devil seems to be at the helm. I do not believe in cunning, but I only thought I would tell you what I saw on that point. They die here like sheep. I never saw so many motherless children in all my life. I will tell you one of the doctor's doses: a teaspoonful of lime, ashes, salt, pepper; that much he was seen to put into a glass besides the root he had taken. He gave this to the sick man at night; then in the morning he was as dead as a stone, so that was the last of that poor man.

They marry here on Sundays, and have prayer-meetings Saturdays. It opens at nine, and closes Sunday morning about five. This in the place for shouts. I never saw so many discords in marriages in any place. A man can get a divorce for a few bushels of corn. About twelve months ago, a man's wife sold a pig that was her own; her husband had her tied to a post and thirty-nine lashes put on her by an officer, and yet that man seems to be respected. Sometimes four or five will go to jail in a week. They will go into a man's barn, and kill a cow and cut her up and carry it off. Cows, sheep, hogs and corn stand a poor chance here. The people scarcely know that they are free. The KuKlux have been here. The white people told the colored that the KuKlux were people that came out of the moon, and that they would take their heads off and ask you to hold it. I have seen young men here that would not go to the spring at night to save your life.

I hope you will not get tired of reading this. I will be thankful for any reading matter that you have to dispose of. I feel under many obligations for all of your kindness to me.

Programme for opening my school:

I have them all to repeat after me—I believe in God the Father Almighty, &c.—the Apostles' Creed.) Then I read a chapter in the Bible. After that I have the instruction questions and answers—as follows:

Who was the first man? &c.—(3 questions).

I sing one hymn, and then open the school with counting the first thing. I have some little children five years old who can count a hundred. Many a one only two could count that much.

I walk to the church to teach Sunday-School every Sunday—it is only sixteen miles, there and back. It is something like the day school; the people are too poor to attend much, there are about sixty children that should attend, and only ten or fifteen attend it. It is not the children's fault, because I have seen them a-crying to go, but the old slave will not go without the white man to drive him.

I visit all the children's parents. It takes a great deal of my time, but I have to do so, to beg them to let the children come.

Please remember me to my friends at Hampton.

I have the honor to be,

Respectfully yours,

S.

Nov. 18*th*, 1877.

My dear Miss M.:

As I have been from home almost two months, I guess you think it time I was letting you know what I am doing; I think so my way. I have been teaching five weeks and have made out one monthly report, and am going to send it in to-morrow to the County Superintendent. My school numbers thirty, but will be larger soon; all that come now are small, but five: three boys eighteen, and two girls fifteen years old. I am expecting a visit from the County Superintendent soon. I would like to tell you all about our examination, and the Teachers' Institute.

I remember writing to some one at Hampton that I would be reminded of Hampton again when I went to the last. It was not so, only the *name* was like anything we had there. The room where the Institute met was an open house, the floor was an inclined plane; down the floor great streams of tobacco juice flowed. We always choose the upper seats to save our skirts. The men seem to think they were treating us with the utmost respect. The other teachers did not seem to mind it at all.

Well, Miss M., I have introduced gymnastics into my school. I do wish you could look into my school-room some times and not let me know you were looking until after you had seen all you wanted to and then call my attention. I like teaching very much, but I cannot get the scholars to come regularly, nor promptly. I tried to organize a Sunday-school since I've been here, but have not succeeded as yet. This morning I went to the church hoping to find a full school and found only two. I am going to try again soon, and see if I can possibly get a Sunday-school. I hope I may be able to. Most of the people round here are owners of property, and are getting along very nicely.

Give my love to Miss H. Tell her to save my goose Thanksgiving. You are asleep now my dear Miss M., it is after eleven o'clock. So I bid you good-night, and go quietly to my room. Write soon, to your devoted

L.

OCT., 1877.

Dear Teacher:

I opened some time since—been teaching just a month to the day. We have a terribly large school—numbering near a hundred and forty, and a great many have not yet set in. The school numbers at present a great many more than I ever knew it. You asked about my sister coming; I guess I failed to tell you that the males and females have separate schools. We teach boys only, and I tell you, rough customers some of them are. I had begun to think that I could govern a school without whipping. I had almost unlimited confidence in my ability to govern a school by "moral suasion" as its called, but since I have been teaching I have found how mistaken such an idea was. Boys are coming to school now, who for the last two or three years have, been idling away their time on the street and of course they have acquired all the traits of character that belong to the street loafers, and, of course, such boys as those have to be severely dealt with, but after next month, I seldom expect to have to whip a boy. So far though we have been very successful. I do not teach any classes below the third reader. The State Superintendent honored the school with a visit this week. He questioned them a good deal in regard to their studies, but did not address the school. One of his questions is Geography was to know how to go from here to Charlestoa, W. Va., by water. Can you tell? The class told him very promptly.

That young woman about whom I wrote you could not make it suitable to come to Hamptoa, and, as I had attempted to help her, I just turned my efforts in another direction, and began giving her lessons myself, that she might teach, and although she had not been to school for two years, after helping her for a month she passed a very creditable examination, and I assure you some portions of it were not so easy, but she is about as apt and diligent in her studies as any one I know. Well, after she had passed examination it was easy enough to get a school. The clerk of the district where I taught last year, had asked me to secure teachers for his schools, so you can see there was not likely to be any trouble about her getting a situation, in fact, they wanted her at several places but she rather chose to go to where I taught last term. I have received a letter from her once since she has been there; she has a good school and is getting on nicely, and I think that I shall go down and see her next Saturday. Her parents are both dead; her father went crazy from the effects of drinking whiskey. She has lived with her aunt since the death of her mother, who, it is said was a very nice woman.

I have a great deal more that I will write next time. I teach night school also, it numbers about twenty-four.

Yours truly,

M.

CENTENNIAL HORSES.

WE ARE indebted to Messrs. Harper Bros. for the spirited portrait of four of the horses exhibited last summer at the Centennial Exhibition. Their reporter says that a curiosity of the American exhibit was a beautiful Arabian horse bought from a tribe of Bedouins—the wild tribe, which roam the deserts of Arabia and possess horses which are the finest in the world for beauty and fleetness, and loved by their wild masters like their wives or children.

This Arabian horse was fifteen hands high, a grayish white, very gracefully formed, with an eye gentle as a fawn's. His colts by Kentucky and Norman mares were shown and praised as fine roadsters. "In striking contrast to this dainty son of the desert," says the reporter, "was the little, wicked-looking, black French stallion, of Percheron breed, that stood in a neighboring stall, shaking his long forelock out of his eyes and flourishing a tail of astonishing size." Another contrast of a different sort was seen in the stalls where the ponderous, gray Norman draft horses stood. These huge animals come of a race that is as docile as it is strong. The larger numbers of noticeable animals were of English or Scotch breeds.

An exchange gives some interesting bits of information concerning horses in the United States:

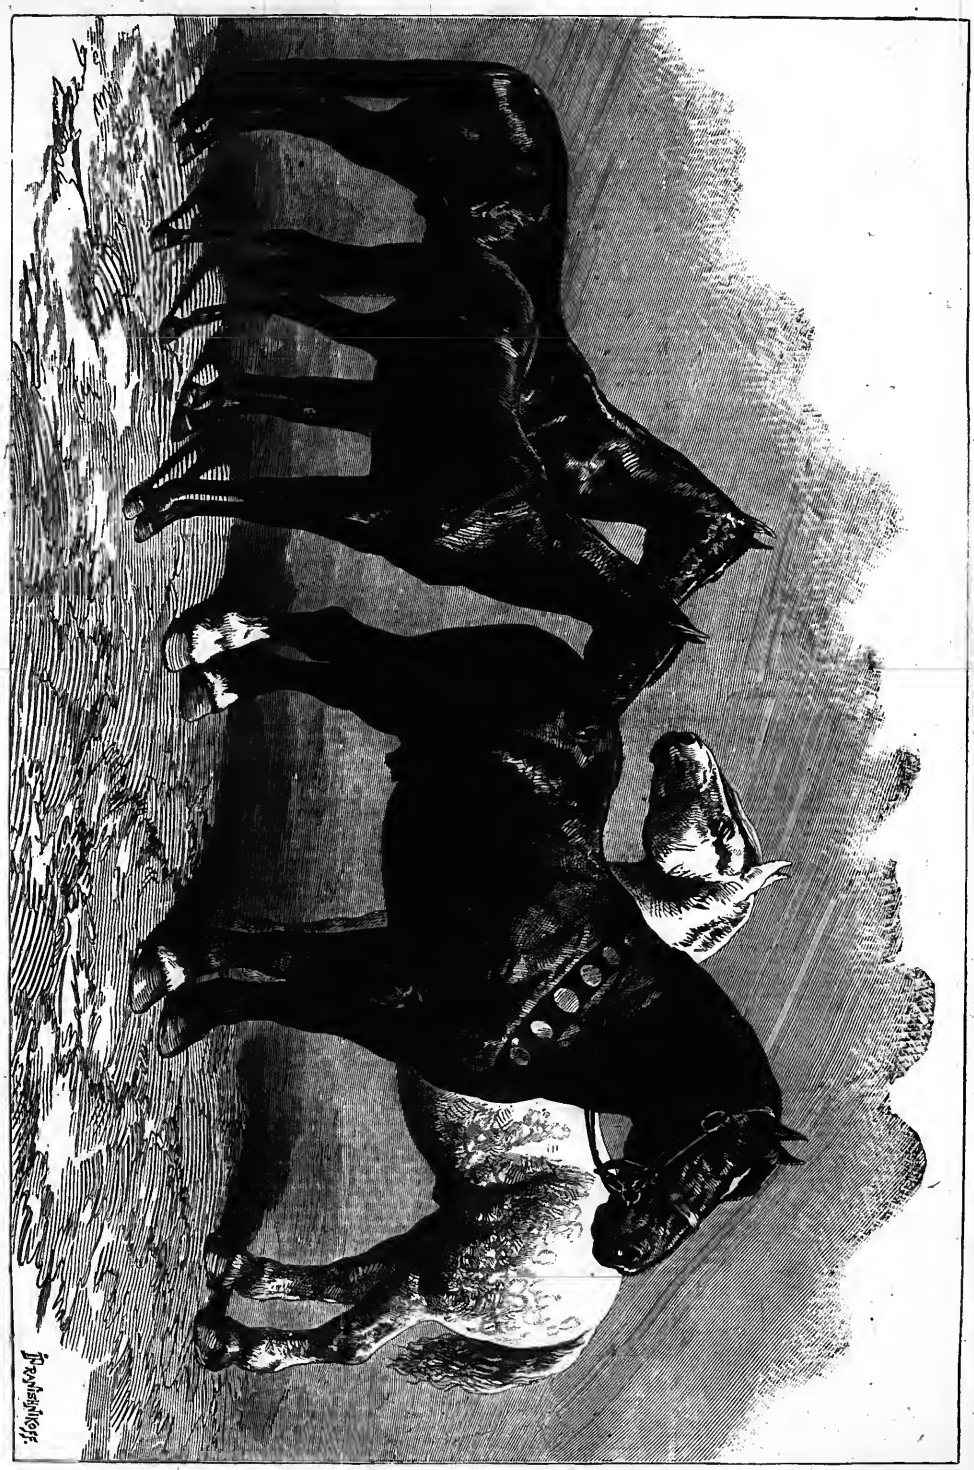
"HORSES AND THE HORSE-TRADE.

"The number of horses in the United States is estimated at 8,000,000, Illinois ranking first in numbers; New York next with over half a million; then Ohio, Missouri, Pennsylvania, Texas, Iowa, Indiana, and Kentucky. The number of horses in the New England states is estimated at 500,000, Maine having the largest number, and Massachusetts next. The farms of Maine and Vermont are noted throughout the land. The horses raised in Maine are, generally speaking, fine specimens of the equine race. So are those imported from Vermont and Canada, the latter having qualities of their own quite distinct from the thorough New England animal. The weight of a good roadster may vary from 950 to 1,000 pounds. For ordinary purposes on the road and for general work an old horse dealer tells us that 1,000 pounds is heavy enough. A larger sized horse would not be found serviceable in horse-cars, omnibuses, or hacks, and certainly not in the huggy or light carriage. A heavy horse will not last so long over the hard pavements of the city as a medium sized one. The practice now conforms to this rule, we believe, as strangers especially will notice in all large cities (in the East at least), quick, tough horses for most kinds of work. A medium sized horse will range from 14½ to 15½ hands in height."—*Dunton's Spirit.*

"THE HORSE TO HIS OWNER.

Going up hill—Whip me not.
Going down hill—Hurry me not.
On level road—Spare me not.
Loose in stable—Forget me not.
Of hay and corn—Rob me not.
Of clear water—Stint me not.
Of soft, dry bed—Deprive me not.
Tired or hot—Wash me not.
Sick or cold—Chill me not.
With sponge and brush—Neglect me not.
With hit and reins—O jerk me not.
And when you are angry—Strike me not."

"GEN. O. O. HOWARD has again, and we trust finally, been relieved from responsibility for the misuse of the funds of the Freedmen's Bureau. The Judge before whom the case was tried, in Washington, yesterday, declared that the General himself had certainly not misappropriated a dollar of the money, and that, under the circumstances, he could not be held responsible for the misconduct of his subordinate, General Balloch. The Judge, therefore, ordered the jury to return a verdict of acquittal, which was done promptly. General Howard has been the victim of much vile abuse in connection with this matter, but it may be hoped that the fact of his innocence will be accepted now even by the disreputable and scurrilous guerilla journals who have made him the favorite target of their calumny."



CENTENNIAL HORSES.

CONJURE DOCTORS IN THE SOUTH.

turn him loose. Every time they would take hold of him the same thing would occur, so not being more attentive; however, they had done just as he had directed them.

weeks for stealing." The girl was a good, virtuous, honest girl, respected by every-

OONJURE DOCTORS IN THE SOUTH.

A careful inqhiry among the stndents and graduates of Hampton has elicited a great mass of testimony in regard to the prevalence of superstition among the freedmen; especially of the belief in what is known among them as conjuration, or "trieking." From over a hundred letters, we select the following specimens, to throw light upon the mentel condition of the masses of this people, and the kind of work that mnst be done amoeg them if they ere to be raised to civilization or even saved from extinction.

It will be noticed that the writer of the following letter—a memher of the Junior class—does not hesitate to avow himself a believer in conjuration. Two years more in the school will change his ideas, it is to be hoped. Yet nothing is harder to eradicate from the mind then early-acquired superetition, and there is little doubt that many who are less frank in its ecknowledgment are hy no. means free from it.

DEAR TEACHER:

Being requested hy you to tell you what I know about coojure Doctors, I will endeavor to do so, accordieg to the best of my ability. I remember once beiag at a woman's house, and there were six mea aad five girls there, and a conjure Doctor passed, hie aame was ——, hut the people called him Dr. ——. He passed the houge, and there were three mon with him, and after he had passed the woman'e house, about a half a mile, those that were at the woman's house, began to talk about him and make fun of him, with the young girls, and the woman told those at the house, that they had better stop talking about that conjurer; she said, "if you don't he will conjure you all." The men said to her, "He doesn't know that we are talkieg about him." She replied, "You need not fool with those conjurers, for they will conjure you hy looking at you," hut they would not stop The conjure Dr. said to the meu with him, that he had to go back to that womaa's house—which he had passed about a mile back. He said, "They are talking about me and makieg fun of me;" and he turned roued, aud went back, and when he got la eight of the house they all got so afraid that some got under the bed and some went up tha stairs, and the head women of the house got almost frightened to death, but he went in and told them to come from down the stairs, and get from nnder the bed, for he said, "I have somethieg to tell you all," aed they all looked as if they were condemned to die, hut he said to them, "Don't be uneasy," and he told them every word they said about him and not one could deay it. He said "honeys, I won't do anything about it this time, hy you not knowing who I am, hat when yon are talkieg about me, yon had as well be talkieg about Jesus Christ, for I can do yon as much good, and I can do you as much harm." They all begged him to excuse them, and told him that they would never say anything about him agaia, and thanked him for not harting them in aey way; aad you could not hear one of those men say any harm about him after that. All they would say would be that they would never say any thiag aboat another conjurer as loeg as they lived, and after he had gone, he said to those men that were with him that those people were telkiag bad about him now as they were talking bad about him at first.

In 1873 I was going down the street and came across a conjure Dr., and he asked me where did a certain lady live, aad I told him, and he weet there; and when he got there the woman told him she had some kind of pain in her head and side, and told him something kept comiag up in her throat and she did not know what to do, and she said, "I want you to look over for me," and he went aud got his cards and shuffled them, and told her to take them in her hands, and she did so, and he told her to hand them back to him, and she did so, and he began to tell her what was the matter with her and he told her she was conjured and told her what it was about. Aed he told her she had better do something for it very soon, for if she didn't she would be under the ground very soon; and she told him she did not know what to do, and she asked him if he could do her any good, and he told her yes, he could care her in two days. She said "All right," and he told her she was conjured by drinkiag a cnp of tea at a wedding, and he looked in his sack, and got out his roots and made her a cup of tea and told her she would see what that was in her, and he told her to drink the tea, and she did so, and in five minutes a scorpion came ont of her month. That frightened several of them, and after this thing was seen, they all got on the right side of that conjure Dr, and the next day she was all right, and she paid this conjurer twenty-five dollars aad gave him as mnch as he could carry home with him, that is, anch as meal and meat, and flour and lard.

At home there was a conjure Dr. that did a crime. He said he was going to kill a man, and this man whom he said he was going to kill had him put in jail, and as fast as the jailor would lock one door and tnrn hie back, this coajurer would come out behind him, and they put him in three times, and he did the same thing avery time, and they started to put him in for ths fourth time, and he said he was not goiag in thare any more. So the sheriff took hold of one eide of him, and the coastable hold of the other, and just as soon as they fastened him, scorpions would rnn out of hie coat sleeves and rnn on them, and they would turn him loose. Every time they would take hold of him the sama thing wonld occur, so they turned him loose. I remember oace of being at a woman'e house, and a conjurer came there, and hy the time he got in the house he told her that she was conjured and she asked him to look and see how her time would run. And he throw his cards to the top of the room and called them out one by one until he called them all dowa. And he looked over them, and told her that she was badly off and told her if she would put it into his hande he would fix thiega. And she told him all right, and he said, "Before I will do anything, you shall see who coejured you, and the one that conjured you shall come and make a great to do over you;" and he told her not to say anything to him. That evening the man came and tried to make them believe that he believed he knew who did it, but they did not say anything much to him. But this coajure Doctor was off in the woods fixieg for the man who conjured the woman, and when he went away, this conjure Dr. went back and asked the woman if she wented him killed, and she told him to do as he chose. And he said, "What he coejured you with will kill you in five daye;" and he said, "I shell turn it back on him;" them man threw down there walkieg atick and it will turn to a snake. in 1878, I was in —— Couety workieg, and there was a lady there hy the name of Clariada ——, and they say round there that she is as dangerous as a rattlesnake. If any one would go to her, yon might hear her scream for a quarter of a mile, and she would begin to tell them whatever they wanted to know. There was a man went to her while I was over there, and she told him who conjured him, and this man went and got after him about it, and he said no one would tell him he did it, and the man asked him who told him that he conjured him, and he said Dr. ——; and this man went to thie conjurer's hoase, to shoot her, and when he got there he pulled the trigger aed tried to shoot her, hat she had tricked his gun and he took it down, and just as soon as he took it down both barrels went off and liked to have killed him, and she told him he would have to crawl home, or some one would carry him, and he started heme and before he had gotten two hundred yards from the house he could not do anything but crawl, and a cart came aleng aud carried him home, and when he got home he was so badly off that he did not live hut half a day. This conjurer had conjured him so badly that he could not live.

At my home once a conjurer was caught in a man's orchard, up a tree, and the man got his gun and shot after him, and this coejerer told the man to shoot again, and he shot him again, and this coejurer told him to come and get his shot, and the man went and the conjurer looked under his arm aad gave him his shot. The people at my homa believe in these conjure Drs. more than they do in the Physician Dr. These conjurers can get their money time the work is done because the people are afraid of them, and I believe they make more money than the white Dr.

I now will close hy saying that I believe in the coajure Drs., and all this that I have written I can vouch for myself.

Yonrs truly

R.

A natural hesitation—partly fear, and partly sheme—was felt by many of our students, at the idea of thus revealing the superstitions of their people, until they were made to perceive the motive and importance of such a consideration of the work before them. Many of the letters show a serious appreciation of that work. It cannot be too serious, and we urge it upon every thinking freedman, with the interests of his race at heart.

What kind of people are Conjure Doctors? They are a class of ignorant people that go around pretending to be ahle to core people hy certain performances. They sometimes make from fiftees to twenty dollars a day through their base deeds.

They are found mostly in the South where people are not so enlightened as they are in other parts of the country.

I have seen several of them, hut have not seen for myself much of their worke, although I have heard a great deal of them. I have heard my uncle speak of several that he has been in contact with. I remember hie telling me abont an old man that pretended to have the power of fixing people so they could steal, murder, or do anything else that they wanted to, and not be found out. This old man was a slave on a large plantation. His fellow-servants would pay him whatevar he charged; then he would give them some kind of root to chew, telling them that they could steal or do anything that they wauted to and their masters would not find it out, if they chawed this root. They thought all he said was trne. When they were caught and punished by their masters they would complein to thie old man. He would tell them they did not do just as he directed them.

When his patients did not get well, he would say it was not his fault; as they did not do as he told them they must enffar for it. They did not once think that he really did not have any anch power, and hlamed themselves for not being more attentive; however, they had done just as he had directed them.

Instead of encouraging people, conjure doctors discourage them when they find them complaining, hy telliag them some one has conjured or tricked them and ueless something is done for them very soon, they will die, or something dreadful will happen to them. The patient are so saible in their doings that in many cases people have supposed them to do more good than real doctors. A great deal of their worke appear very true.

I knew an old lady that had not been able for several months to even sit up in bed. She was pronoaced incurable hy all the other doctors. An old conjure doctor took her in charge, and in less time than two moethe she was apparently as well as ever. How he menaged to de it, I do not keow.

Conjure doctors are not so numerous now as they were before our race became so enlightened, hut still they are too uumerous. They are a curse to their race. Instead of trying to elevate those around them hy doing those things that will lead them toward the light, whea they find how narrow their coeceptioas are, they take advantaga of them hy telling some great tale, and pretendieg to be ahle to do many things to get what little money they have.

We as a school should think on this subject, for it behooves us to prepare for all such obstacles that we are to contead with when we leave school. We aeed eot wait till we graduate to begin to he useful, hat we should begin new. If we begin with the determinatation to rid our land of all these superstitious notions, it will not be long before we shall rank amoeg the greatest nations of the earth. We are the ones to do it, so let us begin hy studyiag hard and trying to learn all that we can that will be useful to us. in this way we mould ourselves for our work hereafter.

L.

The Conjuring Doctors. This is a name applied to a set of colored people in the South, who pretend, either that God favors them, or that they sell themselves to the Devil, who gives them power over disease, so that they can kill or cure as they wish.

They cure, or pretend that they can cure, persons who, they say, have been tricked. Of course they only need to be sent for or consulted when one is sick; they will readily determine that they are tricked. The people being so ignorant and superstitious that they are ready to receive anything, therefore, it seems that the idea of conjuration has become imhued in them.

Conjuration, I find, is one of the many horrible features of ignorance and vice, one that it is very difficult to rid a people of. Time shonld be devoted to the consideration of tha matter, in the South, where it is known to take hold of the people in such a manner. It is not only the wle who practice this misdemeanor and believe in the same, but I believe it is safe to say that at least three-fourthe of the mass of negroes have a tendency to believe in it, and one-fourth, you could not preach ont of a belief in its truth. It is said to be so common and popular that it is practiced not only by the people of the church, but even that their leaders are often known as Conjure Doctors. My impression is simply this, that our people, being a race that delights in anything fascinating or even delusive in point of fact, have adopted such sophistry; and that it has spread to a great extent and to the demoralization of a great many of our young people. I fear it may continue to do evil to the cause of the civilization of the negro of the South.

I am proud that the time has come for the giving of attention to this evil, and hope that it may be rooted out ere long, hy our energy and advice with the aid of our friends and God.

I am glad that I haven't had the chance to know as much of the Conjuring Doctors as many of the students, for it seems to have enchanted them to some extent, I take warning not to trifle with such principles, hnt to "strive to overcome evil with good.

The ceremonies and tricks of these conjurers and Conjure Doctors are often different. They effect the cure of their patients mostly hy the use of roots, snakes, scorpion, lizard, &c., which they usually keep with them.

My idea of such action is that it is an absurd superstitious folly that should speedily be rooted ont.

G.

I will tell you what I have heard about it, and know to be the truth. I can't say that I believe it, for I do not. I have seen enough to to convince me that such things con be done. For instance, an old woman was walking along one day, I weut by her and spoke to her. I don't know her neme. She did look so queer; you can always tell them when you see them, for they always have red eyes. I don't believe yon can find one who has not red eyes. So a young girl and boy passed her, and they laughed at her; she turned around and said to the yonng girl, "you will be in the work-house before this time two weeks for stealing." The girl was a good, virtuous, honest girl, respected by everybody that know her. Sure enough, before two weeks had passed, we saw her name in the papers for etealing, and that she had been sentenced to three years' imprisonmeat. To the yonng man the conjurer said, "Your head will be turned around and you shall crawl on the earth like a enake before you die, and that won't be long." I will tell you how she did this. I stood there and saw her do this myself. She spit on the ground, and then crossed it, and all come to pass just as she said it would. Then I have seen people thet have been conjured. Some get over it, and others just linger and waste awey, and when they get that notion in their heade thet they are hurt, you can't beat into their minds that they are not; they will never rest until they have sent for an old man or woman, as we coll them, "Conjure Doctore." And then they sit down and tell them, "You ere poisoned, and I will put it back on the one that hurt you, if you will pay me so much money," and then they go to work and fix all kinds of tea, and give the person four or five bottles of medicine to take at different hours in the day. Ilcally, I think that the tee end other medicine that these conjure doctors give the people, help to meke them sick, and they keep taking it without feeling better, oely getting worse ell the time from the effects of drinking ell kinds of root tea. I hed an aunt that said she was conjured, and she told ne whet for, end grandma paid an old woman $25 to cure her. She hed been sick for e whole year; she could walk only on crutches. This old woman gave her something to rub her limbe with every night end morning. After she had used thie medicine hy her directions for a month or so, she got so she could walk across the room, end then out of doors, and she has been walking every dey since. She took out of her right arm e spool of chrend, and out of her leg a lizzard. This is the truth, whet I saw with my own eyes. Then a dear friend of mine was sick; her parents had all the doctors come to see her, and spent money on her in every way possible, but instead of her getting better, she would get worse; so one day her brother said he believed she was hurt, end thet he was goieg to e conjure doctor to ask him to come and see her. Well, sure enough, he did bring him home with him that night. I remember the night just as well I went up to to see her; there we sat telking about different things; in came her brother and this man. Her brother said, "I will make you ell ecquainted with the Rev. Mr. H." I can see him now, for we did laugh at him. He had his hair braided like a woman, and rings in his ears. He went to work, and told enough to set one sick person crazy. Then he said, if you come and go with me, I will dig up what they put down for her; her brother went with him, and he dug up e bottle thet hnd all kinds of things in it, flies, bugs, lizards and lots of green looking things, and one lerge frog. After he had explained it to those who were there, he took it, spit in hie hand and rubbed it over the bottle, and told her brother to put it in running water, and that it would make those who had hurt her wonder about it end be troubled about it why it did ne hnrm. Well, she did get better efter e long time. I can't say she was hurt; she herself did not believe it, but like e good child she obeyed her parents and took tha medicine. When I left home she was in good health, and I heve heard from her since and she is still in good health. They have a way to fix you to make you love any one when you don't want to. I knew a women who loved a man at home, and this mnn used to treat her very coolly. So she said she intended to have him, if money would get him, so she went to an old woman and told her ehont this man, and how she loved him, and thet she would pay her any amount of money to fix him in way to make him love her. So this old woman told her to bring her one of her own underskirts that she could let it be buried in e place where he could step over it, and she had a lock of his hair; so she did have it put just where he would step over it, and he commenced to love her after a month or so. He got so he could not stay away from her, and they were married just before I left home. Then there is another thing that the people believe in, our poor ignorant race, and that is *witch riding*. When they can't sleep at night they imagine that something heevy is on their bed, then they will go to work and say, "Such a one would not let me rest last night: she came in shape of a cat"—or some other name they will have it. I heerd and old woman tell this story; she said it was the truth. I will tell you it to you just as she told it to us. She said thet in slavery time they had an old cook, they were all slaves for one family, and this old cook was so mean they could I hardly get along with her, and she could speak to her mistress any way she wanted to, whon others would be whipped for so doing. One day, one of the servants said something to her, and she replied "You shan't sleep any to-night I After they had all gone

up stairs, about nine o'clock, this old woman came out of her room. She was in such a

ing for a family of six or eight persons: "First, have plenty of boiling water; to every boiler-

fully declared under oath; and false swearing is severely punished. The ncenser must face the

the Board, William Coppinger, Esq., corresponding secretary of the American Coloniza-

up stairs, about nine o'clock, this old woman came out of her room. She was in such a hurry to leave that she forgot to fix her things in her room, and she left her door open. They always go out through the chimney, so as to go over the top of the house. So when she had gone, they went into her room to see what she did before going. They found her skin on the hearth where she had skinned herself, so she could be limber. They took it and filled it with salt and pepper, so when she came home she could not get in her skin, because it burnt her, so she had to get into bed and stay there. Next morning, when her mistress went into the room to see her, it frightened her so to see her in that condition that she sent for the master. He asked her about it and she had to tell him. So they tarred and feathered her and burnt her to death. This is all I have time to tell you about. You can judge from this how ignorant they are to believe in such things.

A.

At Home.

THE SPARROW.

A sparrow lighted chirping on a spray
Close to my window, as I knelt in prayer,
Bowed by a heavy load of anxious care;
The morn was bitter, but the bird was gay,
And seemed by cheery look and chirp to say,—
"What though the snow conceals my wonted fare;
Nor have I barn or storehouse anywhere,
Yet I trust Heaven e'en on a winter's day."
That little bird came like a winged text,
Fluttering from out God's Word to soothe my brain!
What though my life with wintry cares be vext!
On a kind Father's watchful love I rest;
He meets this moment's need, I leave the next,
And, always trusting, shall be always blest!

—Rev. Richard Wilton.

OATMEAL AND CRACKED WHEAT. FOOD THAT IS GOOD.

Since I wrote last, we have been using freely of oatmeal and cracked wheat, and we do most heartily endorse them as wholesome food. In oatmeal we found the materials for the growth of the muscles, the bones, and the sustenance of the brain and nerves. We use the oatmeal made into mush or porridge, eaten either hot or cold, with butter and sugar, or with cream and sugar, if preferred. How to cook them? Well, put a pint of oatmeal to soak in warm water a few hours before cooking it, just water enough to cover it, then pour this mixture into boiling water, a little at a time, with a good pinch of salt, and let it cook slowly, same as a cornmeal hasty pudding, for half an hour or longer. To make a pudding of it, take eggs, milk, sugar, raisins and cinnamon, the same as for other puddings. If a heartier dish is desired than either of the ways mentioned it can be made by cooking it with the water in which meat has been boiled, skimming off the fat, and thus adding the relish of the meat. Or, soup can be made by cooking meat until very tender, removing it from the bones and chopping it up finely and cooking it in with the oatmeal.

When eaten by the invalid, it is well to have it thin like gruel, served with sugar and milk, or cream if desirable.

CRACKED WHEAT.—I cook it always one way. It is apt to burn, and for this reason I put it in a little tin pail, and set the pail into a kettle of boiling water; cover closely, and let it boil half or three-quarters of an hour. I soak it previously, the same as oatmeal, and stir the mixture into boiling water.

In a family of little children these two dishes are almost indispensable, and especially where the little ones, through inheritance, will be likely to lose their teeth while young. Sometimes the bony structure of children is little better than chalk. In this case, oatmeal and cracked wheat should be articles of daily food. They should learn to like them, if only from a sense of justice due their mortal frames.—*Exchange.*

LEG ACHE.

A "Relieved Mother" writes to the Chicago *Tribune* to tell another mother how to relieve this really distressing pain: "When one of the small fry makes night hideous with the cry of 'leg ache,' let her rise, wring a common towel out of cool water, wrap it around the offending member its whole length, and instantly cover it with flannel. A flannel skirt is usually the most convenient article, and should be thoroughly wrapped around and pinned, or tied to its place. The mother can then return to her bed, and the patient—after one gasp—will bowl no more."

HINTS ON WASHING.

The quickest and best way to do the washing for a family of six or eight persons: "First, have plenty of boiling water; to every boilerful add from two to three tablespoonfuls of pulverized borax; use some of the borax water from the boiler for every tubful of clothes, adding only enough cold water to make it comfortable for the hands; use soap on the most soiled, and rub on the board, or through a washing-machine; do not boil the clothes; have a tub partly full of boiling-hot borax water, in which to put the clothes that have been rubbed; let them remain in the hot borax water until you are ready to rinse them; from a quarter to a half hour will do; rinse in one clear water, without borax. Use very little, if any blueing. Borax will not injure the texture of the finest linen, and for infants' clothes or flannels it is the only thing that can be used with perfect safety. If stockings or socks are badly stained, they might be boiled in borax water for a few minutes only—too much boiling makes clothes yellow. Borax acts slowly but surely. The improvement in clothes washed after this direction will be noticed after the second or third trial, often after the first. Add a teaspoonful of borax to every quart of starch—it will keep the starch from sticking and add to the polish.—*Ex.*

RIGHTS AND DUTIES OF CITIZENS. II.

"*LIFE, LIBERTY AND THE PURSUIT OF HAPPINESS.*"

"Familiarity breeds contempt" in political as well as social matters; and no man, with eyes in his head, can fail to see, every day of his life, many citizens thoughtlessly trifling with rights which are priceless in themselves, and which have cost tons of blood and millions of treasure. This thoughtlessness arises partly from ignorance, and partly from the fact, that we have become so accustomed to the enjoyment of these rights, that we regard them more as parts of our nature, than as something earned or inherited.

The foremost right of every citizen is his right to his life; for it, he will sacrifice all other rights, indeed all else that he has. A right without the power to enforce the right is no right at all; and if a man's right to his life lies only in his physical power to defend it, the community in which he lives is a barbarism. In more civilized societies, the tenure of life is more guarded; but only in the highest spheres of civilization is life regarded as the most sacred possession of man. Indeed it may be laid down as an axiom, that the sacredness of human life is an exact measure of a nations civilization.

In this country a man's right to his life is most carefully guarded: not only is he protected from the violence of his fellow-men, but also from the violence of the State itself: and nowhere in the world is a man's life declared forfeited for fewer crimes, than in the most self-governed States of this Union. Not only is a man warranted in using all his strength to preserve his life, but in addition can call to his aid the entire force of the State.

Even treason is no longer necessarily punished with death: a court has the power to hang a man convicted of treason, but is permitted to simply fine and imprison him. In most States, a man's life can only be taken from him for his having wilfully taken another's life.

So accustomed are we to the enjoyment of this right to our lives, that we pay little heed to it. But a keener appreciation of this right would prevail if the State became too weak to offer the protection it now does, and forced us, as it were, to carry our lives in our hands.

Next to his life, the dearest right of an American citizen is his liberty of body and mind. The idea of liberty has never yet been accurately formulated in words: indeed for a free man to try to define it, is like trying to define the infinite. To do exactly as one pleases is not liberty; it is license: to do exactly as another pleases is not liberty, it is slavery: yet between these two, the idea of true liberty lies. Perhaps for the purposes of these papers the following, far from complete definition will answer. Liberty is a citizen's power to do all things, which if done by another to him would not injure him.

Impossible as it is to accurately express the idea of liberty in words; the fact is beyond question, that the very idea of liberty involves the idea of restraint: for liberty is a power, and like all other powers must be limited before it becomes useful. A barrel of water converted into steam may pass off into the atmosphere as useless vapor: but confined within the walls of a boiler, it becomes an active living force; a force of incalculable benefit to those who know how to use it; a source of terrible danger to those who are ignorant of its properties.

The freedom of an American citizen, consists in his liberty of body and mind. The State offers the citizen the same right to the free use of his body, as it does to his life; and cannot seize that body unless some specific act has been done by that body, which if done to it by another would have injured it. Before a citizen can be deprived of the liberty of his body, the wrong done by that body must be fully declared under oath; and false swearing is severely punished. The accuser must face the accused speedily in open court: no private trials can occur: the accused is regarded as innocent, until proven guilty, and the proof must be plain enough to convince twelve impartial men: no witness against the accused can testify more than he *knows*, no hearsay evidence being admissable: the accused is entitled to have legal aid furnished him by the State, if too poor to pay for it; and every doubt, if any exist, is to be cast in his favor. To trace, step by step, how these rights have been secured to us, would be to write the history of Anglo Saxon freedom, of the Magna Charta, the Bill of Rights, the publicity of courts and the accusatorial form of trial. Such is not the object of these papers; but suffice it to say, that these rights as enumerated do exist, and what greater ones could a citizen ask?

Having thus hastily sketched a citizen's right to the liberty of his body, we next come to his more intangible, but equally guarded liberty of mind. No despotism can be strong enough to curtail a man's right to *think*; but as before stated, a right is no right without the power to enforce that right; and what does it avail a man to think, if the State forbids him to express his thoughts? In this country a man not only has the right to think, but to express his thoughts orally or through the press; and there is no limit to this right, except the limitation involved in liberty itself. Mark this distinction, the United States gives every man liberty, no man license. Any man can say or publish what he pleases, and the State will protect him, so long as his words are such, that they would not injure him if uttered by another. In despotisms the government says what shall and what shall not be printed: but with us, a man may publish what he likes, and the law, which is but the written wish of the people, will protect him in the use of the right, and punish him for its abuse. It has been noticeable in all ages, that as men cease to be self-governed, they demand license for themselves, and slavery in some degree for others. The history of this country is full of examples of this tendency of mankind. When the Puritans crossed the seas, they claimed to be in search of religious liberty: yet scarcely had they landed, than it was evident that their idea of liberty, was freedom for other men to think as they did. Less than twenty years ago to express anti-slavery sentiments in some parts of the Union meant an invitation to leave that section of the country forthwith, and the invitation was sometimes accompanied with a feather coat more picturesque than comfortable. These examples are introduced simply to point this truth; viz., that large liberty can only exist in communities where every individual recognizes that his neighbor has the same rights as himself, and that the security of both can only be maintained by the mutual respect of both. The right to worship God in this country, as every individual sees fit, is one of the grandest rights that we enjoy: every man can worship as seems fittest to himself, and the State will uphold him, so long as his form of worship is such, that if practiced by another, it would not injure him. So, too, a man may belong to whatever political party he pleases, and no other man can prevent him. But the full exercise of these rights only occurs in those communities where citizens recognize the fact that they are part of the ruled as well as of the rulers, and that they owe every other man certain duties as well as that every other man owes them certain rights.

This great right of liberty of body and mind is treated by most men as the air they breathe: they notice it only when deprived of it. Teachers and leaders of the people, in the pulpit and out, should never weary urging the performance of those duties, on the doing of which this right depends; for unless every citizen does his part to the State, the State cannot do its part to the citizen. When we hear of these rights being impaired in parts of the country, we may know that some citizens have neglected their duties. This right, and others belong to us now, but it rests with ourselves if we keep them or squander them. To keep them we must be ever on the alert, and leave undone no action that would tend to strengthen us in their possession. Beyond peradventure this ballot is the most powerful ontward means of keeping these rights and will be the subject of the next paper.

T. T. Bruce.

AFRICAN COLONIZATION.

A NEW EXPEDITION TO LIBERIA.

An important meeting of the Board of Managers of the Pennsylvania Colonization Society was held March 12th, at the Society's office. Hon. Eli K. Price, President of the Society, was in the chair, and the Rev. J. W. Dulles, D. D., Recording Secretary. William V. Pettit, Esq., Vice President of the Society and Chairman of the Committee on Emigration, reported that about forty letters, with applications from large numbers of freedmen, had been examined. By special invitation of the Board, William Coppinger, Esq., corresponding secretary of the American Colonization Society, was present from Washington, D. C., and furnished for examination the numerous letters from freedmen, received since January 1st., earnestly asking for aid to reach Liberia. In most cases a portion of the expense of passage could be paid, and in some cases one-half. The applications come from Massachusetts, Pennsylvania, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Arkansas, Louisiana and Texas. The applications coming within two months, from twelve States, and from persons claiming to represent more than 50,000 freedmen, manifest a deep and wide-spread desire to reach the fatherland and there build up a Republic of Liberia, which closely resembles the United States in Constitution, laws, language and religion.

It was unanimously voted to authorize the American Colonization Society to send fifty emigrants, to be selected by Wm Coppinger, Esq., at the expense of the Pennsylvania Colonization Society. The expedition will leave on the 1st of May and locate at the flourishing settlement of Brewerville, named in honor of the late Charles Brewer, Esq., of Pittsburgh, by whose generosity many emigrants have been enabled to reach Liberia.

Resolutions were passed complimentary to William Coppinger, Esq., who has been engaged in colonization work for forty years. The President, Hon. Eli K. Price, was one of the founders of the Pennsylvania Colonization Society, in 1826, fifty-two years ago. Robert B. Davidson, Esq., a Vice-President of the Society, was also present, who has been actively engaged in the work for over forty years, and also Edward J. Morris, Esq., who has visited Liberia and given a great impetus to the culture of coffee.

DOING FOR JESUS.

There are four reasons why we should be doing for Jesus.

The first is because he has done so much for us.

The second, because of the honor of doing for him.

The third, because of the pleasure.

The fourth, because of the profit of doing for him.

In making our offering or rendering our service to Jesus, it is very sweet to think that he is pleased with what we are doing, and is saying to us, 'Ye have done it unto me.' Blessed Jesus, accept all our services and our offerings! And give us grace that 'whatever we do we may do it unto thee!' If we do this, my dear children, we shall live useful, happy lives, and at last we shall receive an abundant reward from Jesus in heaven.—*Great Pilot.*

Hold On—Hold on to your tongue when you are just ready to swear, or to speak harshly, or use any improper word.

Hold on to your hand when you are about to strike, or do any wrong.

Hold on to your feet when you are on the point of kicking, or running away from your study, or pursuing the path of error, shame or crime.

Hold on to your temper when you are angry, excited, or imposed upon, or others are angry about you.

Hold on to your good name at all times, for it is much more valuable to you than gold, high places, or fashionable attire.

Hold on to the truth, for it will serve you well, and do you good throughout eternity.

The death of ex-Senator Benjamin F. Wade adds one more to the number of old abolitionists who have laid down their arms after seeing the accomplishment of the aims and dreams of a life-time. That accomplishment was so sudden and unlooked for that it is but human nature that these valiant old warriors should sometimes fail to believe that it has come, and hold on to their weapons till relieved of them by death. Mr. Wade vigorously resisted President Lincoln's method of reconstruction and amnesty, as he opposed President Hayes' Southern policy, "greatly fearing," as he wrote last summer before the election in Ohio, "that this policy, under color of what is called 'local self-government,' is but an ignominious surrender of the principles of nationality for which our armies fought, and for which thousands upon thousands of brave men died, and without which the war was a failure and our boasted government a myth." The question between Mr. Wade and the reconstructing administrations is of course only one of the proper time for adopting their policy, a question only to be decided by experiment, and that experiment never to be tried without temporary friction and confusion. It is doubtful whether to these veterans the proper time for trying it would ever seem to have arrived. Senator Wade was always one of the most valiant of them, and his outspoken, fearless adherence to his opinions won him the respect of even the bitterest of his antagonists.

His enmity to slavary marked his whole political career and inspired his best efforts. Some of his most brilliant speeches were made during the Nebraska bill debate in 1854 against the proposition to ignore the Mis-

The Auditor of Public Accounts of the State of Virginia reports that the financial condition of the Commonwealth is truly deplorable. Nine men are coming in from taxes all payments being made in coupons which are at 30 per cent discount. He says there are but $—— in the Treasury, that no money can be borrowed or collected, and that he cannot run the State Government an hour longer. The asylums are behind even on support

His enmity to slavery marked his whole political career and inspired his best efforts. Some of his most brilliant speeches were made during the Nebraska bill debate in 1854 against the proposition to ignore the Missouri Compromise and admit slavery into the Territory. At the breaking out of the Civil war, he was appointed a member of the joint committee of congress on the conduct of the war. In this capacity he always favored the most vigorous measures, especially the confiscation bill, and the bill abolishing slavery in all the Territories. At the death of President Lincoln in 1865, in his position of president *pro tem.* of the Senate, he became acting Vice-President of the United States. In 1867 he was again made President of the Senate, and held the position till 1869, the close of his term. In 1871 he was appointed by President Grant on a commission to visit Santo Domingo and report upon the policy of annexation. Since then he has retired from official life but without losing his active interest in political affairs, and his last illness is attributed to the anxieties and fatigue attending the Cincinnati convention of 1876.

Senator Wade was a self-made man, son of an ex-soldier of the Revolution, and worked his own way through school and up to the bar. He held successively the offices of Justice of the Peace, Prosecuting Attorney, State Senator and Presiding Judge of the Third Judicial District of Ohio. In 1851 he was sent to the United State Senate, and was a prominent member of it for three terms. He died at his home in Jefferson, Ohio, at the age of seventy-eight.

SMALL soldiers be allowed to play cards? In the French and German armies card-playing has been encouraged on the grounds that, like dominoes it is a source of innocent enjoyment, and that it trains the soldier's mind to act quickly and to be habituated to sudden changes of plan. The Director-General of Military Education in the British Army has prepared an exhaustive report on the subject. He thinks that under proper control cards have their uses in the army, but is constrained to admit that their introduction has driven out the chess-table and draught-board.

SOUTH CAROLINA is making progress in manufacturing. There are now in the State 5,941 spindles and 1,400 looms divided among ten prosperous factories. When the Vaucluse and Piedmont Mills, now nearly completed, are filled with machinery, it will add some 1,500 spindles and 450 looms to the above figures. In the course of a few months it is safe to say that there will be 7,400 spindles and 1,850 looms in active, profitable operation, besides other factories in process of construction.

THE Rev. M. W. Taylor, a colored man, and a clergyman of the Methodist Episcopal clergyman of Cincinnati, preached there the other day on the death of the Pope and the work of the Catholic Church in behalf of the colored people. He declared that Pius IX. "was the means for the colored race a movement calculated to excite profound gratitude in them. During the civil war he gave his whole energy to devising means for ameliorating the condition of the American slave." "When freedom was proclaimed to our race," added Mr. Taylor, "the Pope ordered Archbishop (now Cardinal) Hughes to select three hundred of the best and brightest colored youths he could find and place them in the best college in the world, for the purpose of preparing them to lift up our race from the depth of ignorance and degradation to which slavery had plunged us. And to help on this work he added to the sums taken from the revenues of the church, frequent and liberal contributions from his own private means. The Sisters of Charity have done even more. Bunkhorne and the Five Points, and have accomplished wonders in the work of elevating our race. We ought to proclaim on the wings of the wind that we honor these things and appreciate them. And then let our Protestant brethren command—as they may—the same gratitude from us by banishing among them the prejudice that exists toward the black man."

NEWS OF THE MONTH.

FOREIGN.

SABINI, the famous Italian astronomer, died at Rome, Feb. 25th, in his sixtieth year.

THE TREATY of peace between Russia and Turkey has been signed. Russia has abandoned her claims on the Bulgarian and Egyptian tribute, the latter to the satisfaction of England, to whom it was pledged to pay the interest of her loan to Turkey. Great enthusiasm prevailed at St. Petersburgh. The indemnity will principally be in the form of territory in Asia, including Kars and Batoum.

POPE LEO XIII was crowned in the Statine Chapel in Rome, March 3rd.

ICE on the Hudson, breaking up March 3rd.

COMPLIMENTARY telegrams exchanged between the Czar and the Sultan on the occasion of the anniversary of the Czar's accession. Austria is dissatisfied with the peace negotiations and wants Bosnia and Herzegovina. A congress of the Powers will probably meet at Berlin. The political outlook in England is brighter. Thessaly and Epirus are promised the same reforms which are pledged to Bosnia and Herzegovina, but this will not satisfy Greece, which wants to recover her provinces.

POLITICAL.

THE Custom returns at New York show a large increase in the imports of Japanese goods, the trade between the United States and Japan having grown nearly three hundred per cent. since the Centennial Exhibition.

THE Auditor of Public Accounts of the state of Virginia reports that the financial condition of the commonwealth is truly deplorable. No money becoming due from taxes, all payments are being made in coupons which are at 35 per cent discount. He says there are but $—in the Treasury, that no money can be borrowed or collected, and that he cannot run the state Government an hour longer. The asylums are behind even on support account. He has no means of paying for per diem of members. $175,000 are due to the banks and they refuse further loans. He says a deficit may be avoided if the General Assembly will provide that the license tax be paid in money only. Of the $1,000,000 balance of taxes now due, for the last fiscal year, there are now ready nearly enough coupons to absorb it, and on the July 1st, next, $600,000 more of them will mature. In the House, various propositions were submitted looking to a solution of the public debt question one of which was the appointment of a commission consisting of the Governor and other state officials to meet the state creditors in order to adjust the debt. No action has yet been taken on any of the propositions. Subsequently the committee adopted a report in accordance with the Auditor's suggestion, recommending that the General Assembly pass a law for the collection of license taxes, including revenues from the Moffat regime, in money to the exclusion of coupons.

ELECTIONS for city and town officers in New York state, Mch. 5th, showed marked Republican victories.

A BILL has been reported in the House, authorizing the equipment of a polar expedition on the plan of a colony, and appropriating $50,000 for that purpose.

EX-GOVERNOR D. ROLEY, of Maine, has published the following statistics, which he claims show conclusively the effect of the prohibition of the sale of liquors save by agencies in that State. In 1840, thirteen distilleries made 1,400,000 gallons of liquor; now there is not a distillery or brewery in Maine. In 1830 there were sold by 2,000 taverns, hotels and saloons $10,000,000 worth of liquors or $20 to each inhabitant. In 1877 the aggregate sales of 160 town agencies were $100,000, or fifteen cents to each inhabitant. Including clandestine sales, the highest total for the year claimed is $1,000,000, or $2 for each inhabitant. In 1833 the deaths from delirium tremens were 242; now they are not over fifty annually. Ex-Governor Dingley claims, also, that rime and pauperism have been greatly reduced in the State, but does not give the exact statistics.

DOMESTIC.

THE FUNERAL of ex-Senator Wade was largely attended on the 6th, at Jefferson, Ohio. His grave is close by that of Hon. Joshua R. Giddings.

THE N. Y. TIMES is about to publish a supplement in Spanish, for distribution in the Spanish-American Provinces, to spread information as to American markets and extend our trade with these countries.

A COLORED County (Ga.) negro farmer raised last year seventeen bales of cotton and thirteen hundred bushels of corn on nine acres of land, his only help being a bob-tailed yearling. This astonishing feat in agriculture reminds us of the period of "dead falls," when some white men were able to raise twenty bags of cotton on a two-acre patch, with a little grocery store in the centre.

THE city of Atlanta, Ga., experienced, March 10th, the severest tornado ever known there. The Episcopal Church, filled with worshipers, was crushed to shapeless ruins, the people having just time to throw themselves under the seats, as the minister abouted to them to do. By this prompt action all but eighteen were protected from the falling timbers, and, strange to say, even these escaped death. The City Hall was unroofed, and great damage done to many stores and private houses.

THE Sea-Shore Cottage, a large building about one mile north of Long Branch, N. J., on the sea-shore, has been purchased by Mr. Fletcher Harper, as a home for sick and suffering females connected with Harper Brothers publication house. Mrs. Fletcher Harper was the originator of the enterprise, and it is said that she will have the entire supervision of the establishment.

THE vessel purchased by the freedmen composing the Liberia Exodus Association in Charleston, S. C., reached that city on March 19, in fourteen days from Boston. The Azor is described as an exceedingly neat-looking craft, full clipper build, and of six tons burden. She has fifteen berths for cabin passengers, and 140 double berths for steerage passengers. A beautiful American flag was presented to the Liberian Joint Stock Steamship Company by Anne E. Thompson.

A meeting of colored men interested in the movement to organize a colony for their race in the West was held at Washington, March 23, and measures were taken to promote that object. They denounce the Liberian scheme of emigration now in progress in the Southern States.

THE United States Treasurer yesterday (March 31st,) commenced the payment of the second dividend, 10 per cent., to the depositors in the late Freedmen's Bank. The sums varied from ten cents upward, and both yesterday and to-day crowds of colored persons were pouring in and coming out of the cash room. The work of of payment will be continued from day to day until completed.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of ROSCHEE'S GERMAN SYRUP in all parts of the country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that a trial might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home, it is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering, skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cts.

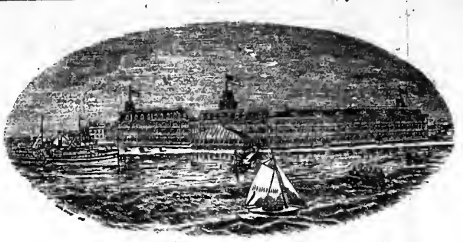
PAINT YOUR BUILDINGS!

The New York Enamel Paint will not only beautify your buildings, but preserve them.

It is made of Pure Lead Zino and Linseed Oil, and is prepared ready for use, a fair trial will satisfy you as to the quality, one gallon will cover twenty square yards—two coats.

Sample Cards of 30 shades of color, sent free on application, our white, as well as colors, has no superior for outside or inside work. Best of references given. Address

New York Enamel Paint Co.,
178 PRINCE ST., *New York.*



THE HYGEIA HOTEL.

OLD POINT COMFORT, VA. H. PHOEBUS, PROPRIETOR.

TERMS: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from the city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years, as taken from the notes of the Meteorological Observatory, shows an average of 60°, 74°, 70°, for Summer; 70°, 56°, 46°, for Autumn; 43°, 44°, 42°, for Winter; and 48°, 58°, 53°, for the Spring months.—Open for guests all the year.

SOUTHERN WORKMAN

SUPPLEMENT.

APRIL EDITION, 1878.

INDIAN VISITORS.

The number of Indians in the United States is now, according to the latest official estimates, about 275,000. A little over a fifth of these are supported by government. The tribes in the Indian Territory are generally well off and have their own schools, churches courts and legislatures. A lady who has lived among them, the wife of a United States officer, reports the curious fact that of the present generation of young people, the women are decidedly in advance of the men in their appreciation and degree of education and civilization—a sad difference, but not as disastrous for their future as the reverse would be.

A bill to allow the civilized tribes of the Territory to elect a delegate to Congress has been introduced into the House this winter. The report shows that it costs the Indians now over $60,000 a year to send delegates to Washington, every tribe sending from two to six. One delegate for all with the privilege of the floor of Congress would give them much more influence, at a far less expense.

It is the policy of the Government to collect the Indian tribes as far as possible in one territory. Many of them do not wish to leave their western hunting grounds, and many delegations are sent to confer with the Great Father at Washington—as they call the President—upon their claims and grievances. Our picture, from Harper's Weekly, represents one of those delegations, literally, in full feather. The wrongs of the Indians from the United States government, in broken treaties and disregarded rights, make a dark page in history, so does the reverse side—the treachery and cruelty of the savage tribes to the settlers among them. The Indian question has always been a difficult one. We are glad to see that President Hayes believes, as President Grant did, in maintaining a policy of peace toward them as far as possible. The Secretary of the Interior in his last Annual Report recommends as progress towards civilization, that the Indians be gathered in smaller reservations and taught agriculture and stock-raising; that small tracts be deeded each one, so that they may have fixed homes; that hunting be discouraged; that proper tribunals of justice be established; that schools be introduced and attention be made compulsory; that farmers be employed to teach Indians agriculture, and that Indian labor be employed on all reservations.

CONGRESS AND PRESIDENT LINCOLN.

When the late civil war was beginning, Alexander H. Stephens, in a powerful speech, warned the people of Georgia of the inevitable horrors of the struggle. A little later, as Vice-President of the Confederacy, Mr. Stephens made another speech, declaring that its government was established on the corner-stone of slavery. A few days since, in the presence of both Houses, and as a Representative from Georgia, Mr. Stephens, on behalf of the House of Representatives, spoke at the reception by Congress of Carpenter's picture of the signing of the proclamation of emancipation. The picture contains portraits of President Lincoln and all his cabinet. All but one who appears in the picture are dead. The room, carefully studied from the fact, is remodeled. The Union is regenerated and renewed, and it is Mr. Stephens who says: "I can say for myself, and for those of my immediate circle of acquaintances, and for the whole Southern people, that there is not one who would now change the condition of things, resubjugate the colored man, or put him in the condition he was in before." Mr. Stephens did not assume to foresee the result of emancipation, nor even to say that the act was wise. But he declared it to be irreversible, and he begged that sectional strife might end. It is for him and his associates to preach this gospel constantly and zealously at home, and to take care that sectional hatred of the North is as vigorously reproved at the South by Southern men as a similar feeling at the North is reproved by Northern men.

Mr. Stephens spoke of Mr. Lincoln in the most cordial tone. He knew him well in Congress, and honored the simplicity and rectitude of his nature, and felt a pang at his untimely taking off. His words are the most striking and touching tribute to Mr. Lincoln that we recall from any Southern man, and it is a singular vindication of the deep earnestness of Lincoln's solemn words in speaking of the Southerners that Mr. Stephens should say that he knew that in Mr. Lincoln's heart there was malice toward none, and charity for all. What he says brings out again and strongly the "providential" character of Abraham Lincoln. The country might well believe itself to be the peculiar object of Divine favor which in its hour of extremity found that it had chosen such a man to be its leader. The great act of emancipation, which, as General Garfield truly stated in his admirable speech, was passionately demanded by a powerful public opinion before it was approved by the President, seems to have proceeded from him more fitly than from any man then living, or from any other President since Washington.

Whatever incident vividly recalls the truly great men in a nation's history is a public benefit, and this simple ceremony of receiving the the memorial picture, by uniting the voices of a brave Union soldier and of the Vice-President of the Confederacy in affectionate reverence for Lincoln, reminds the country of his noble character and of his immeasurable services. As the orators and the occasion vividly renewed the recollection of the contest and its mighty result, did some musing listener, thinking of that sore extremity of the nation, of the great cost of the sacrifice for its life, and of its solemnly pledged faith to repay that cost, doubt for a moment what Abraham Lincoln would have said of a proposal to break that faith and dishonor the nation? Did he doubt that the war President would refuse to believe that in the very moment in which both friend and foe were proudly praising him, the honor of the nation for which he died lay trembling in the balance?—*Harper's Weekly.*

INDIAN VISITORS.

THE SURPLUS OF THE ALABAMA CLAIMS AWARD.

The Application of the Geneva Award Surplus to Education in the late Slave States would be a beautiful example of compensative charity and international comity. Opinions favorable to it have been expressed by eminent and sound-headed statesmen in both the countries which were parties to the award. The undisbursed money surely belongs to England, if claims direct or *indirect* do not come forward to exhaust it. It has been suggested that the United States, after proper legislation by Congress, should say to England, "Here is the money unclaimed: will you enter into negotiations by the proper channel for the application of it to the good of those who had the most at stake to lose by the piracy of the Alabama, and who have come to the surface of the turbulent waters of the Rebellion as the most in need of help? The United States Government wishes to be generous, and just: just in returning the unclaimed portion of the award, and generous in proposing that it be used for those who would have been the greatest losers had the cause triumphed, far which the Alabama was run out of British waters, i. e., the whole people of the late Slave States." It is for abler minds than ours to indicate the fit steps to reach so desirable a result. But two things seem to be indispensably preliminary, viz.: to make the measure international, and hand over the money to England.—*Monitor.*

TO THE FRIENDS OF HUMANITY.

The undersigned, a corporate body according to the laws of the District of Columbia, appeal to a generous public in behalf of the home for friendless women and girls. This charity, though not exclusive, designs to afford a home for the class named above, among the colored people of the District of Columbia. The population of this class numbers nearly forty-five thousand. Except a small charity, accomodating about one hundred little children and one adult, the other similar institutions are closed against them. Among this class there are hundreds of orphans and destitute women, for whom no one cares, and who, unprotected and untrained, tend to increase the numbers who fill our jails and poor-houses. It is for these we wish to secure a home, and to that end we hope to receive donations in Money, Clothing, Furniture, and goods. We propose to instruct these women and girls in

every branch of useful industry. Also the strictest attention will be given to the moral training, which has been so sadly neglected. Therefore, we earnestly ask the aid and co-operation of the Christian churches and the general public to help us carry on this great work.

clasped them around the other's neck, and replied:

"Don't cry, Bob—don't feel bad! I was ugly and mean, and I was heaving a stone at ye when the wagon hit me. If ye'll forgive me I'll forgive you, and I'll pray for both o'

THE

every branch of useful industry. Also the strictest attention will be given to the moral training, which has been so sadly neglected. Therefore, we earnestly ask the aid and co-operation of the Christian churches and the general public to help us carry on this great work. It is not the work of a few, but of the entire community. It is a humanitarian and non-sectarian work. We not only appeal to friends in the District, but we apply to all who are in sympathy with Christian work, as the great majority of the people who need this charity are from the various States of the Union.

As one of the instrumentalities of promoting this object, we respectfully call attention to our *National Bazaar*, to be held at Tallmadge Hall, commencing April 8, 1878, for which we solicit material of all kinds, which may be left at the residence of Mrs. E. A. DUFFIELD, General Managing Agent, No. 1111 I Street, N. W. Washington, D. C.

BOARD OF TRUSTEES.

Hon. R. H. Cain, Mrs. Catharine E. Bond, Rev. J. W. Dungee, Mrs. Amanda Hill, Mrs. M. A. S. Cary, Bishop John M. Brown, Mrs. Mary Watts, Mrs. Maria Hayson, Mrs. E. A. Duffield.

NORFOLK.

Bute Street Sunday-School.

At the regular election of officers, January 6th, 1878, the following persons were chosen to serve the ensuing year:

J. J. Frazier, Superintendent; Jordan Williams, Assistant Supt.; Joseph Webb, Librarian; Thomas H. Brooks, Secretary; Moses Grimes, Treasurer; J. B. Towe, Organist.

The school has greatly improved since the completion of the new church, and was never in a more flourishing condition. The Lesson Exercises in the "Southern Workman" are used regularly in this school.

FREEDMAN'S BANK NOTICE.

Depositors in the Freedman's Bank are again reminded that in order to get their second payment promptly, they should *now* leave their books at the Home Savings Bank, Norfolk, for collection. The books will be returned early in April. A large number have been brought in, but several hundred are yet outstanding. Bring them in at once and have them forwarded. Call at the Bank only between the hours of nine and three.

H. C. PERCY, *Cashier.*

A BATTLE THAT WAS NOT FOUGHT.

Two boys were once at play. A dispute arose between them, and in high words they dared each other to fight. Jackets and caps were thrown on the ground, and both boys were ready to begin. But who was now to strike the first blow, since both of them truly seemed as if they would rather not?

"Now then, strike me if you dare!" cried out the younger boy, with an angry look. The other boy looked at him, but did not strike; and at last he said:

"I have nothing to strike for."

"Well then, after all, neither have I," said the other, who had begun the quarrel. "So let us be good friends again, for I have nothing to strike you for either." They left the field without striking a single blow, and never quarreled again. Both of them became good men, and held good positions in life.

How few battles would be fought if young people, and old as well, tried to find a reason for the quarrel before they struck a blow!

"The beginning of strife is like one letting out water," but "a soft answer turneth away wrath."

THE HEARTS OF THE LOWLY.

One day three or four weeks ago a gamin, who seemed to have no friends in the world, was run over by a vehicle on Gretiot avenue and fatally injured. After he had been in the hospital for a week, a boy about his own age and size, and looking as friendless and forlorn, called to ask about him and to leave an orange. He seemed much embarrassed, and would answer no questions. After that he came daily, always bringing something if no more than an apple. Last week, when the nurse told him that Billy had no chance to get well, the strange boy waited around longer than usual, and finally asked if he could go in. He had been invited to many times before, but had always refused. Billy, pale and weak and emaciated, opened his eyes in wonder at sight of the boy, and before he realized who it was, the stranger bent close to his face and sobbed:

"Billy, can you forgive a feller? We was allus fighting, and I was allus too much for ye, but I'm sorry! 'Fore ye die won't ye tell me ye haven't any grudge agin me?"

The young lad, then almost in the shadow of death, reached up his thin white arms, clasped them around the other's neck, and replied:

"Don't cry, Bob—don't feel bad! I was ugly and mean, and I was heaving a stone at ye when the wagon hit me. If ya'll forgive me I'll forgive you, and I'll pray for both o' us."

Bob was half an hour into the morning Billy died; when the nurse took him to the shrouded corpse he kissed the pale face tenderly, and gasped:

"D—did he say anything about—about me?"

"He spoke of you just before he died—asked if you were here," replied the nurse.

"And may I go—go to the funeral?"

"Yes, my."

And he did. He was the only mourner. His heart was the only one that ached. No tears were shed by others, and they left him sitting by the new-made grave with heart so big that he could not speak.

If, under the crust of vice and ignorance, there are such springs of pure nobility, who shall grow weary of doing good?—*Detroit Free Press.*

WHAT AILED OLIVER.

"Get up, little boy! You are lying in bed too long; breakfast will soon be ready. The canary-bird has taken his bath, and is now singing a sweet song. Get up! get up! or I shall throw this pillow at you."

That is what Sister Charlotte said to Oliver Reed, one frosty morning in November. He was a good little fellow; but he had one fault: he was too fond of lying in bed in the morning.

"Don't throw the pillow at me!" cried Oliver. "I'll promise to get up in five minutes."

"If you would be 'healthy, wealthy, and wise,' you must rise early, little boy," said Charlotte.

When Oliver came down to breakfast-table, his father said, "How is this Oliver? You are late again."

Oliver hung his head; and Charlotte said, "I woke him in good time, father; but he went off to sleep again the minute I left the room, though he promised to be up in five minutes."

"I went to sleep, and forgot all about it," said Oliver.

"Come here, my boy, and let me feel your pulse," said his father. "I should not wonder if Oliver were suffering from a disease which is very common at this time."

Oliver gave his hand to his father; who, after feeling his pulse, said, "Yes, it is as I thought. Poor Oliver has Slack's Disease. Take him up to bed again. Put his breakfast by the side of the bed; and, when he feels strong enough, he may eat it. He may stay at home from school to-day."

The little boy wondered what Slack's Disease could be; but he went up stairs with his sister, and was put to bed. He could not sleep, however. He heard children playing out of doors; he heard Ponto barking; and Tommy, the canary-bird, singing a sweet song.

Then Oliver called his sister, and said, "Charlotte, what is Slack's Disease? Is it dangerous?"

"I rather think not," said Charlotte. "You dear little simpleton! don't you know what father meant? He meant you were troubled with laziness; that's all."

Oliver saw that a trick had been played on him. He jumped out of bed, dressed, and ate his breakfast, and ran off to school, where he arrived just in time.

Since that day, Oliver has been the first up in the house. He is no longer troubled with Slack's Disease. *Children's Prize*

LOVE LIGHTENS LABOR.

One morning I found little Dora busy at the ironing table, smoothing the towels and stockings.

"Isn't it hard work for the little arms?" I asked.

A look of sunshine came into her face as she glanced towards her mother, who was rocking the baby.

"It isn't hard work when I do it for mother," she said softly.

How true it is that love makes labor sweet. So if we love the blessed Saviour, we shall not find it hard to work for him. It is love that makes his yoke easy and his burden light.

WORKING FOR JESUS, NOW.

"If I can't teach people to be good, I can get them to come to Sunday-school, and then somebody else can teach them," said a little boy to himself.

He had been thinking how, when he was grown up, he would be a teacher, and do so much for the dear Saviour. Then he thought: "What if I should die before I grow up, and then never have done anything for Jesus."

Now is the word; do for Jesus now. Let every one of us find some work to do for Jesus now; to-morrow is not ours; it may never come.

DEVLIN & Co.,

LEADING

CLOTHING

HOUSE.

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,

FOR YOUTH'S WEAR,

FOR BOY'S WEAR.

Our stock is always

THE NEWEST,

THE LARGEST,

THE FINEST,

THE CHEAPEST.

When visiting New York do not fail to examine our goods.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

"THE second stage of a mission is the really difficult one," says Bishop Patteson, the martyr hero of the grandest work ever done in Polynesia. These words apply to the work for the Negross of the South. When Northern teachers first brought them testaments and spelling books, they were everywhere met hy the ontstretched hands of a newly emancipated people, hut had a chilling welcome from their former owners. Now, while colored youth from every quarter are overcrowding ths common and higher negro schools, and gladly make sacrifices for an education, the mass of them are not fired with so much ambition.

Adults have generally lost their interest in night schools, and the leaders whom politics and church authority have brought to the surface are hy no means unanimous in approving ths labors of their Northern friends.

At the same time the sentiment of Southerners is in many regions changed; universally so, we believe, where the larger negro institutions have been planted, and their honest, thorough and useful work has been seen. Candid, progressive men of all classes believs in them, and some Democrntic Legislntnres are generously aiding in the higher education of the blacks, and are maintaining free negro schools.

We recently visited the Atlanta University at Atlnnta, Georgia, in charge of the Rev. E. A. Ware. His two hundred and fifty colored students of both eexes are aiming at varioue grades of scholarship from n normal to a complete classical course.

The corps of teachers is admirable; the results of the institution are far renching. Atlanta is perhaps the grandest of all places as an educational centre for the freedmen of the South. This University, managed with rare skill and economy, hy Northern teachers who have no social recognition, and who develop a fine spirit of self-sacrifice flashing its light into thousands of benighted minds throngh its graduates. It has received many signs of Executive and Legislative favor, having $8,000 yearly from the State treasury, and has won striking testimony to its success from prominent ex-slaveholders who admit, from personal observation, the existence of that which they had believed to be an impossibility; and yet its President pointed to a conspicuous African church whose pastor was his relentless opponent. Not that it is yet fashionable for whites to approve, and blacks to oppose, such work. We are simply illustrating a phase of the experience of negro educators that is not confined to that institution.

A visit to the admirable "Shaw University" at Raleigh, N. C., managed hy the Rev. Mr. Tupper, under Baptist auspices, whose five hundred ex-students are making as teachers and preachers a great impression on the negro race in that State, confirmed our impression that the friends and foes of such a work were not according to the color line.

There is a widely varying experience among those who have taught long in the South. Some have had hitter grievances and others hnve had nons whatever.

Their general preference is for the rule of the most moral and honest. Negro education prospers least under the party that seeks to pay off political labors with the positions of school officers or schoolteachers. Ths spirit and capacity of the administration of school matters is of more account than ths amount of money they spend. Yet prejudicc has done as much as politics to paralyze educational effort at the South.

This experience is natural. The hlack man like other men finds it hard to see himself as he is seen. In the excitement of freedom his true condition did not appear. He was glad to take what was given him. He is kindly disposed, but has not right intuitions or common-sense. Wisdom will come to him as it comes to all, through suffering and loss. Hs will learn mors hy his hlunders than in any other way. Even the white man is not yet through his hlundering period.

The negro in 1878 is more difficult to manags than was the negro in 1868. He is not taking good care of ths political estate put into his hands, and sometimes even denounces the action of his best and wisest friends. But though he has squandered much of his inheritance, and in soms cases failed to appreciate all that has been done for him, he is today vastly qnickened, mentally, hy his experience.

Suffrage furnished him with a stimulus which was terrihly misused, but it has reacted and given a training utterly out of the power of schools and churches to impart. A wild nnimal may be subdued and hecomes useful, hut forever lashed, he becomes a hurden and a curse.

Colored voters, as a class, are slow to see their follies, hut they finally are, to a degree at least, realized. The sources of American intelligence is not so much the pedagogue as the system which gives each man a share in the conduct of affaire, leading him to think, discuss and act, and which educates him quite as much hy his failurcs as hy his successes. Responsihility is the best educator.

By ite political failures the negro race has made a etep in progress. Its objective possessions, politically, are nearly gone, hnt its subjcotive kingdom, that of mind and experience, ie enlarged and improved. It has lost power only to gain it. The question to put to an individual is the one to put to the people—Can you learn hy your experience? We helieve the colored race has that capacity.

We see it in the hundreds of negro students of whom we have had personal knowledge. This people is doing more wise thinking than it ever did before. It nevthinking than it ever did before. It nevsr was so willing to pay for its forty acres and a mule; and the old negro dream is being fast fulfilled in the best possihle way. The negro thinks less of eloquence and mors of honesty. In Georgia and in other States, they nay the hlacks steal much less than they used to. The crops they mnks are strong testimony in their favor. They care more for a good government and less for race rule. They are getting out of pupillage and nre in ths second and the most difficult stage of progress; and the most difficult stage of progress; and the corrnpt and selfish element is active, hnt many strong young men and hright young women of the race are living good lives and doing good work. A small minority of negro editors and preachers may be expected to denounce what is good for their race, and to oppose the higher institutlons whose graduates will some day replace them. It is better that they deride and attack whatever in their hlindness they think to be wrong than take without a questioning thought whatever is supplied to them. That they act is nearly as important as is what they act. Only thus will they learn. Satanic influences beset them; rum is ruining them, but the school-master is abrond; they are thrust into a life of action and reaction; they will hnve some rough justice and some rough injustice, hut we believe that the pillar of cloud is still hefore them.

IN AN account of the Indinns who are to be educated at the Hampton Institute, published in the N. Y. *Herald*, we regretted to see a reference to the "refined and cultured Hampton which in disdain of the effort, hrooding over her old wrongs and wounds, sulkily looks on," etc. Judging the people of Hampton hy the language of the *Monitor*, their weekly paper, there is anything but "disdain of the effort" on their part. On the contrnry, while papers in other parts of the state have used some foolish language about this matter, the *Monitor's* language is fair, appreciative and encouraging. The people and papers of Norfolk evidently regard this movement with much interest and sympathy. After a twelve years' experience of uniform courtesy and fairness on the part of our neighhors, it is ahsnd to suppose they would take ths course above described.

We helieve that Virginians will not object to teaching Indians those things that are vital to their well-being, even if the work shall be done in a Negro institute, especially sincc it alone has the facilities for doing such work.

FOR some years to coms the colored people of ths South will be in special danger from the influences of "watch words." These words often express ideas tcrsely, and, as rallying calls, have done, and may do, signal service in critical moments. But the virtue may die out of a thrilling phrase, as the heart of a tres dies ont. Men often live on reputation after reputation has in fact gonc. Merchants often live on good-will in trade after it has ceased to cover honest transactions. In the grand religious nprisings men hnve fought and sacrificed without limit, for the "Holy Cross," when those words meant that which was high and pure. Yet whole communities have been hntchered, when the "Holy Cross" meant, in truth, only plunder and murder. Was it not Madam Roland who cried ont, "O Liberty, what crimes are committed in thy name!" as the knife went down on her neck? For "British glory" thers is charged up a series of revolting crimes through a century, against the English people. France was torn in pieces, in 1793, by a hurricane of "watchwords." Hardly had one spent its force before another rose and swept the land with desolation. "America for the Americans!" These words once threw political parties into confusion, called into existence secret societies everywhere, mads honesty and statesmanship a hy-word, and cast out of office every foreign-born citizen, without regard to fitness, education or character.

Watchwords are the swaddling clothes of infant communities. Men who think and reason soberly need no such words. Sound judgment needs not to be called to its work hy a ringing shout. Where men cannot reason well for themselves, or reason weakly, rallying cries have their place the economy of education. But they are in apt to be dangerous and misleading.

Across the political hanners of the last few years have been written, "Old Democracy," "Hickory Democracy," "Old Linc Whig," "Repuhlican Party." These words covered, originally, well-defined ideas. Men were working up to objective points. Whnt is the meaning now? In the growth of political opinions they have, each in their own way, done excellent service in calling men to think and act; in mnrshalling them around sound ideas; in adjusting halances of political power; in correcting the ahuses which majorities like to inflict on minorities. But in every community not utterly stagnant, changes of thought go on constantly. What was important and true yesterday is obsolete to-day. What the laws considered just and wise twenty years ago, is deemed inhnman to-day. Opinions flourish and ripen, like trees, and then die out and enrich the soil for a larger and better growth.

So long as men look to office for hread only, and not for honor, so long will the rallying calls be used for personal advancement, just as pir.tes put at the masthead the flags of respectahle nations. To the colored people thers is great and pressing danger from the ahuse of watchwords. There will be a disposition to take on trust, to believe in pretty labels. But political parties, like reputahle Christians, or fair merchants or sound statesmen, may fall from grace and honesty and wisdom. Under the hand that seems to be velvet, may grow the iron grip of selfishness. People young in political experience are easily imposed upon.

For some years the Repuhlican party has rallied the mass of colored voters, for many good and sufficient reasons. And it should do so in the future, if its work, hereafter, is as vital and all-important as it has been in the past. Its bed rock was "no slavery," and now there is no slavery. For what, then, shall it summon the colored voter hereafter? For what, indeed, shall it summon the white voter in tims to come? If it hopes to keep its ranks unhroken and maks itself dominant still, it must unerringly follow ths logic of its own early teaching, or strike off sharply into n new and better departure. If it called up ths peopls of the Federal Union to redress the wrong of slavery, it has imposed upon itself the duty of making that redress complete. If it has lifted the negro harely out of the pit of bondage and ignorance, it has bound itself to carry him to a higher plane of education. The task is, indeed, vast and tedious. If the Republican party took the negro for its "ward," it assumed the duty of educating the "ward." Charities, free gifts of money are not asked for it. The negro ie not, and must not be, a mendicant. Bnt he can claim, and claim justly, that which aids his own serious efforts to make his

citizenship of advantage to the State. He has a right to demand much of the Federal Government, inasmnch as by a Federal law he was harred out of knowledge, cials. An idea of the system adopted may be gained from the fact that the six working committeee appointed were as follows: 1. On insanity; 2. On public hnildings true of all states which have no Charity Boards or Aid Associatione, and therefors of all the Southern States? Is there in any one of onr Southern States anything like sential and accepted facts the less he wil be confused hy any difference in the meth- od of presenting them, and the better he will be ahle to teach, as he should be, with any book, or without any.

citizenship of advantage to the State. He has a right to demand much of the Federal Government, inasmuch as by a Federal law he was barred out of knowledge, light and liberty, for a century.

Undoubtedly, in a Democracy, the best growth is left to the nurturing hand of the individual citizen. Only when the State has been persistently unjust, should there be an exception to the rule, and large, necessary, though temporary aid be given in amends for the wrong done. The soil of these United States cost the white man nothing. The negro must pay for every foot of soil he occupies, though it has increased in value for several hundred years. It is a hardship. Yet the negro does not insist on communism. He can, however, properly and reasonably insist on some exceptional advantages in the way of education. To do him justice, without demoralizing him, is no easy task. This should be the great and final task of the Republican party, the sequel of its career of emancipation.

Whether that party, has been, of late, more anxious for the negro vote than for the negro's well-being, each one of us can answer for himself. What the party has done for negro education, working through the Federal government, of which it has held control for some years, may be best answered by some of the leaders of that party. The statistics are uncommonly meagre. We do not condemn the party. We simply suggest consideration, and careful examination. If the party is still working for ideas, and not for office, it should still command our respect and allegiance. But its methods and plans must be put under the cold, white light of unbiased investigation. Nothing should be taken for granted. The worst enemy of the politician is the independent thinker. Political leaders, like army generals, dislike the rank and file who do much thinking. The best assurance of good government arises when each citizen makes his own "platform." It is not the hard, compact earth which makes the best soil. It is rather the rich, mellow dirt, where the particles are not pressed together, but each atom, from its separate and loose condition, takes in air and water freely. It may be that the Republican party has accomplished its mission. There is no disgrace, if it has indeed run its race. Other parties will follow with new and wider issues. It may repeat the story of the old "Temeraire," in Turner's glittering picture, where the great battle-worn three-decker, after its fighting days are over, is towed out, in the soft twilight, to its final anchorage and eternal rest.

W. N. A.

In 1874 the members of the Social Science Association called, in connection with their general meeting at Saratoga, N. Y., a Conference of Charities, the reason for such a call being best stated in their own words:—"It was found, some years since, that the members of the various State Boards which deal with public charity in the United States, were desirous of a better acquaintance with each other; and that they could meet together and discuss the questions in which they had a common interest with mutual profit and encouragement. It also appeared that a considerable number of persons, some officially connected with public or private charities and others not, were desirous of attending such a meeting and were both competent and willing to join in its debates or to contribute papers, which should be the fruit of special research or of long experience."

This first meeting effected such important results that it was considered on all accounts desirable to hold regularly at least one annual meeting, to be known as the "Conference of Charities." The conference of September, 1877, was the fourth since 1874, and the report of its proceedings furnishes much valuable information and suggestion. At this meeting six State Boards of Charity were represented (the whole number of such Boards in the United States being nine), while sixteen kindred boards, associations and institutions, were represented by one or more delegates, the other members of the conference who were present being non-officials. An idea of the system adopted may be gained from the fact that the six working committees appointed were as follows: 1. On insanity; 2. On public buildings for the dependent classes; 3. On dependent and delinquent children; 4. On penal and prison discipline; 5. On statistics and legislation; 6. On medical charities. These committees are permanent in form though of course the changes of membership are frequent, and their reports are of the greatest value, not only to those specially interested in philanthropic work, but also to the country at large.

The State Boards of Charity, by whom these conferences have been inaugurated, vary somewhat as to the manner of their formation and the amount of authority delegated to them by the state, but in the main their objects are the same, though their efficiency must depend, of course, upon that of their individual members, the appointment of such a board being only the beginning of the work. They have in most instances, and ought to have in all, the immediate charge of the charitable, correctional and penal institutions of the state; that is, they are obliged to visit annually, or semi-annually, all the almshouses, jails, reformatories, hospitals, asylums, etc., of the state, to report upon their condition, to advise as to changes and reforms, to examine estimates of appropriations, to pass judgment as to the proper amounts to be allowed by the legislature, etc. Investigation and exposure of abuses is, to our shame be it said, the fundamental work of State Boards, and the facts which they present to the public ought to rouse a sentiment of sufficient strength to give them all the support they may require in their work of reform. The reports of the various committees go to show that such support can best be given by volunteer associations which shall directly supplement the work of the State Boards, and may be known as State Charities Aid Associations. The members of these societies are of both sexes and are drawn from the most intelligent class, while the fact that they are actuated by purely philanthropic motives puts them beyond the reach of the temptations which, in the United States at least, are likely to affect the working of any semi-political organization.

It is impossible to know anything of state charities, or of any state institutions which deal directly with the pauper and criminal classes, either in their philanthropic or their economic aspect, without being convinced that the interest of both the state and the individual, be he taxpayer or pauper, demands that all such institutions, whether penal, correctional or charitable, should be placed by state law under the direct supervision of associations of intelligent, high-minded men and women, who are competent to examine, criticize and wisely reform.

There is no other way to ensure that the public moneys shall be spent for the public good, or that state and private charity shall reach the unfortunates who require it, through the channels prepared by enlightened Christian sympathy, and it is with regret that we notice that so small a number of states have as yet undertaken this reform.

As we have already said, only nine State Boards are in operation in the United States, and of these not one is in a Southern State. At the September meeting of the conference no Southern State was represented either officially or otherwise, and the only clue which was given to the condition of things in the South, is to be found in the report of Dr. J. S. Conrad, Supt. Maryland Hospital for the Insane, who says that in connection with Dr. Chancellor, who has lately been appointed by Governor Carroll, he had visited the reformatories, prisons and almshouses of the state, and had found them without exception in a frightful condition, "the inmates being huddled together without discrimination of age, sex or condition, and commingling in unrestrained licentiousness." Dr. Conrad closes his report with the gratifying statement that the public attention was thoroughly aroused and they were hoping for the dawn of better things; but the question is forced upon us as to whether what is or has been true of Maryland is not true of all states which have no Charity Boards or Aid Associations, and therefore of all the Southern States? Is there in any one of our Southern States anything like regular inspection of state institutions by competent and unprejudiced men and women, and if not, is it not high time to make a beginning in this direction?

Whatever may be the difference of opinion as to detail, and there is always ample opportunity given in these societies for the expression of individual views, there can hardly be a doubt as to the necessity for these organizations, nor a doubt as to the fact that this necessity is constantly on the increase.

The class of evils which has always existed and will always exist in state institutions which are not supervised by men and women of clear intelligence and high morality, are and must remain a disgrace to the state which permits them, and the only excuse which can ever be honestly presented by such states, viz., that of their inability to meet any increased expenditure, is defended by the reports made by those State Boards and State Aid Associations which have been in operation for the last ten years. The formation of such boards and associations is a directly economic measure, and on that ground, as well as upon the higher one of Christian charity, all conscientious citizens should urge their establishment. No state which is able to support prisons and almshouses is too poor to provide for their efficient supervision, and surely there can be no Southern State in which there are not a sufficient number of benevolent persons to form the necessary aid associations.

The next Conference of Charities will meet at Cincinnati, Ohio, on May 18th, and all states, as well as the more important municipal and private organizations for relieving the poor, are invited to send delegates. It is greatly to be desired that there should be a fair representation of the Southern States in the persons of competent observers, and that, by this and all other means, a general interest should be awakened in subjects which are of such incalculable importance to the Commonwealth.

M. F. A.

We begin in the supplement of this issue to print the chapters of a little book which we design to supply a need greatly felt in Hampton Institute, and we believe in other schools, of a grammar which shall contain only what is necessary and express that in very simple words. The time spent in wading through a mass of superfluous rules and splitting hairs over idioms, might be better employed in learning thoroughly the essential elements of the language and practising its use. This is particularly true for those who begin their education late, or with but few years to give to school, and little money to spend on large and costly school-books.

That the study of grammar need not be the dry and irksome task it too often is, is very certain, and was demonstrated on one occasion by a Hampton student, who exclaimed to his teacher, after a few weeks' exercise in the previously distasteful study,—"Why, there is something really beautiful in grammar!" It is as pretty as *the picture of a little bird with its wings spread!*" We shall be quite satisfied if this simple volume be successful in developing an equal taste for the "fossil poetry of words."

Believing that the practice of the language is even more important than the committing of rules, we shall devote several pages to simple language lessons, taken by permission from "Kerl's Composition and Rhetoric," taught in Hampton in the Middle and Senior years, and given orally to the Junior classes. The examples here given will suggest others to the teachers who will find their practice of the greatest interest and value.

We have invented no new terms, and have as far as possible employed those we find in the text books already in use in Virginia public schools, choosing always what seems to us the clearest and simplest forms of expression. A good teacher should know that it is only in non-essentials, or in methods of presenting accepted facts, that grammarians disagree. The more thoroughly he understands the essential and accepted facts the less he will be confused by any difference in the method of presenting them, and the better he will be able to teach, as he should be, with any book, or without any.

We commend the little book to County Superintendents for introduction into schools, as a saving of time and money; and to teachers, for their own use, as a great help in their teaching whether it be introduced into their schools or not. By thus printing it in the supplements, of four or five months, we bring it within the reach of all who will preserve the numbers.

We acknowledge with many thanks the receipt of the first four numbers of the new magazine, *Sunday Afternoon*, and the permission to add it to our exchange list, which is already, through the kindness of our friends, rich in the best periodical literature of the country.

Sunday Afternoon is published in Springfield, Mass., and edited by Rev. Washington Gladden. Among its contributors are Harriet Beecher Stowe, Edward Everett Hale, Dr. Howard Crosby, Charles L. Brace, Prof. William G. Sumner, and "Susan Coolidge;" and they will no doubt keep up the standard of these four numbers, which is as high as need be. The stories are bright and original; the graver articles discuss such living topics of the times as the relations of Labor to Capital, the Temperance Reform, How to save the Children, the relations of Christianity and Civilization, and of Money and Morals. These subjects are discussed by live men in a live manner. To start a new magazine in these days of the making of many books is a bold venture, but, after reading these four numbers, we can but sympathize with the sentiments of Mr. Whittier's graceful note to the editor,—"I need not wish thee success, it is thine already. Thy readers, like Tennyson's wanderers, cannot fail to rejoice that they have reached the place 'Where it is always Afternoon.'"

The sailing of the barque *Azore* from Charleston on April 20th, with the first shipload of emigrants to Africa, sent out by the Liberian Exodus Association, is a marked event in the history of the freedmen. Whatever its ultimate result, and, for the sake of the emigrants and Liberia, we hope that it may result happily, it is an experiment worth trying, because the only satisfactory way of learning most things worth knowing is by experience. All the arguing that can be done on both sides will not do as much toward settling the question of emigration, and with it many other questions, as will this direct experiment. Those who go and those who stay will learn more of the needs and abilities, and the best policy of the race, for this effort. Its success will certainly not injure the prospects of those who are left behind. For all sakes we wish them God-speed.

A great revival of religion among the colored people of Richmond has been noticed recently in all the papers. We hope to be able next month to give our readers a report of it from those who are on the ground. It would seem, from all accounts, to be a genuine deepening of religious feeling. It has excited more attention because one of the principal leaders of it has been the colored preacher Rev. John Jasper, who has been preaching sermons lately to prove from the Bible that the earth does not move, which simply shows that, fortunately for humanity, the love of God can exist in an ignorant mind.

A Letter from Rev. A. N. Arnold, D. D., the eminent Baptist divine, and one of the trustees of the Hampton Institute, who is spending the winter in Charlottesville, for the benefit of his health, says:

"I went to-day to visit the colored Schools in company with Mr. Powers, the County Superintendent. We visited four or five schools, two taught by Hampton graduates. They seemed to be doing well, and were quite large, though suffering somewhat from the same cause which has interfered so seriously with the schools in Richmond for the last few weeks, namely, the unwonted interest in religion. We united our influence with that of the teachers in trying to show them that there was no better way to serve and please God, than the faithful discharge of daily duty.

The following letter just received from the chief of the Japanese Centennial Commissioners of Education who visited Hampton Institute last year, will be read with interest.

SLAVE AND FREE LABOR COTTON.

Twelve crops of cotton have been raised by free labor, and the comparison of the returns with an equal number of crops before the war shows some interesting results. The

Experience teaches that unless we are reminded of excellencies, we will ourselves hardly become excellent.

Besides, I do not think you will find a very considerable degree of gratitude on the part of many of your readers for such publications. If you are in possession of facts concerning the condition of our

certain amount of grace or experience to be willing to hear also how bad or foolish we are. Less frankly, perhaps, but as anxiously, until we learn a deeper lesson of our needs, we all ask for praise and shrink from blame or ridicule. No great

could we stop this? We had Savings Banks made, as we called them. Little tills, or boxes attached to a table. Each boy had his own box. It had a slit in it, her could not be opened except once a month. Then when a boy opens his bank at the end of the month and takes out five or six, or sometimes ten or twelve dollars, he begins to have a sense of property: feels like a capitalist. He's going to save that money, he's not going to spend it for trifles. So the boys' money is spent for useful things—clothes and the like, or finally gets into the large Savings Banks.

One cerious fact about these boys is, that many of them have no real names. They don't know their own names, or their parents' names, and it is impossible to find them ont. One of them went through his life as just "Picketty." Coesumption seized upon him. The boys watched him and nursed him till he died, and then paid his funeral expenses. This little nameless body was carried to Greenwood and there laid down, as no known as the leaves that drop from the trees in enturnn, but the soul had gone to the Father of the fatherless.

One of our lodging-houses is for girls. I trust that our experience is not the experience of General Armstrong. We have found our one lodging-house for girls, more trouble than the five for boys. I don't keow just why it is, but these little floeting girls of the street, little homeless ones, seppurtieg themselves as the boys do by selling newspapers, are very difficult to manage, uncertain, you can't reach them by the usual influences. But we have a jewel of a womae in charge of them, a perfect saint, Mrs. Hurley. She sends off one as servant in a geetleman's family. Perhaps she smashes up everything, makes a dreadful time, comes back to the lodging-house. Mrs. Hurley takes, her in, tries her again. Perhaps she steals the next time she goes out. Mrs. Hurley won't believe she is hopeless—thinks it is the consequeece of her unhappy past, takes her back and tries her over egain. Under her untiring efforts, the large majority of them finally come out well, but it is a hard struggle in the beginning.

Thers are sometimes very pethetic cases among thess girls. Last winter, e girl came in who had been drivse from her home by e drunken step-father. She weet forth ie the wieter storm, sed looked from house to house for e place to work, but could find none. She passed houses of crime, whose light and warmth streamed out to invite her in—temptation met her on every side. She steggered for refuge for a momeat into a hall-wey of a public building, and there on her knees she prayed,—not for hoese or money or food,—she prayed that best of all prayers—"Oh, God, lead me in the strait sed nerrow wey."

Many enthems were asceeding at that moment to Heeven. The rich end the great were praying, but amoeg those prayers and snthems, these few words found room and seemed to touch the very heert of the Father in Heaven. That very moment a gentlemen coming in heard her cry. It might have heen a wicked man—it might heve been one who would try ie her momeet of hitter need to lead her astray. But he seemed sent of God to her. He spoke kindly to her, and brought her to ths Girls' Lodging-House, sed now she is doing well. Her prayer is answered.

In ths boys' Lodging-Houses, over one hundred thousand hoys have been sheltered since their foundstion, and a very large proportion of them have turned out well.

The neme of our society is the Children's Aid Society, end the lodging-houses form only one hranch of its work. The next greet hrench of it is thet of the Industrial Schools designed to reclaim the poor children who heve homes, such as they ere. These are like ths lower common schools with an industrial department added, where the children nre taught to work. They are given a noon meel, clothed aed cleaned, sed all good influences thet cen be, are brought aroued them. Good ladies of the city, from rich and heppy homes, come and teach these poor little children from homes of crime and wretchedness, and under these refieg, Christian influences, little girls, wild, fierce, neeartain, become modest, self-governed, industrious, end grow up to he good women. The results of this work are amazing. We cen point to schools where not more than one out of a thousand heve gone wrong. This is marvellous when you know whet homes they come from.

The inheritance of drunkenness is broken up hy these schools. While eighty per ceet. of the peresns ere drunkards, not oee out of a thousand ef the children become so. This proves whet good influences cae do, eed shows one wey of mecting the evil of intemperance in the land. It is the same with societ crime. Not one in e thousand of our girls go astray.

And now we cen even see the grand result of our work upon the children, in the diminution of crime in the city. I will not enter into statistics, hut one of the most striking indications of our work is the great diminution of commitments of womee.

But the crowning hranch of our work is the transportation of these children from the haunts of vice into good homes. Since we began, we heve placad four hundred thousand children in good homes and a very large proportion of them heve done well. I recently saw two of our boys whom we sent out fifteen or sixteen years ago enter the audience room of the Boys' Lodging-House. One of them had been a litls "Five Points" thief; he used to steal lead from the roofs of honses and sell it; that was the way he made his living. He was sent to Michigan. The little Five Points thief grew up with an honest, kind farmer, learned to work, went to school, taught for awhile, and worked, and earned money and went to Yals College, working his own way through, and graduating last year as honorably as the son of one of the richest men in New York. When he came into the audience room of the boys' Lodging-House and told the boys his story, he told us he had entered the New York Theological Seminary to prepare himself further to be a missionary among the poor city children, who were like what he had been. The second boy went to Indiana; now he owns a farm, has married a pretty and nice young woman out there, hnilt himself a house, and now came back to get enother little boy, snch as he had heen, to help him start on the same road to prosperity. Instances such as these, we have by the hundreds of thousands, of our little rescued children, becoming respectable citizens, good and Christian men and women.

We want to extend this work sow Southward, by trying whet our larger boys can do in Virginia. We have seet some to Petersburgh. Thers is some demand for them down here among the farmers. We have considered the West as on the whole the hest place for oer boys to grow up. It is cheaper of course to send them down here, not so far off. We shall wait and see what is the report from those we have sent.

Of all things that can he done for these children snatched from haunts of crime, to send them far awey from their old surroundings, to new homes, is far the best. They heve a healthy home life—on e farm perhaps, new circumstances, a new chance, good society, all the restraining, elseting influences which are thrown abont respectable people in this Christian land.

I see by your paper, the Southern Workman, that some of your people believe in conjure doctors, whose touch cen pnt seakes into people, or draw them out. There are conjurers of a worse kind who have heen after these boys and girls: coejurers that heuet corner groggeries and thieves' resorts. We mese to epply to them better medicine to draw from their souls and hodies the serpent of evil passions, the poison of intemperance.

It cannot be long before General Armstrong and all your friends, and the friends of these children, and you and I shell appear before the Great Assizes. And the question which will he asked you and me—which we shall each one have to meet—is not, "Whet church do you helong to? Whst professions do yon make?" hut, "What poor heve you fed? What good have you done in the world?" It may be that you may not know you have done this, hut you may heer a voice come ringing from the depths of the heavees,

"Inasmuch as ye have done it unto one of the least of these my hrethren, ye have done ueto me."

LETTERS FROM HAMPTON GRADUATES.

GREAT BRIDGE, NORFOLK CO., VA.,
Jan. 11, 1878.

Dear Teacher:—I received your Postal cards, two *Educational Journals* and e *Southern Workman* of recent date. My other friend, Mrs. ——, sent me ths *New York Observer* nins months; the times was just out; I was wondering in what direction I should seed for a paper, as I em not ahle to pay $3.15 e year for the *Observer*. Mrs. —— is in Europe.

The times seem to he hard everywhere this winter, though I heve not seen very much of it. These people plead that they are very poor, hut when it comes to the truth, they are just as ahle to do when they are a mind to do, as the next one of our rsce that has any standing at all. I am very sorry to say, it is this old time religion thet keeps the poor colored people heck, end Conjuretion, for the people are full of it.

There is e colored man who lives ebout one hundred and fifty yards from my school. Several of my pupils have to pass his yard on their way to school. One day, e little girl, about ten years old, had e little stick, and, in running, made some cross-marks in the sand. He saw her makieg these marks. He ran out with a handful of salt end something else and threw it over these marks. In ten minutes I saw him meking for me. He asked for "Ellen." I called her to him. He said, "What did you put in the road to cripple me and my folks?" The child said, "I didn't put nothing there. I only was running, eir."

The child could not satisfy him, hnt then she gave him as much satisfaction as I could give. He weet a helf-mile after the little girl's mother, and *made* her come and look at the marks. Had it not heen for me, the child's mother would have whipped her.

These half-way ministers keep the people in darkness, at any rate a great deel more so than any one might think. The people like to go to chnrch and hear the word of God, sed when they go, they should have sound doctrine preached to them.

I have a very full school; seventy-four pupils on roli.

I am very much pleased to hear thet Ackrel White has gone to Liheria. I truly hope he will have success, for there he wont have te contend with the disadvantages of color. If I were a young enterprising man I should be inclined to try my fortunes there.

I was very anxious to teach; well, I have taught, and feel fully paid hy the children and also their parents, hut I would be better paid if they would only get e good minister and pay him. The whols Soeth is in need of good ministers. There is one that lives three miles from me. He teaches and is also minister. I had a talk with him not long ago. He does not preach this old foolish religion, hut toward the last he becomes rather excited. I asked him what made him do it. He says he only does it to make tbe people think well of him. I told him I thonght that very wrong in him. He made me no reply.

I must hid you good-night. Mey the angels ever guard dear old Hampton, and may Heeven smils on eli its good worka.

Your pupil, J.

ACCOMACK, CO., VA., *Jan. 4th*, 1878.

Dear General:

Maey thanks for ordering the Educational Joureal of Virgieia to he sent to me. I am teaching in a County where it is fureished to all of our teachers free. I find the Joureal very acceptable, and I am sere it should be welcomed by every practical teacher.

I hnvs a very nice school. I have fifty-three scholars on roli. I am glad to say that they seem to be in a prosperous condition. I feel no though i am sowing seed in good ground. The majority of the parents seem interested in the education of their childrne. I have not hnd aey troulhie whatever. The white people seem very kied. I have been ie convrsnation with several, and they all want to know how I mn getting along with my school. I find the superintendent extremely kied; he has done everything in his power to mnke it comfortable for us. McKinsey is nbont four miles from me. Hn is doieg nicely, and seems to *enjoy* his work. Wn taught two weeks before being exnmined. The day before examinatioe, I told my scholars to be at school bright and early ext morning, with thnir heads nicely combed, face and hands washed, and good lessoes, that the Coesty Superintendent would be to visit the school.

By somn meaes they thought that General Armstroeg was thn County Superintendent. They went homs, told their parents, sed frieeds, that Gne'l Armstrong was comieg to visit our school next day. Soon after Mr. W. hnd finished with us, I was called out hy some one (a very old colored lady with a hundle of books sed letters). She said, "Honey, what time will Gne'l Armstrong be here?" I told her thet he was not comieg, she said, "I hnvs henrd he was coming to-day, end I havn walked out here to see him." Shs seemed perfectly disappointed when shn found out the difference between ths County Superintendent and Gen'l Armstrong. I soon made the mistake correct and commenced my schooi again.

Your pupil, W.

ABOUT THE CONJURING DOCTORS.

I am acquninted with four or five Doctors, who mnintein their living hy going ahout, the country with a good mnoy bottles and roots of different kinds. Amoeg thsm was ons that most of ths peopls belinved in, they thought he could cure eny kied of disease. I heard of this Doctor's asking e mnn how was his health. The mse replied, "I don't feel very well." This Doctor told him that he didn't look well eed he had better gnt some onn to work on him; "you nre coejured," says ths Doctor, "nnd for n smnll sum of money I will cure you." The man became very sick after the Doctor told him he was coejured, and the mse told him if he would cure him he would pey him eey reesonnhle price. The Doctor visited him two or three times; tben the man was well agaie.

Shortly after that, I met a mne thnt I was very well acqnainted with, I asked him where he was going in such a hurry. Hn replied, "I nm going after the Doctor, some one has conjured my danghter." Hn went to the Doctor's house and asked him to go homs with him, saying, "I have e very serious troulhiet home. Some-oee has cunjured my daughter." "That's all right," said the Doctor, "now, if you will agree to pay me my price, I will cure your daughter." The man agreed to pay whatever the Doctor thought was reasonahle. I met the man afterwards, and he seemed to he very happy; he told me that every thieg would be right eow. The Doctor said, "Thiegs always are right where I go." The Doctor told thn girl that she had snakes in her. The poor girl looked as if she would die on hearieg this. He fooled aroend her till et last he got a large seake from somewhere and showed it to the family. They all seemed very frightened. Indeed, they worshlped him as if hn were a Priest. I used to believe in conjuring whse I was quite small, hut siece I have seen so meey people believing that they were coejured whee they were well, I do not believe thet it is anything. I told a person once thet I did not believe in conjure doctors. He replied, "you will believe some time, if you live to be conjured." A man that lived a little way from my home was disliked hy one of those doctors, and the doctor told him that if hn did not do better than he had been doing, he would make him see a great deal of trouhle, "Make me see it if yoe like," says thn man. The Doctor thought he could frighten him to death, so he wnet to work. His saw ths man coming down the road, and began fixing somsthing in the road to frighten him. Thn mae went up to the spot. He saw several roots and snakes' heads together. He said to the Doctor, "what have you got here, sir?" "Nothing," said ths Doctor. "I know better," said ths man, "yoe havn got somsthieg here, and you put it here for me. I hnvs tried thnt trick myself, and know all ebont it. I am going to have you presented, not morn than that, I can climh a conjure mocetain, and pull a coejurn wagon, I can ride a conjurs mule." The Doctor was very much frightsned, sed told the man that hn coulde't do anythieg, and that if hn would not repent him, hn would be his friend always. The man didn't report him; after that they were friends. One of these Drs. got engry with a woman and told hsr shn should eot have any more health. He weet to the spring that she used ths water from. This womae saw him there, and every time she drank any of the water from that spring she would get sick; as long as she would get water from other places, shn would be well. The water would not make any onn sick hut her. I didn't believs that he did anything to thn water, she was afraid that it was something in the water for her, she said if shn drank any more watsr from thnt spring, she would dis; and shs didn't drink any more. it got so bad with the people, that nvory time a persoe happened to be sick, ths people would say that they were conjured, sed if any one died, they would say that some coejurs Dr. had coejured them. It is true thnt the doctors did n great deal of hnrm, but they did not do as much hnrm as ths people think they did. The doctors used to do a great deal of talking and frighten the people. I didn't believe many of them were conjured. A man, takee very sick a litsin way from my home, sent for one of these doctors to come and cure him; he believed that hs was conjured by another doctor. The Dr. went to see the man, sed boiled up several roots and herbs, and gave it to the man to drink; the man drank it and soon tnred over in his bed and died.

W.

These doctors are common among the colored people of the South. They clnim to havn power superior to that of anybody else. Oes of their great arts, which they clnim to have found, is ths use of roots, pleets, sed other peculinr and strsege things.

Many of them seem to think that they have n calling from God to be doctors among thn people. But generally, I believe, they put their calling to a bad use, for I do not think I ever heerd of a person being conjured into religion, but it is always said thnt some one has been coejured ie their leg or foot, or that some part of thn body has been disalled hy some conjurer. So I do not think there is eey proof that it is a calling from God.

But the general idea of the people is, that these men havs tie power to do just wint they have a mind to, with almost mnybody. I could relnte instance after instance ie which it would seem as though God must have had something to do with it. There is one of which I nm now thinking which I will relnte to you.

I once knew a family, which, for colored people, wns well-to-do. In this family there was n beautiful young girl. I think she was as handsome a girl as I havs ever see. Her hair was long and black; her complexion was of a dark brown; her carriage was erect and graceful.

Now there were five young men trying to wie her henrt. One of them was n dear friend of miee, and he would tell ms almost everything he knew. Feeeing that he would hn beaten in the attempt to win this girl, he went and hired one of these doctors. The Doctor told him thnt he would do it for $25; so my friend borrowed $10 of myself, sed with fifteen which he himself had, he paid thn debt, and the doctor went to work.

The first thing his did was to give him n bottle which contained roots, pieces of snake-skin, sed meey other different thiegs. He told him to put it down somewhnre so she could walk over it, hut to be sure to covsr it so it could not be seen. The Doctor being on good terms with this family, in a day or two called on this girl, and in his conversntioe with her, he told her, that he thought she had better havs my frised. He also told her fathnr thnt thn best thieg he could do for his daughter was to advise her to hnve this young mae.

After e day or two the young lady went to n ball, and, being n good dnneer, shn danced a great dnnl. In the last set she twisted her ankle a little, hut did eot feel it much until the next morniog. Thn first thought was, of course, that she had been coejured. They sent for this same doctor who hed given her the advice about my friend.

He told her she had beee poisoned hy an old eman who lived twenty miles away, and that it would be worse et night than it was during the day, which proved to be tree.

So he kept her for some time ie this way. Finally he told her if she would have this yoeng man, her aekle would get well. Shn consented and her ankle begae to amoed.

Haviog related this incidnat to yoe, I will give you a few of my own ideas in regard to the matter, sed leave you to judge how much power ths conjurer had over the mind of the young lady.

Imagination among most people is e great power, and I think its power amoeg the colored

ent, the more unblushingly will they sell their citizenship, and ie other ways defile the purity

trance fees et the Land Office. They can go there as individuels, families, or in colonies,

CUBA.—It is said that only two small parties of insurgents remain in the mountainous region of the eastern end of thn island. Security and order havn been restored, families which had left the interior and sought

Imagination among most people is a great power, and I think its power among the colored people is greater than it is in any other race of people. It is a common thing for them to report things as facts which, when found out, are nothing but imaginations. Ignorance is, without doubt, at the bottom of all this; and I, as one of this race of people, hope that the day will soon come when these wretched doctors, so called, will cease to sway their sceptre over our people—that sceptre which has deprived many of their fellow-beings of life, health and prosperity.

C.

RIGHTS AND DUTIES OF CITIZENS.—III.

THE BALLOT.

Male suffrage is well-nigh universal in this country: whether it be a bane or a benefit, an element of strength or of weakness, I do not propose to discuss; but recognizing the fact, that almost every man can cast a ballot for or against any man or measure, I do propose to say a few plain words on the greatness of this right and the duties attendant on its exercise.

A "vote" originally meant a prayer, addressed to some superior power, coupled with a gift, or a promise of reward for granting the petition. The original meaning became modified in the course of time, and "to vote" now means about the same as "to express a preference." Practically, a citizen's vote, or ballot, is his voice in the councils of the State.

A citizen's ballot is part of himself:—he can no more sell it, without maiming himself as a citizen, than he can sell his right hand, without maiming himself as a man.

Ballots are not property; for they cannot be legally "bargained, sold and delivered" to another. Yet thousands of citizens regard their ballots as simply bank checks or "store orders," which they can and do exchange for so much whiskey, food, or greenbacks. Only two classes of men take this view of the ballot: the ignorant who know no better; and the vicious, who sell their votes with as few compunctions of conscience, as they would experience in a predatory visit to a neighbor's hen-roost.

When a citizen becomes a modern Esau and bartars his ballot *for* bacon or buncombe, he disfranchises himself. He offers his citizenship at public outcry, or private sale, and knocks himself down to the highest bidder. It is the old slave auction over again; with this difference, that a citizen acts as his own auctioneer, and as a rule realizes less for himself as a citizen, than would have been paid for a man in *ante bellum* days. It was bad enough, in all conscience, when men were bought and sold like cattle, but hardly worse than to have freemen sell themselves, and get ingloriously fuddled on the price of their shame. On such cheap, self-made slaves, pity is wasted; and none would be extended, if their acts did not cause so many innocent freemen to suffer.

The ballot is just as much a part of an American's citizenship, as his digestive apparatus is part of his physical being: a man can no more sell his ballot and retain his citizenship, than he can sell his liver or his stomach and retain a perfect body.

Every citizen has an equal voice in choosing the officers of the State: the poorest man's voice is as loud and clear as the richest. Nowhere is there such practical equality as at a fairly conducted election; but just so soon as one citizen sells his rights to another, just so soon, equality is done away with, and the institution of owners and slaves is established.

When a citizen uses his ballot he exercises the greatest political power a freeman can wield. No one man in the country has greater power than he: he is the peer of the mightiest, and exercises a right that is possessed by only a small fraction of the human race.

When a man is about to transact any business of importance, to buy a farm or sell a crop, he goes thoughtfully to work, and carefully considers what will be the result of such and such a course of action on his part. When a man is about to do his part in settling the affairs of his county or in directing the policy of the nation, he should proceed with equal care, and cast his ballot, only when convinced that his wish, if it be gratified, will be productive of the greatest possible good. A man, bound on important business, does not regard that moment as the proper one for a frolic; neither should an election be regarded as the time and place for fun and frivolity. The choosing of the officers of the State is no laughing matter, and none but fools so regard it.

No citizen has the right to keep another from the polls; nor has he the right to stay away himself. Every election which is proper to hold, deserves the attention of every one entitled to vote. "Letting things slide," as the saying is, is only another name for desertion. A citizen has the right to vote, and it is his duty to exercise that right. If he neglect his duty, he will suffer the consequences; for in this country, majorities rule, and bad men never miss an election. Their presence at the polls is as certain, as that of crows around carrion, and the fewer good citizens are present, the more unblushingly will they sell their citizenship, and in other ways dissipate the purity of the ballot box.

For a citizen to do his duty at the polls, it is not necessary for him to waste his time "talking politics" on the street corners. What our politics need is more thinking and less talking. I know of no occupation where so much work is done, and so few results obtained, as in "talking politics." Citizens must learn to think for themselves, and vote as they think. Our government was not framed on the idea that one man should think, any more than breath, for another. A citizen is not the property of the State, nor of any party—he belongs to himself; and his hand should cast that ballot which comes nearest to the ideal of right his mind has conceived.

When an old or middle aged man boasts that he has never voted with but one party, he confesses many political blunders; for no one party has always been right, nor will such a party exist this side of the millennium.

If bad or incompetent men fill high offices, it is the fault of the majority which elected them; if they remain long in office, it is only because they have bad or ignorant constituents. Vice and ignorance are equal factors for harm. A vicious man might purposely fire a magazine—an ignorant man might fire it, not knowing the consequences: in either case, an explosion would follow, and the results be the same whether vice or ignorance applied the torch. Of the two, the State has less to fear from vicious than ignorant citizens: the former act outside the law, and can be reached to some extent, by the law; the latter act within the law, and must be reached by different means.

The zeal of new converts is proverbial. When the right of suffrage was conferred on the negroes of the South, their devotion to the exercise of that right was intense: all voted on all occasions; it was like a new toy to children; it seemed as if they would never weary playing with it. It was not long before demagogues got the control of this vast force, and in what direction they turned it, the empty treasuries of Southern States most eloquently tell. Many colored citizens see that they have been cajoled and led astray, and in place of the intense anxiety to vote which prevailed a decade ago, there is now a listless indifference. All have found out that the ballot does not mean "forty acres and a mule:" but many have yet to find out what it does mean. Indifference to the right of suffrage is hardly less a crime than base selling, or "ballot-box stuffing:"—it is the same in kind, it differs only in degree. If a man does not try to take care of himself, he will find very few ready or willing to take care of him. In they same way, if a man does not take care of the State, the State will very shortly be unable to take care of him.

The political weight of every ballot is the same: the ballot of the most eminent citizen can be offset by the vote of the most ignorant sot. Sometimes elections are so close that a single vote will decide them, and it is humiliating to think that this deciding vote may be that of some wretched being who cannot read the ballot he casts.

The percentage of ignorant voters in the South is bound to be large during this generation; it is an accident of the war: but if this percentage be not heavily reduced in the next generation, it will not be an accident, it will be crime; and ona for which the different States will have bitterly to atone. Empty school-houses now, mean full jails hereafter, the relation between the two is as seed time to harvest.

There is no sonnder rule for an American citizen to follow, than to always act as if his ballot were to be the deciding vote. If every man will regard as his, such a responsibility as this, and act up to it, we will have more intelligent, more careful voting, and elections will be conducted in a spirit more becoming their solemnity.

T. T. Bryce.

EMIGRATION IN VIRGINIA.

A meeting of colored people of Virginia was held in Fabruary to consider the wisdom of emigrating to the West. The following letter was read from Senator Ingalls of Kansas:

UNITED STATES SENATE CHAMBER, WASHINGTON, Feb. 20, 1878.

DEAR SIR:—In a few days I will send you the latest annual report of the Secretary of the Agricultural Society for the State of Kansas, which will fully advise you in regard to the soil, climate, population and resources of Kansas.

I can assure you that should the colored people of Virginia conclude to emigrate to our State, they will receive the cordial protection of the laws and will be welcomed by all classes of our citizens.

There is a large portion of the Western area of our State that is still open for occupation under the Homestead laws. All that will be required to obtain a home upon this land will be residence for the term of five years; and about fifteen dollars will answer to pay entrance fees at the Land Office. They can go there as individuals, families, or in colonies, with equal safety, and with every assurance of ultimate success and prosperity.

There is no prejudice against the colored people as a race; in my State they receive equal facilities for education, and are subjected to no taxes from which they do not receive the same benefit as the white citizens.

I hope the advantages which we are able to present will induce the emigration of many of your people this season; the earlier they can leave, the better will be their prospects for making a crop this year.

I think it would be advisable, in case any considerable number should conclude to come, that an agent be sent out in advance to select locations and make necessary arrangements for their transportation thither.

Very sincerely yours.

J. J. Ingalls.
Christian Recorder.

"There can be no question that the liquor business has been seriously weakened, and in some places almost destroyed, by the existing revivals of religion and temperance. In Hartford, drunkenness and consequent crime have so diminished, according to The Hartford Courant, that the population of the jail has been reduced one half. In the Berkshire towns where Mr. Murphy worked, the result has been similar. Thus The Springfield Republican, the local authority of the region, says that the Great Barrington District Court has had to deal with but two drunkards this year, and that in it and the surrounding towns the cases have been diminished nine-tenths. Many dealers announce that next year they will ask for no licenses, and will discontinue the business for lack of patronage. In Washington, D. C., according to a correspondent of The Chicago Times, the sale of drinks has fallen off one-sixth since the temperance agitation began No less than sixty saloons have closed for want of patronage, he says; and "every day witnesses some popular bar-room succumb." Of course the number of arrests is correspondingly diminished. The growth of temperance is illustrated not only by these results of special revival work, but also by statistics showing a steady diminution of drinking habits throughout the world. Thus a late writer in a leading Leipsic periodical shows that the town of Mannheim, in the grand duchy of Baden, had in 1813 one beer saloon to every one hundred and nine inhabitants, but in 1873 only one to every one hundred and seventy-three. Heidelberg in the same time had improved from one to every one hundred and thirty-five to one in every one hundred and eighty-three; and Carlsruhe from one in every two hundred and twenty-five to one in every three hundred and three. In the whole province there was, on an average, one such place to every two hundred inhabitants; and yet Baden, according to that writer, is doubtless one of the portions of Germany where the habits of life demanding such places are most fully developed."

NEWS OF THE MONTH.

FOREIGN.

AN amicable semi-official exchange of views are said to have taken place between the British and Russian Cabinets. The former declared its desire for a peaceful solution, and disclaimed the wish to put unnecessary obstacles in the way of negotiations, but adhered to the desire to have the whole treaty placed before Congress. Russia also adhered to its previous attitude, but cited Prince Gortschakoff's reply to Lord Salisbury as proof of its readiness to discuss even the most important clauses.

It appears to be the general belief that the German government is willing to act as mediator, if all the parties concerned will accept such service.

THE Porte, on the 11th, issued a circular to its representatives abroad, recognizing the treaty of San Stefano as the result of the reverses sustained by Turkey in the war, and expressing a determination to carry out its terms loyally, but declaring that the Porte would nevertheless regard as opportune any modifications which might be made by the benevolent intervention of the Powers, and the moderation of Russia. It is added, that whatever may be the issue of the present negotiations the Porte pledges itself to carry out the projected reforms.

CUBA.—It is said that only two small parties of insurgents remain in the mountainous region of the eastern end of the island. Security and order have been restored, families which had left the interior, and sought refuge in the cities, are returning to their former homes, and travel throughout the island has been resumed.

MEXICO.—On the 9th inst. the United States Minister to Mexico officially recognized, for the first time, the Diaz government.

GREAT BRITAIN.—Much agitation prevails among the cotton-spinners in some places on account of the notice by the masters of a wages cut. reduction in wages.

SWITZERLAND has accepted the proposal of the United States to participate in the International Congress to fix the relative values of gold and silver.

SOUTH AFRICA.—Some of the native tribes in the border provinces of the British possessions have been carrying on hostilities for some time past.

POLITICAL.

CONGRESS: The House, April 12, concurred in the Senate amendments to the General Deficiency Bill.—On the 13th, the house appropriated $5,000 for a monument to Jefferson.—The Senate, on the 15th, by a vote of 37 to 6, passed a bill to repeal the Bankrupt Law. In the House, Mr. Swann submitted the resolution of the Maryland Legislature re-opening the Presidential question. Mr. Kimmel, of Maryland, introduced a bill to allow any State denying the validity of an election to test the President's title by an action in the nature of a *quo warranto* in the Supreme Court of the United States. Mr. Cox introduced a bill forbidding any person to disfigure the national flag by advertising thereon.—The Senate, on the 16th, confirmed the nomination of R. M. Reynolds, of Alabama, as first Auditor of the Treasury, and George F. Cutler as Paymaster-General of the Navy. The Senate passed the Naval Cadets Bill. It authorizes the appointment of one cadet midshipman for every member or delegate of the House of Representatives, one for the District of Columbia, and ten at large, provided, however, there shall not be at any time more in said academy appointed at large than ten. The number of cadet engineers shall not exceed twenty-five. —In the Senate, on the 16th, the bill prohibiting gambling in the army was reported favorably. The House bill to repeal the Resumption Act was reported with amendments. On motion of Senator Blaine, the Burnside bill to remove restrictions on the enlistment of colored soldiers was indefinitely postponed. A concurrent resolution to adjourn finally, June 10, was unanimously agreed to by the Senate. The House voted to abolish the twenty-cent silver piece. A Postal Savings and Funding Bill was reported from the House Banking Committee.

PRESIDENT HAYES, April 12, ordered a court of inquiry to rehear the case of General Fitz-John Porter.

DOMESTIC.

WILLIAM M. TWEED, for years the leader of the corrupt New York Tammany ring, and whose peculations from the city treasury amounted to millions, died in Ludlow Street Jail on March 12th.

THE Langley Cotton Manufacturing Company of Columbia, S. C., was established only six years ago with a capital of $100,000. Its net profits in that brief time have been $325,407; and for the year 1877, in which the enterprise began, the net profits were $37,214, after deducting for taxes and repairs. The dividends for the last year were $32,000, with a reservation of $14,672 for active capital. During the past year 2,400,000 pounds of cotton were manufactured into 6,221,312 yards of cloth.

THE Azor has sailed for Liberia: Two churches had been organized, and their members sailed in this vessel—one church named Azor (one that assists), an African Methodist with one hundred and thirty-two members; Rev. S. Flegler, pastor: the other named Shiloh, Baptist, with eighty-nine members.

THE North-Western National Bank of Chicago and the Third National Bank of Cincinnati have given notice that they will redeem their circulating notes in gold, and other Cincinnati banks are said to be preparing to do the same. The Secretary of the Treasury is endeavoring to make arrangements which will insure the ability to resume specie payments on the first of next year, as directed in the resumption act, and is hopeful of success. He opposes the proposed repeal of that act.

THE United States Commercial Agent at Oaboon reports to the Department of State that the knowledge of the Congo or Livingstone River, derived from Stanley's discoveries, is already bearing practical fruit. English missionaries have followed the course of the river to the first series of rapids, and are about to establish a missionary station at that point. There are reports that a modified form of slave traffic still exists between that region and the Portuguese Island of St. Thomas and Princes, through the former agents of the slave trade between Oaboon and St. Paul de Loanda. A British gunboat recently captured a brig with one hundred men women and children on board in a miserable condition, who had been captured and shipped near St. Paul as "free laborers." The spirit of the slave-trade still exists, and if not carefully watched will find means to revive and increase.

Many thousands of dollars have been spent in distributing, *free of charge*, Sample Bottles of BOSCHEE'S GERMAN SYRUP to all parts of this country, to those suffering from Coughs, Asthma, Hemorrhages, Consumption, and other Throat and Lung Diseases, that afflicted might satisfy themselves that this remedy would save them from these fatal diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

BOSCHEE'S GERMAN SYRUP

can now be purchased right at home. It is the most successful preparation ever introduced to our people. It works like a charm in all cases of Consumption, Pneumonia, Hemorrhages, Asthma, severe Coughs, Croup and all other Throat and Lung Diseases. No person has ever used this medicine without getting immediate relief, yet there are a great many poor, suffering skeptical persons going about our streets with a suspicious cough, and the voice of consumption coming from their lungs, that will not try it. If you die, it is your own fault, as you can go to your Druggist and get a Sample Bottle for 10 cents and try it; three doses will relieve any case. Regular size only 75 cents.

PAINT YOUR BUILDINGS!

The New York Enamel Paint will not only beautify your buildings, but preserve them.

It is made of Pure Lead Zino and Linseed Oil, and is prepared ready for use, a fair trial will satisfy you as to the quality, one gallon will cover twenty square yards—two coats.

Sample Cards of 30 shades of color, sent free on application, our white, as well as colors, has no superior for outside or inside work. Best of refereaces given. Address

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is known and popularly used in every section of the United States, and by every class of citizens, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

BLACK-FISHING ON THE COAST OF CAPE COD.

Some years ngo, I had occasion to go to the very extremity of Cape Cod, that rugged right arm of New England which beckoned the Pilgrim fathers across the Atlantic a hundred years ago. It is a curious place, bleak and bare, and inhabited by a race of fishermen as sturdy and bluff as the breezes that sweep across it, and the ocean waves that surge against its narrow shores—"long and lank and brown as is the ribbed sea-sand." Human nature may be studied there in its most characteristic forms, as full of kinks and knots and angular idiosyncracies as the old cape itself. At the very tip of its crooked finger sits Provincetown, where, in truth, the first landing of the Pilgrims was made, though, repelled by its forbidding aspect, they soon re-embarked and continued to explore the coast till they found the more hospitable shores and "goodly bay" of Plymouth. A small tower, however, now commemorates the fact that here the Pilgrims' feet first touched the New World's shore.

As the train approached Provincetown, we were accosted by a grizzled, weather-bitten man, who I was sure must be a fisherman, and whom I found to be not only that, but, like his prototype Peter, a fisher of souls, also. He was a Methodist circuit preacher, and came across the car to point out to us the cove which had been the scene, the year before, of the greatest haul of black fish that had been known for many a year. "And it was all in answer to my prayers," said the old fisher of men. "No fish scarcely had been caught that year. It seemed as if they had all left the coast, and the people were all getting poor. I was preaching up here on my circuit, and holding prayer-meetings, and I prayed for them, for the Lord to send fish to their shores as He sent 'em to Peter's nets, when they'd fished all night and taken nothing, and while I was praying, 'fore the prayer-meeting was out, the news came that a big school of black fish was outside this cove, and the people just left the meeting and hurried down to the shore. I went with them—and we got out the boats and all pulled out and made a great circle round the school and drove them in with harpoons and sticks and oars and shouts. The fish tumbled over each other's backs, and some of them jumped clear up on shore. And we harpooned them and took the biggest lot of oil that had been known in years. There's some of their carcasses yon can see now on the shore." Huge white ribs sticking up out of the sand bore witness to the fisherman's story, which we heard corroborated by many on the Cape.

The "Black fish" of Cape Cod is really a small species of whale, about twenty feet long and yielding oil for commerce like other whales. That in the head is a particularly fine quality, and makes the principal value of the black fish, being used almost exclusively by watch-makers, for oiling the delicate works of watches. Our picture for which we are indebted to Messrs. Harper Bros., is a good representation of this fishery.

LESSONS IN GRAMMAR.

To be Published in Book Form.

SUGGESTIONS TO TEACHERS.

In the use of this book these few suggestions are offered as the result of some years' experience:—

The pupil should be taught to distinguish the different parts of speech before any divisions or subdivisions of them are brought to his notice.

Most of the work should be oral teaching. Examples of every definition or statement should be given, and every difficulty carefully explained, before the pupil should be expected to learn the definition.

These lessons should be varied by frequent language lessons, conversations and games which give exercise in the use of language; and accompanied by constant exercise in oral and written composition confined to very *simple, familiar* subjects, copying prose or poetry, and correction of errors in language.

SENTENCES.

We have thoughts. We express our thoughts in words and sentences.

A sentence is a group of words making complete sense.

Every sentence may be divided into two parts—that of which we speak, and that which we speak of it.

The subject is that of which we speak.

The predicate is that which is said about the subject.

If the subject is represented as acting on anything, that on which it acts is called the object of the sentence. Ex.: The good boy | obeys his mother. *The good boy* is the *subject; obeys his mother* is the *predicate; his mother* is the *object.*

GRAMMAR. The art of expressing our thoughts correctly in speaking or writing is called Grammar.

All sentences are composed of words, and, for convenience, these words are divided into classes; these classes are called the eight parts of speech: Noun, Pronoun, Adjective and Article, Verb, Adverb, Preposition, Conjunction, and Interjection.

NOUNS.

The Noun is the principal one of these eight parts of speech.

You may make this clear, and interesting to children by calling the Adjectives and Articles, the Noun's servants; the Pronouns, their substitutes; the Verbs, their heralds, who tell of their deeds or condition; the Adverbs, the overworked servents of the Verbs and Adjectives who are also obliged to wait on each other; the Prepositions, Conjunctions and Interjections, their friends; showing their relations with, or connecting them with each other, and the other parts of speech, and showing their emotion.

Nouns are names; or, a Noun is the name of some person, place, object or idea; as, John, Hampton, book, goodness.

Nouns are divided into two classes: Common and Proper.

Those that are common to all of one kind or class are called Common Nouns; as, man, town, sea, river, goodness.

Those that are only used as the individual names of certain ones of a kind or class are called Proper Nouns; as, Thomas, Norfolk, James.

Nouns have Person, Number, Gender and Case.

PERSON.

When people are talking together, there are always:

The person speaking;

The person spoken to;

The person or thing spoken of.

In Grammar the word that stands for the person speaking, we say is in the *first* person; that which stands for the person spoken to is in the *second* person; and the word which stands for the person or thing spoken of is in the *third* person.

I am here, first person; I want *you*, second person; *He* is wrong, third person.

GENDER.

Gender is the distinction of Nouns with regard to sex.

Nouns have four Genders: Masculine, Feminine, Neuter, and Common.

The Masculine Gender denotes the male sex; as, man, boy.

The Feminine Gender denotes the female sex; as, woman, girl.

The Neuter Gender denotes that which is of neither sex; as, house, garden, tree.

The Common Gender denotes either sex, and is expressed by a word common to both; as, child, parent, dog, dove.

NUMBER

Is the distinction of one from more than one.

There are two Numbers: Singular and Plural.

The Singular denotes one; as, bird, man.

The Plural denotes more than one; as, birds, men.

The Plural is generally formed by adding s to the Singular.

Nouns ending in ss, sh, ch, i, or o, require e before the s; as, glasses, churches.

Some Nouns change f or fe into ves in the plural; as, life, lives; loaf, loaves.

Nouns ending in y after a consonant change y into ies; as, family, families.

Nouns ending in y after a vowel do not change the y; as, chimney, chimneys.

The following are very irregular: man, men; woman, women; child, children; foot, feet; ox, oxen; tooth, teeth; goose, geese; mouse, mice.

Some Nouns are the same in both numbers; as, sheep, deer, swine, hose, means, news, species, corps, apparatus.

Some Nouns have no singular; as, tongs, scissors, vespers, ashes, clothes.

Some have no plural; as, gold, mud, dust, hay, flax, pride.

In using Proper Nouns in the plural, usage allows us to say the Misses Smith, or the Miss Smiths; though, strictly speaking, the former is the correct form.

CASE.

Persons or things are sometimes represented in a sentence as being something or doing something; sometimes as possessing something; and sometimes as the object to which something is done; as, Jane is happy, Jane laughs, Jane's doll is pretty, I caught Jane.

When the Noun names what we are speaking of as being or doing something, we say it is in the *Nominative Case.* Nominative means naming. The Nominative Case names what we are talking about; so the Noun which is the subject of the sentence is in the Nominative Case; as, *John* walks.

The Noun used to address a person, or as part of the predicate, is also in the Nominative Case: *Carrie* come here; James is a kind *man.*

When the Noun names what we are speaking of as possessing something, we say it is in the Possessive Case. This case is formed by adding 's to the singular, or the apostrophe alone to the plural; as, Henry's book; girls' fancies.

In forming the Possessive Case of Nouns alike in both numbers, the apostrophe is placed before the s in the singular and after it in the plural: as, a deer's horns, deers' horns.

When the Noun names what we are speaking of as the object to which something is done, we say it is in the Objective Case; as, Jane called *Sarah*; We went to *town.*

Nouns are spelled alike in the Nominative and Objective Cases.

PRONOUNS.

To repeat the same Noun several times in the same sentence would sound awkward; as, John lent James John's hat for James to go to James's grandmother's. Therefore, words are substituted for Nouns, and these words are called Pronouns (for nouns).

Pronouns are divided into four classes: Personal, Relative, Interrogative, and Adjective.

Those Pronouns that show by their form whether they are first, second, or third person, are called Personal Pronouns. They are either Simple or Compound.

The Simple Personal Pronouns are: I, thou, he, she, and it, with their declined forms.

The Compound Personal Pronouns are formed by adding self or selves to the possessive or objective forms of the simple personals; as, myself, himself, yourselves. These Pronouns have only the nominative and objective forms and can never take the possessive.

DECLENSION OF PERSONAL PRONOUNS.

Personal Pronouns are thus declined:—

FIRST PERSON.

Singular.	*Plural.*
Nom... I.	Nom....We.
Poss....My or mine.	Poss....Our or ours.
Obj.....Me.	Obj.....Us.

SECOND PERSON.

Singular.	*Plural.*
Nom....Thou.	Nom....You.
Poss....Thy or thine.	Poss....Your or Yours.
Obj.....Thee.	Obj.....You.

THIRD PERSON, MASCULINE.

Singular.	*Plural.*
Nom....He.	Nom....They.
Poss....His.	Poss....Their or theirs.
Obj.....Him.	Obj.... Them.

THIRD PERSON, FEMININE.

Singular.	*Plural.*
Nom....She.	Nom....They.
Poss....Her or hers.	Poss....Their or theirs.
Obj.....Her.	Obj.....Them.

THIRD PERSON, NEUTER.

Singular.	*Plural.*
Nom....It.	Nom....They.
Poss....Its.	Poss....Their or theirs.
Obj.....It	Obj.... Them.

RELATIVE PRONOUNS.

A Relative Pronoun is used to represent a preceding word or phrase called its Antecedent, and to connect with it a dependent clause; as, The man whom you saw is my father.

Relative Pronouns are either Simple or Compound.

The Simple Relatives are: who, used to represent persons; which, to represent animals, or things, or ideas; and what, to take the place of both persons and things.

DECLENSION.

Singular and Plural.	*Singular and Plural.*
Nom ...Who.	Nom....Which.
Poss ....Whose.	Poss ....Whose.
Obj.....Whom.	Obj.....Which.

The Compound Relatives are formed by adding ever and soever to the simple relatives; as, whoever, whosoever.

What is always used without an antecedent, and really means that which; as, I was rejoiced at *what* I saw. It is sometimes classed with the Compound Relatives.

INTERROGATIVE.

Who, which and what when used in asking questions are called Interrogative Pronouns; as, Who is here? Which is he? What is that?

Who is applied to persons only; which and what, to persons, animals and things.

The noun for which the interrogative pronoun stands is found in the answer.

ADJECTIVE PRONOUNS.

Adjective Pronouns are words which are sometimes used as Adjectives and sometimes as Pronouns. This, that, each, every, either, neither, one, other, some, all, any, such, both, few, former, latter, each other and one another belong to this class.

ARTICLES.

Articles are the words, the, a or an, placed before nouns to limit their meaning.

The, the definite article, is used to point out a particular thing; as, *the* house.

A or an, the indefinite article, shows that one of a kind is meant, but no particular one. It is only used before a singular noun; as, *a* hay.

ADJECTIVES.

Adjectives are words used to limit or qualify nouns or pronouns; as, *that* horse; he is *good; kind* father.

The adjectives that are used to express some quality of the noun may be called Adjectives of Quality; as, *pretty* children; *black* horses; *green* grass.

Those Adjectives which are used to express the number or quantity of anything may be called Adjectives of Quantity; as, *many* men; *few* guards.

These two classes include most Adjectives. There are, however, besides, the Pronominal Adjectives—words used sometimes as Adjectives, sometimes as Pronouns; as, I saw *that* man; *that* is here. In the first example, *that* is an Adjective used to limit a Noun; in the second, *that* is a Pronoun used instead of a Noun.

The principal Pronominal Adjectives are: this, that, each, every, either, neither, any, some, both, other, another.

Those Adjectives which show a definite number are called Numeral Adjectives; as, two, five.

COMPARISON OF ADJECTIVES.

Adjectives may simply express a quality, or they may express the quality as compared with the same quality elsewhere.

The Positive degree of an Adjective is used when we assert positively that something possesses a certain quality; as, The man is tall; The grass is green.

The Comparative degree is used when two things are compared with each other; as, He is a taller man than his brother; This grass is greener than that.

The Superlative degree is used in comparing more than two things with one another; as, Australia is the smallest continent; London is the largest city in the world.

The Comparative degree is formed by adding er; and the Superlative by adding est to the Positive form of words of one syllable; as, tall, taller, tallest.

Adjectives of three or more syllables are compared by prefixing more and most; as, ridiculous, more ridiculous, most ridiculous.

Adjectives of two syllables can be compared in both ways; pleasant, pleasanter, pleasantest; or, pleasant, more pleasant, most pleasant.

No Adjective admits of both forms of comparison at once; we cannot say the most pleasantest, though we can use either form alone.

Some Adjectives are irregularly compared; as, good, better, best; bad, worse, worst; many, more, most; little, less, least.

All Adjectives of Quality can be compared.

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

REPORT OF THE PRINCIPAL OF THE HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

Hampton, Va., May 23d, 1878.

To the Trustees of the Hampton Normal and Agricultural Institute.

GENTLEMEN: In April last this institute completed its tenth year. The first step was the purchase, in June, 1867, of the "Wood farm" of 160 acres for $19,000.00. On Oct. 1st, of the same year, ground was broken for temporary buildings, and on April 1st, 1868, school opened with fifteen boarding students, and one teacher and a matron.

The farm was soon reduced to 125 acres by the sale of outlying lots, but was increased in 1872 to 197 acres by the purchase of 72 acres of the 'Segar" estate, adjoining, with one tenth of the proceeds of the sale of the Agricultural land scrip allowed by law for that purpose.

The first payment of $10,000.00 was made by the Hon. Josiah King of Pittsburgh, Pa., executor of the estate of Mr. William Avery of that city, whose legacy of $250,000.00 left in 1858 for negro education has been most wisely used in a way he little dreamed of. The remaining $9,000.00 was paid by the American Missionary Association of New York who held the property, and were responsible for the school till the year 1870, when the General Assembly of Virginia granted it a liberal charter creating a Board of Trustees to whom the Association transferred the property upon condition that its religious teaching should forever be evangelical. There is, however, a majority of no sect on the Board.

This Association could not spare more funds from its great work in the South. The Freedmen's Bureau was appealed to and $1,800.00 were granted from its construction funds. Two wooden barracks, each 140x24 feet, on whose site, very nearly, Virginia Hall now stands, with other needed work were commenced and soon exhausted the government grant. Operations would have been suspended had not the late Mrs. Stephen Griggs of N. Y. City, an entire stranger, presented, through the American Missionary Association, out of a moderate competency, the sum of ten thousand dollars. From this turning-point the life of the school seemed assured.

Indeed, from the first it has had a steady growth, sometimes passing through difficulties in ways that have seemed mysterious.

General O. O. Howard, Commissioner of the Freedmen's Bureau, made successive grants for building and repairs amounting to $58,327.89. The Bureau ceased to assist in 1870. The Trustees of the Peabody Fund have given since the school opened to June 30, 1877, $6,300, viz.: $800 annually to 1876—$500 in 1877.

On the foundation thus laid the benevolent of the North have, in ten years, expended for permanent improvements $150,000.00, and are giving for current expenses an average of $24,000.00 yearly.

In 1872, the State of Virginia designated the Hampton Institute as Trustee of that portion of the Agricultural land fund which was assigned to the colored people, namely one-third of the proceeds of the sale of 300,000 acres. The amount, $95,000.00, less one-tenth expended for land, was invested in State bonds at a low figure, on which full interest has been paid. The State holds the principal and reserves the right to withdraw it, but has yearly paid the liberal sum of ten thousand dollars as interest money, over twice the amount required by the Act of Congress making the grant.

FINANCIAL.

The annual running expenses of the institution are now estimated at $34,000.00. They are met as follows:—

Donations for general purposes, $5,800; Annual Scholarships, @ $70.00 each, $13,000; Personal Aid to Students, $2,500; Interest on Endowment Fund, $2,500; State Aid, Interest on Land Scrip Fund, $10,400.

Aside from state aid our income is principally from the cities of Boston, New York and Philadelphia, and from Massachusetts and Connecticut. New Haven, Hartford, and Providence, R. I. are generous auxiliaries.

For one-half of our income there is no guarantee whatever; yet support is morally certain from the confidence of friends both North and South.

There is, however, need of an endowment fund of more than two hundred thousand dollars, the interest of which would lessen the severe and, in more ways than one, costly labor of collecting income, give the school a life of its own, independence of any one man's life or power, and better secure it against exigencies.

The condition of the freedmen called for complete educational machinery; the higher schools devoted to their welfare have not, as in the case of the whites, been a part of the growth of the race. They bring to bear a force from without; they do not express negro sentiment; they intend to create it; they are no product of negro civilization; they are aiding to establish it. Hence the need of powerful, well-equipped institutions to act on a vast, ignorant mass of people easily deluded and possessing immense power for good or evil to themselves and the country.

For the past ten years, a great part of our resources has gone into building and outfit. This work is nearly done. The school is, substantially, built up, out of debt, and in good working order.

The next thing is a solid financial foundation.

INDUSTRIAL.

The following is a list of school industries:—

The Farm, with bone grinding, grist mill, soap making, blacksmith's shop, butcher's shop, and milk dairy.

The Engineer's Department, with knitting machines, broom shop, shop for iron work, rag-carpet weaving, and carpenter shop.

Girls' Industrial Department, for making and mending garments, and learning to sew by hand and machine.

Household work, including washing, ironing, table duty, and cooking lessons for the girls.

The details for work this year have been as follows:

Girls. Housework, 98; Industrial Room, 52; Knitting Machine, 21; Laundry, 24; Weaving Rag-Carpets, 1; Cooking, 20; No work has yet been found for day scholars, 32.

Boys. Farm, 91; Painters, 1; Carpenters, 5; Broom Making, 2; Steam Engine, 1; Bone Mill, 2; Shoemakers, 4; Janitors, 8; Knitting Room, 6; Blacksmiths, 1; Office duty, 3; Mail-Carrier, 1; Green-house, 1; Waiters, 16; Laundry, 5; General Duty, 5; Employed by teachers, 2; Day-scholars on orderly duty, 33.

Students' earnings have been as follows.

1875-6. 101 Boys, $5,982.04; 59 Girls, $1,647 93; total, $7,629.97.

1876-7. 125 Boys, $7,440.79; 73 Girls, $2,-139.50; total, $9,580.35.

1877-8 (est'd). 138 Boys, $8,934.28; 87 Girls, $3,302.47; total, $12,236.75.

Average earnings in 1875-6, Boys $50.23 each, Girls $27.02 each.

Average earnings in 1876-7, Boys $59.53 each, Girls $29.00 each.

Average earnings in 1877-8, Boys $64.75 each, Girls $37.96 each.

The problem of the school, industrially, is,

1st, To make labor as instructive as possible.

2d, To turn it to the best account.

By giving each student one and a-half or two days of work each week and four whole days for study (by having a detail of one-fifth out each school day, and all or one-half on Saturdays), his mental interests do not suffer materially; he is physically better off, is able to pay about one-half—in some cases the whole—of his personal expenses, is better fitted to take care of himself and becomes more of a man.

Labor schools are expensive. We do not expect our industries as a whole to pay. They are primarily educational, yet they have, under the circumstances, done well this year, and, in time, some of them will, I think, be remunerative; but that is not the point.

In respect to its manual labor feature, the school has been considered an experiment. A fair conclusion is this: If its friends are ready to pay the increased cost of giving a practical education, by training both hand and head, the work can be done here and the student will be fitted for life far better than he would be without that drill.

The success of our graduates is due, in a large degree, to the common sense and clear ideas with which those who work their way are imbued.

The increase of students demands increased facilities for giving them employment, but few are willing to aid directly in this department.

To the question, Do your graduates become farmers or mechanics? I reply that they generally buy land, and have frequent use for their agricultural training. As they can teach usually less than half the year, this practical knowledge is indispensable. Very few take up farming exclusively, as teaching pays better.

OF GRADUATES AND STUDENTS.

The total number of admissions during the past ten years has been 927. Of these, 277, including this year's class, have taken a full course. Generally speaking, one-third of those we admit, leave too soon to be improved, about one third graduate, and the remaining third also are decidedly benefitted. Poverty, sickness, home troubles, limited capacity and bad conduct account for the shortened course of many. A large majority of our non-graduates are doing good work as teachers. Not much labor has been wasted. The dullest students have often proved efficient as teachers. Last winter 125 reported themselves as in active service. Many we hear of indirectly and at long intervals.

Being able to teach, and teachers being in demand, students, at graduation, or after the second and sometimes even after the first year, are independent. It seems impossible to supply the need of colored teachers in this and other Southern States.

Sessions continue from three to six months, and salaries, in country places, are from $25.00 to $35.00 a month payable in orders on the County Treasurer, who cashes them in from three to fifteen months There is often distress and discouragement from this delay. Teachers are compelled to discount their small wages @ from 10 to 25 per cent. and serious injury to school interests is likely to result. In the cities wages are better, sessions continue for eight and ten months, and payment is more prompt.

The value of the free school systems of the South depends on the supply of teachers; those trained by Northern educators are universally acceptable, because carefully taught morally as well as in book knowledge, and not disposed to take an active part in politics. There is no "chasm" between the graduates of the higher negro schools of the South and the patronage of the school officers of the states. The real trouble of colored teachers is with a class of preachers, politicians and editors of their own race who resent the introduction of intelligent ideas into religion and into the relations of life. They could easily be conciliated by substituting Latin for labor. The colored people at large and their leading men, as a whole, are most appreciative and give the school and its graduates the heartiest support. But negro opposition is no novelty.

It is as much a national as a race interest that the negro race be elevated. The success of the negro teacher indicates the way it is to be done. In ten years not a serious grievance has been reported by a student to this office; nor a complaint by a state officer of the conduct of a teacher. Troubles and annoyances have occured, but nothing like "outrages."

It remains to push carefully selected and fitted colored youth into the field. There are, at the South, thousands of them of excellent capacity and spirit, who would, were the way opened, work for their race, and be welcomed and encouraged by good men of every class.

Hampton graduates find it easy to secure general confidence and respect.

To the question, then "What becomes of your graduates?" we answer: Not less than ninety per cent. have taught school. We are satisfied that eighty per cent. were teaching last winter, and that the large majority will devote themselves to the good of their people. Those who do not teach are generally working for themselves or others. I know of but few worthless ones. There seems to be no general tendency to relapse from the tone given to their lives at the school. I have observed in many, a moral growth after graduation, the reaction of right life upon character. That some will

(*Continued on page 44.*)

While tho average edncation of the American people is high, its average knowledge of matters concerning political economy is very low. The sparse popnlation, the absence of commercial friction and competition, the agricultural pnrsuits of the people, and the ease with. which money has been made, have combined to make a knowledge of political economy a matter of secondary importance. It must be admitted, however, that the commercial classes exact from their agents some knowledge of book-keeping, of putting up and taking down shutters, of drawing billbeads and of taking invoices. It is not overstating the case to say that in no civilized nation, are so few of the leading men in public life, both business and political, fitted by training or education to consider, or wisely expound, the principles of political economy, as in the United States at the present time. In the Universities the subject of political economy bas been ranked as a secondary study. Even now it is not seriously taught. Among the merchants, the bankers, the brokers, the retailers, among all classes who handle the vast products of the country, from producer to consumer, there is no literature of political economy whatever, save what appears in the fugitive, and generally foolish, contributions to tbe press. The few able men and newspapers which discuss this subject, work largely in stony ground. It is certainly not complimentary to the national pride to recall the fact, that, so far, it seems impossible to generously support any periodical which is devoted to serious subjects (excepting religious literature), while on the other hand, periodicals devoted to trifling subjects command extravagant support. The "Popular Science Monthly," with its annual circulation of five thousand copies, and the "New York Ledger," with its three hundred thousand subscribers, make the best commentary. The British public, with its low average in education, supports over ten magazines devoted exclusively to the treatment of political and social matters only. Should the American periodicals cut out their love stories, and illustrated articles on travel and adventures, and treat soberly and exclusively the vital matters that underlie social and business life, their circulation would stop. Our merchants read newspapers, and "keep up with the times." But this mental dissipation, the passing into the brain every morning of a lot of disconnected, incongruous items, not only fills the mind with much chaff. but, and what is of more importance, excludes any trained, systematic thinking.

The intense suffering among the commercial classes during the last few years, is due in a great measure to the all-pervading ignorance of the laws of political economy. So far as foresight or the careful sifting out of facts, or the drawing of inferences and comparisons from them, with a view to permanent results are concerned, our people have hardly been wiser than common savages, certainly not as sensible as the common peasantry of France or Germany. The laws of trade have been the "rule of three." So long as goods bring a profit over cost, make and sell. So long as there is a demand, rush in supplies. What the actual condition of the country is, what light carefully gathered statistics may throw on the future of trade, or what the experience of other nations has been, are matters usually ignored by merchants, though they go to the life and solvency of business. For fifteen years, we have been spending money, not earned, for national, State, city, county, and town objects. The great war was fought on credit. The town bridges have been built on credit. The Union has been restored on credit. And nearly every local improvement has been made on credit. This is what thriftless men always do. In business matters there has been no economy, no saving, no safe trading, no keeping of capital well in hand. Wild-cat railroad speculations, visionary gold, silver, and coal mining schemes, have taken captive the leading business men. Throw a rickety bridge across commercial perdition, and before it put a notice, "here is the short cut to fortune," and the young clerk and the old merchant sweep upon it in solid column, though the stream below is full of drowning men. In New York City alone, during the last five years, the decline in the value of real estate has been about four hundred millions of dollars, or nearly one fifth of the national debt. Why has there been this decline? Why is there the same vast, crushing decline in Boston and Chicago? And why did the values ever rise? A few years ago, animal and vegetable food commanded here a higher price than in any market of the world. Yet here is a country which was so rich in the products of the animal and vegetable world, that it should have furnished, as it does now, the cheapest food on earth. One sufficient, though not the only, cause of this, is the wide-spread ignorance of the mercantile classes respecting the facts upon which the laws of political economy are based. The people are apt to call the knowledge of such facts "book learning," yet it goes to the essence of every-day business. The vast and wide-spread ruin from the decline in the values of real estate would have been largely avoided, had the dealers in real property known and understood the history of real estate in this country since the beginning of the century.

The paper money of the war of 1812 and the paper money of the Civil War produced the same results, and was followed by the same consequences. We venture to say that not one merchant in ten thousand has ever read the financial history of the "paper times," or has he ever made any researches regarding the character of currency, beyond the desultory reading of a daily paper. The great demand for industrial products during the war, was abnormal and vicious. The intelligent merchant did not see it. There are now in existence facilities for supplying the country with cotton, iron, and chemical goods for fifty years to come, and a vast capital is now locked up and wasting away in these enterprises. But the merchants did not know what they were doing in expanding their manufacturing facilities. The cities are filled with a surplus population, carried out of the producing, into the consuming class. Educated men and common workmen are starving, and thousands of once promising lives are utterly blasted from this heaping up of the commercial classes in the cities. Neither legislative bodies, nor Chambers of commerce, nor individuals, stopped to consider the situation, or to study the inexorable laws of trade which are stronger than men, and which crush without remorse, all who oppose them. Congress once attempted to keep down the rising price of gold, by legislating against speculation in it. But the laws of trade carried up the price of gold to ruinous figures, and exhibited our statesmen as so many impotent manikins, trying to sweep back the Atlantic with a broom. Legislatures have enacted that men shall consider "eight hours a day's work." But the laws of trade come in, and make a day's work just what the market for labor chooses to make it. At this late day, the relations of labor and capital should be understood, but the commercial world is harassed, production retarded, confusion created, because no one seems to know anything about them. The vast majority of people live from hand to mouth, very dependent for sustenance and happiness upon the proper adjustment of these relations. Yet in the politician's library, the merchant's desk, on the farmer's table, there is a dearth of the literature upon these important subjects. If we wished to illustrate supreme ignorance on these matters, we should go to the Congress of the United States.

Men who have entered upon their business careers with the best prospects, are now closing up the accounts of a long and profitless business life, and find the cause of their misfortune in their ignorance of those principles of political economy which are as important in the minor affairs of trade, as in the larger relations of States. A knowledge of these principles will not always insure success in business. It will, however, indicate the strong points in commercial life, and reduce the errors of judgment. Napoleon said, "He is the successful general who makes the fewest blunders." W. N. A.

FLORAL EXHIBITION AT HAMPTON.

Everything must have a beginning, and May 15th and 16th, 1878, will hereafter be marked as the inception of the Hampton Horticultural Society of the future,—the dates named being the first occasion of a public floral exhibition ever having occurred in Hampton.

This event was mainly due to St. John's Guild, represented by a committee, consisting of Messrs. Booker, Cumming and Garrett, and the display, although not large, was very creditable, embracing forty-six entries, every one of which was by an amateur.

The exhibition room was tastefully decorated, and presented quite an attractive appearance. The inclement weather of the few previous days played sad havoc with roses, and, in consequence, this "queen of flowers" was inadequately represented. We know that some of the finest varieties in cultivation are grown here, and regretted it was impossible to show them in proper condition. A list of awards, and reference to some of the more prominent objects of interest, is unfortunately excluded, owing to want of space. A fair collection of plants was shown by some of the students of the Normal School, but in another year we hope it may be able to make an exhibition which shall surpass any similar effort ever attempted in the State. When we consider the possibilities in floriculture that this section affords,—where tea roses and other plants too tender to be exposed to the rigors of the winter at the North may be safely left out of doors the year round, the only wonder is, that flower exhibitions have not been generally held throughout the South. That the love of flowers is quite as strong here as elsewhere, we perceive evidences all about us. Almost every house bears testimony that the germ exists which only needs proper encouragement to develop into full fruition. Aside from the mere sentimental aspect which the subject presents, it may well be considered, with the great markets of New York, Philadelphia, Baltimore and Washington, with their immense demands, at our very door, if floriculture could not be made a *practical* undertaking here, and if we could not compete favorably with the the florists of those cities. The subject is one worthy serious thought, and our hope is, that before many months shall pass, some steps will have been taken toward the accomplishment of so desirable an end.

A REMARKABLE EVENING OF MUSIC AT HAMPTON INSTITUTE.

It is frequently the case that evening prayers are attended by those who may be visiting the Institute, and sometimes the students are called on to gratify the desire, that almost all who come here have, to hear some of the plantation songs. The recently arrived Indians are also called on occasionally to give specimens of their peculiar music. After the singing is over, the visitor, if he be a distinguished one, is generally introduced, and asks to the entertainment by an exhibition of his talent, which is usually in the speech-making line. Sometimes, however, visitors with a different gift come, and it was on one of these pleasant occasions, about three weeks ago, that the following remarkable programme was given before an audience of teachers and scholars in the chapel.

PART FIRST.

Plantation Songs. Hampton Singers.

PART SECOND.

War Song.
Indian Sentimental Song.
"I need Thee every hour."
Cheyenne, Arapahoe, and Kiowa Indians.

PART THIRD.

"O Luce di quest anima"—"Linda di Chamounix."
Miss Clara Louise Kellogg.

Cantique de Noel.
Mme. Marie Roze.

"La Donna e Mobile"—"Rigoletto,
Signor Frapolli.

Ballad—"When the flowing tide comes in."
Mr. Tom Karl.

'Tis the Last Rose of Summer.
Miss Kellogg.

Long metre Doxology.
Chorus of Italians, Germans, Frenchmen, Norwegians, Cubans, Hawaiians, Africans, Cheyenne, Arapahoe, Kiowa, and Ute Indians, and Yankees.

Here are three distinct styles of music, the offspring of as many different degrees of civilization and culture, and performed by representatives of the classes from which they have sprung.

First—The harsh, guttural, unmelodious sounds that are used by the Indian to give expression to his emotions. They vary little in character to the uninitiated ear. The quick passage from a low to a high note, which, held for an instant with a discordant sort of "shake," drops suddenly to another low note; the repetition of this several times with the occasional introduction of two or three other notes, without apparent form or rythm, ending as unexpectedly as it begins,—is his song, that tells the story of his ardent love or of his wild delight at the approaching conflict with his enemy: the savage expression of savage love and hate.

Second—The plantation melodies. Simple, many of them beautiful; made, like the Indians' songs, according to no rules of which those who composed them were conscious. They are the fervent musical utterance of longing for the good time that *has* come; full of the pathos of suffering and the fervor of religion, albeit, at times, grotesque in the conceptions formed by ignorance and superstition of spiritual things.

The florid, melodious strains of Donnizetti and Verdi, the delight of crowded opera-houses; the inspiring Christmas Hymn, well known in concert halls and churches; the besutiful ballad, sung by artists of high professional rank, and the grand old Choral, in which all joined, make up the third part—the music of culture and art.

Certainly, the most skillful theatrical manager, desiring to give an entertainment that should introduce specimens of music differing most widely in style and manner of performance, could not have succeeded better. Of the individual performances of Miss Kellogg and her associates, it is, of course, needless to write. Their kindness in consenting to gratify the desire to hear them sing and give a great treat to the students, many of whom will, in all probability, never have another opportunity to listen to such singers, was acknowledged by General Armstrong in a few words.

It was a remarkable evening of music and most enjoyable. The stopping of the troupe over night at the hotel at Fortress Monroe, on their way to Norfolk, gave the opportunity to invite them to visit the school, and the impromptu nature of the affair contributed in no small degree to its success.

In view of the very great need for concerted action among the friends of temperance, we have decided to prepare, from time to time, full programmes for meetings, so arranged as to meet the requirements, without making too great a demand upon the resources, of an ordinary temperance society. We propose that each programme shall be used once by the Hampton Normal School Temperance Society, before it is issued by us, and by this means we shall be sure that we are offering to our readers only such material, as will, if rightly used, result in a successful and attractive meeting. Any further information which may be desired in regard to these programmes, will be cheerfully given by the editor of the Southern Workman.

PROGRAMME.

For a Temperance meeting, the materials for which are within the reach of any Temperance Society.

SINGING—RESCUE THE PERISHING.

ESSAY—Original, and limited to five minutes.

RECITATION—I'm a Little Temperance Girl.

I'm a little temperance girl
Just five years old;
I wouldn't drink a glass of wine
If you'd fill the cup with gold.
I have a little brother,
We belong to the Band of Hope;
I 'spect there'll be no drunken men
When he and I grow up.
For, don't you see, the *little ones*
Are all going to join the Band,
And we'll soon be *great big temperance folks.*
Oh! won't that be *so grand*
When there's not a drunkard to be seen?
For, don't you think it's queer,
The *first thing* drunkards learn to drink
Is the *cider, wine, and beer!*
And so we belong to the Band of Hope,
And we mean to be *good* and *true;*
And all the little boys and girls
We shall ask to join us, too.

TEMPERANCE DISCUSSION—My Aim in Life.

This scene shows a room in which are five boys, and one youth, who should be in appearance somewhat older than his companions. Two of the boys are reading, two playing cards, and one at work upon a little boat. Conversation begins as soon as the curtain rises, and each boy tells of his hopes and intentions in regard to his future occupation. One means to be a lawyer, one a clergyman, one a gambler, one a sportsman, one a sailor. After each one has stated his reason for his choice, the young

man, who has been quietly listening, comes forward and gives them the result of his experience, advising them to choose useful and honorable occupations and to work always for the cause of temperance.

Think of the teeming prison's cell,
Where rum incited felons dwell;
Think of our lovely sisters' doom,
When wine has nipped them in their bloom;
Ay! pause and think of every shame,
Of every crime too dark to name;
And let the wine-fiend's spell be riven,
And turn your thoughts to home and heaven!

Agricultural.

THE NEW CHAMPION MOWER.

Among the great achievements of the in-

Supper: Beans boiled in Broth, 10; — 30 cts.

SUNDAY.—*Breakfast:* Cocoa and Bread, 7; Fried Lentils, 10; *Dinner:* Bean Broth, 10; Haslet Stew, 10; Suet Roly-poly Pudding, 12; *Supper:* Cheese Pudding, 12; — 61 cts.

man, who has been quietly listening, comes forward and gives them the result of his experience, advising them to choose useful and honorable occupations and to work always for the cause of temperance.

SINGING—GOD SPEED THE RIGHT.

DECLAMATION—Drinking does not Pay.

Go with me to every jail and prison throughout our lasd, from ocean to ocean, and ascertain how large a portion of those crimes and misdemeaaors that have taken men from their families and lodged them there in prison walls has resulted from intoxication; and the answer from every jail and prison comes to us to-night, that "drinking does not pay." Visit the poorhouses, which the charities of mankfnd provide for those who from competency, have been reduced to destitution, and learn there the sad lesson, how many of them have ceased to become useful and valuable members of society, and dependeat upon the taxes by which we support the poor, in coasequence of yielding to the intoxicating bowl; and every poor-house aaswers, "Drinking does not pay." Examine the statistics of the gallows, and learn how many of its victims were indaced to take the dowaward road thither by that intoxicating cup which turned their hrains aad nerved their arm for the blow which seat them to the gallows; and the gallows tells you that "drinking does not pay." Read history, and learn from it how many of the great and the gifted in other laads as well as oar own have commenced at wine-drinking, and ended in ruin, meatal aad physical, aad history tells you that "drinking does not pay." Nay, more, read the papers of the day, and from every quarter you hear, morsing after morning, and evening after evening, of the thousands who, oace having pledged at the altar a lifetime of devotion and affection to their brides, reel home from a drunken debauch, to treat with brutality and violence those who shonld be as dear to them as their heart's bipod; and this army of worse than widowed wives, whose woes no one but themselves caa realize, tells you most sadly and impressively that "drinking does not pay."

It has been well said, "It is the first step that costs." Young men, stepping ont upon the threshold of life, with everything bright and hopeful in your future, let me adjure you, above all things else, aext to devotion to that religion which is to smooth your pathway to the tomb, avoid taking that first step. Plant your feet apon that solid rock of sobriety, as well as of safety, aad then you may know that, so far as intemperance is concerned, its waves can dash against you, hat they will dash in vain.

Hon. Schuyler Colfax.

TABLEAU AND DECLAMATION—Bridal Feast.

The curtain rises upon a wedding scene, the personages in which are a bride and groom, clergyman, two bridesmaids and two groomsmen, page holding tray with wine-glasses upon it. The curtain falls upon this scene and rises again to show the same company, each one of whom is now holding a wine-glass. The bride steps forward, glass in hand, to the front of the stage and declaims as follows:

"I see a mountain range, whose purple heights
Are lifted to the sky; while o'er its brows
Ocoasmer clouds hang like a bridal veil.
Bright flowers are blooming on its ragged sides,
And joyous birds are carolling in the shade
Of giant oaks and beeches. A crystal rill,
Merrily laughing, leaps from cliff to cliff,
Eager to gambol in the vale beneath,
And over all, a shadowy, cloud-like mist
Mellows the harsher outlines of the crags.

There ! there ! within a deep, and cavernous gorge,
I see the half-nude forms of savage men,
Flitting like phantoms, 'mong the umbrageous trees,
And in their midst I see a manly form
Stretched lowly on the cold and dankeome sward,—
How death like is the pallor of his cheek !
How gleams the fire of madness in his eye.
As the wild fancies of delirium,
Like Etna's flood, roll o'er his fevered brain !
One faithful friend kneels by him, and his head
Is pillowed on his breast so tenderly
As 't were a mother with a dying child.
"Genius in ruins !" Oh, that noble youth !
Why should death single out a mark so young ?
See how he throws the damp locks from his brow
Of marble whiteness ! See him clasp his hands !
Hear his appalling shrieks for help, for life !
Mark how he clutches at that kneeling form,
Imploring to be saved ! Oh ! stones might weep
A rivulet of tears to hear him call
Upon his father's name ! See him entwine
His icy fingers, as he vainly shrieks
For his loved sister, twin of his fond soul,
Who weeps for him in a far distant land !
And now his arms are lifted up to heaven,
Praying for mercy; and his language bears
Such fearful agony upon its sentences,
The red men move away with noiseless feet,
And leave them quite alone.

"'Tis evening now,
And like a warrior's shield, the great white moon
Stalks through the eastern sky. One silver beam,
Piercing the thickness of the clustering leaves,
Lights up the features of the dying youth;
His eyes are fixed and dim; he does not heed
The kindly words his friend pours in his ear.
And now his head sinks back, he gasps for breath,
His pulse is still—ah, no, it beats again !
'Twas a mere fancy; it will beat no more,
For death's cold hand is on him: he is dead !

"They hollow out a grave within that glen;
Without a shroud they lay him in the earth,
Where he shall sleep until the end of time.
No sculptor's hurin ever shall emboss
A marble shaft to mark his lonely tomb.
Dear friends, the youth who died in that strange land
Was my twin brother; and he owed his death
To ardent drink. Shall I now taste the cup ?"
"Say, shall I taste the cup ?"

The guests must here reply "No ! No !"

"Then shun the wine cup;—
'Twill hrand you with the mark of Cain:
Forswear at once the tempting bowl,
That ruins body, mind and soul !
Think of my brother's lonely grave,
Far by the bland Pacific's wave;
Think of the hungry infant's wail;
Think of the mother's visage pale;
Think of the teeming prison's cell,
Where rum incited felons dwell:
Think of our lovely sisters' doom,
When wine has nipped them in their bloom;
Ay ! pause and think of every shame,
Of every crime too dark to name;
And let the wine-fiend's spell be riven,
And turn your thoughts to home and heaven !

As she says this the girl dashes the glass to floor breaking it into fragments, and the curtain is drawn.

SINGING—THE TEMPERANCE BAND.

READING.

If we ever expect to gain any signal victories in the warfare with intemperance we must arm ourselves with the only weapons that are mighty through God to the pulling down of its strongholds. Where are its strongholds? They are in the depraved moral natures and the diseased appetites of men,—in a region that laws never can reach and subdue. What are the weapons by which these strongholds may be taken? They are the weepons of truth and love.

But love is better than truth. Personal kindness to the intemperate is the main reliance. Many persons are miserable because they drink; many drink because they are miserable. Hard toil all day; a cheerless home or no home at all at night; no relief or recreation; no opportunity for social enjoyment; no cheering prospects; no elevating friendships—such as is the portion of many of those whom, as Christ said, we have always with us. And if such as these choose to forget their loneliness and misery now and then in the exhilaration of strong drink, it is not so much a matter of wonder. The expedient is a foolish one, hat it is easy to see why many people resort to it.

Now the whole business of saving these people from ruin is not done when you have "shut up the grog-shops." Shutting up the grog-shops will not make them happy or hopeful; what they want most is not so much the shutting up of the old ways in which they have sought relief, as the opening of new and safer ones. A little personal kindness, a little effort to improve the conditions of their life, a little care to provide them with diversions that are wholesome and elevating, will do them more good than much legislation about liquor selling. This is the work that costs—not money, but what most men are less willing to give than money—time and patience and loving vigilance and careful thought. It does not cost much to make a speech in a temperance meeting, or to pass an evening in a bright room wearing a pretty regalia road your neck and singing pleasant songs, or to go to the polls and cast your vote for the prohibitory candidate; but to seek out the homes of the wretched and to contrive ways of making them heppier,—this does cost something And yet nothing is plainer than that Christ, if he were on the earth, would be working in this way.—*Sunday Aft.*

ADDRESS, Original, and limited to six minutes.

SINGING—TEMPERANCE CRUSADE.

READING—Seeds.

Wa are sowing, daily sowing,
Countless seeds of good and ill,
Scattered on the ia'el lowland,
Cast upon the windy hill;
Seeds that sink in rich brown furrows,
Soft with Heaven's gracious rain;
Seeds that rest upon the surface
Of the dry, unyielding plain.

Seeds that fall amid the stillness
Of the lonely mountain glen;
Seeds cast out in crowded places,
Trodden under foot of men;
Seeds by idle hearts forgotten,
Flung at random on the air;
Seeds by faithful hands remembered,
Sown in tears and love and prayer.

Seeds that lie unchanged, unquickened,
Lifeless on the teeming mould;
Seeds that live and grow and flourish
When the sower's hand is cold:
By a whisper sow we blessings,
By a breath we scatter strife;
In our words and looks and actions
Lie the seeds of death and life.

Thou who knowest all our weakness,
Leave us not to sow alone !
Bid Thine angels guard the furrow,
Where the precious grain is sown,
Till the fields are crowned with glory,
Filled with mellow ripened ears,
Filled with fruit of life eternal
From the seed we sowed in tears.

Check the froward thoughts and passions,
Stay the hasty, heedless hands;
Lest the germs of sin and sorrow
Mar our fair and pleasant lands.
Father help each weak endeavor,
Make each faithful effort blest,
Till thine harvest shall be garnered,
And we enter into rest.

TABLEAU — Before the pledge.

Interior of room, broken furniture, disorder and poverty visible in everything; drunken father sitting beside an old table with his head buried in his hands, mother crying, a boy hanging to her skirts and crying also, and a little girl kneeling beside her father looking up into his face, boy in the background with cigar in his mouth, evidently following in his father's footsteps. Curtain falls to rise on second tableau—

After the Pledge—

Same room, everything neat and in order, a tea-table well spread, father sitting beside it, nicely dressed and reading a newspaper, mother, with heppy face, stands beside him, two children in the foreground playing merrily with toys, boy just entering with his market basket filled with good things. During the first tableau a voice or voices behind the scenes should sing "Hear our Prayer"—during the second, "Home sweet Home."

Agricultural.

THE NEW CHAMPION MOWER.

Among the great achievements of the inventive genius of Americans may be classed the Champion Reaper and Mower, manufactured by Whiteley, Fassler & Kelly, at Springfield, Ohio. This machine was invented by Mr. Wm. N. Whiteley, and the first petent was issued thereon in 1853. From thet time forward the "Champion" has been a success.

In 1858 a shop 40 by 80 ft. was all the limited capital of the projectors would afford, and indeed it was of ample capacity to fill their orders for some time. Petient toil and honest ambition, however, heve won their own reward, and from the modest little shop of twenty years ago have grown *five mammoth factories*, which are now exclusiveiy employed in the manufactnre of the "Champion" harvester, and ere producing over forty thousand machines annnelly. Their immense factories form the "United Champion Interests," composing the largest manufactories of agricultural implements in the world. A better idea of the magnitude of these establishments can he obtained from the following figures, which were obtained by actual measnrement. The foundries, for monlding castings, are equivelent to one floor 853 ft. in length and 50 ft. in width; the iron working departments wonld make e floor 1,490 ft. by 50 ft.; the wood working department, a floor 845 ft. by 50 ft.; the paint and varnish shops, n floor 962 ft. by 50 ft.; the warehouse for storage of finished machines is equal to n floor 2,220 ft. by 50 ft. nnd will store 8,000 machines. These five establishments cover an area of grounds amounting to almost nine acres, and fully twenty acres in all are used for buildings, yards, nnd side tracks.

The "Champion" Mower embodies an entirely new mechanical contrivance for giving motion to the knife, which does away with all fast rnnning gearing and gives an even and rnpid motion to the cutter, rendering it almost noiseless. There are other valuable features which combine to make this a superior machine; it can be instantly adjnsted while in operation, to cut low, to take up lodged and very short grass, or to cut over rough grounds, and when it is desirable to cut the crop high. Either end of the cutting apparatus may be lifted at pleasure at any angle or position when cutting, to pass over cut grass or obstructions.

The agricnltnral department of the Hampton Institute is, fortunately, in possession of a "Champion," which has been thoroughly tested and with complete success. It is all that its makers represent it to be, and is truly worthy the nppreciation it has received in the more than a dozen first premiums—including that of the Centennial—which have been awarded it. The machine belonging to the school was presented hy Messrs. Whiteley, Fassler & Kelly, with permission of Messrs. L. H. Lee & Bro., of Baltimore, their Southern agents

At Home.

HOW TO FEED A FAMILY OF SIX.

We have recently given our readers an account of Miss Corson's good work for workingmen and women in New York city, her cooking schools to teach the wives how to cook wholesome, good and economical meals. We published three of her receipts and offered to give her pamphlet containing these and many others to any one who would try them and send us word. No one has done so, but we renew the offer, and give below her daily bills of fare for one week, estimated for a family of six, with the prices, and the directions for preparing the first day's meals. The directions should be strictly followed in order to make the experiment a fair one. The richest dishes may be spoiled in the cooking—the most nonrishing ones made unwholesome. Follow her directions carefully, and send us word how you like them, and if then, you wish it, we will send you the little pamphlet which is full of good advice and *tried* receipts for cheap but excellent dishes.

MONDAY — *Breakfast:* Boiled Rice with Scalded Milk, 15; *Dinner:* Corned Beef and Cabbage, 10; *Supper:* Peas boiled in Stock, 10;—35 cts.

TUESDAY.—*Breakfast:* Broth and Bread, 10; *Dinner:* Baked Beans, 10; *Supper:* Macaroni with Cheese, 12;—32 cts.

WEDNESDAY.—*Breakfast:* Toasted Bread and Scalded Milk, 13; *Dinner:* Stewed Tripe, 15; *Supper:* Polenta; 5;—33 cts.

THURSDAY.—*Breakfast:* Rice Paneda, 12; *Dinner:* Salt Pet-nu feu, 10; *Supper:* Lentils stewed in Stock, 10;—32 cts.

FRIDAY.—*Breakfast:* Broth and Bread, 10; *Dinner:* Mutton and turnips, 10; *Supper:* Barley boiled in broth, 10;—30 cts.

SATURDAY.—*Breakfast:* Mutton Broth and Bread, 10; *Dinner:* Beef and Potatoes, 10; *Supper:* Beans boiled in Broth, 10;—30 cts.

SUNDAY.—*Breakfast:* Cocoa and Bread, 7; Fried Lentils, 10; *Dinner:* Bean Broth, 10; Haslet Stew, 10; Snet Roly-poly Pudding, 12; *Supper:* Cheese Pudding, 12;—81 cts.

Total..... $2.53

Rice.—Rice is largely composed of starch, and for that reason is less nutritious than flour, oatmeal, Indian meal, or macaroni; but it is a wholesome and economical food when used with a little meat-broth, drippings or molasses. It is very safe food for children, especially if used with a little molasses. The following is an excellent supper dish. Wash half a pound of rice, (cost five cents,) throw it into one quart of boiling water, containing two teaspoonfuls of salt, and boil it fast ten minutes; drain it in a colender, saving the water to use with broth next day; meantime just grease the pot with sweet drippings, put the rice back in it, cover it, end set it on a brick on the top of the stove, or in a cool oven, and let it stand ten minntes to swell; be careful not to burn it. The addition of a very little butter, sugar, molasses, nutmeg, lemon juice, or salt and pepper, will give it different flavors: so that you can vary the taste, and have it often without getting tired of it, and it need never cost you over seven cents.

Salt Pot-au-feu.—Put one end a half pounds of corned beef (cost eighteen cents,) in three qnnrts of cold water; bring it slowly to a boil, and skim it well; when it has boiled fifteen minutes, put in with it a two or three cent head of cabbage, cut in quarters and well washed, and boil both steadily for half an hour; new cabbage boils tender sooner than old, but you must not cook either after the stalks are tender, or you will waste a great deal of nourishment; when both meat and cabbage are done, take up the meat with a fork, and the cabbage with a strainer, and mash them for dinner.

Rice and Broth.—After dinner carefully strain the pot-liquor, and put it in an earthen pot until an hour before supper. Then put it over the fire, and when it boils throw into it half a pound of well washed rice, (cost five cents,) and boil fast for twenty minutes, or until the rice is just tender; try the seasoning, and then pour both broth and rice into a strainer set over an earthen pot or bowl; as soon as the rice drains, shake it ont into a dish, and use it for supper.

Bread Broth.—After supper carefully strain the broth and keep it over night in an earthen pot. In the morning heat it; if it is too salt, add a little more water; or season it more, if necessary; while it is heating, toast two pounds of bread, (cost six cents,) cut it in small square pieces, and throw it into the broth. As soon as it is hot, use it for breakfast.

These three dishes will cost about thirty cents. Salt pork, fresh beef and mutton, can be cooked in the same way, using cabbage with the salt pork, potatoes with the fresh beef, and turnips with the mutton; for the supper dishes, peas, beans, and pearl barley; with bread broth for breakfast.

Thus you see you can make three good meals for four different days, for one dollar and twenty cents, leaving you a good margin for suitable food for young children, such as bread and milk, or oatmeal porridge; or a nice Sundny dinner, if the children are well grown.

THE following pleasant letter was mislaid in making up our last issue.

DRAGON MILLS PO.,
KING & QUEEN CO., VA.,
March 23d, 1878.

General Armstrong,—Dear Sir:

I am truly glad to say my paper renders me a great satisfactios. I can say I do admire the Southern Workman rather better than any other paper I have ever taken since I have become capable of reading them. I am sorry that I have not been taking the paper for the last two years. Oh, those interesting letters of the teachers and scholars of that school are enough to attract the attentios of any one that appreciates education as I do. I have never had the glorious opportunity as a great many of my school mates. There are some of them in Hampton now, I hope they may have good luck and study hard until they have completed their education. Oh, it makes me feel so prond to see that the colored race is prosperiag so fast. Now there has been but a very little while, it appears to me, since H. F. Sparks was a school-boy here in King and Queen. Now he is the teacher, besides being useful in a great many other things. I started to school in the year 1870, not knowing anything scarcely, but I kept on learning after leaving school. I was so unfortunate as to lose my father, and I had to leave school. I crave very much to visit the school at Hampton. My dear teacher, Mr. Jas. Dungey, in vocal music school tells us what nice times he and others used to have at Hampton. He has been with us now for two terms, one in 1878 and another in 1877, and after the hour is ont he very frequeatly gives us a good lecture about learning music, and honest living &c., No more.

Yours, Respectfnlly,
B. A. Reed.

degenerate, there can be no doubt; but, after leaving here, the general movement is upward.

The little army of Hampton graduates is becoming a power. For the first time It is indispensable to a true civilizing work, but is practicable only with careful, capable teachers, and with good discipline. An advantage of colored pupils is that they can be better disciplined than whites, and produce a better manhood. In a few weeks there has been a marked improvement among the young men. This feature of the school, owing to the peculiar fitness of the officer in charge, is likely to than those of race are being drawn. Common sense and common interest are working against deeply seated notions and prejudices that will yield because weak in themselves and because they do not pay.

degenerate, there can be no donbt; but, after leaving here, the general movement is npward.

The little army of Hampton graduates is becoming a power. For the first time in the school's bistory, they have, this year, an alumni meeting. Their nnion and mutual sympathy, their relations with the school, are of great importance. To many, the school is their only home. It is tbe birthplace of their better life; and tbey give to it an affection and confidence that create an obligation on our part.

This year the newspapers of the scbool reading-room have, after lying a week on tbe table, been distribnted among graduates in every direction, also qnantities of illnstrated papers and many others have been given by friends of the school for this purpose. They have received much benefit from the State *Educational Journal* which is sent to them. Next year we intend to have a graduate department; making as complete a record of them as possible, corresponding with each one, supplying good reading matter, of whicb they are often destitute, thus keeping tbem in close and pleasant relations, enconraging and cheering them in every possible way. By such moral snpport they will be stronger, better, safer. Thns will the results of onr labors be preserved, and a guild of earnest, high-minded, united and powerful workers be formed as a nucleus of civilization, a barrier to the mischievous element among their people, and, in connection with n similar class from other institutions, become a basis of hope for the race; they will be civilizers rather than mere pedagogues; the future leaders of their race, and occupy a place not yet taken.

The present class of students has not qnite the earnestness and enthusiasm which characterized those who first entered. Parents sometames send their children to be improved, rather than from the innate desire of the child to learn. Education is not now, as it was then to them, a sudden Heaven-sent opportunity. The stimulus of the first few years following emancipation conld not continue. Our student material is, however, good, perhaps more youthful than formerly, but capable of excellent results.

The size of the school renders it difficult to do the best work on individuals. If possible, numbers will not be increased and there are plans for more thorough work next year upon students, in personal habits, in condnct and in Christian cultnre.

The conscientiousness of stndents in paying up debts after graduation is worthy of mention. There is an evident increase of it among them. In many cases great sacrifices are made, and during the past ten months they have paid from their own earnings $836.59 on this account, a much larger snm than has been paid within any previous twelve months. (*See Treasurer's Report.*)

The instruction corresponds to that of high school English course without the classics. There is a craving for the languages, but such a lack of the simplest mental furniture that, during the three years of their stay, the chief work is rudimentary. There is a childish desire for the signs of polished scholarship, and faint appreciation of the absurdity of them without a foundation training. They usually, however, come to better ideas of their studies. We are not testing the capacity of the negro mind; it has, like all mind, no limits, but we are trying to send men and women into the world with a purpose.

Thorough primary teachers are the present and pressing need of the South.

The institute class of this year will be conducted hy Col. F. N. Parker, Supt, School of Quincy, Mass., whose methods of, and success in, primary instruction are the finest of which I have any knowledge.

Ours is foundation work; the best skill is as necessary in the bottom as in the highest courses; to make men cling to and contented in such work they should be experts in it.

THE CO-EDUCATION OF THE SEXES,

is, after ten years' experience, considered successful. The leading colored institntions of the South (whose pupils are adults) have adopted this plan with nniversal-satisfaction.

It is indispensable to a true civilizing work, but is practicable only with careful, capable teachers, and with good discipline. An advantage of colored pupils is that they can be better disciplined than whites. Only in boarding schools can negro youths receive the training that they need. Otherwise, no thorough work can be done. Well regulated living is the condition of true growth, and it is to be had not at our students' homes, but by creating it at their schools, thus snpplying the sad deficiencies of their previous lives.

A majority of the stndents are yonng men, but the majority of the teachers are ladies. The latter exert a refining influence, create a pure Christian atmosphere, and work with a patience, skill and devotion that could not be surpassed.

I believe that no corps of male professors conld give the tone that lady teachers impart, or do so well as workers npon the whole life.

The teachers of the ex-slaves have a peculiar position and responsibility. They give character and direction to the lives of their pupils, who in their turn endeavor to do the same for those they teach.

Onr graduates do not find in their world hosts of educated men with whom to compete. They are commonly the most enlightened in their circle, and find influence and authority within easy reach. We have to prepare not only routine teachers, but civilizers. It becomes us to study the character, condition and tendencies of the negro race, and upon a just analysis of it to base a system of instruction that shall make their weak points strong. This course has brought upon us the condemnation of many negro leaders and papers, but the commendation of intelligent Southern men of every class; this is inevitable from our recognizing deficiency of character rather than mere ignorance as the difficulty with the ex-slaves.

INDIANS.

Curiously, without effort on our part or expense to the school, there are here fifteen Indian youth, five of them to be transferred in September next to Bishop Whipple's school in Minnesota. They were originally from the Indian territory, captured and committed three years ago to the care of U. S. troops, at St. Augustine, Florida.

Through the skill and tact of Capt. R. H. Prstt, their commander, they threw off their old garments and assumed a civilized appearance and habit. When the sixty-two captives were recently offered a return to their homes, twenty-two preferred to remain East and be educated. Ten of this number are here. One only was originally accepted, but learning the terms the winter residents of St. Augustine gave funds for the education of nine more. They arrived April 13th, with the five others above referred to.

All were at once put to book instrnction four days eacb week, and to labor lessons for two days weekly.

They write and understand English quite well, but speak it with difficulty; they are earnest and quick at study; they use the hoe and spade energetically, and they show mechanical skill, and at everything willinguess and quickness. They compare in pluin work with the best of our students; they seem to enjoy their colored associates; no point of friction has been discovered, though they are said to have quick tempers. They like their fare and instruction and accept their discipline. Their habits are unexceptionable.

I think this school can indicate one way in which the Indian may be educated to his own great advantage, and to that of the country.

Brevet Captain Henry Romeyn of the U. S. Army, was, on the 13th day of March, 1878, detailed by orders from the War Department, as Instructor in Tactics at this institution; it being entitled to an officer as an agricultural college.

It is not intended to make soldiers ont of our students, nor to create a warlike spirit. Snch a course would be most unwelcome to onr friends and supporters. Drill, inspection of person and rooms daily and organization, without arms, will create ideas of neatness, order, system, obedience, and produce a better manhood. In a few weeks there has beeu a marked improvement among the young men. This feature of the school, owing to the peculiar fitness of the officer in charge, is likely to be of great advantage.

IN GENERAL.

I would again refer to the need of an endowment fund.

Accommodations for female students should be increased by finishing a new corridor of ten rooms in Virginia Hall, at a cost of $1,000.00, and by erecting a cottage to provide for 40 young men at a cost, of $5,000.00.

The need of decent, civilizing surrouud ings for a part of our students, and to relieve their present crowded quarters is great.

The range of industries should be increased for the sake of more varied training, and to give employment to the surplus labor that cannot now be worked to advantage.

A fine basis for a mechanical department is made in the generous offer by Mr. Geo. H. Corliss of Providence R. I. of a new sixty-horse power "Corliss engine," with boiler, complete in every respect. With this engine, and a snitable shop, for which the bricks are now being made, partly by our students' labor, a new and valuable feature will be introduced into our system of education by self help.

I think it right to recommend the redno-tion of all salaries of over $300.00 by ten per cent. They are now worth by more than ten per cent. what they were when first fixed. This reduction seem indispensable in view of the times, and the necessities of the school.

No finds given for permanent investment have ever been used for current expenses. Money intended for endowment to the extent of $15,600.00 has been used in the erection of necessary buildings for the accommodation of stndents, and to the extent of $2,929.92 for the purchase of lots of land. There are, however, funds on the way to us that will eventually restore those amounts to the interest bearing accont.

I regret to announce the resignation of the Rev. Richard Tolman who for eight years, has been pastor of the Bethesda Church in connection with this institution. His ministrations have been highly blessed. The religious work of the school has been a quiet, constant, healthy one, with far-reaching results. The steadfastness of those who have gone out from this fold, has been a comfort und encouragement.

REPORTS.

I would refer the Trustees to the accompanying reports of the several departments, all of which are in good condition, and well managed. The detailed reports of the Treasnrer, showing results in, and condition of every part of the work, create confidence and serve to insure continued support.

The farm has been fortunate in the erection of a fine barn 100x150 feet and complete outfit at a cost of $8,566.07. It is a means, as mnch as the school-room, of giving instruction. It is an educator in other directions.

I would call attention to the report on "Wildwood," a valuable cotton farm of 1300 acres, near Newbern, North Carolina, the gift of Mr. Arthur R. Graves, Executor, from the estate of the late R. R. Graves of N. Y.

Our relations with the State of Virginia, as trustee of that part of the land fund devoted to the colored people have been in all ways satisfactory. Interest has been promptly paid. Throughout the State the feeling is kindly and encouraging to good work for the negro race.

During the past ten years there has been a progress in Southern sentiment in respect to the negro, readily apparent only to those who can look behind the front presented by politicians and periodicals. Thought, experience and necessity have pushed out old ideas and pushed up new ones. The change has been, I believe, as great as was possible for human nature under the circumstances, and in time will be so regarded. Other lines than those of race are being drawn. Common sense and common interest are working against deeply seated notions and prejndices that will yield because weak in themselves and because they do not pay.

The present condition of the colored people is more favorsble for their improvement than at any previons time.

All its schooling in the past decade has done less for the negro than the lessons of experience which have been in some ways severe They are now less influenced by sentiment, and more by reflection. They seek education less universally, but with a better idea of what it is. It is not the "Open sesame" they once dreamed it was. Freedom is disillusioned. "Salvation by hard work" is an nnderstood thing, illustrated by the immense crops produced by their labor. The necessity and the moral obligation to aid in their elevation is more appreciated than ever in the South. The freedmen are working into more settled and pleasant relations with their neighbors. Although rum, demagogues and other evil influences within and without are pushing them down, yet I believe with long-continned and wise effort, and by infinite patience and care, that "the fate of the negro, the romance of American history" may become a bright record.

The friends of this Institution and of negro progrese have reason from its record of the past ten years, and from the slow bnt sure and steady forward movement in the Southern States, to thank God and take courage for the future.

The plan of the Hampton School was snggested by the educational system of the Sandwich Islands, introduced by American missionaries and built up chiefly by the labors of the Rev. Richard Armstrong, D. D., Minister of Public Instruction. The twenty years' personal observation of the Principal, and of the Treasurer, Gen. J. F. B. Marshall, of the civilizing work in that country has been an important element in the direction and result of the efforts at this institution.

Respectfully submitted,

S. C. ARMSTRONG, PRINCIPAL

THE INDIANS' RETURN HOME.

Extract from a letter from Sallie M. Dawes, former teacher at the Wichita School, now staying at the Cheyenne and Arapahoe Agency, dated 5 mo., 3d, 1878.

We hear that several of the Indians from Florida are going to Hampton Institute to school. I think John Downing will be very glad to have them there. It was a pleasant sight to see those who came to this Agency when they first arrived. I think there must have been between two hundred and three hundred of their people, that went to welcome them home. They formed themselves in procession, and when the prisoners came up they got out of the wagons and marched at the head of the procession. It was a pleasure to me to witness their march into the Agency. They have come back determined to do better; they are anxious to get work and live like white people.

A MONSTER OF THE DEEP.

Does the duty of kindness to animels include this one? Well—if Mr. Octopus gives you a chance to be kind to him, improve it by all means, but if you have very close dealings with him you will be very likely to be the one most in need of kindness. For frightful looks, and relentless venom, he well deserves his name of Devil fish. He is not a creature of an artist's wild imagination; nor does his picture do him injustice. His body is soft like an oyster's, he has a pair of large eyes, a mouth beneath furnished with a streng parrot-like beak, which seizes the food brought to it by the eight long arms with which he also swims, opening and shutting them like an umbrella. The arms are furnished with powerful suckers, which, heving once fixed upon their prey, cannot be pulled awey till the arm itself is cut off. Pearl divers dread them more than the shark.

Terrible as the large ones are, the smaller verieties at least have been forced, like the rest of the animal creation, into man's service. In the Sandwich Islands they are as highly esteemed for food by the natives as Norfolk oysters are by us. They are eaten both raw and dried, and form one of the most curious articles in the Honolulu fish market. The black ink paste is an especially valned morsel. This ink is also said to be used in the manufacture of *sepia* or india-ink, and the one hone of the cuttle-fish—for that is another name of the moneter, you give your canary bird to sharpen its hill on.

RIGHTS AND DUTIES OF CITIZENS. IV.

TAXATION.

Taxes are debts due the State by its citizens: they are the cost of law and order. No government in the present day could exist for a moment without revenue, and revenue is derived from taxation.

In return for their taxes, and their taxes make up the sum of public monies.

By English and American law, all bills for raising revenne must originate in the lower or popnlar branch of the legislature: the reason for this is obvious; it is the people's money that is to be used; and they, through their direct representatives should have a voice and

can State protection be obtained without taxes; like a well-conducted insurance company, that State will obtain the greatest number of desirable tax-payers, or policy holders if you will, which exteuds the greatest assurance for the least premium, compatible with its own safety. If anyone doubts the truth of this statement, let

It is a peculiarity of mankind, that everybody thinks that system of taxation best, where the burden *seems* to fall on somebody's else shoulders. Such a tax levy is physically impossible to make; and even if it were physically possible, there are philosophical reasons against it: for every organized society is a political unit, composed of many atoms perhaps, but still a unit, and no pressure can be applied to

RIGHTS AND DUTIES OF CITIZENS. IV.

TAXATION.

Taxes are debts due the State hy its citizens: they are the cost of law and order. No government in the present day could exist for a moment without revenne, and revenne is derived from taxation.

Taxation is an ontgrowth of civilization: in savage times, taxes were nnknown; Imperial Rome supplied, what in modern times would be termed her treasnry, hy the fruits of conquest; the feudal system needed no army of tax collectors; it was only as society progressed, and the expenses of government exceeded the revenne of crown lands, that the system now known as taxation, became necessary.

Taxes are a citizen's contributions from his own estate to that of the organized society in which he lives: they are a portion of his own wealth given for the safer keeping of the hiance, and for the continnance of the State. Labor is the father of all wealth, and history presents hardly a more striking fact, than that labor has been deemed honorahle, only as nations have found taxation indispensahle. In harharous and semi-civilized tribes where peaceful taxation is unknown, labor is regarded as degrading, and might is the only right. Taxes do not make labor honored, bnt the honoring of labor makes taxes possible.

Whether taxation he light or heavy, depends on one of two sets of circumstances: first, if the government of the State be wisely or unwisely administered; second, if its citizens be good or bad. A State composed of perfect citizens would have a minimnm of taxation; for in States, as in individnals, it is the vices that cost. A State whose affairs are condncted hy those skilled in money matters, will be infinitely cheaper to live in, than one conducted by persons ignorant of the A. B. C. of finance. Here, again, comes in the all-pervading duty of the citizen to vote intelligently for public officers; for if taxes he high, owing to the corruption, or incapacity of public servants, let the people remember that a majority of them elected these pnblic servants. "It is not onr stars, hnt onrselves," we have to blame, if in this conntry we have faithless and nnfit representatives. No citizen should vote for a man to fill an office of pnblic trnst, whom he wonld not trust with his own money. For would it not he absurd for a man to declare, "That I will trust Smith with pnblic funds, but will not with private moneys"? Let not citizens forget, that the pnblic money comes from their pockets, and that it depends on the representatives they choose, how much or how little they get in return for their taxes, and their taxes make up the sum of pnblic moales.

By English and American law, all hills for raising revenne must originate in the lower or popnlar hranch of the legislatnre: the reason for this is ohvious; it is the people's money that is to be used; and they, through their direct representatives shonld have a voice and choice, as to what pnrposes, and to what amount their money shall be spent. By the same law, however, which directs that all hills for raising revenne must *originate* in the lower or popnlar branch of the legislature, it is provided that the npper honse must concur in the resolves of the lower, before such resolvee are of any effect. This feature of English and American law is pecnliar, and apt to escape the notice of casual students of politics. It amounts to this; that the voter is donhly represented in the law-making branch of the State: first; through his representative in the lower house, he is represented as an individual: second; through his senator, he is represented as a part of his State. To put this statement in other words—a voter is twice represented—as an individnal, and as a social being.

Of a State's right to tax, and of a citizen's duty to pay such taxes, there can be no question; provided taxation is accompanied by representation. Taxes should be paid as cheerfully as any ether debt: the equivalent received is as real, thongh perhaps not so tangible, as if the money had been exchanged for food, clothing or shelter. The more a man has to pay out in taxes, the less he has to exchange for other things; but in return for his taxes he receives, or should receive, the protection of the State, as regards his life, liherty, and property; without which his right to these, or any other earthly thing, wonld depend solely on his being physically stronger than those, who would assuredly try to wrest from him, all he had.

The point I wish to establish is this; a man should he willing to give up a small part of his property, in order to secure the undisturbed enjoyment of the rest: and that in this country he has the proud privilege of choosing the men who shall determine how small this small part shall be.

If a man desires to insure a house against fire, he naturally takes the insurance from a coinpany which he feels convinced will pay the amount insured, in case the house be hurnt; and of two equally solvent companies, he selects the one which will assume the risk for the smaller preminm. Taxes are the preminms citizens pay for the assurance of the State's protection to themselves, their families, and their property. Withont paying premiums, insnrance cannot be had, neither can State protection be obtained without taxes; like a well-conducted insurance company, that State will obtain the greatest number of desirable tax-payers, or policy holders if you will, which extends the greatest assurance for the least premium, compatible with its own safety. If any one doubts the truth of this statement, let them explain why the drift of intelligent European emigration has been, and is, to the far West, rather than to the near South. An intelligent emigrant, be he from New or Old England, will always go to those States where he is best protected at the least cost. It is to the interest of every State to increase the nnmber of her tax-payers, and none but short-sighted citizens favor the raising of any barriers to anch emigration, whether the barriers be social, political, or pecuniary. Where taxation is so high as to amount to practical confiscation, citizens migrate — the ruinous taxes of the city of New York have done more to build up neighboring towns and cities in the last twenty years, than their natural advantnges would have caused them to grow in a century. Practically there are only two kinds of taxes, taxes on land and on personal property. All must agree that taxes on land are eminently proper, for to the cultivation of the soil the labor of the greatest nnmber of men is directed, and directly or indirectly from it, springs all wealth. Taxes on personal property are more difficult to frame: the question for every framer of a tax bill should be, how can the State get most and tax-payers suffer least. The very statement of the question shows its difficulties. The field for discnssion on this point is a wide one, bnt foreign to the object of these papers; still I will venture the assertion, that a system of taxation, whose maximum tax falls on luxuries, and the minimnm tax on the necessities of life, is the best for both the State and its citizens. Liquor of all kinds, tobacco, jewelry, fine clothing, pleasure carriages and pleasnre vessels shonld all be taxed; they are among the superfluities of life; people can get along without them, and if they can afford to indulge in these luxnries, they should pay the State a revenue for the enjoyment of them.

As before stated, all taxes, of whatsoever kind, are a citizen's contribution to the State; and every citizen, even if he pays no greater tax than on a dog, owes it to himself to do all in his power to have the rate of taxation as low as is consistent with the real necessities of the State. If every voter could be made to understand this truism, and to feel that when he votes he directly affects his own pockets, a different class of legislators would meet in our different capitols.

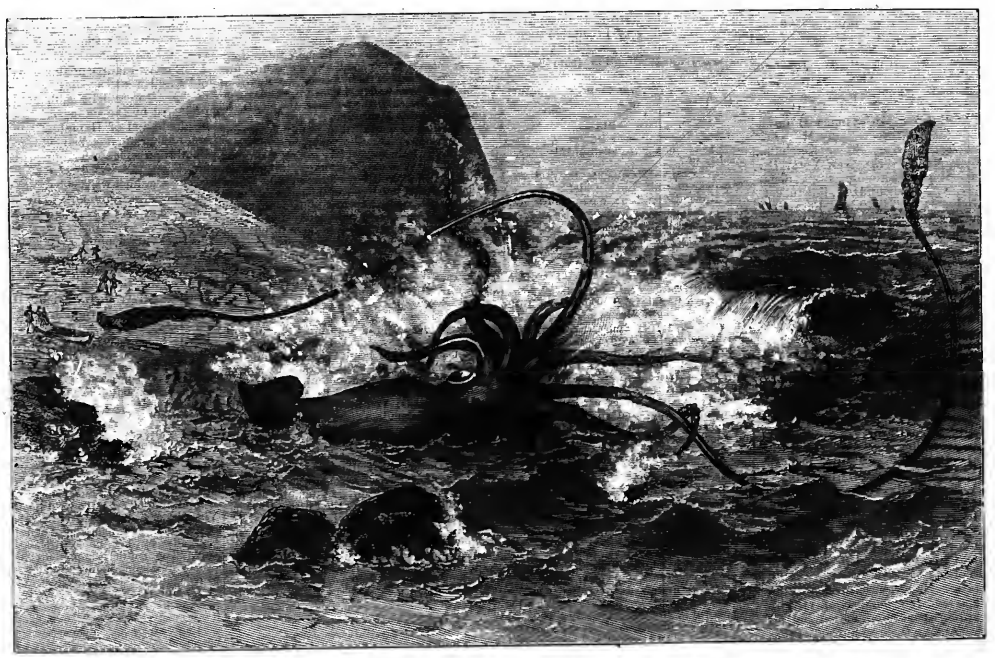
It is a peculiarity of mankind, that everybody thinks that system of taxation best, where the burden *seems* to fall on somebody's else shonlders. Such a tax levy is physically impossible to make: and even if it were physically possible, there are philosophical reasons against it: for every organized society is a political nnit, composed of many atoms perhaps, hnt still a unit, and no pressure can be applied to one atom without affecting every other atom to a greater or less degree. If a farm he heavily taxed, the farmer is less able to pay wages; and if the laborer's necessities are heavily taxed, he must receive higher wages than would otherwise suffice for his needs. If there be any one fact in social science that is head and shoulders over other facts, it is that men as social beings are not independent, hnt dependent creatures, and that which affects those above them, or below them, to the right of them or to the left of them, affects them.

In intelligent communities, the taxes imposed for school purposes are the most cheerfully paid. It needs no argument to show that such taxes are simply providing for the life of the State, by edncating the children that they may he able to wisely continue the affairs of the State, when the present generation shall have passed away. In many States (and it should be in all) the taxes paid for the support of schools are solemnly pledged to that purpose; and to that purpose alone. To divert school taxes from the use of schools, is like removing the fonndation of a house to patch the roof.

Man has been aptly defined as a trading animal: and the greater part of every man's existance is spent in exchanging one thing for another. Self interest is the hasis of every exchange, and no man makes a trade nnless he receives something, which at the time he esteems more highly than that which he gives. Taxes differ from other exchanges in two important points—in the first place they are not voluntarily made; and in the next place, when a man deals with the State it is not exactly as with another man, for to a certain extent he is dealing with himself, inasmuch as he is a part of the State.

That the tax-payers should have a potent voice in the distribntion of the money they contribute to the state seems only justice. The idea of a property qualification is entirely democratic (in the pure sense of the term), for it enables property to be represented as well as poverty, and any argument against this theory must be hased on the communistic idea that "Property is rohbery."

T. T. Bryce.



A MONSTER OF THE DEEP.

ANNIVERSARY DAY AT HAMPTON.

The Tenth Annivereary of Hampton Inatitute was celebrated on the 23d of May. It was marked with peculiar interest, as being the tenth, and hy the presence of President Hayes, who thus confirmed the pledges of his inaugural, and hle repeated declarations of his interest in education and the progrees of the colored race. A very large number

THE ORDER OF THE DAY

was very much as usual with some interesting variations, however. The morning was devoted as always to the examination of the gradnating class, and the ordinary recitations of the other classes. The visitors, among whom were the President and his party, who arrived about ten o'clock, going as they liked from class-room to class-room, or scattering over the place to inspect the buildings and various industrial exercicee, which were condncted according to the following programme:

MUSIC. Chorus: "Men of Harlech."

Salutatory. Essay. - Suggestions to my Classmates. Catharine Fields, Hampton, Va.

Essay, - - The Dangers of Universal Suffrage. Jacob T. Brown, Hilton Head, S. C.

Selection, - "Telling the Bees." - *Whittier.* Dixie Clementine Lumpkin, Williamsburg, Va.

MUSIC. Plantation Songs.

Essay, - - - - Homes for Our People. Angelina Talliferro, Lynchburg, Va.

Egyptian art, and they are allowed here, as they were in St. Augustine, to paint pictures and fans for sale, the money going to themselves and need for clothing. Many of the visitors took away such mementoes of their visit. But though fond of painting wild hunts, and war dances, and grand battles, they are not fond of recounting their own savage deeds, and confided to Captain Pratt that they do not like to be asked by visitors if they have scalped and killed people. It would be best certainly to avoid such curi-

ANNIVERSARY DAY AT HAMPTON.

The Tenth Anniversary of Hampton Institute was celebrated on the 23d of May. It was marked with peculiar interest, as being the tenth, and by the presence of President Hayes, who thus confirmed the pledges of his inaugural, and his repeated declarations of his interest in education and the progress of the colored race. A very large number of visitors attended, some of whom came, no donht, chiefly to see the President, though his coming was not announced, hut all of whom seemed greatly interested in the school and its exercises.

The President was accompanied hy two of his cahinet, Hon. G. W. McCrary, Secretary of War, and Attorney General Devens, also hy his son, Mr. Webb C. Hayes, Col. R. K. Rogers, private Secretary, and Mr. R. A. Evarts, son of Secretary Evarts, and five ladies. The President's party was accompanied from Baltimore hy Hon. S. M. Shoemaker, Rev. C. R. Weld, Enoch Pratt, Esq., Mr. Matthews of the Baltimore *American*, Messrs. John L. Thomas, Harvey Shriver, R. P. Bland, H. C. Cramp, E. Carrington, E. H. Stimson, C. K. Wild, and several ladies.

Besides these, among the visitors were many whose names are prominent in the North and South. Of the trustees of the school, were present, Rev. M. E. Striehy, D.D., New York, Hon. R. W. Hughes, Norfolk, Va., Hon. Alex. Hyde, Lee, Mass., Rev. Thomas K. Fessenden, Farmington, Conn., Mr. Robert C. Ogden, Brooklyn, N. Y., Mr. Samnel Holmes, Montclair, N. J., Mr. Anthony M. Kimber, Philadelphia, Hon. Edgar Ketchum, New York, Mr. Z. S. Ely, New York, Dr. Lewis H. Stiner, Baltimore (State Senator), Rev. A. N. Arnold, D.D., Pawtucket, R. I., Judge F. N. Watkins, Farmville, Va., Rev. J. H. Means, D. D., Boston, Mass. Of the Curators, were present, Col. Thomas Tahh of Hampton, Mr. J. H. Holmes, Richmond, A. Kenan, Petersburgh, Rev. William Thornton, Hampton, and Rev. John M. Dawson, Williamsburgh (State Senator).

Among the guests were, also, Mrs. E. L. Youmans of New York, Mrs. Walter Baker and friends of Dorchester, Mass., Miss M. A. Longstreth of Philadelphia, Mrs. C. Boewell, Mrs. E. G. Sessons, and Rev. F. S. Hatch of New Hartford, Ct., Mr. G. E. Brown of Boston, Hon. Chas. Kimball and wife, of Lowell, Mase., Capt. R. K. Pratt, U. S. A., Rev. John Harding of Springfield, Mase. (representing the Springfield Republican), Rev. Mr. and Mrs. Hall of Brooklyn, N. Y., Miss Day of Elizabeth, N. J., Dr. A. T. Ball, Mr. Willmott Williams and Mr. and Mrs. E. G. Bartlett of New York, Misses L. and E. L. Anetin of Philadelphia, Mr. Clark (Max Adeler) of the Evening Bulletin, Philadelphia, and Messrs. S. C. Hubhard and John Aitkin of New York.

From nearer home, two excursion steamers brought a large nnmber of visitors from Norfolk, about two hundred and fifty in all. Among them were Capt. Truxton, U. S. N., with a party of ladies and officers from the Navy Yard, General Groner and family, General T. H. Webh, Captain and Mrs. Pegram, Capt. Taylor, Mrs Capt. Boutelle, and Mr. A. F. Cunningham.

From Fortress Monroe, General Getty, General Upton, Major Calif, Major and Mre. Campbell, and Lieuts. Zalinski, Clark, Smith and Paddock, with other citizene and ladies.

From the Chesapeake National Soldiers' Home, were present, its governor, Capt. P. T. Woodfin, Dr. Hare, and others. The school le indehted, as in former years, to the courtesy of Capt. Woodfin, who placed his yacht and other conveyances at its dieposal, and also to the Quarter Master, and Mr. Phœhus, proprietor of the Hygeia Hotel, for similar favors.

Hampton was represented hy leading citizens of all classes, the ministers of the white and colored churches, and its Northern and Southern residents, all of whom have manifested a spirit of cordiality and good will toward the school.

The colored race was well represented hy the parents of the graduating class, leading clergymen and promlnent colored citizens of Hampton, Portsmouth and Norfolk, and colored visitors and friends of the etudente from a distance.

THE ORDER OF THE DAY

was very much as usual with some interesting variations, however. The morning was devoted as alwaye to the examination of the graduating class, and the ordinary recitatione of the other classes. The visitors, among whom were the President and his party, who arrived about ten o'clock, going as they liked from class-room to class-room, or scattering over the place to inspect the huildings and various industries. The farm was represented hy a goodly ehow of vegetahles, fruit and sheaves of waving grains, and, as at the last anniversary, two knitting machines were running on a platform hnilt np for them hy-a stairway in the Academic hnilding, and attracted rather more than the nsual group of visitors, because one of the operators was an Indian, who worked as deftly and cheerfully as if snch peaceful occupation had been the chief pnrsuit of his life.

The senior class was examined in Book-keeping, Universal History, Arithmetic, Algehra, Civil Government and the science of Agriculture and Agricultural Chemistry.

The recitations of the other classes embraced Arithmetic, Geography, History of the United States, Reading and Spelling, Physiology and Natural Philosophy. The Senlors passed very creditahle examinations. Ae usual, the class in Agricultnre attracted most attention, from its novelty and practical bearing. The greatest throng, however, was found very naturally in the class-room of

THE INDIANS.

Our readers may be as interested as the visitors were in the roll-call of this class. It consists of

CHEYENNES:—*Ma-ah-chls, Soaring Eagle; *Cow-way-how-nif, Little Chief; Mar-cu-vekist, Howard Charlton; We-ho-no-cas, White Man; Nu-ne-cas, Kohoe; *Nan-hi-yurs, Matches; Tich-ke-mat-se, Squint Eyes; Pa-acya, Nick Pratt; Nock-ko-ist, Bear's Heart.

KIOWAS:—*To-un-ke-ah; Etahd-le-ah; Ohet-tolnt; Tsadle-tah; Koba.

ARAPAHOE:—*Nar-cn-bo-ist, White Bear.

Those whose names are marked with an * are to be transferred in September to Bishop Whipple's school in Minnesota.

Having been at Hampton but five or six weeks, their knowledge of English, and so forth, had been chiefly acquired at St. Augustine. Their former commandant and good friend, Captain Pratt, who came to see them examined, says, however, that they have perceptihly improved since they came, particularly in distinctness of speech—and who is a better judge of them than he? He declares himself more and more convinced that they are in just the right place, and remarked, "If I had known yon would take my speech down that I made when they first came, I would have explained more fully just why I said I was sure there would be no tronhle between them and the other students. It is, that they have come with a purpose. They have coms not to quarrel, hnt to sindy and work. And when they have a purpose, they stick to it. Then, all are too busy here to quarrel. When people are kept hnsy they do not quarrel." The Indians were examined in spelling, and writing and geography. The general atmosphere of excitement around them seemed to rouse them out of their ordinary shyness before visitors—for shy they are, and capable of blnshing, conventional ideas of Indian equanimity notwithstauding—and they answered questions, hounded states and spelled their long names with a wide-awake celerity and smiling eagerness that brought frequent responeive smiles from the interested throng about them.

Any incidents concerning these Indian students will no doubt he interesting to our readers at this early stage of their connection with the school, and one may be told which will illustrate their characteristic, as Capt. Pratt says, of sticking to their purpose. The use of tobacco in any form is contrary to the laws of the Institution. The rule was explained to them, but it was thought to be scarcely possible that they could be brought to yield their consent to it. They stood in solemn silence for some time, then one looked np and with one quick gesture of his hand across his lips, as if striking a pipe away, and a short ejaculatory grunt, indicated, in the most expressive manner possihle, his resolve to give up the Indian weed. One after another followed, after due deliberation, the last one taking qnite a while to bring himself to the point, but finally all had given their consent, and Captain Pratt says that after they make np their mind to a thing it is made np and they do not like even to he asked again about it. They have certainly kept to their resolve thus far with a firmness which would do honor to any man.

The Indians have quite a remarkable natural talent for drawing and painting, is their own peculiar style, which reminds one of Egyptian art, and they are allowed here, as they were in St. Augustine, to paint pictures and fans for sale, the money going to themselves and used for clothing. Many of the visitors took away such mementoes of their visit. But though fond of painting wild hunts, and war dances, and grand battles, they are not fond of recounting their own savage deeds, and confided to Captain Pratt that they do not like to be asked by visitors if they have scalped and killed people. It would be best certainly to avoid such curious questioning and let their dead past bury its dead and its tomahawk.

THE PRESIDENT'S SPEECH.

At noon the graduates marched, as usual, to their dinner, escorted hy their schoolmates and the school hand, and the invited guests of various colors and sections sat down on the broad piazza of General Armstrong's house, and under the trees on the lawn, to refresh themselves with a lunch, after which President Hayes, in response to an invitation which expressed the desire of all present, made the following excellent speech, from the steps of the piazza.

"The announcement that I am to make an address is unexpected, and of course it must be without premeditation. We all must have been very much interested in what we have observed. When now ahout one-half through, as is usual in such cases, we assume that the one-half that remains will he more interesting.

In some entertainments, we are assured that the second half is better than the first. If this is the case to-day, I am sure we may congratulate heartily, the teachers, the pupils, the patrons of this Institution.

Whenever I am called upon to talk to our newly made citizens—to young colored people especially, I always feel like giving them good advice. It is so easy, you know, to give advice. We all do it,—we like to do it. Now there rests—evidently—on this generation of American people, a great duty—the duty of educating this people lately freed from bondage, to rear them up to the full status of American citizenship. I am very glad to learn that the State of Virginia has contributed so largely—$10,000 yearly—to this great duty, and that there are such large voluntary contrihntions to it in support of this institution. And what we have seen here showe that both sides of education to citizenship are attended to here. Knowing how to work, to support oneself is an important part of civilized life. The man who cannot earn a home for himself—who cannot lay np somethiug against a wet day, is not qnite prepared for American citizenship. So this is what I have to say to my colored friends: You have learned to work. In these two hundred years that you have been in America your people have done a great deal of work. Now learn to save. The question all intelligent people interested in your progress ask is, Do they accumulate property? Do they pay taxes? Do they own homes? The great Doctor Johnson said, 'Frugality is the daughter of Prudence, the sister of Temperance, the mother of Liberty.' Remember there is no independence to be gained without frugelity. I said about this same thing the other day to the students of Howard University. The real way to get this glorious privilege of independence is for every young colored man to learn to labor and to save. As Burns says:

> 'Not for to hide it in a hedge,
> Not for a train-attendant;
> But for the glorious privilege
> Of being *independent*.'

Now, this is a simple thing, hut it is the real thing. If you earn $10—save a little of it. If you earn $100, save more. The difference hetween spending all and saving something is the difference between misery and happiness. I was ridiug with a friend of mine the other day, and talking abont this, and he reminded me of the words of that great moral philosopher in whose mouth Dickens puts a better expression of this truth than I can give. *Mr. Wilkins Micawber*—you know, who said to David Copperfield—

"My other piece of advice, Copperfield, you know. Annual income twenty pounds, annual expenditure nineteen ninteen six, result happiness. Annual income twenty pounds, annnal expenditnre twenty pounds ought and six, result misery. The blossom is blighted, the leaf is withered, the god of day goes down npon the dreary scene, and —and in short you are forever floored."

And this is all I have to say to you: Be determined to work—to earn—to save.

And let all of us, in any event, join in a prayer that this Institution may he blessed in its endeavors—that its pupils, its teachers, and all its friends may be blessed."

The procession was then formed, headed hy the officers of the school and the Presidential party, and marched to Virginia Hall chapel, which was soon filled to its utmoet. Crowds are likely to be over-estimated. At least twelve hundred must have gathered to listen to the afternoon exercises, which were conducted according to the following programme:

MUSIC. Chorus: "Men of Harlech."

Salutatory. Essay, - Suggestions to my Classmates, Catharine Fields, Hampton, Va.

Essay, - - The Dangers of Universal Suffrage. Jacob T. Brown, Hilton Head, S. C.

Selection, - "Telling the Bees," - *Whittier.* Dixie Clementine Lumpkin, Williamsburg, Va.

As Ministers, Jos. S. Davis, Pittsylvania C. H., Va.
As Teachers; } Charles A. Anderson, Staunton, Va.
Valedictory, }

MUSIC. Plantation Songs.

Post Graduate's Address, - Who are Needed in Africa? James C. Robbins, Bristol, R. I.

PRESENTATION OF DIPLOMAS.

MUSIC. Plantation Songs.

The music, which has been directed this year hy Mr. Charles G. Buck, formerly of the Mendelssohn Glee Club of New York city, was particularly good. The old English glees, sung without accompaniment, were delightful, and highly appreciated hy the audience. Several of the original hand of Hampton student singers, now graduates, had returned, and the Plantation songs rang out with the old fire.

The readings were good, and the essays and speeches were marked hy good common sense, and a very fair average of excellence.

Fifty-four seniors received diplomas, twenty young women, and thirty-four young men. The diplomas were presented by the president of the Board of Trustees, Rev. M. E. Striehy, D. D., with the following address to the graduating class.

"My youug friends, a fair field and chance are the right of every human being, and almost all men are willing to grant that right, and most, a little more. If a man falls into the water, or drives his team into a ditch, almost any one who passes by will turn to and work hard to help him out and set him on his feet again. There is a very geueral instinctive desire for fair play among men.

Now, I believe this is true in regard to the efforts now making in behalf of your race. In the attendance here to-day the Government of the United States is represented by its presiding officer. The old mother State, Virginia, is represented by the nohlest of her sons and daughters, and more substantially by her noble gift of $10,000 a year. The Sonth is represeuted. Southern people are coming more and more every year to recognize the effort made here in your behalf. And the North is represented hy the many of its best people who come here to visit you, or teach you. Many noble hearts are seeking your good. These are represented here to-day.

You have had this help, and now you are goiug out to use what you have gained. You will no longer have these opportunities of aid, these helpers all around you.

We may all come here next year, President Hayes may come perhaps, other of your friends will come, but you will he far off. Your teacher will be here—the school work will all go on as usual, but you will be off in the field, hard at work, alone. You are going forth, and I feel I speak the seutiments of this assembly of your friends in saying that you give us evideuce that you go forth to do a noble work for yourselves and for your people, and when I give you these diplomas, it is in evidence to you that we believe this.

When you are far off, in the lonesome places where your work is, remember this day, and these people, to cheer and comfort and encourage you in your work. And remember, too, that wherever you are the eye of God is upon you, net to mark your failures only, hut in tenderest pity for your weakness.

By the judgment of your teachers, and in evideuce of their opinion of you, I am authorized to-day to present you these diplomas."

After the distribution of the diplomas, General Armstrong remarked,

"I am very sorry—it was my mistake—that the Senior class did not hear the noble and earnest words of the President in front of my house. I asked him to speak there, thinking that some might have the opportunity of hearing him who would not he able to here. It would not be fair to ask him to speak again,

of course, but we shall have the pleasure of listening to the Attorney General of the United

ic lives. Then, if success comes, well; if not, the brave heart within you will enable you to bear safely up against any ills this life is

general diffusion of knowledge in the town of Hamptou, the attempt to provide him with a class of twenty children who had

tial election in Florida and Louisiana. The Republicans did not vote. President Hayes sent a brief message to the Senate, accompanied by a long letter from Secretary Evarts, in relation to the Halifax Fishery Award. The President recommends that the appropriation be

of course, hnt we shall have the pleasure of listeniag to the Attorney Generel of the United States—Geaeral Devens, whom I have the honor to introduce to you."

General Devens responded.

"It is very embarrassing, after so polite an introductioa, to come forward with the full coasciousness that I cannot come up to the complimentary notice. But I must express the very great satisfaction I have experienced here in all I have seen to-day.

"It is now fourteen years siace I was here lying for three months over in Chesapeake Hospital—which is now the Soldiers' Home, but was then a hospital for officers—after the battle of Cold Harbor. The same natnre lies around me to-day. The Hampton River slips lazily to the sea, the ardent Virginia sun spreads its effulgence over the hroad roadstead. It is the same sea of molten silver—large enough thea as now for the aavies of the world, filled aow as then with greet ships. But now they are the ships of peace, bearing the wealth of netions, the commerce of the world. Then they were the iron-clad messengers of war and death. And on this Peninsula all is changed, so woaderfally chaaged. In Chesapeake Hospital thea, were five or six hundred wouaded officers; on this place, three or four thonsand wounded men. What a change. The teats are struck, the hugles have sonaded their last note of war on this peninsula. (applaaae.) I rejoica that on the spot where those breve men lay suffering, rises this institution of learning.

There is a Greek story thet Cadmus sowed dragoas' teeth ia Greece, aad there sprang up from them e terrible harvest of armed men for conflict and battle. But on these fields where bostile armies camped, and the dreadful seeds of war were sown, I rejoice that this institution has sprung, devoted to liberty and learning. That is a noble monument which Miss Dix raised in the cemetery here to the hrave men who fell fighting for their coastry's liberty and yours. But I thought as I looked up to it to-day that a more beautiful one had been reised here to that army, which vindicated the authority of a President elected hy all the forms of law—which stood for the country's honor, for the liberty of all men. It seemed to me that a nobler monument than brass or marhle or granite, is an institution like this, built for instruction; so well and so strosgly built, and to last, and to cerry forward the benefits of instruction from generation to generation. I recall the language of a brave officer whom I knew well, who was welcomed on the battlefield of Gettyshurgh by every one who saw him with, "How glad I am to see you are come." "Yes," he replied, "I've come, and I've come to stay." Aad stay he did, and sleeping on the battle-field, awaits his just reward. I am glad that this Institution has come to stay. I am glad to see these college walls so well and strongly built, to give shelter to those who seek instraction for hnndreds of years.

I see above me the name of John C. Whitin inscribed upon this marble on the wall, as giver of this chapel to your Institution. I know John Whitin well, and his brother Paul—they are two of the noblest men, and most succesful manufacturers, of this conntry. And I know that they never did a piece of work in the world which they did not mean should last. So this Hall is placed here that it may last.

Now my young friends who ere about to go out from his Institution: after all, all that can be done in the way of material eid to an institution like this is of little importance in helping it compared with the results it can show. By its fruits is every work known. Every institution can show reasons for its existence, only by the sort of men and women it turns out for the duties of life. How long would the military institntion at West Point stand—over which my brother the Secretary of War presides,—if the American people did not see that it turns out competent officers, hreve aad honest men? And no Institution after it is once fairly established, can stand except on its own character, and the character of the men or women it sends out into the world. I believe thet, np to this time, this Iastitution has done all that conld he expected of it. Notwithstandiag all the help thet has been given there are still great difficulties before it, I know, hut we are entitled to say that the experiment has succeeded, and thet it will continue to succeed.

I wish I conld give you one word of encouragement which would be of use to you, which you could carry eway and lean upon. For there is no more interesting occasion than that when young men and women stand thus together as fellow students for the last time, in one moment more to separate forever. One would say to such, Be of good cheer; take up the burden of life hopefully; do your duty manfully, cheerfully.

I wish you had heard the good words of advice of our President. I shell not presume to add to them more than my own good wishes. I am sure that I speak the feelings of all here present, when I wish you all success, prosperous, happy lives, and something better than prosperous lives—manly, womanly, heroic lives. Then, if success comes, well; if not, the brave heart within yon will easble you to bear safely np against any ills this life is heir to."

Amid the lond applanse which followed this speech, a call for "the Presideat—the President!" was raised by some insatiate American sovereign, and the Presidest very kiadly responded, seeming glad, indeed, to add a few more cordial words to those he had already spokea. He said—

"Friends: I came here this morning, as I think we all did, with very friendly feelings and favorable impressions of Hampton Institute. I may not at this time detain you in attempting to describe what I have seen and heard that enables me to feel sure that all who came will leave with feelings more friendly and impressions more favorable for all we have seen and heard to-day.

You are dealing here with some of the greatest problems of America; the problem of edncation, the problem of race. In both of these, I think this Institution is doing something to furnish us with a wise and safe solution. Why, think of all we have heard this afternoon. We all know what is said to be the weakest point of our colored brethrea. Yet in what college commencement have we ever heard more common sense expressed in simpler, purer English, than we have heard today.

Aad then, that other race. Those who were present in their class room to-day, and heard their strange names, the Soaring Eegle, and the White Bear, and all the rest of the hig warriors led by Miss Hyde, will be glad that it is within their power to be educated here.

And I adopt the sentiment I heard expressed at the lunch table. I believe that to elevate any race, we mnst give the womea eqnal advantages with the men. This is done here, and for these fifty-four young men and women who graduate from here to-day, we ell nnite in prsying that God may bless them."

The President's hearty impromptu speech was received with great applause. The audience then joined by requeet in the old ringing missionary hymn,

"From Greenland's icy monntains,"

and a prayer by Rev. Dr. Means closed the exercises of the day, which, from beginning to end, may be called a successful close of Hampton's first decade, and a promising send off for her next one.

ALUMNI ASSOCIATION.

An interesting feature of this tenth anniversary was the presence of over fifty of the past graduates representing all of the seven classes which had gradnated from the Institute, now returning to establish for the first time an Alumni Association. Hampton welcomed back her children, with most of whom, indeed, she has been in constant and frequent communication of friendship and help, ever since they went ont. These young people have been and still are doing excellent work in the field, a field of much labor, some hardship, temptations and struggles of various kinds, but still a field of glorious opportunities for serving their people and their country, opportnnities which they have eagerly songht and to a great extent eppreciated and improved. It is believed that this meeting of the Alumni has resulted, and will result, in good—that these graduate teachers go forth again with increased eppreciation of the advantages they have received and the work they have to do, strengthened confidence in their Alma Mater, and renewed enthusiasm for the work to which they have devoted themselves.

One of the number brought with him, as specimens of his work, one of his advanced scholars, a bright little boy of twelve or fourteen, and a number of map drawings very well done in colored crayon pencils, by his pupils, and some of their compositions. The examination of his school just ont of Norfolk was attended recantly by some of his former teachers. It did credit to his work and we hope to heve a more extended report of it in next month's paper.

THE TEACHERS' INSTITUTE LECTURES.

Twenty-three of the Alumni have remained to attend with this year's graduating class the course of lectures on teaching at the Institute, given this year by Col. F. W. Parker of Quincy, Mass. Col. Parker has the confidence and high recommendation of the principal edncators of New England, and is, no doubt, one of the ahlest teachers of the well-known system of object teaching in this country. Over ninoteen hundred little children are under his superintendence in the schools of Qaincey, and his success is there considered as established. On Anniversary Day, he gave a specimen of his method of primary instruction. Unfortunately for the full illustretion of the theories he advocates, though speaking volnmes for the general diffusion of knowledge in the town of Hamptoa, the attempt to provide him with a class of twenty children who had aever had any instruction whatever, was a failare, hnt he sncceeded admirably in fixing the attention of the little ones npon the india-rnbber rat in his pocket and its written name on the blackboard.

The lectures will coatinne till the close of the term, June 13th, and it is hoped that the graduates may gain from them much that is saggestive and helpful in their work as teachers.

A VISIT TO WICHITA AGENCY.

Lawric Tatum writing from Wichita Agency, Fourth mo. 29th, says:—"The Indian prisoaers from Florida arrived here to-day, except seventeea, who preferred to remain behind to attend school and trades. I had a talk with them. Loae Wolf, Double Bit, White Horse, and Black Horse replied. The latter said, 'I remember the time when we were all taken to Forida. While there, the white people aased to tell as whet we oaght to do. From them we learned about Jesus, our Saviour. At night, before retiring to hed, we used to read of the Great Spirit, and talk about Jesus. I have thrown away all my had ways aad now love only the good.' They all professed frieadship for the white people, and an iatention to abandon the war-path, and be peaceable. Several of the prisoaers were youag, apparently not grown, while others had their hair silvered with gray."

INVENTION OF A COLORED MISSISSIPPIAN.

Bea. Taylor, a colored maa llviag is this place, has lately returned from Washington, whither he has been to secure a patent for a new steam eagine which he has invented, and which, if the judgment of many experienced and scientific men to whom he has shown his model is correct, is calculated to revolutioaize the present application of steem. The engine is rotary, having the steam applied at the circumference of a wheel, giving this trehle the force of ordinary engines, with no distinguishing of power at the various stages of the revolution of the wheel. This invention dispenses with all the machinery except the one wheel, which answers at once the purpose of cylinder and driving wheel, and two steam boxes throngh which the steam is applied. It is estimated that engines on this plan can be manufactured at one-fourth, or less, the cost of those now in use, and their simplicity and the possibility of making them of extremely light weight will extend the use of steam-engines beyond the present limit. Ben. Taylor, the inventor, is sort of mechanical genius, having before manifested an insight into mechanics of no ordinary degree. His invention, if nothing fails—and the probahilities are in his favor—will rank him amoag the first inventors of the day.—[*Rosedale (Miss.) Journal.*

NEWS OF THE MONTH.

FOREIGN.

The Shah of Persia is to visit the Paris Exhibition.

There have been great labor strikes in England among the colliers and the cotton operatives, throwing thousands of men out of employment, and occasioning great suffering and disturbance.

The leader of the Cuban rebellion has come to New York. He reports the Cuban patriots still 3,000 strong, well armed and drilled, but with 40,000 opposed. He thinks the war will continue, but that the late conciliatory policy of Spain has done more against the cause of the patriots than all the Spanish forces combined.

Earl John Russell, the great English statesman and twice prime minister, died May 28th, at the age of 86. He has had probably, a longer public life than any of his contemporaries, having entered Parliament sixty years ag o, and has always been active on the side of liberal measures and reform.

The Congress of the Powers to discuss the treaty between Russia and Turkey and arrange the Eastern question, is to meet at Berlin, probably on June 11th.

The Eastern Question.—Hopes of peace are again renewed. Count Schouvaloff returned to London May 22, via Berlin. Speaking of the results of his mission, the London *Post* says, in semi-official form: "Count Schouvaloff brings the assurance that the disposition in St. Petersburg for peace quite equals that in London."

Steamer advices from Venezuela state that the earthquake of April 14 entirely destroyed the town of Cha and all the surrounding farms.

POLITICAL.

Congress: The Democrats of the House, May 17, secured a quorum, and passed the Potter resolution for the investigation of alleged frauds in the last Presidential election in Florida and Louisiana. The Republicans did not vote. President Hayes sent a brief message to the Senate, accompanied by a long letter from Secretary Evarts, in relation to the Halifax Fishery Award. The President recommends that the appropriation be made, "with such direction to the Executive in regard to its payment as in the wisdom of Congress the public interests may seem to require." The House Committee to investigate the alleged election frauds was announced on the 20th: it consists of seven Democrats and four Republicans. A bill was introduced in the House asking for an appropriation of $139,000,000 for interoal improvements, mainly for old Southern Canals. The government is asked to issue a fifty-year five per cent. bond as a specific loan for this purpose.—In the Senate, on the 21st, the house bill to forbid the further retirement of legal tender notes was reported favorably by the Finance Committee.—On the 23d, in the House, Mr. Harrison, of Illinois, offered resolutions to extend the investigation of alleged frauds in the late Presidential election to the States of South Carolina and Oregon, and not to disturb the President's title. The House, by 71 yeas and 59 nays, decided that a question of privilege was involved, but as less than a quorum voted, the resolutions were withdrawn. Subsequently a resolution was adopted authorizing the select committee to investigate electoral frauds in any State where there is probable cause to believe that such frauds were practiced.—The House, on the 24th, in Committee of the Whole, voted not to reduce the army.

Alexander H. Stephens has written a letter denouncing the Potter resolution as calculated to disturb the peace of the country, declaring the "opinion that the affair will prove in the end, either a contemptible farce or a horrible tragedy."

Saturday, May 26th, the Senate passed a concurrent resolution declaring that the treaty with China, allowing unrestricted emigration to this country, might wisely be modified, to subserve the best interests of both Governments.

DOMESTIC.

The Woman's Hotel in New York city, erected by A. T. Stewart for the benefit of working women who could pay $6 a week, has proved a failure from want of patronage, and will be opened as an ordinary hotel.

A great torcado has passed over Wisconsin, destroying life and property.

The American Social Science Association met in Cincinnati, Ohio, May 18-24. Among the topics discussed were Health in Schools, Money in relation to the Industrious Poor, Public and Private Charity, Labor and Machinery, Tramps and Tramp legislation.

The African Methodist Episcopal Conference met in New York city, May 23-29. It passed a resolution condemning the African Emigration scheme as it now presents itself in South Carolina.

Montana is overrun with grasshoppers.

William Cullen Bryant on returning from the unveiling of a statue in Central Park, May 30, slipped on a door-step and struck his head, becoming at once unconscious.

The General Association of the Baptist Church is now sitting at Norfolk, and the ministers will visit Hampton Institute to-day (May 31).

The annual convention of the Educational Association of Virginia will be held in Hampton, July 9-12.

Four thousand operatives are thrown out of employment by the stopping of the Mills at Fall River, Mass.

The American Institute of Instruction will hold its forty-ninth annual meeting at the White Mountains, New Hampshire, July 9, 10, 11, 12. Headquarters at Fabyan's. This meeting is expected to bring together the leading educators and be the largest educational meeting ever held in the country, and the railroads and hotels have reduced their rates to those who attend, making the round trip from Boston, incinding hotel bills four days, to be each $10 ticket and travel, $7, or $18 with excursions to Mt. Washington, &c. Special rates are also made with other cities and any further information may be had by addressing the Secretary, Geo. A. Littlefield, Malden, Mass.

A successful experiment in silk culture has been made by Mr. Samuel Lowery, a colored lawyer, of Huntsville, Alabama. For three years past he has been engaged in this enterprise, and has now about a quarter of an acre planted with mulberry-trees, and is the owner of more than a 60,000 worms. The mulberry grows well in Northern Alabama, and the silk-worms have proved unusually healthy. Mr. Lowery thinks the cost per acre of silk culture would be about the same as that of cotton. The experiment is of such industrial importance to the South that Mr. Lowery has come North to establish the necessary market, and to procure all labor-saving appliances which are now employed in the preparation of silk for the market.

DR. JORDAN'S
Chest Protecting Full Bosom
CORSET
Is the Latest and Best.

It is made in accordance with the best medical and scientific authorities. It entirely protects the chest from presenre of bono, horn or steel, a principle unknown in all other corsets.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, eod assists, in its piece, to round the perfect whole.

It is the pride of the Pobishers that their imprint appears in not a single poor, or eveo indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-koowo and universally popular works:

JUNE EDITION, 1878.

NOT QUITE RIGHT.

LETTERS FROM HAMPTON GRADUATES.

Our Missionary to Africa has his hands full, with less time to write than at first, but his letters are full of

veloping, and she will be better off when she graduates next year, than if she had been helped through in three years.

Va., *Feb.* 18, 1878.

THE following letter is from one of the second band of Hampton Student Singers, who graduated last year and is now successfully teaching:

since they need some help of the kind, and pay for them myself for the present; but you can, of course, tell me the particulars, that I may know what to tell him, and will you please send me a specimen copy?

I shall be at Hampton in May, if it is possible.

LETTERS FROM HAMPTON GRADUATES.

Our Missionary to Africa has his hands full, with less time to write than at first, but his letters are full of interest and good cheer. More than one of his old school mates would be glad to be with him.

GOOD HOPE STATION,
MENDI MISSION, WEST AFRICA,
FEB. 27TH, 1878.

Miss L——, My dear Teacher:

Your kind letter of the 3d ult. reached me on the 14th of Feb., bearing the sad news of your having lost the use of your left hand also. I am very sorry, because I know how it is when you have to have another work for you. You cannot say half you would say if you were writing for yourself. I had letters from Miss M. A. L., and Mr. Pike and one from a lady in Albany, N. Y., at the same time I got yours. The lady in Albany I never saw or heard from before. She said that she saw my letter in the Workman of Sept 18th, and thought that she would write me to let me know that a stranger was interested in my welfare. I also had a letter from McNiel which told me of a good many of the Hampton students.

You asked what I was doing. I am doing my same work (teaching). I have a school here with one hundred and thirty-nine pupils enrolled, and they are coming every week, and almost every day. I have not yet gotten my school in as good order as I want it, on account of having had to leave it for some time. We opened, as I told you, the second week in December, and I taught six days and then had to leave the school to Dr. James and go to the other station to take care of the place and things, as Mr. Kirk and Mrs. Mair were going away, and the Doctor's family was sick and he could not go. I left here Dec. 18, and got back Feb. 14. While I was there, I had to keep house, look after the school, look after the mill and attend to the church. I had to hold services every Sunday and Wednesday.

You can judge how full my hands were. But I am thankful that the Lord stood by me and helped me through. I was taken with the fever Dec. 29th, and was down ten days, and I didn't think that I would be left to write to any of my friends again. But the good Lord was so merciful that he kept me to work a little more for him. And now I am back again to work with these noisy children. You can tell how noisy they are when only a few out of the number are more than twelve years old. I go in at ten A. M., and let out at 3.30 P. M. My work on Sunday is to play the organ for church and Sunday school, and I have a Bible class. I have all the work I can well do.

Friday Evening, March 1st.

My dear Teacher:—I will try and finish your letter this evening. Last night I had to make a new roll, as it was the last day in the month, so I could not write. The young men here want me to take a Sunday morning Bible class, also a singing class. I have declined the latter, but I think I may take the Bible class. I told you before about the brother of the young man who became a Christian on the ship, being with me. He was a sailor also on the Jasper, and left the ship to follow me. He is not a Christian, and I want you to help me pray for him. I do want him to become a Christian, so much.

Your letter and the others were the first return letters I have had except one from home. I hope to have a good many soon. I want to write to all my teachers but I hope they will not all wait for me to write first. Please remember me kindly to all I know. Tell them that I hope to love Africa as well as I do America, though it's a land of darkness and sin. The harvest truly is ripe but the laborers are few. I hope that you will all pray for a blessing on our work here, also that He will send out more workers to work for him in this field. We need good men.

I pray and wish for a better understanding of the Bible. If I could have had a year or two study on that subject, I think I would be more fit for the work the Master has given me. I have finished my Bible reading and shall start at Genesis again. I have been much benefitted by reading Paul's writings, also John's and Peter's. My new Bible will be much used by the time you see it again. I use it twice each day for my daily readings, and many other times. I shall always thank God and the giver for such a complete Bible as it is. Please remember me kindly to the giver. Remember me to all the students, and tell J. and H. to write.

With many kind wishes and much love for you. I am, Your boy,

ACKREL E. WHITE.

THE writer of the following letter has taken nine years to work her way steadily through the school, staying out a year or two at a time to pay her own way, and help a brother. She has not been the loser. Such good grit as this is worth developing, and she will be better off when she graduates next year, than if she had been helped through in three years.

VA., *Feb.* 18, 1878.

Dear Teacher:—I thought I would write you this letter to let you know how I am getting along, and if you think it is good enough to put in the *Southern Workman*, you may do so.

I succeeded in getting the school, and I went to work both soul and body. I went to the church the Sunday before I began my school Monday, and the man that wrote to Miss H. for me got up (directly after the preacher had finished his sermon) and said, "Sisters and brothers, I introduce to you our teacher." I rose up, standing until he finished talking, and then I politely bowed and was seated again. He went on to say, "She has come from a long ways to bring both the light of education and of the gospel, for she is a member of the same faith and order as we are; therefore I hope all will send their children to her as regular as they can, both to the school in the week and Sunday too." I handed the minister a note saying that I would open school on Monday, and also Sunday-school the following Sunday, &c., &c. Sure enough, the next morning I went to the schoolhouse and found more children there than there were benches to seat them. How they got along before without the benches, I cannot tell. The first day I had thirty-four scholars, and when I had taught five days, at the close of the first week, I had forty-seven. I made out the best I could until I saw one of the trustees, and I asked him for a record book and to have some more benches made; and he asked me how many did I want and how long. I told him as near as I could,—and about a week after I saw him, I had them. I have on roll now fifty-seven scholars. I open my school just as you do at Hampton; also Sunday-school in the way as at Hampton.

The first Sunday I went to Sunday-school the house was very near full. I assisted the teachers in taking the Bible class. We took up the same International Lessons that we had last fall—the book including Paul's journey from Cesarea to Rome. I use my book that we had in our Sunday-school class, and I find it a great help to me. Had not I paid good attention when it was explained to me, I could not have taken it up. I want to take the *Sunday School Times* as soon as I can, and also the *Southern Workman*—I got one the other day, and I was so anxious to hear all the news, I began reading it and kept it continually in my hand till I read it all over. The last two or three Sundays that I went to the Sabbath-School house, I did not find near as many attendants as at first, but some of the leading members told me that they wanted talking to, and perhaps after awhile that we would have a fuller Sunday-school.

I am getting along very well only for one thing, and that is, I board about two miles from the school-house, and I have no watch to tell how the day goes; and I don't think that there is a clock or a watch in the neighborhood. The minister and clerk of the church are the only two colored, and one white man (the Sheriff), that I have seen with watches. I have been trying to rent one, but I have not succeeded in getting it yet.

I will give you a little idea about these people just about here. The colored men is getting along better than the white one is, for I have counted five or six huts where the white people live that are not as good as the colored. I never saw white people live in such cabins before.

I have twelve scholars that will be capable of entering the Junior class next term, and I am going to try to get some of them to go, if I can. Every Friday afternoon I have all the children that can, speak some pieces of poetry, and I spend the rest of the time in reading a little book, called "The First Lesson on Health," Mrs. A. gave it to me for this special purpose, and I explain to the children, as near as I can, how they must dress and keep their skins clean, to prevent so many contagious diseases that are always flying about in the air. I make them all promise me that when they come Monday they will have clean faces, clothes, and combed hair. The reason I do this, I am determined to do my duty as to telling them what they should do in the way of education and civilization, for that is something which is a very important point and very much needed—is lecturing on health and cleanliness.

We have not been able to raise a subscription to send for some Sunday-school papers yet. I will be very glad to get anything for my scholars like papers or good books of any kind. I will be glad to hear from any one who is interested in my welfare.

I have been to visit my friend Mary's school and she is getting along very well indeed for the first time that she ever taught. Mary and I sang some of our old Hampton songs, which made me think of my dear old home, Normal School.

I hope to hear from you soon, for I am always glad to hear at any time from Hampton. Your aff. scholar, R.

THE following letter is from one of the second band of Hampton Student Singers, who graduated last year and is now successfully teaching:

VA., *March* 12, 1878.

Dear Teacher:—I feel *ashamed* of myself to think thet in all this time since I've been on the "Eastern Shore" I have not written you one line. I think it is almost too much to ask of you to forgive me; yet I *hope* that you *will*, and with that hope I will proceed to give you a description of my "field of labor."

I feel, Miss M., that in many respects I am peculiarly blessed; especially do I feel so when I read the letters of some of the other ex-students and students and compare my lot with theirs. The testimony of the student who is now teaching in Florida, not so very far from St. Augustine, struck me the most forcibly of any that I read in the *last Southern Workman*. The case of those poor people is to be pitied indeed. I can see those poor little children, in my mind's eye, sitting huddled around those two fires out doors, with bare feet and scanty clothing: 'tis a sad reality.

The people here are quite thrifty; the chief occupation is farming, and every family I know owns from one to three horses and two or three cows. In Accomac County there are not many who own land, they rent instead. In Northampton County there are more who own land and houses.

I have quite a pleasant boarding place; it is on a large farm quite pleasantly situated. I have a walk of only one-quarter of a mile. I have now fifty-six scholars on the roll, with an average daily attendance of 33.50, which is considered very good for this section, as usually the scholars, both boys and girls, have to leave school in the spring to work out or to help at home. I get along very well in my school, considering this is my first term, much better than I dared to hope—though I think the credit is due a great deal to the *Educational Journal* which I receive once a month through the kindness of the General. As soon as I found who had been so kind to me, I lost no time in sending Gen. A. my thanks, and since I have had more of a chance to find out the value of the book, I thank him again and again through you. The only thing I have of sufficient cause for complaint is the condition of the church. One would naturally suppose, from the condition of the people, that they could and would afford a *little* better church: it is the poorest church that I have seen on the "Eastern Shore." I can put the toe of my shoe in over so many of the cracks in the floor; and the church leaks some,—the best place I can stand when it rains is in the "northeast corner" of the pulpit.

When we met at Eastville, at Etta Stephens' boarding place, there was such a nice little party of Hampton students that it really seemed like a reviving peep into Hempton School "good times." Miss M., you can't imagine how "highly hope up" we were when Jimmie told us that L. and J. were coming to assist us at our concert. We rather doubted him, until he said, "Miss M. told me that they would start on the boat Friday morning." Then we said, "Oh! then they will be here, sure." Every one seemed to enjoy it very much, and they want us to repeat it right away. Some of the people amused me by asking if we were going to have anything to sell to eat. They thought it was a sort of fair, though when they found out what it was really they were very much pleased with it, and the first remarks that greeted our ears were, "When are you going to have that again?" "You ought to have that again right off." Though it is hardly worth while for me to give you such a lengthy description of our entertainment, for I know you have had a full account of it from L. and J.

I heard from W. last Saturday. He says he is getting along very well in his school. I heard also from M. and O.; they are in what you may call something like backwoods, if I can judge from their letters. Mr. C. came to see me one Sabbath not long ago. He is teaching at Drummondtown, as you know, which is twelve miles from me: he told me that he had an average attendance of "*only* seventy-five."

My school will close about the last of April or first of May, and I am trying to get up a school exhibition for the young people. The book which Miss H. sent me comes in just right for selecting pieces for speaking, but I would like some easy dialogues for the occasion, so I could not think of any better way than to apply to you, if it is not too much trouble to ask you to send me a few for boys and girls, or *any* that you can send with the least trouble, and I will be much obliged to you. Another thing I want to ask you about, Miss M., and that is the cost of the little Sunday-school papers that are printed at Hampton. I've spoken to the Supt. of our Sunday-school about having some papers, and he said he would like it, but before deciding he wants to know all the particulars, and if it would be cheaper for each pupil to get them in his or her own name, or how. But I thought I would get some from Hampton myself for the Sunday-school, since they need some help of the kind, and pay for them myself for the present; but you can, of course, tell me the particulars, that I may know what to tell him, and will you please send me a specimen copy?

I shall be at Hampton in May, if it is possible. My love to all. Tell Miss. H. I will write to her soon, and ask Miss L. if she would like to have me come and be one of her cooks again. Remember me to her "Toddles."

Your loving —— D.

C——, VA., *Jan.* 13*th*, 1878.

Gen: S. C. Armstrong — Dear Friend:

I am very glad to tell you of the reception of the Educational Journal and of the Southern Workman. I am very glad to get them, and I find the Journal to be quite a help to me. I shall be very glad to get the paper for the time mentioned. I have intended to send for it, but there has not been any money in the treasury, so I could not get it to send until now. I have a very good school now, and it would be much larger if I had room in my house for them, I shall be very glad to see Mr. Yancey get back to his work. There are a great many just at this time that could be in school now, that can't go after a while. I am much pleased to see that they are so very anxious to learn; I do not find much trouble in having them mind me. This is a dark corner, and there is much work to do here for some one. Their work for Sunday is drinking and gambling or hunting. I feel very sorry for them. I hope that tha time will come when my people will do right. They are all afraid of each other, and if one dies, all say he is "hurt;" "such and such a one has conjured them." I can't say that makes them die, but they do die very fast up here from some cause. I tell them I do not believe in such things, and that they can't do so and so, but I am afraid of them after all I say to them, but they don't know that I am. But there are some of them the white folks are afraid of, so I think I might watch them too. I am about sixteen miles from Sallie and Mr. I. I saw her just before Christmas. I am very glad to say that all appear to think a great deal of me, white and colored. You will please oblige me with the paper and Journal addressed as before.

I will close by saying I am always glad to hear from Hampton, it is so much like home to me I love it more and more.

I am ever, Yours obediently,

L.

FROM A FELLOW WORKER.

ENTERPRISE, MISS., *March* 28, 1878.

Dear Editor of the Southern Workman:

Having read so many letters from graduates and students of the Hampton Institute, I thought I might be permitted to give an account of my labor in this part of the world's wide field.

I have been teaching school in this State nearly three years. Not in regular succession, for our people here do not keep up a regular school. But that has been my work when I could get it to do. In most of the large cities and towns the colored people have had greater advantages of learning than in the interior of the country, as is the case nearly every where, I suppose. We have the privilege of a free public school every year, a period of four months, and most our people do greatly err in that they will not support a private school, and just wait for those four months of free school, which term begins the first of January of each year. Some of the people are poorly provided for with school-houses. Some without any doors or shutters to them and great holes and cracks through which you could put your head, and the floors miserably poor. I did all I could to induce them to fix up their school-houses comfortably so that the children will not suffer much from the cold, for some of them are very poorly clad indeed; it often makes the cold feeling come over me to see the destitution and suffering among our people. It has made me often sit and think over their cases, but as thinking alone would not suffice, I had to give them up into His hands who knows all our sorrows and cares, and even hears the raven when he cries. But I believe if our people would be less political and more seekers of home comfort, it would be far better for the whole population. As a natural thing we look for too much from abroad and do too little at home. I believe that politics has done what good it could, and again, I believe it has done a little harm too. Politics has caused many an innocent man to fall a victim to its insatiable adherents, and many lives were jeopardized which were entirely free from partyism. I hope I have not gone too far from my subject. I was writing about the colored people and their education, and of my labors among them as a school teacher. I often, as I read of progress in studies made by the Hampton students, wish that I was there to complete my education, I thirst for knowledge so much. But I am not able to attend school now, I have to work to support myself and mother who is well advanced in age. If you allow this to be published I will next time write something of my own life and adventures.

Yours,

A. B. COLMAN.

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece

---

THE Thirteenth Annual Meeting of the Educational Association of Virginia will be held at Hampton, Va., from Tuesday, the 9th of July, to Friday, the 12th, 1878.

Col. William Allen, Principal of the McDonough Institute in Maryland, and the Rev. Frank C. Woodward, of Murfreesboro', N. C., will deliver addresses on the evenings of the 10th and 11th of July.

The President's Inaugural Address on the year's work in education in Virginia, will be delivered on opening the session of the Association, at eight o'clock, on the evening of July 9th.

There will be essays on a variety of topics, by the leading educators of the State.

Judging from the list of names, including professors from the University of Virginia and from the principal institutions, the occasion will be a brilliant one, and will fulfill the expectations of the friends of education in the State.

The use of the Chapel in Virginia Hall at the Hampton Institute has been tendered to the Association.

A report of the proceedings may be expected in our next issue.

THE EXODUS to Liberia has called out much hostile criticism. But with all the confused and erratic ideas that have characterized the movement, is there not a germ of possible power or good in it?

Discontented negro leaders may have inspired the movement, and led hundreds to sacrifice their all, to be finally and bitterly disappointed; but through this open door to Africa, there may pass those who will eventually take their places in the front rank of African civilizers.

We are told that not only fanatics guided by religious enthusiasm, but men of property and of the best standing among the colored people, have staked their all on Liberia. Such men will not be put down by the tronhics of the hour. The one great effort of the Anglo-Africans, and their friends, to found a Negro Republic will be encouraged if only one in ten of the emigrants shall successfully plant himself in that distant land. Progress is always through struggle and severe experience.

We are glad to see every legitimate effort of the colored man in his own behalf, whether it be to better his fortunes by going east or west, or whether it be to build up educational institutions, or a literature, or even a political party. To say to this race, "Lie down there; it is your place," would be to ask that they emasculate themselves. The country is strong enough to bear whatever blunders they shall make, and will in the future be far better off when the logic of experience, or in other words, the Providence of God, shall determine when and how they shall stand in all their relations. They will accept whatever limitations are inevitable, when they discover them to be inevitable.

"A fair field and no favor," for the negro as for all.

The success of Liberia would, more than anything else, give to the colored man everywhere a basis of self-respect, and assure the future of Africa. Liberia invites not so much the industrious freedman of America, who can make for himself here a comfortable home, as the ambitious young man of color, willing to do and endure for the sake of his race and for the sake of a social position in which his color shall not be a harrier to his comfort.

Africa itself furnishes the rank and file for good communities. A homogeneous class is needed there, rather than the heterogeneous set (owing to mixed blood) that America sends over. The antagonism between the colored and the black, conspicuous in Jamaica and elsewhere—and existing, but latent, in the United States, is one of the greatest dangers of the Liberian Republic. The "Norman" mixture and the pure negro blood, when relieved from the pressure of a common prejudice, such as exists in America, tend to a sharp division on the color line.

Liberia will, at any rate, illustrate the strong and the weak points of the negro race in the exercise of its unimpeded energies, and in the light of her experience we can better work for it in this country. A wreck that reveals a sunken rock may do greater service to commerce and to men than had she sailed safely to port.

There is no failure in any honest, well-directed effort. Disappointments strew the way to success.

The African race was created for an end; and every phase of its activity is interesting as bringing out its qualities, developing its power, and indicating its direction. It has originated so little for itself that while the remarkable movement in and towards Liberia should be criticized according to the facts as they appear, it should be regarded as most important to be carried to its logical results; as trial ground of a pure negro civilization.

WE copy from a New York paper the following account of the last Liberian party. We believe that the freedmen from the Middle and Northern States migrate in a more intelligent way than those from farther South, and that there is much hope for Liberia from the influx of colored men who have counted the cost, and who go to work for a negro nationality.

They may not see the fulfilment of their hopes, but "Civilization is the sum of the sacrifices of those who have gone before," and, if there is the spirit to make intelligent sacrifice, there will surely rise from the offering and suffering of pioneer generations, slowly but surely, an African Republic of untold importance to the welfare of that continent.

"OFF FOR LIBERIA.

SIXTY-NINE COLORED PERSONS CROSSING THE OCEAN FOR A NEW HOME.

The bark Liberia, Capt. Richardson, sailed June 19th with sixty-nine colored emigrants for Liberia. They were collected principally from North Carolina, Virginia, and Florida, under the supervision of the Pennsylvania Colonization Society. The expedition is under the supervision of the American Colonization Society. Dr. Orcutt, secretary of the society, took charge of the emigrants on their arrival in this city. They are to have twenty-five acres of land each in Liberia. This colony will settle in Brewerville, in the interior.

Among the cabin passengers was Prof. M. H. Freeman, a colored graduate of Middlebury College, Vermont, and late professor in the Avery College, Pennsylvania. He has been appointed to fill a professorship in the Liberian College. He said yesterday that his sole object in going to Liberia was to benefit his race. He encouraged all of his race to start for Liberia as soon as possible. "The problem of social equality in this country," he said, "is too far in the future for me and my children, and in fact for the whole African race."

Dr Orcutt has received hundreds of letters from colored organizations, all making anxious inquiries as to when and how they can get to Liberia.

An English company has proffered a loan of $1,000,000 to the Liberian Government, with the stipulation that it shall have a monopoly in her coffee exports. The bark Liberia brought, on her return trip, forty tons of coffee that sold in this city for $22,000."

SEVENTY young men and twenty-two young women remain at Hampton Institute this summer—a larger number than in any previous year—finding employment on the school farm, in the shops, knitting-room, laundry and at housework. An aspect of busy life prevails instead of the ordinary deserted look of a school in vacation time. This work on the place is eagerly sought. It is not, in all cases, as profitable as other labor might be to the various departments, but their resources are stretched to give employment as far as possible to the deserving and needy students, helping them to help themselves. The young people are under watchful care and supervision; the family life of the school is kept up, and regular Bible class instruction on Sundays. Among those who stay, are earnest Christian workers, and in a quiet way much good influence is exerted.

THE fifteen Indian students are of course among those who remain at Hampton through the summer. Many of our readers will look with interest for some news of them, and be glad to hear of their continued progress and content. Like the other students who remain, they work through the summer, chiefly on the farm, thus earning money for their clothing and support. They are allowed a day and a half in school each week, and thus, under a regular teacher, their instruction is kept up in the English language, with object lessons, and phonetic practice, writing, arithmetic and geography. They also meet for an hour every evening, from eight to nine, with a few of the other students, under the care of a teacher, for conversation, and games that are exercises in talking. This conversation class is thus far a great success, enjoyed by the Indians and the other students who take pleasure in helping them.

They also have their Sunday-school class, and a prayer-meeting in which most of them are very constant and devoted attendants. The devoutness of their simple prayers in Cheyenne and Kiowa cannot be doubted by a listener though understood only by the Great Spirit to whom they are addressed.

At their first meeting, a gentleman present spelled out the question with the card letters for one of the young men to answer: Why do you like to learn? Letter by letter the startlingly impressive answer followed—Because it makes me a man.

The Indians all seem to appreciate their advantages, and at least one of the number who chose to return to their wild woods is wishing himself back, it appears from the following letters, lately received by one of the class at Hampton. He is willing to give them to us to show to our friends, who will surely be interested in them.

FORT SILL, *May, 26th*, 1878.

Dear Etah-leah:

I have got Mr. Fox to write for me. Eleven days after I left you we got home to Fort Sill. Our people were all glad to see us, and when we told them you were going to school to learn more, they were glad again.

I am tired of this place here, and wish I were back with you at school. I don't like it and if I get a chance to go away to school I am go-ing.

I am going to stick to my clothes and what I know about the white man's way, but when my pantaloons and coat wear out I don't know where I shall get any more.

Mr. Fox says the agent will give me new ones.

I have been working in a corn-field here a little, but I have nothing to do now.

I wish I were with you, then I would be happy.

Write to me soon. Mr. Fox will read all your letters and write for me. Give my love to all the Kiowas.

From your friend,

AW-LIH.

FORT SILL, I. T., *June 6th*, 1878.

Dear friend Etah-leah:

I received your letter, and was glad to hear from you. I have not yet gotten into any steady work. The Kiowas are going out to make medicine in ten day from now.

I am still on the good road. I wear my clothes just the same and I use no paint, and I always want to live like a good white man. There are only about half the Indians going out to make medicine, the rest will stay by the agency and watch the corn. Anything you tell me to do I will do it, and will tell the Kiowas anything you say. All the young men want me to join the Kiowa soldiers, but I tell them no, I don't want to go with them.

Etah-leah, study hard, and work, and learn the good road and then come back. I want you and the rest of the young men.

From your good friend,

AW-LIH.

Write soon. Give my love to all the boys.

POLITICAL BANKRUPTCY.

Shrinkage, and a general reduction of money values is not confined to business affairs only, at the present time. Political affairs are in the same unfortunate way. There is no fanciful analogy between political and business affairs, in popular estimation. "Political capital" is a phrase as current as banking capital. Originally it was strictly confined to trading, and corner grocery statesmanship. But the rapid growth of this order of statesmen, together with the extinction of the other and better orders, make it a just and appropriate term.

Honesty, Fidelity, Intelligence, are useful in business. So they are useful in politics. However, they do not always supply the want of cash capital in trade, nor do they, at present, supply the want of capital in politics.

Money, or its equivalent in values, is important in one. Platforms, blunders, and catch words, are quite as important in the other. Without intending it, the people generally have infused into public affairs all the worst, and few of the best, customs and usages of business. The great parties which have so long and powerfully swayed the fortunes of the Republic, seem, just now, to have used up their assets, graded down the quality of their wares, disgusted their customers, and are dependent for existence upon "points," after the manner of the curb stone brokers of Wall street. It is, indeed, a hard matter for a man who has been in only one kind of business, during the best years of his life, to be suddenly required to change it. It is equally hard for a man who has taken his living out of political business, during the best part of his life, to be called on suddenly to retire, and resort to some new and laborious way of support. He will make many forcible arguments to show that he is still needed, and he will convince many that he share in official life is indispensable to the safety of the Republic. But the argument is gradually losing its force. Times are changing. The laws of nature and human nature are stronger than the laws of men. In the gradual growth of ideas the time has come for the great parties to appear before the unseen Court, and pass into the invisible hands of the Registers in Bankruptcy. They must tell off their debts and credits; make out just inventories, and take discharges. It is the logic of events, and it need not be regretted. The change will be for the better. In times past, the clear eye of judgment in political matters has been closed by the steam and smoke of burning passions. Even in New England most respectable Whigs refused to have intercourse with most respectable Democrats. Every man of one party looked upon every man of the other party as an enemy of God and man. But feeling and prejudice are now passing away, and hereafter the asperities of elective campaigns, like that of "Tippecanoe and Tyler too," cannot be revived. The rigidity of party lines is softening. Parties there will be, but for single and distinct issues only, and men will vote together or oppositely, as each issue presents itself. The outlook is good, because political bigotry is dwarfing itself.

After the *debris* of political bankruptcy is cleared away, we shall have a tolerable state of things for some time to come.

W. N. A.

WM. CULLEN BRYANT.

IN the deaths within so short a period, of William Cullen Bryant, America's most

be purchased of other parties, (at an average cost of ten or eleven dollars per suit). It is therefore requested that parents, instead of purchasing suits for their

she was detained until the peril was over.

The best tribute that can be paid to her memory was that paid by Rev. Mr. Garnett last evening in a private conversation after the service: "During twenty-five years as Matron

which give us three good cuttings each week. My first cutting this season was April 21. The bed was subsoiled about eighteen inches deep, and made very rich before the plants were set. I have seven grape vines on this piece of

WM. CULLEN BRYANT.

In the deaths within so short a period, of William Cullen Bryant, America's most honored poet, and Professor Henry, her greatest scientist, there are striking points of resemblance. Both have gone down to the grave in green and beautiful old age, like "shocks of corn fully ripe." Their long lives have been singularly peaceful. They have been men whom their country has delighted to honor. They have not had to wait till death as many do, for fame's tardy justice, but after many years enjoyment of the sweets of success and appreciation, they have gone—with a common faith in God, a common hope of immortality—

"As one who wraps the drapery of his couch about him
And lies down to pleasant dreams."

Some account of Professor Henry's eminent services to science were given in the March number of the Workman, with a description of the Smithsonian Institute. In a letter published since his death, he puts on record his opinion that there is no conflict between science and religion, God's truth is one in his Bible and in his book of Nature.

Unlike Professor Henry, Bryant was born to all the advantages of early and liberal culture, and prosperous surroundings. He was educated at Williams College, though he left it before graduating to enter the profession of law. His literary tastes led him away from law to journalism, and for over fifty years he was editor, for many of them proprietor also, of the New York Evening Post, in both the literary and pecuniary point of view, one of the most successful of New York journals, a leading Republican paper during the war, and ever since maintaining its character of independent patriotism and literary ability.

It gave him golden ease, and freedom for the poetic expression in which his fame will longest live.

He is the true poet of nature. From that wonderful boy poem of Thanatopsis —a Meditation on Death—written in his eighteenth year, to the tranquil backward look on "The Flood of Years," at eighty-two, his verse is full of

"The radiant beauty shed abroad
On all the glorious works of God."

At eighteen he saw

"The hills
Rock ribbed and ancient as the sun; the vales
Stretching in pensive quietness between;
The venerable woods; rivers that move
In majesty, and the complaining brooks
That make the meadows green; and poured round all,
Old ocean's gray and melancholy waste—
But solemn decorations all
Of the great tomb of man."

His lines "To a Waterfowl," "Inscription for the Entrance to a wood," "Forest Hymn," "A Winter Piece," and "Monument Mountain" are among many beautiful and faithful pictures of nature from his pencil. At eighty-two he looked with genial eye about him in the delightful home of his old age—Cedarmere—

"On my cornice linger the ripe black grapes ungathered;
Children fill the groves with the echo of their glee,
Gathering tawny chestnuts, and shouting when beside them
Drops the heavy fruit of the tall black walnut tree."

Mr. Bryant died from congestion of the brain, after standing exposed to the sun in Central Park, New York, to speak at the unveiling of a statue of Mazzini the great Italian statesman and reformer. Even in his sudden death, spared the slow and painful decline of sickness or age, two wishes of his heart were granted.

"I gazed upon the glorious sky
And the green mountains round,
And thought that when I came to lie
At rest within the ground,
'Twere pleasant that in flowery June
When brooks send up a cheerful tune,
And groves a joyous sound,
The sexton's hand, my grave to make,
The rich green mountain turf should break."

"Dreary are the years when the eye can look no longer
With delight on Nature, or hope on humankind;
Oh may those that whiten my temple as they pass me,
Leave the heart unfrozen and the cheerful mind."

At the last meeting of the Board of Trustees of the Institute, it was decided that as soon as practicable, the male students should be uniformed; and a plain sack coat, and pantaloons of bluish-gray cloth, with cap of the same, have been selected as the uniform. Arrangements are now in progress whereby those articles will be furnished here at less price than they, or other goods of same quality, can be purchased of other parties, (at an average cost of ten or eleven dollars per suit). It is therefore requested that parents, instead of purchasing suits for their sons before sending them from home, allow them to purchase uniforms after their arrival at the Institute, as it is desired that *all* should be in uniform by January 1, 1879. After being once supplied with uniform, the student will be required to wear it on all occasions, except when at work in shops or on the farm.

The attention of Hampton graduates is called to the letter to the Alumni Association from Ackrel E. White. And their missionary brother is assured that he was not forgotten on that occasion.

The series of articles on "Rights and Duties of Citizens" is interrupted this month by the absence of the author, but will be continued in the next number.

Died, of consumption, on Friday, June 14th, at his home in Harrisonburg, Va., Albert Jones, of the class of 1877, aged 19 years. His death will be sincerely mourned by his schoolmates and teachers. A young man of more than ordinary promise, bright in his studies, amiable and genial in disposition, he was generally beloved. Converted while a member of the Normal School, he united with Bethesda Chapel, and the gradual decline of his young life since then has been bright with increasing peace. Our sincere sympathy is with his mourning mother, who writes, "His death was beautiful and peaceful. He looked in my face, smiled and kissed me, and said, 'Mother, I am going to be with Jesus and our loved ones.' He longed for rest and to be at home."

We gladly publish the following testimonial to one of our faithful young teachers who is paying her own way through school and will return to graduate with the class of '79.

Beulahville, King William Co., Va., *June 7*, 1878.

Gen. S. C. Armstrong, *Dear Sir:*

We highly congratulate you for sending us such a good and kind teacher. All the parents of the scholars, and the scholars think so much of her, and I think, for the time that she has had, the children have advanced more this term than they have for several years, and I am in hopes she will remain with us another session. I believe she is and has been satisfied with us. I hope you will not think that I was not going to write and tell you how well she has done, for I was waiting to hear what the majority of the people had to say about her, and have heard from all around; they all like her wonderfully well. Miss Rebecca has had as high as sixty-seven scholars, and I believe she did her duty to all.

Sir, I think all the teachers from your school have the praise of being good teachers.

Respectfully yours, &c.,
Gloucester Jones.

EMINENT COLORED PEOPLE.

A COLORED WOMAN'S CAREER.

Memorial services were held at Shiloh church, in New York city, on June 16th, in recognition of the life and services of Mrs. Adelaide Butler, for twenty-five years Matron of the Colored Orphan Asylum in this city. The career of Mrs. Butler, whose funeral took place at the Orphan Asylum one week ago yesterday, and who is buried in Woodlawn Cemetery, reeals the old anti-slavery days, and an episode in the New York riots. Her birth-place was the State of Virginia, nobody knows exactly where, for colored people who came North in those times were very particular in concealing their antecedents. As she was 55 years old when she died, had been employed at the Orphan Asylum twenty-five years, and previous to that had lived a few miles out of Philadelphia in an obscure village for some time, she must have been about twenty-five years old when she took passage for the North, and left her former identity behind her. At the Asylum her devotion to the children was almost maternal; widowed and childless herself, the lastinct of motherhood expended itself in devotion to the motherless waifs under her charge. During the riots she shielded them from the fury of the mob that threatened to kill her, and would have accomplished the purpose had not a Police Captain smuggled her away to the station-house, where she was detained until the peril was over.

The best tributs that can be paid to her memory was that paid by Rev. Mr. Garnett last evening in a private conversation after the service: "During twenty-five years as Matron of the Asylum, her superiors never once had to suggest to Mrs. Butler the performance of any duty devolving upon her;" and her genial face, and pleasant motherly, sympathizing manner will long be remembered by the poor children at the institution. In the crisis of the riots her heroic qualities came out, and it was her presence of mind and decisive courage that prevented a panic, saved the orphans under her charge, and averted a series of cowardly murders. As it was, the mob did pretty rough work, but it would have been rougher still had a less stroag spirit been at the helm. The Asylum was on fire, the surging mob howling for victims. Capt. J. W. Hartt, of the Police, did what he could, but that was very little, with the force at his command. The same Captain attended the funeral and recited a poem in memoriam.

Mrs. Butler's death-bed scene was a solemn and pathetic one. To the last, until her voice grew so faint that its accents could not be caught, she hummed the words of a familiar hymn:

"That gate ajar stands free for all
Who seek through it salvation;
The rich and poor, the great and small
Of every tribe and nation."

"She fell asleep singing that verse like a lullaby, said Rev. Mr. Garnett.

—*N. Y. Times of June 15th.*

A temperance meeting was held on board the U. S. receiving-ship Franklin, at Norfolk, on Sunday, June 24d, by the Christian Temperance Union, by request of Capt. T. H. Gilhis, commander. At the close of the service, the Captain made some earnest remarks to his crew, arging them to sign the pledge, which forty of them—sailors and mariners—did, the Captain, and officers, and the ladies of their families setting the example. More such captains are wanted.

The annual examination of the North St. public graded school of Norfolk, five of whose teachers are Hampton graduates, was held on June 24, and is reported very favorably in the Norfolk Landmark. General Page, superintendeut of schools, made an address of encouragement and congratulation to the school and its teachers, and presided at a spelling match between the different classes, in which the girls were victors.

Rev. Wm. B. Derrick, a presiding elder of the African Methodist Episcopal Church, visited Hampton Iastitute, June 20th. The school of course was not in session, but, introducing himself to the treasurer, he made a careful examination of the industries still in active operation, and careful inquiries into the methods and course of instruction. He expressed himself emphatically pleased with all he saw and learned, and said, "All good work meets some opposers, but Hampton's best monument is her graduates. I notice them wherever I travel, for their refinement, intelligence and desire to do good. They are doing great good."

Agricultural.

POSSIBILITIES OF A PENT-UP GARDEN.

[We extract the following from the *Weekly Tribune*, showing what satisfactory results may be obtained by the *proper* cultivation of a small piece of ground. If some of the former students of the Normal School have the opportunity and disposition, they might take as a guide, this record of what we believe to be an exceptional case, but one within reach of many persons if they do not lack the will. It would give us great pleasure to publish a similar account from any former student of the School. Of course it is not imperative that all or even any of the varieties of fruit named, should be cultivated. More space might be given to vegetables if preferred. It should be borne in mind that an acre *properly* tilled, will produce more and better crops than three acres slovenly cultivated. ED.]

"*Addison Co., Vt.*

"My garden is 30x80 feet in size, situated the south side of my house, made rich by deep and thorough tillage, and furnishes a family of four adults abundantly with vegetables and fruits in their season. It is laid out and cultivated as follows: Next the house is a border about four feet wide for grapes, with a walk three feet wide made of coal ashes exteading the whole leagth of the border. Almost all of my fruit, asparagus, etc., I put in four years ago this Spring. The asparagus bed is 5x20 feet, coataining 100 Conover's Colossal plants, which give us three good cuttings each week. My first cutting this season was April 21. The bed was subsoiled about eighteen inches deep, and made very rich before the plants were set. I have seven grape vines on this piece of ground, from which I gathered last season over fifty pounds of choice fruit. The varieties are Rogers's Hybrids, Delaware, Walter and Israella. I have two varieties of strawberries, about seventy-five plants of each—the Nicanor for early, and Chas. Downing for later. If space is very limited I deem these two varieties as desirable as any in market. (My soil is heavy loam.)

I formerly cultivated two varieties of raspberries, Brinckle's Orange, and Knevet's Giant, but the former not proving hardy enough for this climate I have discarded it and now cultivate but one variety, the Giant, which is semi-hardy, needing with us hut slight winter protection. My bed is some 3½ feet wide and about 25 feet long with stakes and slats on each side. I cultivate them thoroughly and they furnish us all the berries we want in their season. I have niue currant bushes (White Grape, and Versellaise) set hy the walk, where they receive thorough cultivation. Last season they were loaded with fruit, the White Grape currant being almost as large as the Delaware grape, and of most delicious flavor. For over one month we had this fruit on the table almost every day. The only enemy to fight is the worms. At their first appearance I give them a good dose of hellebore and in about two weeks after, another dose, and that is the last of them. On this ground I have set, in a location where they will not shade the garden much, two apples (Primate and Tetofsky), two pears (Flemish Beauty and Clapp's Favorite), two plums (Green Gage and Lombard). Pieplants furnish us an abundance.

I raised last season over two bushels Early Hill onions. Between the rows of onions I set White Swedish turnips. After the onions were gathered, the turnips grew to be long, furnishing over five bushels for Fall and Winter use. One bed of Bassano beets furnished an abundance of greens when thining out, and as they grew we pulled the largest for Summer use. I also raised a row of carrots and parsnips, and a row of striug heans, and half-a-dozen early cabbages, and some seventy-five heads of lettuce (in different spaces,) of the Hanson and Improved Coss varieties, giving us an abundance of large crispy heads. I planted some twenty-five hills of Early Rose potatoes, which ripened early, when new potatoes command high prices—next to them my early peas. After the potatoes and peas were out of the way. I set 100 plants of celery, which grew to perfection. Near the walks and in the grape border I set fifteen tomato plsats, which furnished us all we wanted, and some for our neighbors. Two hills of melons started under glass gave us some twenty good melons, and greea ones for mangoes. Two bills of early, and two late cucumbers furnished us about all we wanted of that vegetable; thirty hills Early Minnesota sweet corn gave us an abundance of early corn. I also raised what we wished of sage, parsley, peppers, and summer savory.

So much for the useful: now for the ornamental. On the trout of this ground my wife has a little floral department about twenty feet square, laid out into four corner beds with a diamond shape centre bed, in the middle of which is an ornamental design, sustaining a Chinese Wistaria on one side, and a yellow Persian rose bush some seven feet high, on the other side—when in bloom a perfect mass of double golden flowers. These beds contain several choice perennials, also early and late tulips, and at this writing are gay with flowers. A few profuse blooming annuals are set each Spring, such as asters, phlox, stocks, balsams, etc., so that this little piece is covered with flowers from now until Autumn. Over the walk separating the floral from the vegetable, is an arched frame, on one side a Queen of the Prairie rose, on the other side a coral honeysuckle. These two climbers produce hundreds of flowers during the season."

MARKET REPORT.

Flour—Fine, $3.75; superfine, $4.50, $4.75; extra, $5, $5.25; family, (ordinary quality,) $5.75.
Corn Meal—per 100 pounds, $1.05 @ $1.10; Brownstuff, $20 per ton; Bran, $20. Corn—white, 54, yellow, 47c per bushel.
Oats—fair to good 29 @ 30c; prime, 32 @ 33c.
Peas—Black-eyed, $1.25 @ $1.50.
Hay—Virginia timothy, 75 @ 85c.; clover, 65 @ 75c.
Butter—Fine Western, 12 @ 15c.; medium, 9 @ 11c.; common, 6 @ 8c.
Potatoes—75c. @ $1.25, per bbl., according to quality; Sweet, 80c @ $1 per bushel.
Eggs—14 @ 15c. per dozen.
Onions—25 @ 40c per bushel. Sumac, 75c. @ $1.25.
Bacon—shoulders, 5 @ 5½c., clear rib sides 6 @ 6½; breasts, 7½; Hams, 10 @ 11c.
Rice—good to prime Carolina, 7¼ @ 7¾c.
Fish—Herrings, North Carolina No. 1 cut, $3.75 @ $4.50; North Carolina gross, $3 @ $3.50; Eastern gross, $2.25 @ $2.50; North Carolina roe, $4 @ $4.50, per half bbl. Mackerel—No. 1 Bay, $16 @ $17; No. 3 in bbls. $9.50 @ $10; No. 3, $6 @ $6.50; No. 1, in kits, $2.50; No. 2, $2; No. 3, $1.50. Mess shad—in kits, $3.
Molasses—Commoo syrup, 28c.; golden syrup, 50 @ 55c.; New Orleans, 40 @ 55c.; per gallon.
Soap—Common, 6 @ 7c.; best washing, 8 @ 9c.; country, 4 @ 5c.
Lime—Agricultural, 10c.; per bushel, 50 @ 55; Virginia, Indian Rock, $1.10; Rockland, $1.10 @ $1.25.

LETTERS FROM HAMPTON GRADUATES.

METHODS OF EDUCATION.

they have all kinds of things to sell to keep away sickness and to give good luck. They want you to buy them £40 (English) or $192.

but I was not able to do so. I suppose it was not second to any, save that of '75, when the *Bloods* graduated and made such a dust around

would tell you and there would be no doubt that he would be supplied.

Both classes here seem to get along admira-

LETTERS FROM HAMPTON GRADUATES.

NATIVE AFRICAN METHODS OF EDUCATION,—PURROO AND BUNDOO,—THE PRICE OF A WIFE,—THE HOPE OF AFRICA,—STATISTICS OF PROGRESS,—MORNING INSPECTION AND A READING ROOM,—FINDING A MOTHER.

We warmly second the appeal which our missionary graduate makes in his very interesting letters just received and given below, in behalf of the young man who seems to have been committed by God to his care, and whom he earnestly desires to send to Hampton, hoping what he can of his expenses. Those who have read Mr. White's former letters will remember the sailor who was converted by his efforts, on board the *Jasper*, and his younger brother, who attached himself to Mr. White, following him on shore and begging for his instruction. The boy is from the island of Jamaica. Hampton has just graduated one young native of that island who has devoted himself in purpose to the missionary work in Africa. There is plenty of room for another to be trained for some good work, and we heartily hope that the way may be opened to him. The cost of his passage here, we estimate as from seventy-five to eighty dollars. Is there any one willing and able to respond to the appeal, or to contribute to a response?

SHEBRO ISLAND, W. AFRICA, *April* 27, '78.

Dear Teacher:—

The young man whom I mentioned in my last letter to you is still with me. I want to send him to Hampton; he is a dear boy and I want him educated at my old home, Hampton. If I can get him there, there is no doubt about his fee. I am not able to send him there and pay for his schooling too; I could pay for him after I have gotten him there. I would like to send him in time to begin school at the opening of the fall term in 1878. Please ask Gen A. if he can have a place in school there and if he will try and get some one to help me send him.

I am spending a short time with Bro Gorner at the Shangey Mission, which is about sixty miles from Good Hope. I shall go home some time next week.

We had a very nice time on the 3d of April. I closed my school for a ten days' vacation, and called all the friends of the school together and had them put in what they could to make a dinner for the school. I kept school till 1 o'clock, and then marched the children (both day and S. S.) to the Mission house where they were getting the dinner ready. Bro. Snelson then marched them through the town of Bonthe, and you can imagine the excitement; all the people said they had never seen anything of the kind before. At night I had about twenty-five of my school to speak pieces and they all did well; all the people who were there seemed to be well pleased with what they saw, yet it was all new to them. When I opened school on the 15th, some came and brought their children who had never been sent before. I have on roll about 140 now.

GOOD HOPE STATION,
MENDI MISSION, WEST AFRICA,
May 4, 1878.

Miss M., My dear Teacher:—

I told R. to tell you that you should be the next person at Hampton to whom I should write. And to-day I find myself seated at my little table trying to fulfil my promise. I wanted to write you some time ago, but I had the rheumatism in my right arm so badly that I was unable to write at all; and now I have a large rising under my right arm. I am ashamed to send you thanks for your picture which was forwarded from New York here, but you know that I was glad to receive it.

I have just returned from the Shangey Mission where I have been for near two weeks (this mission is carried on by the United Brethren of Ohio). The brother there sent for me to come and spend some time with him, and to give him some advice in regard to his work while I was there. This mission is on the main land, and one can see more of the habits of the people than he can here. When their children have gotten up to be two or three years old they send them to the bush, called the Purroo and Bundoo. The Purroo is the place where they send the boys, and the Bundoo where they send the girls. They keep them there for a good many years, and cut on their backs the shape of a hamper basket, and teach them the use of the country medicines and the way of worshiping the heathen's gods, and all of the heathen's habits. If a man wants to marry, he can go to the Bandoo hush and pay eight pieces of cloth, of two yards each, and take any girl he wants. After these boys have spent all the time which the chief says they must spend in the bush, they come out and go to whatever trade they have learned. Some are doctors, others teachers, and some are farmers. The doctors go around with their medicine and sell it at a very high price, and when they attend the sick they carry a board about one foot long and nine inches wide, with a bottle of ink and brush. On this board they write, and then wash the ink off and give it to the sick to drink. Then they have all kinds of things to sell to keep away sickness and to give good luck. They went you to pay them £40 (English) or $192. These children are taught all kinds of vice, and they think it is right—such things as lying and stealing. They are very easy to teach, and they put a great deal of faith in the person who is an educated man; he spent eight years in the high school of England. When you find one of the heathen educated, he is ten times worse than an uneducated one. This man was taken up and sent to England and educated there. If he had been trained under some good missionary, he might have been of some use to the country.

Well, apart from this, I guess you have heard of our party since we have been over here. We have been getting on very well except some fever, and now Miss Wyche (the young lady who came with us) is very ill indeed; the doctor says that there is no hopes of her, yet I hope she will be better soon. On account of her sickness, and the excitement caused by it, I shall not be able to write you such a letter as I wish. Since I have been writing it was thought that she was leaving us, but she is still here, and I hope will be for a long time to come. The mail goes at 4 P. M., and I must haste to send this.

I guess by the time you get this you will be quite busy getting ready for the Commencement. I am happy to say that I have had my *commencement*, and a FINE one too, and have started school again. I closed on the 3d of April and had ten days' vacation, and commenced school again. But now I have given the school to Mr. Miller, one of the new comers, and I have taken other work. We had an examination and all the people seem to be pleased. We had, also, pieces recited on the stage, and a dinner for the children and the friends of the school. The people said that they never saw anything of the kind in Africa before. I think now we have about 140 pupils that are coming. We don't have that many any one day, but they are in attendance. I dropped a good many from the roll last month, those who did not come regularly. I have some fine boys in school and one whom I want to send to Hampton next fall if I can get a place there for him and get some one to help me pay for his board. Please ask the General if he can have a place there. He is the boy who has been with me since I have been here, and I have taken him and want to do all I can to educate him.

I hope you will send me a few words before you leave Hampton, for a letter from it always makes me happy to think that I am not forgotten by my old friends. Please remember me kindly to all the teachers and scholars, also my brother and G. Tell them that I hope they will soon join me here as missionaries. I am sorry that my mind has been so upset. I had a good many things to tell you of which I have forgotten on account of the excitement. But after you have written I hope to write a better letter.

Remember me kindly to Mr. Howe, and tell him that I need old Polly (one of the farm mules) and a good plow, and he may express them as soon as he can.

As ever,
Your boy,
A. E. WHITE, Missionary.

FROM a still later letter just received we make the following interesting extracts.

May 9, 1878

Miss H., My dear Friend:—

Last Sunday was the happiest day I have seen for many. We had thirteen new members to unite with the church,—twelve on profession and one who once was a member, and was shut out when the church was closed, came back and united the second time. And of this number, six were members of my Bible Class. Four were my best boys, as I call them, and two I owe as the fruits of my own labor. The young man whom I wrote you about when I wrote before was one. He has been trying ever since his brother became a Christian on the ship, and at last has made up his mind to follow Christ. You can imagine how I felt to see all these, my boys, standing up acknowledging Christ to be their Saviour. There was another of my class to unite with us, but he was sick and could not. I hope he will be able by the next Communion day. Now I ask the prayers of you and all my Christian friends that these young people may prove to be what they profess to be, followers of Christ. I saw in the *Missionary* for last month that a good many of the students at H. united with the church. I do hope out of the number that —— —— was one.

Remember me to the Generals and all the teachers, also to Mr. and Mrs. D. Much love to all the scholars, and a strong desire for their prayers. I do hope I am not being forgotten by my Hampton friends.

As ever, Your boy,
A. E. WHITE.

Hampton's graduates are her living epistles known and read of all men, and the only answer she cares much about making to attacks upon her motives and methods. The following hearty words are dictated by the filial impulse of one of these graduates who thinks that a "living epistle" is at liberty to speak for himself.

VA. *May* 30, 1878

Dear Teacher:—I wanted to attend the Commencement and Teachers' Institute very much, but I was not able to do so. I suppose it was not second to any, save that of '75, when the *Bloods* graduated and made such a dust around those blackboards, working Algebra, &c., &c. I guess you well remember what a dash they cut on that occasion.

From what one Dr. Turner says in the Christian Recorder one who knew nothing of Hampton and its teachings would be apt to think you have a class of perfect know-nothings this term, and that the teachers know but little, if any, more than the scholars. But they would be likely to think you know a great deal about house-keeping and how to treat *white* visitors with more politeness than *colored* ones.

It is true, nevertheless, we graduates of Hampton do not know *it all*, nor do we profess to, but we stand as fair with the school officials of Virginia and other States as the majority of graduates do from the other schools which Dr. Turner named; and I guess the school officials of this State are as capable of judging in this respect as Dr. Turner is. It is not hard for one who knows anything about Hampton and its teachings to see that prejudice is the foundation of most of the objections that are made to it. If Dr. Turner, or some other prominent colored man that knows *it all*, were in General Armstrong's place, and the other places filled by colored teachers—the farm converted into a play ground, the Wash and Industrial rooms into a Drawing-room to entertain visitors—especially colored—when they come, and if the graduates were one-horse preachers going about trying to blow the A. M. E.'s and Baptist's trumpet, begging money for Bishops, &c., &c., (imposing upon the poor, ignorant and hard-working people who need more than they make to keep them and their families from suffering) —Hampton would be considered the greatest place on earth.

Of course Hampton and its graduates have their faults, but show me the one that is without faults, and let the institution that is without first cast a stone at Hampton. I know nothing about Dr Turner and how he was treated at Hampton, but if what he says is true, a mighty change has taken place since I left.

I taught seven months this term and gave general satisfaction. I shall leave here for home in a few days. Please remember me kindly to Miss L. and all the teachers with whom I am acquainted.

Wishing you much pleasure and recreation during vacation, I am as ever,

Your friend and old scholar, I.

The following wide-awake letter gives some valuable statistics of the progress of the freedmen in tidewater Virginia. It suggests the greater progress there might be with more widely spread knowledge of agriculture. An intelligent man with ten acres of land could, by experiments with different kinds of fertilizers that would cost him next to nothing more than perhaps fifteen minutes' extra work a day, while putting in his crops, make discoveries as to the character and requirements of his land that would double its value to himself and be a lesson to the whole country.

VA., *March* 18, 1878.

Dear Teacher:—As it is about time for the boys to be on the lookout, I thought I would write and ask you what they are doing for themselves—I mean in the way of getting work for the summer. I like my new work very much, better than I thought I should. My number on roll is 79, but my attendance has never been over 42.45. I began to teach last fall, not because I thought I would like it, but it was a duty I thought I owed to the institution for having received a free education. I gradually grew to like the work and now I think I love it, as one of the ladies has often said to me when I would speak of not wanting to become a teacher, "When you get into the work you will gradually grow to love it." I believe most of the people in the neighborhood like me, both white and colored. I think there are few who don't. Since I have been here I have been around a great deal and talked a good deal about agriculture. I have not had what you could call a lecture, or talk, but I have given them hints whenever I had a chance to meet them. Some have promised to put my hints into practice. I have also had conversation with one or two white persons. One man told me he was going to sink a barrel and save all manure. He knew nothing of its value until I made mention of it to him. I spoke to a man about the leeching of his manure, and on looking at the heap a few days after, I found he had put a thick coat of dust over it.

Mr. West, the Supt. of Norfolk Co., visited my school soon after the holidays; he gave the school a little talk; he seemed pleased. When I went a few days ago to get some report blanks, he said, "C., you are on your last month, and if you can't do any better next year you may have your school or some other school in the county." Said he "If you can do any better, do it. I always like to see a man get as high as he can." He spoke of all our graduates teaching under him as giving much satisfaction, calling them by name. He said he wanted four graduates next fall, and asked me if I would get them. I told him I would tell you and there would be no doubt that he would be supplied.

Both classes here seem to get along admirably well together. The chief place of rendezvous is at the stores, where they drink and smoke, and talk over matters pertaining to their crops and various parts of the Scriptures. Politics and the questions of the day they know nothing of; but both white and colored have a merry time at their loggin's and corn beatings. A few of the colored people own a little land; those who don't own much land tend other land than their own on shares.

Please accept my thanks for the papers you have sent me from time to time; also the Journal which is of great use to me. There is a young man here—I think him quite bright—who is desirous of getting an education. Though he has lost two fingers of his left hand, he does most anything in the way of work. He is a good farm hand. He says he is willing to work out a year; he has work until July, then he would like to go to Hampton. I have inquired among the neighbors about him and they give him a good name.

In going through the country I have noticed this: In a square of eight by five miles there are 230 families; 108 are colored. There are nine churches, five are colored; seven school-houses, three are colored. The white churches are very much better than the colored, the school-houses are about the same. Forty-eight whites live on rented land; twenty-six colored live on their own land. There may be a few families who live a good distance from the road that I failed to count, but this is pretty nearly correct. I have been around the four sides and through a great many of the by-paths across the swamps and woods.

Gratefully yours, C.

From West Virginia comes a cheerful report. To introduce military inspection and a reading room in a public district school shows enterprise and progress, and an encouraging appreciation of some of the best lessons Hampton aims to give of the value of training outside of text-books.

W. VA., *March* 26, '77,

Dear Teacher:—I am very grateful to you for those books you sent me. I would have sent you the enclosed fifty cents, but I thought probably you might send me the other two in a day or two, so I waited for them. My scholars think them splendid and are making fine progress in them. I have a much larger school this year. I like teaching more and more every day. I have over 60 scholars. I have been teaching Algebra ever since my school began, but I must say I never understood Algebra till I began to teach it this year. I have only one scholar studying it and I think he is excellent in it. I enjoy teaching now as I never did before. My scholars all seem anxious to learn, and this gives me pleasure and patience to labor with them. I require all to keep their clothes neat and clean, and their hair combed every morning, and the boys to keep their boots cleaned. To see that this is done I have a morning inspection, as we did at Hampton. I have now a news table where I keep all the fresh papers and magazines that I can get for the children to read, so that they will know what is going on in the outside world. They take great delight in this. If you could send me any newspapers from there that are not used, and will let me know, I will send the money to pay the postage on them. I know you have heard very little of me at H. this year, but it is only because I have been so busy with my school.

Yours faithfully, W.

The thrilling experience narrated below is one of the dramatic incidents which abound in the history of the freedmen and will make it a rich resource for the poets and novelists of the future.

MD., *May* 20, '78.

Miss E., Dear Teacher:—

Please accept my sincere thanks. Let me assure you that I derive a great deal of good from the papers myself, and in my turn delight others with them. The fame—miniaturely speaking—of "Mr. ——'s pieton papers" has no small extent, and is not a matter of infrequent gossip among the illiterate, which class forms more than two-thirds of the residents in this district.

I'm expecting to have a school exhibition on a small scale on the 30th of this month. "Old Iron Sides," the dialogue commencing "In Brentford town of old renown," "Old Grimes," "Freedom's Flag," "The Last Leaf," and several other pieces, with six pieces of humor by myself.

Since I've been here I've met with the good fortune to find my mother whom I supposed was dead or in some secluded part of the country where neither I, my name, nor any tidings of me would ever reach her. She is living with my eldest brother, who is now twenty-four years of age, in Brunswick Co., N. C., just five miles from Wilmington. I left my mother when I was seven years old

and have not seen her since, so, you see, we are real strangers; though I think I distinctly remember her features and believe that I would be able to point her out among a thousand others. I have heard from her, and written her several letters. I wish very much to see her, and she wishes as much to see me, but I shall not be able to go to Wilmington, as I now see my situation pecuniarily, until July, 1870, if I should live. I want to teach all next fall, winter and spring if I'm able, and go to see mother in the summer. The school term here is ten months, from the first of September to June 80th. At the close of the session I shall not be able go. Through my correspondence with a Wilmington friend this winter, I learned that he had seen a young man who so much resembled me that he made inquiries which led to the discovery of my mother. The young man turned out to be my younger brother Eli who is two years my junior.'

I hope you are having a pleasant time with your scholars, and have none in your Algebra class as troublesome as I was to you. I wish to be prayerfully remembered by you and the other teachers.

Your ex-pupil, M.

At Home.

RULES FOR MARKETING.

FROM MISS JULIET CORSON'S "FIFTEEN-CENT DINNERS."

In my other cookery books, I give directions for marketing for the best cut of meat, and the choicest vegetables; but these cost the most money, and I must tell you how to choose cheap and good food.

Beef.—The second quality of beef has rather whitish fat, laid moderately thick upon the back, and about the kidneys; the flesh is close-grained, having but few streaks of fat running through it, and is of a pale red color, and covered with a rough, yellowish skin. Poor beef is dark red, gristly, and tough to the touch, with a scanty layer of soft, oily fat. Buy meat as cheap as you can, but be sure it is fresh; slow and long cooking will make tough meat tender, but tainted meat is only fit to throw away. Never use it. You would by doing so invite disease to enter the home where smiling health should reign. The best way to detect taint in any kind of meat is to run a sharp, thin knife-blade close to the bone, and then smell it to see if the odor is sweet. Wipe the knife after you use it. A small, sharp wooden skewer will answer, but it must be scraped every time it is used. If, when you are doubtful about a piece of meat, the butcher refuses to let you apply this test care fully enough to avoid injuring the meat, you will be safe in thinking he is afraid of the result.

Fish.—Although fish contains more water and less nutriment than meat, it is generally useful from its abundance and cheapness; and certain kinds that are called red blooded, such as salmon and sturgeon, are nearly as nourishing as fresh meat: oily fish, such as eels, mackerel and herring, satisfy hunger as completely as meat; herring especially, makes the people who eat it largely strong and sinewy. Sea fish are more nourishing than fresh water varieties.

Sea fish, and those which live in both salt and fresh water, such as salmon, shad, and smelts, are the finest flavored; the muddy taste of some fresh water species can be overcome by soaking them in cold water and salt for two hours or more before cooking; all kinds are best just before spawning, the flesh becoming poor and watery just after that period. Fresh fish have firm flesh, rigid fins, bright, clear eyes, and ruddy gills.

Oysters, clams, scallops and mussels, should be eaten very fresh, as they soon lose their flavor after being removed from the shell.

Lobsters and crabs should be chosen by their brightness of color, lively movement, and great weight in proportion to their size; you ought always to buy them alive, and put them head first into a large pot of boiling water, containing a handful of salt; they will cook in about twenty minutes.

Vegetables.—In order to be healthy we must eat some fresh vegetables; they are cheap and nourishing, especially onions and cabbages. Peas, beans and lentils, all of which are among the lowest priced of foods, are invaluable in the diet of a laboring man; he can get so much nourishment out of them that he hardly needs meat; and if they are cooked in the water that has been used for boiling meat, they make the healthiest kind of a meal.

All juicy vegetables should be very fresh and crisp; and if a little wilted, can be restored by being sprinkled with water and laid in a cool, dark place; all roots and tubers should be pared and laid in cold water an hour or more before using. Green vegetables are best just before they flower; and roots and tubers are prime from their ripening until they begin to sprout.

Fruit.—Fresh fruit is a very important food, especially for children, as it keeps the blood pure, and the bowels regular. Next to grains and seeds, it contains the greatest amount of nutriment to a given quantity. Apples are more wholesome than any other fruit, and plentiful and cheap two-thirds of the time; they nourish, cool, and strengthen the body. In Europe laborers depend largely upon them for nourishment, and, if they have plenty, they can do well without meat. They miss apples much more than potatoes, for they are much more substantial food.

All fruit should be bought ripe and sound; it is poor economy to buy imperfect or decayed kinds, as they are neither satisfactory nor healthy eating; while the mature, full-flavored sorts are invaluable as food.

HOW THE INDIANS HEARD THE "GOOD NEWS."

More than two hundred years ago, a young English teacher came across the sea and joined the Pilgrim colony in America. His name was John Eliot. He came to teach and preach, and do what good he could in the New World, and when any one wants to do good, he always finds plenty to do. His heart went out to the wild and ignorant savages of the forest all about him, and he longed to teach them how to live better, and tell them of the love of God.

He studied their language, and this was a hard thing to do, for they had no books and no written language. Then he met them in the woods, and called them around him and prayed for them, and then told them the good news of the gospel of Christ. When he finished talking, he told them they might ask him questions about it. One asked whether God could understand prayers in the Indian language: another asked how the Indians could have such different thoughts about religion from the English, if they all had come from one father. For three hours he talked with them, answering their questions, and at last one very old man asked, with tears, the best question of all—whether it was too late for such an old man as he to repent and be saved.

HOW THE INDIANS HEARD THE GOOD NEWS.

This was Eliot's first sermon in the wilderness, but it was not his last. Some of the Indian eachems, or chiefs, and some of their medicine men, or conjurors, fearing to lose their power over the ignorant minds, threatened to kill him if he did not stop his preaching, but his answer was, "I am about the work of the great God, and he is with me, so that I neither fear you nor all the sachems in the country." Many of the Indians were converted to Christianity, and were known as the "Praying Indians." Eliot spent all the rest of his long life till he was over eighty, in this good work, and became known as the Apostle to the Indians. He traveled constantly among the tribes in the Massachusetts and Plymouth colonies, establishing Indian churches, schools and villages in the trackless forests.

In one of his letters he says, "I have not been dry night or day from the third day of the week into the sixth, but so traveled, and at night pull off my boots and wring my stockings, and on with them again, and so continue; but God steps in and helps."

Besides these active out-door labors, Eliot found time to write several books for the Indians and to awaken interest in them. The most important and remarkable of all, was his translation of the whole Bible into the Indian language—the New Testament in 1661, the Old Testament in 1663. These made the first Bible ever printed in America.

How much can be made of one lifetime if it is given to God.

Do all the good you can in the world and make as little noise about it as possible.

GIVE THE OLD HORSE A BITE.

The beautiful picture for which we are indebted this month to our friends of the N. Y. Christian Weekly is an excellent one to use for picture reading in schools. We would remind those of our readers who are teaching, as we have before, that this exercise is one of the very best they can use in their work. Whenever you come across a good picture—large enough to be comfortably seen by your class, and of a character to interest them, keep it if you can for future use. There is enough in this one for several lessons. The children will be interested in the picture as it strikes them at first, and then in finding out how much they can see in it; in naming and talking about the the different things; in describing the picture as they see it, and at last in making up a story about it. They can give sentences orally, and write them on their slates and papers, and so be learning to observe and to think and imagine, and reason, and to express themselves, and to be kind to animals, and he having the best of times, all at once.

HOW MY HORSE TOOK ME HOME.

I was once travelling in the interior of Portugal with several companions. My horse had never been in that part of the country before. We left our inn at daybreak, and proceeded through a mountainous district to visit some beautiful scenery. On our return evening was approaching, when I stopped behind my companions to tighten the girths of my saddle. Believing that there was only one path to take, I rode slowly on, but shortly reached a spot where I was in some doubt whether I should go forward or turn off to the left. I shouted, but heard no voice in reply, nor could I see any trace of my friends. Darkness was coming rapidly on. My horse seeming inclined to take the left hand, I thought it best to let him do so. In a short time the sky was overcast, and there was no moon. The darkness was excessive. Still my steed stepped boldly on. So dense became the obscurity, that I could not see his ears; nor could I, indeed, distinguish my own hand held out at arm's-length. I had no help for it but to place the reins on my horse's neck and let him go forward.

We had heard of robberies and murders committed, and I knew that there were steep precipices down which, had my horse fallen, we should have been dashed to pieces. Still the firm way in which he trotted gave me confidence. Hour after hour passed by. The darkness would, at all events, conceal me from the banditti, if such were in wait—that was one consolation; but then I could not tell where my horse might be taking me. It might be far away from where I hoped to find my companions.

At length I heard a dog bark, and saw a light twinkling far down beneath me, by which I knew that I was still on the mountain-side. Thus, on my steady steed proceeded, till I found that he was going along a road, and I fancied I could distinguish the outlines of trees on either hand. Suddenly he turned on one side, when my hat was nearly knocked off by striking against the beam of a trellised porch, covered with vines; and to my joy I found that he had brought me up to the door of the inn which we had left in the morning.

My companions, trusting to their human guide, had not arrived, having taken a longer though safer route. My steed had followed the direct path over the mountains which he had pursued in the morning.

Another horse of mine, which always appeared a gentle animal, and which usually carried a lady, was, during my absence, ridden by a friend with spurs. On my return, I found that he had on several occasions attacked his rider, when dismounted, with his fore-feet, and had once carried off the rim of his hat. From that time forward he would allow no one to approach him if he saw spurs on his heels; and I was obliged to blindfold him when mounting and dismounting, as he on several occasions attacked me as he had done my friend.

My horse had till that time been a willing, quiet animal. How many human beings have, by thoughtless, cruel treatment, been turned from faithful servants into implacable foes. I must urge my readers always to treat those who may be dependent on them, with kindness and gentleness; rather because it is their duty so to do, than from fear of the consequences of an opposite course.

W. H. G. KINGSTON.

For the Southern Workman.

On the 18th of April, I had the pleasure of visiting five of the public schools for colored children, in Charlottesville, in company with Mr. Powers, the County Superintendent. These schools were graded. There were three male teachers and two female. Of these five teachers, two were educated at the Hampton Institute, one in Boston, one in Washington, and one in Charlottesville. The schools all appeared neat and orderly, and the teachers competent and interested in their important work. We heard recitations in arithmetic, reading and spelling, which were as a whole creditable to the scholars. I had been reading, only a day or two before, an account of the widespread religious awakening among the colored people in Richmond, and the extravagancies that in many instances accompanied and alloyed it; and was therefore not surprised to learn, that a similar religious interest had caused considerable irregularity of attendance in the higher departments of the schools which we visited. Both of us, in the brief remarks which we made, referred to this subject. We were careful to make it plain at the outset, that we regarded religion as "the chief concern of mortals here below," according to the express injunction of our Lord and Saviour, "Seek ye *first* the kingdom of God and his righteousness;" but we endeavored to show them that the best way to prove that they had sought and found this chief good was by a more conscientious fulfillment of daily duties, and a more earnest improvement of all daily privileges; and, in their case especially, a more diligent pursuit of knowledge, and a stricter attention to the lessons of the school. I do not know how far we succeeded in producing the impression that we wished; but our remarks were listened to with good attention, and evidently heartily endorsed by the teachers.

And now if I could reach the ears and hearts of any of the readers of the Workman who may be in danger of neglecting school duties or other duties, from the same cause, I would like to say a few words of kind admonition to them. First of all I would say, that I not only approve of your seeking the salvation of tha soul above everything else, but I can also understand the temptation to which you are exposed of neglecting other duties, inferior to this, no doubt, immeasurably inferior in importance, but still real and binding duties. When the mind is absorbed with the urgent need of being at peace with God, and oppressed with a sense of having guiltily neglected to attend to this great need, we are apt to feel as if nothing else was of any importance. "The fear of the Lord is," indeed, "the beginning of wisdom." Life ought to begin with that. And what then? Go on from that to other things? No: go on *with that* to other things. The fear of God is the thing to *begin* with, to *continue* with, and to *end* with. It is the excellence of religion that while it is the first of all duties, it enables us to perform all other duties better. The scholar who didn't get his or her lessons well without religion, must show his or her religion by getting them well now. And the scholar who did get them well before, by getting them better now. It is the happy privilege of the Christian to do all things *religiously*, and so to make all duties a part of the service of God. What saith the Scripture? "Whether ye eat, or drink, or *whatsoever* ye do, do *all* to the glory of God." And tha pious poet, George Herbert, says,

> Teach me, my God and King,
> In all things thee to see,
> And what I do in any thing,
> To do it as for thee.
>
> A servant, with this clause,
> Makes drudgery divine;
> Who sweeps a room, as for thy laws,
> Makes that and the action fine.

And if such common acts and duties as eating and drinking and sweeping can be done for the glory of God, how much more can study. Strive to show your religion, then, my young friends, by doing your school duties religiously, and then you will at the same time glorify God, please your teachers, and promote your own growth in grace. Diligent study with prayer will help, not hinder, your religious life, and you will find that your religion will make you a better scholar. The conscientious discharge of every daily duty is the surest way to glorify God and grow in grace.

A. N. A.

Charlottesville, April 25.

WILL INDIANS STAY CIVILIZED?

Nothing seems wanting after the following—a personal letter which we are permitted to print—to show the thoroughness of Capt. Pratt's work for the St. Augustine Water"—they were going to be so badly disappointed that I decided to submit their names for the approval of the Honorable Commissioner. "Little Medicine" is very much of a gentleman, and I am well satisfied he will keep his force in good trim and ready for duty. I had to have the Apaches many times in that Association to be cast in this or some other land to carry the light of God's word to many who are now in darkness. While you sit and talk together, may you remember that you have a fellow student in the land of darkness and sin, who desires that when he has passed away there may be some one pliment very highly the last piece in that Workman headed, "Rights and Duties of Citizens—the Ballot," by Mr. T. T. Bryce. I must thank that gentleman for his very clear and excellent article. If he had given the subject a lifetime study he could not have made it more satisfactory. His statements are the

WILL INDIANS STAY CIVILIZED?

NOTHING seems wanting after the following—a personal letter which we are permitted to print—to show the thoroughness of Capt. Pratt's work for the St. Augustine prisoners.

The Captain believes in a preliminary training of the wild Indian before he passes into the mild hands of the missionary teacher. Routine teaching did not do the regenerative work for these once fierce savages. It was the influence of a clear-headed, strong man with power at his back and Christian sympathy in his heart.

The difficulty with the Indians is in finding white men competent to deal with them rather than in their unyielding wickedness.

It will not do to turn the "noble savage" over to cheap men or weak management.

The Secretary of War is, we believe, disposed to give to the Indians the benefit of whatever skill or power for their welfare is at his disposal.

OFFICE U. S. INDIAN AGENT,

CHEYENNE AND ARAPAHOE AGENCY,
Darlington, Indian Territory, May 23, 1878.
(Direct: *via* Wichita, Kansas.)

Capt. R. H. PRATT, *Logansport, Indiana.*

SIR: I am duly in receipt of your letter of 27th ultimo, from Logansport, Indiana, and my only excuse for not writing sooner is "the usual rush of business."

I met the returning Indians in Wichita, Kansas, and although I had made up my mind to see a great reformation in them, yet I was never more surprised, and that agreeably too, to see such a complete, radical, and thorough reformation. I could scarcely believe that I was in the presence and company of men whom I saw three years ago leave this agency and country *in chains*, and with hearts full of revenge and hatred, and their hands crimson with the blood of our friends. And let me assure you, friend Pratt, that I know there is a rich blessing waiting for yourself and all those who have labored so earnestly and effectually in bringing about so great a change in the very nature of these people, and nothing short of the mighty transforming power of God could have brought about so great a change, and it must have been the unselfish motive of "good will towards men" that actuated yourself and your helpers, that prompted you to undertake such a *labor of love*, and to continue in it until success has crowned your labors.

I find that the best, deepest, and finest impressions have been made among the *young* men, and I think I can safely say that some of these young men have realized a "change of heart"—conversion—and have realized what it is to be "born again," that "putting off the old man with his deeds" and "putting on the new man Christ Jesus," and they are now living the lives of Christians. It has been insinuated by some persons that their reformation was only superficial and would soon be lost. After having enjoyed the company and social and religious fellowship of those who have returned, for nearly one month, I am ready to pronounce the reformation as *genuine*, and if they do return to the beggarly elements of sin, the responsibility will not rest upon the fact that "they have never known the way," but with those with whom they may hereafter be associated, and whose duty it is to keep watch over the precious lambs of the fold. Taking this view of the matter, I think I fully realize the responsibility that is now before us, and the necessity for more earnest Christian care and labor, and especially more rigid watchfulness on my part, in preventing the evil influences of bad white men in their direct and indirect labors to draw them away from right and God. You are well aware of the evil tendencies of camp life among the Indians of the plains, and also that the Indians themselves are not always responsible for their own bad deeds; and, with this view to keep the returning prisoners from all the evil influences possible, it will be my policy, so far as practicable with the limited means at my disposal, to give employment of some kind to the *reformers* that will keep them away from temptation, and under good moral and religious influence.

I was authorized by the Honorable Commissioner of Indian Affairs to enlist fifteen police, with the suggestion that, perhaps, the greater portion of this number might be secured from the lately released prisoners. On the 1st instant I enlisted "Little Medicine," ("chief of police" as your suggestion,) "Buffalo Meat," "Chief Killer," "Star," "No-co-mista," "Antelope," "Left Hand," "Come-uh-so-vah," "Rising Bull," "Medicine Water," "Long Back," and "Howling Wolf," of the Cheyennes, and "Little Wolf-chief," "Sunrise," "Medicine-Pipe," "No-Horse," and "Packer," of the Arapahoes—making a total of seventeen persons. After having chosen those of the Cheyennes except "Long Back," and "Medicine Water"—they were going to be so badly disappointed that I decided to submit their names for the approval of the Honorable Commissioner. "Little Medicine" is very much of a gentleman, and I am well satisfied he will keep his force in good trim and ready for duty. I had to have the Arapahoes represented, or their people would have been dissatisfied. "Howling Wolf" applied to me, during our first conversation at Wichita, for some kind of a position in our school, and I informed him that I would see to the matter as soon as I returned to the agency. On my return, I submitted the matter to Mr. Seger, the "school-contractor," who took hold of the idea at once, and he "(Howling Wolf") and wife and one child, four years old, have been duly installed: He—as butcher, moderator, and general assistant—at a salary (paid by Seger) of $15 per month, to which I add $5, amount authorized to be paid to police; his wife is being instructed in general housework. They occupy a nice room in the building, and take great pride in keeping it in "apple-pie" order; and, that you may know the positive influence exerted by "Howling Wolf," it is my pleasure to inform you that his wife and child have thrown away the squaw dress and blanket, and have come out boldly on the side of reform; also his brother, "Little Creek," twenty years old, and his old "friend in raids," "Wolf Robe," have joined the reform—cut their hair—donned the American costume, and gone to work like men; and I am satisfied that if we could furnish all the reformers with houses and a compensation that would keep them from hunger, there would soon be such a rallying to the standard of reform as would place a majority on our side; but with only a limited amount of supplies and means to assist them in farming and other industries it is up-hill business. We are now only issuing coffee, bacon, flour, and beef, and not sufficient to prevent some degree of hunger, which is unfortunate at a time when these people are trying to work, and realizing no immediate return for their labor.

Our Sabbath school and religious organization has received a fresh impetus since the return of our people from St. Augustine, and not a Sabbath has passed away without the presence of a majority of those returned, and on each occasion some one or more of them takes part in the exercise, either in prayer or exhortation, and we are satisfied that these testimonies have been promoted of the Lord and proceed from hearts full of love.

At the time the police were installed, "Little Medicine" gave his people a talk, in which he stated, in substance, that he once "roamed over the prairies like a wolf, and did bad work with some of these young men, (pointing to them,) and that Captain Pratt took him away in chains for his meanness, which was all right; that Captain Pratt had been very kind to him and had taught them many good things which they would never throw away, and that all the whites had treated them kindly, and that he had been taught to pray, and that God had heard him and had given him a good strong heart full of love for all people, and that he was not afraid to talk before his people, and that he expected to do his duty as police; that Captain Pratt had told him that none but the guilty would be punished, and if any young man in the Cheyenne tribe did bad work he would arrest them, and that they had better not resist, as they would be arrested," &c.

I have thus briefly given you a few items hearing upon the released prisoners, with the hope that you may be assured, by one who claims to be your friend, of the high appreciation of the labor bestowed by you upon the minds and hearts, and very natures of the people just released, and of my belief that good results will accrue to the whole Cheyenne tribe through those whom you have returned to us. With the hope that I may some day have the pleasure of a face-to-face "talk" with you on this subject, I subscribe myself as

Your friend,
JNO. D. MILES,
U. S. Indian Agent.

TO THE HAMPTON ALUMNI ASSOCIATION.

FROM ACKREL E. WHITE.

MENDI MISSION, GOOD HOPE STATION,
WEST AFRICA, *May* 10*th*, 1878.

My dear Schoolmates and Classmates:

Your desire to meet at our Alma Mater on the 22d, and form the Alumni Association is my desire also. Yet while I desire to be with you and have a word in the formation of this Association, I don't believe that God wants me to be. I do know that I am doing more for him here than I would be there; yet my heart desires to be present with you on that most noble occasion. I feel and know that God has cast my lot in this far off land for the good of his people, and the upbuilding of his kingdom. And I pray it may be the lot of many who shall meet in that Association to be cast in this or some other land to carry the light of God's word to many who are now in darkness. While you sit and talk together, may you remember that you have a fellow student in the land of darkness and sin, who desires that when he has passed away, there may be some one among those who are present with you who will step forward and say, "here am I Lord, send me" to fill his place. Some may say that God has not called them to be missionaries; that may be true, yet, dear friends, there is a part for you to do: "you can help them at your door." If a person has a desire to do good, God will never bar him up so he can not do the good he desires. There are thousands of ways in which we are able to do good, or speak a word for Christ. We know that we cannot all be missionaries, if we were who would be left to help us? And while we can not all be, let us be helpers. I do hope that the class of '76 may be well represented in your meeting, and that the African missionary's name may not be forgotten by you. I hope when you hold this meeting again, that I may be able to meet with you, and tell you many things about this land of darkness and its people. If there were an express train running across the Atlantic Ocean, I would take passage across to be with you on that day. I know that it will be a day long to be remembered. Please send the minutes of the meeting to me, for I shall be glad to hear and know what took place at the meeting. And as I cannot be with you, I will send my congratulations to the committee who brought the idea before the Students, I only wish that I had heard it before this late hour. And as I can say no more, I close by asking you to pray for your fellow student who is a missionary in Africa.

As ever, yours in Christ,
ACKREL EDGAR WHITE.

Class of '76.

CORRESPONDENCE.

WE commend to our colored readers a careful perusal of the following letter from a Northern lady in Alabama. It gives two very opposite pictures, either of which it is quite possible for them to realize in their own experience. Which shall freedom mean for you?

HUNTSVILLE, *April* 24, '78.

General Armstrong:—

The papers were received and sent to such readers as I thought would use them to advantage. They ought to do good, and I hope they will.

As a class, our freedmen are doing reasonably well. One of my servants, not over fifteen years of age (entirely black), is making remarkable progress in her education, and her teacher hopes, will make a missionary for Ethiopia. Her poetic recitations are really wonderful. A friend told me a few days ago that he had sold a farm to three freedmen, their joint labor to pay for it in annual payments of $1,000. They have, for the three years they have had it, paid their notes a little in advance; besides, they have put up a gin and several cabins. In two more years they will pay the balance of the $5,000 and will be the owners of a good farm. Others of the same order I could name, but must regret that many, very many, still believe that emancipation means idleness, freedom from work, and appropriating for their sustenance what belongs to another. Some of them who can earn money trifle it away, and often when you hire a servant, the first thing is to advance money to clothe him. Their funerals are perfectly absurd. On Sunday a good old sexton dropped dead from his seat. Yesterday in riding out, I passed the funeral cortege. The handsomest hearse in the city, drawn by four white horses, preceded by numerous attendants with white scarfs; then followed a train of carriages and more than I could number on foot. How all this is supported I can't tell. The schools are doing well. The A. M. A. supports one in a good brick building furnished by the same. Then we have two others with large numbers of pupils, supported by the State.

I have hurriedly, my dear sir, written these facts, and you may publish some of them. I read with great interest the news from Africa, and anticipate great results from that kingdom of darkness.

Wishing you increased success in your noble enterprise. Very kindly,
J. HAMILTON CHILDS.

VIRGINIA, May 9, 1878.

MR. EDITOR:

Will you please allow me a short space in your columns for a

RESPONSE TO—"THE RIGHTS AND DUTIES OF CITIZENS."

Dear Workman:—

I am sure you should be welcomed by every true citizen. I wish it were possible that your May number could be read to every poor ignorant man in America. I must compliment very highly the last piece in that Workman headed, "Rights and Duties of Citizens—the Ballot," by Mr. T. T. Bryce. I must thank that gentleman for his very clear and excellent article. If he had given the subject a lifetime study he could not have made it more satisfactory. His statements are the *TRUTH, THE WHOLE TRUTH, AND NOTHING BUT THE TRUTH.* As a general thing my people are too *easily satisfied;* and in order to become a people that will be noticed by enlightened nations, we *must* be more ambitious. "Let the ambition be a noble one, and who can blame it?" God has remembered us in our deepest trouble. He has removed the yoke of bondage from us and allowed us an equal chance of becoming a people. And unless we become more ambitious and improve our privileges, I fear they will soon be taken from us. I repeat Mr. Bryce's forcible words, "Every citizen has an equal voice in choosing the officers of the State. The poorest man's voice is, or should be, as loud and clear as the richest." There are men in this county that really do not know who our President is, and as for voting for the officers of the State, they never think of leaving their employment for such trifling. I don't mean to enter into a discussion of politics here, but *I* don't think such men should be considered as citizens of the State. They are not aware of the harm they are doing by neglecting so great a duty.

The majority of the people here are very ignorant—white and colored. I think if the Virginia free schools are continued, the rising generation will be more enlightened, and be more worthy of citizenship. And after a short time, Virginia will have an intelligent population that will soon help to free her from the enormous debt she is now struggling with. If I were going to remain here long enough, I would think it a great pleasure to call a meeting of the people and read to them this article on the "Rights and Duties of Citizens," and try to convince them of their error. I take the privilege of expressing to Mr. Bryce most cordial thanks for his invaluable advice, and the hope that he will continue giving such instructions to the public, for they are just what the people need. I sincerely hope that his efforts may be crowned with success.

Respectfully,
O. M. MCADOO.

COLERAINE, BERTIE CO., N. C., *June* 24, 1878.

"The Colored Baptist Sabbath-school of Coleraine, gave a pic-nic on the 13th inst., which was a pleasant affair. A fine brass band from Edenton enlivened the occasion, and several good speeches were made; among which was one by Mr. Wm. H. Outlow of Windsor, who gave some good advice to the young people who are to decide the question whether the enslaved people are to drift backward into semi-barbarism or ascend in the scale of civilization."

A FRIEND.

WE are permitted by a very generous friend of the school to publish the following letter from one of our graduates, who has received, as others have, many kindnesses from him.

VA., *Jan.* 21*st* 1878.

Dear Mr. B——:

Your letter and bundles were received Saturday. I was very much pleased with the little stockings, and was more than pleased with the last bundle you sent me. The little coats I will keep until it is near time for my school to close, and then I will give them to my *graduating classes.* The little dolls I will give out as prizes to the little girls, and the puzzles will be given in the same way. I think they are too cunning for anything. I have given most of the other things out. The little boys seemed to be so tickled with the little flannel shirts. To-day I came near whipping two of my little boys, for sitting in school opening their coats and showing their little shirts. I was glad to see them so pleased, but still I could not have them disturbing the school talking about them. You are very kind indeed for thinking of the very things they most needed. I do not know how to thank you for them, but I do appreciate your kindness to me, and only hope that I may deal them out wisely.

C—— wrote to me Saturday. The letter was very nice. She says that she is one of the speakers for commencement. I think it will be very nice to hear and see them. I have plenty of wood, and my school is quite full now, thirty-five. The school-house is not very large, I have scarcely room enough for them, but somehow I manage to crowd them in. The snow is all gone, but it is very muddy. I do not like my board one bit, because it is so coarse. I never get any change, but the same fried meat for breakfast and dinner. I pay my board, and feel grateful that I am able to pay it. Every one is fast asleep here, and I am sitting all alone writing. I have not heard from Miss H. for quite a while. Gen. Armstrong sends me the Educational Journal. It is very interesting. I get all the papers you send me. I want to make out a report of my school to send to you next month. I think you would like to see how I make it out.

With many thanks for all your kindness,
I remain, Yours truly,
S.

THANKSGIVING IN HAMPTON.

dles" and "Little 'Liza Jane" are the favorites; the former danced to the following words,

consecretes himself, his art, his statue to the gods, striking here the grand prerequisite of

duced by the Republican member from Illinois, repudiating all purpose of attacking the President's title, and declaring that as the XLIV Congress decided

THANKSGIVING IN HAMPTON.

BY C. G. BUCK.

The new teacher in Hampton cannot fail to perceive, two or three weeks before Thanksgiving Day, that some important event is about to take piece. There is something going on of which he knows not. He has the uncomfortable consciousness that he is surrounded by mystery, and that the dark feces about him, conceal secrets of an unfathomable nature.

Small knots of students are seen conversing esrnestly together at recess and "after school." The teacher who has cherge of the study-hour is requested to give notice, at the end of the evening, of a meeting of the "A. F. S. O. G's," the "Manhattan Club," or some other organization hitherto unheard of. The girls, for once, keep a secret, and there is nothing to do but give it up, end wait to see whet will heppen.

Suddenly, on the blackboards eppeur solemn wernings end instructions from somo unknown source. "Don't spare the old goose!"—"Filo your teeth! Thanksgiving Dey is coming!"—ere fair specimens of these mystic utterances, each accompanied hy en illustretion supposed to represent a gigantic goose, the bird that here takes the place occupied in the North by the turkey. And here e ray of light finds its wey to the mind of the bewildered pedagogue, and ere long he is in full possession of the secret. These clubs are harmless hodies of students who wish to dine together on Thanksgiving, end are making plens and rsising funds to decorete the tables for which they have spoken.

The dey draws near, and now n feeling of sympathy for the fate of the "old goose" seems to be awakened in the minds of the expectant young gourmands. The blackboards are again the medium of communiestion, and in letters of purest white upon their mourning background we read. "Poor old goose!" or "The old gooso is praying; it is his last night!"

The morning dawns nt last, as all other mornings dawn; the services are held in the chapel, and the reverently-bowed heads give no sign of the exeitement that has reigned for the past days, and that is soon to culminate. The benediction pronounced, the scholars are formed in line, two by two; and while they ere getting ready to merch, we will go with the teachers to the big dining-room, where the tables are set and all is ready for the feast. Some are very prettily ornamented with evergreens and flegs, The Manhattan Club, with its nsme printed with ivy-leeves, is conspicuous. The "A. F. S. O. G." ("Ask For Some Old Goose") looks as hospitable as the board of a club with such a name should look. The old Bachelors' Club table is, as one might expect, quiet and unadorned. The Old Meids' table (to which no boys ere admitted) is, as one might *not* expect, very much adorned. This club is mede up of some of the prettiest end most popuier girls in school, and they carry out this strange freek, "because"—a very good reason, but I understand thnt it has been given bofore by members of their sex. The other parties heve appropriete devices and ornements, and the room looks very gsy.

A moment of expectation, and the doors open to let in the procession. They take the places indicated by slips of paper on the plnfes, and all stend until n blessing has been asked; then 200 chairs rattle on the floor, and 200 tongues begin to huzz. From beside each table march two waiters, in clean white aprons and neckties, to the centre of the room, where stand the hend weiter and his lieutenant. They form in line, and at the command, "Forward!" disappeer into the kitchen, soon to reappear, however, each bearing aloft, upon a platter, a roast goose. The carvers rise, the waiters vanish and appear ngain many times, leaving, after eneh visit, substantial mementoes in great dishes upon the table. The dinner is fairly begun, nnd we will leave them to finish it in peace, while we edjourn tn the teechers' dining-room, to discuss some matters relsting to Turkey.

The dinner is, however, but the beginning of the festivities—the grand opening of the sport. On this occasion, as on Christmas, mnd New Year's also, the boys are nllowed to join the girls in games, &c. Every boy has had his partner selected, end nfter the last mouthful of plum-pudding is eaten, the last raisin gone, and the last motto read, the last couple disappear from the dining-room and follow the throng that has already filled the girl's study-room and parlors. Then the fun begins. In one room a party is playing "points;" in nnother n set of "parlor croquet" is laid out on n table, but as we have croquet almost every day, that is not very well patronized. In the middle parlor, surrounded by a denso circle, lined by a row of interested teachers, a boy is giving an exhibition of conjuring feats, very cleverly done, to the great mystification of the scolars. The "plays," as they are called, enlist the most attention. They are really old-fashioned country dances, but the peculiar views of the colored church members on the subject of dancing are responsible for the name "play." "Husk, oh, Ladies" and "Little 'Liza Jane" are the favorites; the former danced to the following words, sung by the dancers, for they have no other music. The set is formed like e Virginie Reel, and first a couple merch np end down, singing,

> "London Bridge is broken down;
> Oh, how it troubles me;
> Build it up with sand and clay;
> And a husk, oh, ladies turn."

Then the ebain to the words,

> "Husk, oh, ladies, get in line;
> Husk, oh, ladies, turn,"

repeated until the figure is finished.

The olcer pupils, who do not cere fer such exercise, amuse themselves quietly in the teachers' parlors, thrown open to them for the dey.

Nothing lasts forever: even Thanksgiving; and ten o'clock comes by and hy, and the dey is over; but the fun will linger in many memories e long time after the routine of school has begun egein. It has been e beppy day, and a new experience to some. What is this girl seying to the ledy who has cherge of the housekeeping department? She draws in a long breath, laden with the fragrence of the deperted "old goose," and asks with a sigh: "Miss M., do you think the suell will stay around the house long?" The reply cannot be a satisfactory one, for she turns away sedly. Will sho ever see another such day? She waits for next Thanksgiving for her *anser!*

THE SOULPTOR OF CYPRUS.

(A Heathen Fable.)

Long ago, in the beautiful islend of Cyprus, there dwelt a sculptor. None could equel him in his srt; wesith, power and honor were at his command; yet he was not heppy, for his heart was sick within him for the treachery, felsehood and various follies of mankind, and he longed for something higher and nobler. He looked upon his glorious statues, and his heart swelled with mighty yearnings to carve out one which should excel them all; to embody his *ideal* of beauty, of truth, of loveliness. So he took n pure white block of marble and commenced. Day by day it rounded under his skilful hand, till its perfect lines grew into a fair figure.

But even as he worked upon the wondrous countenance, he felt thet, beautiful as it was, he never could fulfill his ideal. Despairingly his ebisel wanders nimlessly over the features, when suddenly a new impulse, not his own, seizes his soul. As he yields to the inspiration he finds his hend guided by n superior power; end gradiuelly tho outlines of the statue grow into surpassing perfectness. At last, his ideal is personified: beauty, truth, purity, rest, all find their full rounded expression in the marvel of her face; and his work is done.

Entrsnced he gazes; hut still the unsatisfied longing remains; he feels that he must *possess* that which he heholds; there stands his ideal before him, but it seems to him as fur off as ever, and its attainment still more impossible. Recognizing his own helplessness, he seeks the temple of the gods: and kneeling down, he devotes bimself to their service, if they will but help him.

At first he deres not, *cannot express* his wish: it seems to him presumption even to think of life heing given to cold marhle; hut nt last he pours out his whole heart in one impassioned prayer, and returns to his home, with heert beating high with undefined hope; he lifts the latch, and, lo! the statue steps from its pedestal and cnils him by his name!

So, in briefest lenguage, runs this simple story: when, or hy whom composed, we cannot tell; hut in it, couched in their own nrtistie way, lies the history of a grand conflict in tha human soul, with its glorious lumination. First, sre depicted those vague longings sfter a higher and a nobler life, to which every beart responds. The deepening conviction that there is such a life, and the search after the knowledge of *what* it is, all are here; nnd as the sculptor, after carving for wesry weeks in vain, despaired of ever heing ahle to set up his stnndard unaided, do we not find it thus!

When et last our perceptions are irradiated (unconsciously perhaps) by the "Divinity which stirs within us," and perceive the criterion by which we are to measure our lives, and the glorious results of a life spent with God and in God flash upon our view, or once the soul recognizes in *this* the fulfillment of her long sought for ideal, and the desire of *appropriation*, of claiming and possessing this, seizes the soul. It nbsorbs, as it were, the whole being, notbing elso seems worth living for; and in this crisis we find our own power utterly worthless; here our hoasted intellects avail us nothing. Happy we, if, like the sculptor, we instinctively turn to n Higher Power!

Nnw let us notice how wonderfully the actions of our artist correspond with the instructions of scripture. He confesses his own inability to do anything of himself; then he consecrstes bimself, his ert, his statue to the gods, striking here the grand prerequisite of sny upward step. Then follows his prayer, feehle et first, indefinite et first, as he does not neme his wish, efterwards swelling into the cleer, earnest petition that this ideal might be given him for e possession, living and *his own*: gift worthy of a god! Lest and most beautiful of all, mark his faith. See his confident, exulting step as he goes to his home. *His* part is accomplished, all thet now remains is to prove the fidelity of the god; e moment more, and this is also done.

(*Moral:*) So with us: our first lesson learned, "without ME ye can do nothing," follow those same successive steps: Consecration, Prayer, Faith. The result is sure; delayed it may be by our own slowness or unwillingness to comply with the terms, but glorious end complete at lest. The fetters are broken; and the soul finds its very deepest longings *satisfied* in the fulness of Him that filleth all in all!

HON. STEPHEN ALLEN'S POCKET-PIECE.

Among the victims of the *Henry Clay* disaster, was Stephen Allen, Esq., en aged man of the purest character, formerly a Meyor of New York. In his pocket-hook were found the following maxims:—

Keep good company or none.
Never be idle—if your hands cannot be usefully employed, attend to the cultivation of your mind.
Always speak the truth. Meke few promises. Live up to your engagements.
Keep your own secrets, if you heve any.
When you epeek to a person look him in the fece.
Good compeny and good conversation are the very sinews of virtue.
Good character is above ell things else.
Your charecter cannot be essentially injured except by your own acts.
If any one speak evil of you, let your life be such that none will believe him.

It is the wisdom of a Christian not to be angry when rebuked, nor to be proud when praised. This is the remedy egsinst hoth: "Be clothed with humility."

NEWS OF THE MONTH.

FOREIGN.

THE European Congress for the discussion of the Russia-Turkish treaty, assembled on the 13th in Berlin. Prince Bismarck was elected President.

AN official telegram from Havana reports that peace has been restered throughout Cuba, the remaining insurgents having surrendered.

A TERRIBLE tornado swept over Canton, China, on the 11th; 10,000 persons are reported killed.

A MOB of strikers, intending to attack a mill in Quebec on the 12th, was fired on by the military and dispersed.

DR. BROCHARD estimates that France has lost through preventable causes, fully 10,000,000 children within the last fifty years. Returns show the average mortality among infants under a year old, in 5,000 districts, is 41 per cent.

THE policy of England is announced to be, to secure an active protectorate per passic for Turkey, and maintain the freedom of Constantinople.

A DISPATCH from Sierra Leone announces the arrival of the bark *Azor* which sailed from Charleston April 21st with 250 negro emigrants for Liberia. There was much suffering on the voyage from the shortness of water. Ship fever broke out and twenty-three of the emigrants died. The rest were in good spirits at having reached Africa.

POLITICAL.

CONGRESS.—The Senate on the 8th passed the Army Appropriation Bill with an amendment to consider the expediency of transferring the Indian Bureau to the War Department. The House passed the General Deficiency Bill. On the 10th the Senate referred the Spencer resolution for an investigation of all alleged frauds in the election of 1876, to the Election Committee. The House non-concurred in the Senate's amendment te the Army Appropriation Bill. On the 12th, Gen. John C. Fremont was confirmed as Governor of Arizona. On the 13th the Senate passed the bill reported by its Finance Committee as a substitute for the House bill to repeal the Specie Resumption Act.

THE Ohio Republican State Convention met in Cincinnati on the 12th. The platform recognizes in the administration of President Hayes, "the highest integrity and patriotism, the most sincere effort to promote political purity and harmony, and secure general business prosperity throughout the whole country." The Michigan Republican State Convention met at Detroit on the 13th.

CONGRESS adjourned *sine die* at 7 A. M. of June 20th.

THE Potter investigation is dragging its slow length along, with less excitement of public interest since the House, by a vote of 215 to 21, passed a resolution introduced by the Republican member from Illinois, repudiating all purpose of attacking the President's title, and declaring that as the XLIV Congress decided that Hayes and Wheeler were duly elected, it is not competent for a succeeding Congress to review or interfere with that action, and that any attempt to do so would be revolutionary.

THE monetary conference proposed by the United States to consider the double standard of silver and gold promises to be an important affair. The United States, France, Russia, Italy, the Netherlands, Hungary and Switzerland insure the meeting of the conference. Great Britain, Germany, Austria and Belgium have not yet accepted the invitation. The conference is expected to adopt a current ratio between gold and silver for the purpose of establishing internationally the use of bi-metallic money and securing fixity of relative values between these metals.

THE Democratic Convention of Alabama has refused to admit colored men, and the two Central Committees of the Spencer and Smith rings of the Republican party of the state have united in a call for a State Convention to be held on the Fourth of July. It is believed that they may be able to carry two Congressional districts in the Black Belt, where they have clear majorities of nearly ten thousand votes.

DOMESTIC.

THE Washington National Monument is at last to be completed, the Senate and House having adopted the report on the bill. It will consist of the shaft 55 feet high, with bronze reliefs on the four sides representing events in the life of Washington. Around the base will be a double terrace 220 feet square and 17 feet high, with stairs at the four corners leading to the entrance to the shaft. At the side of the steps will stand statues of revolutionary characters. There are 120 tablets contributed by States, societies and foreign countries; 40 of which are already in the monument. It is expected that others will be given.

TROOPS are being concentrated te put down the Indian revolt. The forces available are but slight for the purpose. The President and Secretary of War have granted the request of the Governor of Oregon to supply settlers on the eastern border of that state with arms and ammunition. It is believed that all the tribes in southern Idaho and eastern Oregon are hostile and that they can muster 1,000 fighting men. There is trouble also in Nevada and Utah, and the Indians in Montana have suddenly disappeared, probably for no good purpose.

A LABORATORY for the study of marine zoology by scientists has been established for the summer at the Rip-Raps near Fortress Monroe, by the Johns Hopkins University, which furnishes the nets, dredges and other apparatus necessary for bringing up the curious forms of life from the vasty deep, and exposing them to the eye of science.

THE schooner *Esther* sailed from New York June 19th to search for relics of Sir John Franklin in the Arctic regions. The cruise is expected to last for two years.

THE Centennial Anniversary of the evacuation of Valley Forge by the Continental army was celebrated June 19th by a grand military display. Thirty thousand people were present.

SIXTY-NINE more colored emigrants sailed for Liberia from New York June 19th, under the auspices of the American Colonization Society who will support them for six months after their arrival. It is understood that efforts are to be made to open up the back country of Liberia, and construct roads to bring produce to the sea coast.

REV. CHAS. C. BURLEIGH, the veteran abolitionist who was injured on the railway at Northampton on the 3d of June, died on the 13th.

WILLIAM CULLEN BRYANT, poet, author and editor, died in New York City June 12th of congestion of the brain resulting from exposure to the sun while making a speech at the unveiling of a statue to Mazzini, the great Italian statesman and reformer, in Central Park. His death is mourned throughout the country. He was born in Massachusetts in 1794, and began to write poetry which was published before the age of ten. He was educated at Williams College, studied law and was admitted to the bar, but left it for journalism. For fifty-three years he was editer of the New York *Evening Post*. His end was peaceful; his name has been a household word in this country for half a century,—and his poems are part of English classic literature.

NEW YORK CITY is talking of abolishing the colored schools and admitting negro children to all the public schools, as has already been done in districts where they live too far from the colored schools of which there are only four in the city. Curiously enough, the opposition comes from the negro s, as the change would throw the thirty-four colored teachers out of employment.

A TELEGRAM has been sent to Washington proclaiming that a hundred thousand working men are idle in Philadelphia. The falsity of this statement is apparent on considering that this would be one-half of all the male adults in that city.

DR. JORDAN'S
Chest Protecting & Full Bosom
CORSET
Is the Latest and Best.

It is made in accordance with the best medical and scientific authorities. It entirely protects the chest from pressure of bone, horn or steel, a principio unknown in all other corsets.

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA. H. PHOEBUS, PROPRIETOR.

Terms: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years, as taken from the notes of the Meteorological Observatory, shows an average of 69°, 76°, 78°, for Summer; 70°, 58°, 46°, for Autumn; 45°, 44°, 43°, for Winter; and 46°, 52°, 69°, for the Spring months. —Open for guests all the year.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

EMIGRATION TO VIRGINIA.

Senator Withers of Virginia nnd Mr. Borst, Secretary of the Virginia Immigration Society, have recently been to New York, for the purpose of promoting emigration to Virginia. The spectacle of poor old Virginia begging at the cross roads for settlers should be stopped. It is demoralizing, and, more than that, covers up the real issues which must be met sooner or later. Virginians must give value to their own lands, and give up roping in strangers to do it for them. Emigration schemes were on foot right after the war. Speculators, sociclies, nnd "statesmen" have had hands in them. Pamphlets without number have been written about them. Nothing comea of all this. The army marches up the hill and then down again. The ships are all sailing in a circle. The cannon are fired with thundering noise, but the balls come bounding back. Ia every rock, and bare wnll, and amooth fence of this earth, to be plastered with the "Resources of Virginia?" The trouble, O honored statesmen, is that therc is no backing to all the pretty stories! You say "wonderful resources." Why do you not develop them yourselves? You reply, we have no capital. Were Ohio, and Illinois, and Michigan dcveloped with capital? Your own and very able agricultural writers are telling Virginians every day how they can really improve their own soil if they choose to do it. They will not choose. There are eighty thousnnd land-owners in Virginia. There are only two thousand of them who belong to the State Agricultural Society. It means that seventy-eight thousand of the land-owners take no interest in the supreme object of Virginia industry, the culture of the soil. It means ignorance, negligence, laziness, covering the State like the waters of the sea. So the poverty-stricken old State totters into the highways, and beseeches the emigrant to turn off into her barren fields which are really, she says, full of resources. It is like the picture in *Punch*, of the very bald headed old gentleman selling to a customer a lotion guaranteed to make the hair grow! Settlers will crowd into Virginia as thickly as grasshoppers when Virginians show tho productive quality of their land—when they produce a little hair on the bald head, before selling lotions to make it grow.

If our people will make a business of agricnltnre, instead of nsing it as the last shift to escape the poorhouse, and will actually show the value of the soil, instead of declaiming about it, there will be no tronble in selling land nt high prices. Land in the far West is now cheaper than any land in Virginia. Besides, it does not need "restoration." It is known beyond peradventure, what it will produce, nt the start, when the spade goes in. But across every field in Virginia the emigrant reads "This soil is exhausted."

On the able men who are working in the interests of the State Agricultural Society, much depends. They carry the future of the State, and we count more on them for its restoration thnn npon all the politicians, emigrant societies and statesmen combined. All these latter are bnilding on the sand. The former only are hammering on hard rock.

HAWAIIAN LAW REPORTS.

Before ns is volume 3d of the above Reports. It contains the final judgments of the appellate and highest court of the Hawaiian Kingdom. So thoroughly has the Anglo-Saxon civilization got foothold on these Islands, that the opinions recorded here might readily pass for the judgments of American or British trihunals. The Polynesian names and the, occasionally, nnique character of the issues passed up, indicate that these are not American, but, in fact, reports of a judicial system located in the heart of Polynesia. Burke said, "Justice is the great standing polity of society," and it is true that the Hawaiian government has, decidedly, adopted that polity, and is enforcing it with remarkable persistence.

The opinions of this Report are carefully and studiously drawn. There is no learned writing, or tedious, essay-like gronping of authorities. The points in each ease are developed clearly, and then passed upon. A few days ago, the Presiding Justice of the Supreme Court of the City of New York remarked while a case was argued before him, "The Court of Appeals (the highest court and that of last resort in the State of New York) has decided, in the Smith case, that the law is so and so. It has decided in the Jones case, it is not so, but exactly the contrary. As its opinions are contradictory, we can do nothing but follow our own reason." This is the condition of things in the Empire State. It is needless to say, the judicial system there is wholly elective. In comparison with these Hawaiian Reports, those of the highest Court in the State of New York suffer at every point. Elected Judges,—half lawyers and half politicians,—holding the scales with seeming blindness, yet always with one eye open to "political effect;" rusty lawyers, with the keen sense of justice blunted, and the knowledge of law worn away by a demoralizing experience in Congress or in the Custom House, are not the men to make the splendid researches of Story, Marshall or Shaw, or to master the simple, strong diction of thoroughly trained men. Ex-Senntor Carpenter recently said to the law students of Columbia College, "inexperienced minds are bewildered and tossed to nnd fro by reading New York decisions.

It is not a little strange to rend, in these Reports, the cases involving the rights to highways over great volcanic mountains, where the same principles are made to govern, as in a common highway of Virginia, or a byway of a small Connecticut township. If the system of Anglo-Saxon Jurisprudence is carried much further westward, and beyond those Islands, the yearnings of Tennyson's bilious young man may speedily be realized, and the "world be lapped in Universal Law." We may rest assured of this, that the Law in its Westward course does not deteriorate. W. N. A.

FOR the months of July, August and September, the supplement is omitted from the Southern Workman, the languors of summer usually affecting both our subscription list and editorial forces to about the degree indicated by such contraction. It will be added again in October. Meanwhile, we think that what is left of the paper will be as worthy as usual of the attention of our summer friends.

We published in our June number a programme for n temperance meeting, which we hoped might be of practical value to some of our readers, and in regard to which we offered to give any information that might be desired. Ths great revival in temperance work which has been going on all over the country, shows that the people at large are giving serious thought to this all-important subject, and surely there can be no part of our own or any other country wherein such thought is more needed than in the Southern States. All men, not even excepting those who are themselves the chief consumers of liquor, are beginining to understand that drunkenness and the general use of intoxicating liquors are responsible for much more harm than is apparent in their direct results.

When men or women drink until the power of self control is lost, it is easy to see that they become dangerons to society and to themselves, and in all civilized communities the law has the right to step between them and those whom they are likely to injure. Thus far the law protects us, but it is very difficult, if not indeed impossible for it to go farther than this, and for any attempt to prevent the immense amount of harm which may be done without coming in contact with the law, we must look to the efforts of individuals, nnd particularly to the efforts of individuals organized into societies. It is for this reason that the methods employed by such societies are of so much importance, and we would advisc all pastors of churches, all teachers, all, in short, who are likely to be, or who ought to be, intercsted in establishing temperance organizations, to study the subject most carefully in its practical aspects.

The pledge which is adopted should be carefully worded and the work should not stop with the simple enrollment of members. All who sign, but in particular those who are weak in the faith, or subject to special temptation, should be followed up and strengthened in every possible way, so that they may not only save themselves, but may also be a light unto others. Any temperance society which does not keep watch over the daily life of its members can hardly accomplish much permanent good, and this sort of work can best be done by appointing committees who should be empowered to visit nnd assist such members as, (though they have taken the first step) are not yet able to stand alone. Of course the method of work must be varied to meet the requirements of different neighborhoods, but one great fact holds good everywhere: If you want to make your members permanently and consistently temperate, you must make them feel that they can depend upon you, upon your organization, for personal sympathy, for advice, and to a certain extent for practical assistance.

Temperance Societies which do not make this idea their foundation, need not expect to have much to show for their meetings and pledges, their banners and parades, for all these are useless, and perhaps worse than useless, nnless there is to be found behind them, energy and common sense and Christian aympathy.

M. F. A.

TO THOSE of our readers who are interested in the question of higher education, we commend a enreful reading of the ahle paper of Rev. F. C. Woodward, given in another column, as delivered before the recent meeting of the Virginia Educational Association. Though the broad position it takes as to the necessity of general education necessarily includes all citizens, without distinction, it was of course addressed to white men and intended for white men, without n thought, perhaps, of ths colored man's concern in the question. But this very fact makea it tho more valuable to the colored man, nnd worthy his attention. He can study it without sensitivenesa or suspicion. Its thrusts are not aimed at him. Its ideal aystem of education is not proposed as good enough for negroes, or arranged to keep them down, but it is what white men want for themselves and their sons. It is a call—and, indeed, only an echo of a very general call—for a reform in the collegiate course that shall make it more solid and practical. There is a strong and growing demand among the best white educators everywhere for such a change—for more science and less language, for less Latin and more English, for strengthening and broadening the foundations instead of piling up top stories. The colored man, on the other hand, is crying for the classics, and wants his high schools dignified with the title of Colleges and Universities, to have the name of studying Latin and Greek, though he may not be able to write a letter correctly in his mother tongue.

This state of things, though curious, is not unnntural at all. The popular tendency, especially in the South,—noticed by Mr. Woodward,—to exalt "professionalism," to associate inseparably the ideas of edncation and college training, and to nnderstand by ths latter a strictly classical course in preparation for professional life, is, of conrse, reflected by the colored man as the privileges of citizenship seem to coms within his reach. The desire to improve himself is a worthy one, and what more natural than for him to adopt the white man's view of the case, what more difficult than for him to discern anything special in his own position and needs? But it is a great pity for him to take up worn out, fallacious notions which the white man is just lying down. It is particularly important for him to demonstrate his possession of a ground work of common sense that is worth building upon, and an intellectual honesty that will not be satisfied with a veneering of superficial accomplishments, instead of honest progress.

The Virginia Press Association held its annual reunion at Hampton, on Tuesday, July 23d. Only twelve members were present, and on their way back to Norfolk the next morning, accepted an invitation to call at Hampton Institute, spending an hour in looking over the buildings, printing office and other industries.

Among the visitors, were Col. Bascom, editor of the Lexington Gazette, and President of the Association, Col. Shepard its Secretary, and Major Glennan, editor of the Norfork Virginian.

Agricultural.

THE STATE FAIR.

THE EIGHTEENTH EXHIBITION of the *Virginia State Agricultural Society*, will be held at Richmond, on Tuesday the 20th of October next, and continue four days. An examination of the Schedule of Premiums indicates that Virginia manufactures and products are expected to be conspicuous. There is no restriction as to the color of the competitors, except in the list of "Special Premiums," for the largest and best crop of "bright, fancy tobacco," "dark wrappers," and "sun-cured tobacco," from two acres of land respectively; for the largest and best crop of wheat from five acres, and for the best crop of corn from the same quantity of land. The competitor must be a "young white man between the ages of eighteen and twenty-five, who by his own unaided labor shall raise" the specimens exhibited. A ploughing match is to be one of the attractions, with prizes of silver plate, valued at $15, $10, $8 and $5, to the best white ploughman with four, three, two and one horse respectively, and the same conditions to colored ploughmen except that the prizes are in money. As no agricultural exhibition seems to be complete without the inevitable horse-racing, euphemistically styled "Trials of speed," ample opportunity will be afforded to those whose tastes incline in that direction, as there will be four days of racing, with two trials each dsy.

It would bs well to observe that the entry books will be closed on Tuesday evening, October 22d, at 6 o'clock, after which no entry for competition will he received, but subjects *for exhibition only*, will be received at any time. Each exhibitor, ladies excepted, who shall compete for a premium, must be a member of the Society, or pay an entry fee of two dollars. Entries may be made hy letter to the Secretsry, W. C. Knight, Richmond.

BROOM-CORN FOR TYING SHOCKS.

An Indiana farmer says that in his experience, broom-corn for tying shocks or binding fodder, is very much preferable to twins or rye-straw.

WATERING PLANTS.

The old gardeners have always recommended not to water plants when the sun shines on them, hut Mr. Thomas Meehan says, "*water*

whenever the plants need it." Tha writer has been *Axor's* side, to fsed all on board of her for a world, with a gcasrous and cheaply procured soil, and perfect social equality. Others were now in progress whereby those articles will be furnished here at less price than

whenever the plants need it." The writer has been for years in the habit of wetering plants et *all* times of the dey, without perceptible injury to them. *Worm* water is preferable, either in summer or winter; in summer, because there can be no check to vegetation, end in winter, because growth is stimuleted hy its use. Indeed, we recently read of en applica- tion of *hot* water to a plaat which was sickly, restoring it to health. The same euthority asserts that with the application of hot weter re-potting is unnecessary.

PIGS ON AN OAT DIET.

F. D. Curtis says in the *Weekly Tribune*,—"Little pigs will do finely, if the supply of milk is short, hy giving them all the oats they can eat. We fix a pen for them to go into by themselves as soon as they are old enough—three or four weeks—and scatter the oats on the floor, where they run in and out and help themselves. They will not eat enough to be injured, as they might of corn. They chew the oats and spit out the shells, swallowing the meats. The floor should he swept out every few days, as the shells or skins accumu- late and are in the wey. The miller's toll, one-tenth, is saved, and not one oat need be lost. We have a pen of fine, fat pigs which have never had a mouthful of milk fed to them. They run out to grass, and have of kitchen-swill, all they will drink. Oats are the thing which keeps them growing and healthy. Enough are thrown into their pen in the morning to last all day. This saves time, and time couats when pork is low."

NEW YORK HORTIOULTURAL SOOIETY.

At the June exhibition of the above-named society in New York City, a display of grasses was made, being exhibited by the Hampton Normal and Agricultural Institute, and collect- ed and named by Mr. George Dixon.

A report in a New York paper says, "a col- lection of over thirty-five correctly named grasses, which were much admired, and re- ceived a well-merited diploma." Mrs. Albert Howe of this place made an exhibit of seed- ling carnations, which received "special com- mendation" from the judges.

THE VOYAGE OF THE AZOR.

The Charleston *News and Courier* gives an *Extra* to the detailed history of the voyage of the *Azor* to Liberia, by its special correspond- ent, Mr. A. B. Williams, who went out in her as reporter. Mr. Williams is a Southern man, we understand. His letter exhibits a spirit of great fairness to the expedition, and often a most delicate feeling and tender sympathy for the emigrants. His report is of thrilling in- terest. It is over nine columns long, and we can give our readers only an abstract of it, with such extracts as our limits will allow.

The letter is dated—Sierra Leone, May, 30, 1878; and is a faithful record of the long voy- age, from the day when "the *Azor* with her experimental load left Charleston amid the sound of 'The Gospel Ship is Sailing,' and 'We're Bound for the Promised Land,' sung from the hark's deck, and re-echoed from the *Pocosin* and *Allison*."

The second morning found everybody lan- guid as usual at sea, but social lines beginning to he drawn hetween cahin and steerage, while the captain, mates and reporter, who were the only white people on board, repre- sented those "freyed ends" of society that belong nowhere. On the second day "tha captain and mates went vigorously to work reduciag

"THE ISSUING OF FOOD AND WATER

to a system. Messes were formed among the between deck passengers, and cooked pro- visions issued to them twice a dey. The food was generally not good and ill-cooked, caus- ing complaint and suffering. Thera was ebundance of meat, flour and rice, but of very poor quality. The meat was eaough to last with care. All of it but five barrels belonged to the "six months' stores' intended by the emigrants for their support in Liberia till the first crop is made, but it had to be nsed on the voyage. There was no danger of starvation, however. Such 'medical comforts as wines and good spirits' in small quantities, sago, arrowroot, &c., were entirely absent. When stimulants were needed for the sick, the pri- vate stores of the officers and reporter had to bs called upoa."

Mr. Williams speeks in the most enthusias- tic terms of the officers of tha *Azor*. They were kind and considerate and cheering always. Unfortunately, their efforts were constantly baffled by the "ignorance, indiffer- ance and carelessness of the emigrants, and the utter want of anything like system or or- ganization in the expedition." Mr. Williams remerks,—"However bad the supplies, it seems as if any sane person, out at sea with all the possibilities of a long voyage before him, would refrain from wasting them. Yet I have seen nearly enough bread, meat and rice, which would have lookcd eatable enough ta a starv- ing man, thrown carelessly or angrily over the *Azor*'s side, to feed all on board of her for e week." Captain Holmes on the third dey in- stitated

A WEEKLY CLEANING-OUT

and airing of the steerage—bringing up all the beds to be sunned and eired. But in this effort too he met osly hindrance. "It was only by begging and driving that the passen- gers coald be indnced to clean ap around their berths. Often even that failed, and they would not even come on deck themselves to get a little fresh eir." While et the end of the voyage the raporter writes: "Very few of the steerage passengers have changed their clothing aad many have not evea washed their hands and faces since leaving Charles- ton. Of course there were honorable excep- tions,—the Shew and Reeves families from Georgie; Clement Irons from Charleston, who voluntarily surreadered his cabin passage for which he had peid, and weat iato the steerage to make rooin; William Adams from Lancas- ter and a few others set examples worthy of imitation."

"The *Azor* proved a fine sailer, passing every craft steering in her course, and would easily have made Monrovia within the estimated twenty-five days but for three days of south- westerly gales. She also encountered severs! calms, and two storms, one but a stiff gale, but enough to render the inexperienced passengers almost frantic; a few, howaver, really display- ed "courags of a high order, taking matters very coolly and asying thet they were willing to die then if necessary. Tha Captain came down end quieted them with a few quiet words of assurance."

On the first Sunday, the first deaths occur- red, of two infant children. In connection with them, Mr. Williams protests, as he does again and again in his letter, egainst en out- rage. He says

"NO PHYSICIAN

was oa board the *Azor*, though the Managers of tha Exodus had distinctly stated that a physician from Washington would accompany her." The law requires the presence of one on board emigrant ships—and one George Curtis was used to clear with, hut Mr. Williams vig- orously asserts that he knew "aboat as much of medicine as a street car mule." He pre- scribed by goess-work and the help of a small "Mariner's Medical Guida" book given him hy the captain. Captain Holmes at last for- bade his dispensing any more medicines with- out his superintendence. Mr. Williams car- nestly says,—"I cannot find terms strong eaough to denounce the conduct of the mana- gers of the expedition is deliberately seading the *Azor* to sea without a competent physi- cias. If I should never write another line, my last earnest advice to the colored people interested in this movement would be to rig- idly investigate this matter." He also asserts that the fact that the measles was on board the vessel was known and deliberately con- cealed from the Custom House authorities.

This precious doctor shared with a certain so-called "missionary" on board, an ungrace- ful distinctioa. Mr. Williams remarking that, "It seems unfortunate that the Missionary and 'Doctor' sent out with this expedition should each have seen fit to beat his wife."

The Baptist and Methodist ministers in charge of their respectiva flocks, he thinks, "from close observation, were men of really earnest piety who do their best according to their light,"—bnt without the degree of edu- cation that could make them intelligent teach- ers of their people. As Mr. Williams says, "To the observer who thinks a moment, there is something peculiarly saddening in this. For a preacher who can teach his people sound, simple Christianity, there is work to do among these emigrants." Prayer-meetings and Sunday services were held on board, and a Sunday-school, thongh this was hampered by sectarian variances. Clement Irons suc- ceeded in organizing ona good religioas meet- ing in the evenings. The yonng people on the qnarter-deck would gather round the wheel on pleasant evenings and sing sweetly. "After meals, the emigrants generally dis- persed

ABOUT THE DECKS.

Probably one-half could read, and about a fourth write. These fortunate ones would lie about, poring over Bibles, learning hymns, or studying old geographies, histories, newspa- pers or slates. Pleasant to relate, some would gather round them a few of their uneducated fellows, and laboriously instruct them in the rudimeats of the three R's. Others would lie on their backs staring at the blue eky and white clouds," building "castles in the air."

Mr. Williams "interviewed the emigrants quite generally" on

THE OBJECTS OF EMIGRATION.

His conclusion is that "there is no reason which can be called general. The grievances complaiaed of and the hopes antertained were, almost invariably, of a local or personal na- ture. Some were going because they thought they would have a better chance to rise ia the world, with a generous and cheaply procured soil, and perfect social equality. Others were tired of reating or working ont, and wanted to be their own masters. Others complained that the farmers were handing together more and more to keep down wages. Others could only fall back on the old talk of 'Ku-Klnx,' 'Night-Hawks,' and 'political persecntions.' Some assigned nearly all these reasons. One of the most intelligent of the Georgia emi- grants said thet it is becoming such a general practice for farmers in that State to evail themselves of the homestead exemption laws, that the lahorer had no aecurity for his earn- ings, and, therefore, no inducement to work. It seems that, in the main, various and widely- differing opinions and views hrought the em- igrants to Charleston. Once there, they soon rallied nnder the generel watch-words of 'Politicel Persecution" and 'Social Equal- ity.'"

By the third week out, the measles had be- come quite prevalent between decks, and the deaths increased rapidly in the want of medi- cal care. One sudden death from heart dis- ease occured, of which Mr. Williams touch- ingly observes: "It seems a curious fate that this woman who, for forty-three years, had passed her life in the quiet of the conntry, knowing no world heyond the precincts of the town or county, should flad her grave be- aeath the waves of the Atlantic, three thou- sand miles from any place she had known be- fore." The deaths were chiefly from measles and a kind of sore-throat which seemed to become epidemic. On May 20th, the twenty- ninth day out,

SHIP-FEVER

made its fatal appearaace, increased no douht hy the condition of the steerage, which the captain could not purify, even with disin- fectants. For eight days more, tha terrible ordeal lasted, with insufferahle heat, and long calms, provisions getting bad, water scarce, and disease spreading. On the thirty-fifth day, the calms were followed by a wind which soon rose to

A TORNADO,

of which Mr. Williams gives a most graphic description: "The wind roared, shrieked and whistled through the rigging, the thun- der discharged itself in peal after peal, the sails heat with dull, monotonous thuds, or cracked like a thousand whip lashes; the rain pelted and rattled, the cries of sailors and orders of officers could he heard faintly as the wind swept them away. The continnous, vivid flashes of lightning brought out mo- mentary tableaux—a dark figura ap in the riggiag, the captain at the helm—a group of sailors heuling a rope, a groap of passengers standing under some shelter with startled faces—all standing out in a flash and swallow- ed up by tha darkness. What added to the wiardness of the effect was that tha storm had come so suddenly that there was no sea, the *Azor*, amid all the crash and confusion, running as quietly through tha water as a phantom ship, with balls of electric fire on her mastheads. To the noises of the storm were added those of praying, wailing and shoating." This was the last heavy blow, and such light breezes followed that the captain wisely de- cided to put into Sierra Leona, then bnt fifty- seven miles distant, for provisions and medical help, before running to Monrbvia. The longed-for haven was reeched May 28th, the thirty-seventh day out, and after resting there a day, they started in tow of a steamer for Mourovis, which they reached on the ascond day.

Mr. Williams' estimate of tha emigrants of the *Azor* is a fair and kindly one. He says:

"I do not wish to be understood as running down the people or their project. The emi- grants have generally behaved themselves ex- cellently. They have uniformly easily been managed, obedient and accommodating. They have complained much, it is true, but when it is considered that they were suddenly brought into unaccustomed surroundings, with manifold discomforts, insufficient, poor and generally novel food, and with no physi- cian, this cannot be wondered at. The only real trouble has beea their indifference to their own comfort and cleanliness. While all are lamentably, some grossly, ignorant, that is hardly their own fault. Altogether, despite the many reprehensibla characteristics dis- played by some, I have been fevorably im- pressed with the mass of these emigrants. Most of them will maka good citizens; some will be invaluable acquisitions to the new coastry. I don't think there is a reelly bad or viciously disposed person among their num- ber."

AT THE last meeting of the Board of Trustees of the Institute it was decided that as soon as practicable, the male stu- dents should be uniformed; and a plain sack coat, and pantaloons of bluish-gray cloth, with cap of the same, have been se- lected as the uniform. Arrangements are now in progress whereby those articles will he furnished here at less price than they or other goods of same quality, can be pnrchased of other parties, (at an av- erage cost of ten or eleven dollars per suit). It is therefore requested that par- ents, instead of purchasing suits for their sons before sending them from home, al- low them to purchase uniforms after their arrival at the Institute, as it is desired that *all* should be in uniform by Jannary 1, 1879. After being once supplied with uniform, the student will be required to wear it on all occasions, except when at work in shops or on the farm.

THE FOUR EMPERORS AND THEIR TREATY.

It is interesting at this time to look at the portraits—for which we are indehted to the N. Y. Christian Weekly—of four of the mon- archs who have jast, hy the treaty of Berlin, decided another of the world's great questions without fighting: the division of conquered Turkey among the European powers. When the bloody war between Russia and Turkey ended with the fall of Plevna, and the hanners of the Czar waved before the gates of Constan- tinople, all that kept him from entering was tha knowledge that all tha other Great Powers of Europe were watching his movements, jealous of any disturbance of the European balance of power. This mada his terms with Turkey, the treaty of San Stefano, very different from what they would have been if he had only himself to consult. But the Powers were not satisfied with this. England especially, with her pock- ets full of Turkish bonds and a special interest in keeping a harrier between Russia's encroach- ments and her vast possessions in India, insisted that tha terms of the treaty should be submit- ted to a general confercuce of the Powers. Russia objected, and for a time there were muttering thunders of war which should shake all the thrones of Europe.

Happily for the interest of peace and civil- ization, the thunder clouds rolled harmlessly away, the Congress of the Powers assemhled, and the Treaty of Berlin is at last agreed upon. It has indeed been "aptly called the Carving of the Turkey," of the eight provinces of Tur- key in Europe. Austria gets Bosnia and Her- zegovinia; Greece, are citification of the froa- tier of Albania and Shessaly; while Servia, Montenegro, Bulgaria, and a large part of Roumelia becama more or less independent. Russia has amply indemnified herself. Con- stantinope is left indeed to the Turks, but his powcr has departed, and he must go back to the Asiatic posassions from which he swept, sword in hend, into Europe, five hundred years ago. In this he is protected by England, who surprised tha Congress with the anouncement of an agreement already secured with Turkey by which she assumes the Protectorate of Tur- key in Asia, and occupies tha Island of Cyprus. This is regarded as a sharp stroke of state pol- icy on the part of Lord Beaconsfield, Eng- land's Prime Minister, and he has received the most enthusiastic reception since his return homa.

And now let us look at the Emperors. What a contrast in types of head and featnres, be- tween Nicholas II of Russia—intellectaal, vig- orous, far seeing,—and tho Sultan of Turkey, heavy browed, dull eyed, crafty, cruel, fit rep- resentatives of their different national history —the Russian, powerful, despotic, encroach- ing, but progressive in civilization, favoring art and encouraging education, emancipating their serfs, giving more and more privileges of free- dom to the people, keeping up with tha march of the world. The Turks utterly bliad to it, till forced now and then to some ill kept prom- iss of reform, extravagant, oppressive, in five hnadred years failing to make of the country they conquered one nation; for fiva hundred years only the hated invader and tyrant.

Here also is Francis Joseph of Austria, and tha bluff, strong face of Kaiser Wilhelm, who with the help of his soldier-statesmen Prince Bismarck, mada Germany one natioa and him- self its emperor. Yon are not surprised to hear that emperor though he is, he still sleeps on an iron camp bed and hard mettress, keeps early hours, takes vigorous out-door exercise, works every day and is in full vigor of mind and body, ia his advanced years.

TAKE OARE.

If the pilot had taken care, tha ship would not have gone among tha breakers. If the coachman had take eare, the stable and three fine horses would not have been burned. If the druggist's clerk had taken care, he would not have put up the prescriptioa wrong and destroyed a life.

Take care what books you read. *Take care* what company you keep. *Take care* of your time. *Take care* of your thoughts. *Take care* of your health. And above all, TAKE CARE OF YOUR SOUL.

LETTERS FROM HAMPTON GRADUATES. The colored ont here are poor. I only know one colored man who has land of his own. Work try and keep this up all summer for we do not keep husy aow that school is closed, and we

RIGHTS AND DUTIES OF OITIZEN. V.

LETTERS FROM HAMPTON GRADUATES.

Over eighty Hampton graduates have been regularly supplied with newspapers from our reading-room. Over eighty of the best journals, dailies wecklies and monthlies, of the North and South are thus being distributed. The course of most of the journals that come to the Institute is first, the editorial office; second, to the reading rooms of the young men and women; third, to the students who are out teaching. There is no greater encouragement to the young teacher, far from home and every educational opportunity but the stern discipline of life, than these papers which follow him to his isolated station in the woods or the mountains, bringing him into close communication with the outer world and with friends who are still remembering him. Every mail brings back some grateful acknowledgment of the good done. We hope next year to extend this work, and to this end, would suggest to our friends who don't know what to do with their papers and magazines after reading them, that they could make missionaries of them by sending them to Hampton.

The freedman's first thirst for education cannot be said to have did out, while children willingly walk ten and fourteen miles a day to go to school.

——, Va., *April 19th*, 1878.

My dear Teacher:—

I received the monthly Jonrnals, and find them a great help to me. I must also return to you my warmest thanks for the Congregationalist. I have the Rev. Mr. Moody's sermon to read to my Sunday school. I have closed one of my five months schools, and have opened another in Cartersville. The people were much pleased with my teaching. I had about fifty-five scholars, ages *from four to sixteen*. And scarcely any one of them could count a hundred, but when they left me they were all good counters. In my present school I have about seventy-five scholars, and an assistant teacher. I also have a large Sunday school, somtimes numbering a hundred. When I first opened Sunday school, I never saw a rougher lot of young folks than the last Sunday school I had I never saw a better. So I know I am doing a little good. I teach a night school of old persons who cannot go to day school, three nights in a week; the night school I do not charge anything for teaching. With all my teaching, I have not received one single cent, and cannot get money unless I discount it at 30 or 40 per cent. or wait eighteen months for it. I have often heard the question asked, are the colored people anxious for an education? I must say that the young ones are. A great many of my scholars walk ten miles per day, and some of them fourteen miles, to school. But the poor children have so many disadvantages. Grog-shops are well patronized. I wanted to give a lecture on temperance. Will you please give me the number of bushels of corn, wheat and rye that are converted into whiskey?

Hoping to hear from you soon again. Much love for all. Yours as ever, S.

——, Va., *April 14th*, 1878.

Gen. Armstrong—kind friend:

It seems impossible for me to find words would express my thanks to you for the many papers you have sent me since I've been teaching. If nothing happens, I shall have taught school six months next Friday, on which day my school will close. If I understood right, the school which I teach, has been in operation for seven years. But the progress of the children seems to have been very slow. I opened my school on the fifth day of November with two scholars only. Before Christmas the people were so slow in sending their children to school that I was about to be sent to another neighborhood. They kept their children home simply because they could not clothe them as they wished. I have told them, and will try and prove to them next Friday, that the scholars of whom I can boast, are not those that were kept away from school because of dress, but those who came regularly though with the poorest of clothes on their bodies. I have even stood and and gazed on some of my pupils' dress, wondering which was the original piece of their garment, girls as well as boys. Many of their heels were well protected from the weather, but their toes were just the opposite. I have at times, felt so sorry for some of the children that had I had the money, I believe I would have spent it for their benefit. For the last three months the children have turned out well. My school-house is a very rudely built one. The school-room has one small black-board in it by means of which I taught many the Alphabet and how to read. I can only say, in behalf of my scholars, that their desire to learn seemed to have been lately excited. They all, children and parents seem to like me very much. They all think I'm the best teacher they've ever had, and have asked me often if I will return next fall. I have made no promise. As the colored people are very easily satisfied out here, the white people like them. The colored ont hers are poor. I only know one colored man who has land of his own. Work seems to be plentiful at times, but very little money is got for the doing of it. It takes a good working man to earn fifty cents and board a day.

Everything looks like spring here now. The farmers are plowing, and planting corn, the fields are looking green with oats, &c.

Even if I should not return to this place another year, I hope some other student of Hampton school will come, and I'll assure you, that if he tries to walk uprightly, at the end he'll not want for friends. Whoever comes after me, I believe will find a school ready to go right ahead May he be successful, as was his predecessor, or as he seems to have been.

I am, respectfully, your ex-student,

Mc.

——, Fla., *May 2d*, 1878.

My dear Miss H.:

Your most welcome letter came duly to hand. I never pernsed a lotter with more interest in my life. In the first place, I was glad to hear from you, and the other teachers; secondly, I was much interested in the account given of the various changes that have taken place since I was in school. I shall always think of the Hampton school with a peculiar recollection. While there, I learned to love the place, and there, too, I made the acquaintance of some noble young people, of whose onward march I sometimes hear, and I feel unspeakable joy when particularly I remember the *great* mission each one has to undertake. *Our* circumstances are vastly different from those of our more fortunate neighbors, and as I view the situation the more perfectly we understand and realize this fact, if there be the slightest degree of energy and humanity within us, we should persue a progressive course with more vigor as each day passes awey. This, knowledge should act as the lever to propel the cause of general advancement among the colored people. I have been studying, time and again, about the methods that are indispensable for the complete elevation of our people from the almost helpless and degraded condition in which we have been for ages, and I see no other way but by growing intelligent By this I mean to include all of the virtues that properly belong to an intelligent individual. Such for instance as frugality, honestly, perseverance, and good morality. With these will come a bright era for our people and likewise for the country. realizing these important matters as I do, and knowing the want of such among us, I have been leuding my little influence in that direction ever since I have been out of school, I am satisfied that the blessing of God has accompanied my feeble efforts, and I feel thankful to realize this satisfaction.

I do wish I could be at Hampton during the reunion of graduates, and the commencement exercises and also to the Teachers' Institute of which I have just received a circular notice from Gen. A., but it is impossible for me to be there. My schools will close this term the last of May. Gensrally the term lasts nine months. Owing to a failure in making collections of certain taxes this year, which is the excuse, *the colored schools* must close a month earlier than usual. The colored public school in this place is divided into two divisions, each division occnpying separate buildings and in different parts of the town. I am Principal, and have the oversight of both divisions. In division No. 1, I have charge of the grammar department. We are expecting that the two divisions will be consolidated at an early date; the Board promising to build us a school-house sufficiently large to hold all the children we may have, which will not be over three hundred, I reckon. The salaries of our teachers range from $35, to $50. At the beginning of each school year, that is in October, we cannot get the cash, but about Jan. 1st, until close of school all teachers are paid off promptly, in cash, at the end of each month. Our warrants that are paid during October, November and December, will he cashed if we have not sold them.

I read with much interest the article of Gen. A., about his Georgia trip, in the "S. W." Please remember me to Gen. Armstrong and Gen. Marshall, and Mr. Tolmen. I have thought about Mr. Tolman *so many* times since I left the institution. I was very sorry to learn of his feebleness during the past year. Please give regards to Miss M., also. I must not forget R. and B. I shell try to write a letter to one of them soon.

With much regard for yourself, I remain,

Most truly youre,

M.

Aiken, S. C., *June* 24, '78.

Dear Mrs. ——:

I thank you very much for the book that you sent to me (Habits and Manners). First Anna and I read part of it together at school, for there were no others there at that time that I thought would like it. But on Wednesday afternoon I would invite the girls down to my house and then I would read it to them. They all liked it very much and said that they thought all that I had read was quite true, and that they would try and remember what I had read and follow some of those rules. I have now read nearly half through it, and yet there is so much more to learn. This afternoon the girls will meet for their reading; it is very plain, we can nnderatand it very easy. I will try and keep this up all summer for we do not keep hosy now that school is closed, and we enjoy ourselves so very much reading to each other.

Don't you think that it would he a good plan to continue this meeting to read once a week and not stop just because the book is finished? I will tell you more of what we do when I write again about the book.

I am, respectfully,

S.

The following letter is from a graduate of the "Institute for Colored Youth," in Phildelphia, in the charge of Miss Fanny Jackson an accomplished womnn and a very successful teacher.

Coming North to solicit funds for the erection of a school house at his home in Georgia, he was advised on his return to stir up the people to help themselves to build a substantial house and to continue school four or five months after the State aid (which continues four months) should cease.

The "Workman" is always glad to publish account of the good work done by colord youth, and letters from them are invited.

Louisville, Ga., 6-13, '78.

Miss M. A. Longstreth:—Dear friend:

I would heve written you loug since, hut for various reasons, merely local however, our work has not been pushed forward as rapidly as I would wish; so in order that I might be able to make my statements with certainty and correctness, I have waited patiently for the graduel, and I can now say successful development of my plans.

As soon as I arrived I at once consulted with the leading men as to the propriety of directly commencing the building. They were greatly encouraged by the liberality which the kind Friends of Philadelphia had shown me, and they take this opportunity of expressing to you their sincere gratitude for your generosity; and they trust that in the future of themselves and their children, it may be seen that the seed was sown upon good soil. With the means which I brought, we immediately commenced the building. And though we did not have enough cash on hand to complete it, we relied upon the spir it which would be aroused, and the innate pride of the people to carry us through. It proved to be a happy venture. Both white and colored, seeing that we were in earnest, encouraged and assisted us. Of the white people, some lent us teams to assist in hauling our lumber, (the mill is six miles distent;) some gave us nails and others in various ways menifested a *friendly feeling toward the enterprise; a point which in the South cannot be over-estimated.* Of the colored people, they have not much to give; but some volunteered to work a few days gratuitously; some gave a little cash; some gave so many boards, and some gave shingles, &c. All this shows a healthy spirit in the community; and that is its chief value, for the amounts given were generally small. We would still fall short of having enough to finish our building, so in order that the work might go on, a number of responsible men mutually agreed to be personally accountable for the deficit. Thus the financiel problem was solved. Our building will be sufficient to accommodate the wants of this community for years to come. It is now more than half done. But in order to suit the convenience of volnntary help, our work proceeds leisurely along. We will not need the building until Fell. I am at present teaching in the old church, the openness of which is, at this season of the year, more favorable than injurious to health. Thus the enterprise bids fair to be a success, and I can now say that the permanent establishment of a school in this place is assured. One more step has been taken towarde your happy idea of placing like so many light-houses, permanent schools ell over the South, as the surest and most practical way of dispelling the derkness which surrounds the freedmen. I informed the people of your kind and unsolicited offer to give the school, if we succeeded in making it a permanency, a set of maps, &c. We shall he truly grateful to you for those articles, the need of which we have felt all the year. I hope I shall heer from you soon as to your approhation of my course. I read with pleasnre the copies of the Southern Workmnn which you gave me. I was sorry the others did not arrive. My address was perhaps misplaced. I have written to seral who assisted me, thanking them for their kindness; but to none so long a letter as this. I must really close or I will weary you.

With many thanks for your goodness and the kindly interest you have manifested in me personally, as one of "Fanny's boys," I remain,

Very respectfully,

Geo. E. Johnson.

Hearts, like doors, can ope with ease
To very, very little keye,
And don't forget that they are these,
"I thank you, sir," and "if you please."
Then let us watch these little things,
And so respect each other;
That not a word, or look, or tone,
May wound a friend or brother.

RIGHTS AND DUTIES OF CITIZEN. V.

JURIES AND JURYMEN.

Although the right of trial hy jury is several centuries old In England, and has existed in this country since the old colonial times, but few persons, even among the thinking classes, often stop to think what a magnificent right, this right is—in theory; nor with how mighty a harrier it surrounds every citizen, protecting him ugninst the assaults of other citizens, and even against the State itself.

The Latin word, from which "jury" is derived, means "to make oath;" and it, in turn, came from a word which is the equivalent of our English "Right." From its very derivation, it signifies "a body sworn to do right;" and no amount of legal phraseology can give it a clenrer cut definition.

There is nothing perfect in this world, and while the jury system is apparently perfect in theory, it oftentimes becomes a farce in practice, owing to the imperfections of humanity.

In this paper I propose to briefly consider, the theory of triel hy jury; the abuses that exist in practice; and the duties of citizens called to sit in the jury box.

Laws are the direct expressions of the will of humnn societies. It is the province of judges to expound and apply these laws: but with them, juries have nothing to do. It is the province of juries simply to determine facts, "only this and nothing more." If two citizens have a controversy, or the State accuses a citizen of some offence, a certain state of facts has to be determined before any law can he applied. It is the duty of the jury to discover just what this state of facts may he; then, to this state of facts, the law, as made and provided, is applied. The existence of a jury ennobles the position of a judge, for hy its co-operation, he is not only forced to be impartial as to the two contestants, but is lifted far above both and becomes, as he should he, the personification of Law.

In this country and in England, it is the theory at least, that the people govern; and a jury is the introduction of the popular voice into legal proceedings. Indeed, in England, the clerk in a criminal court, on reading an indictment, declares to the jury, thnt the accused plends "not guilty, and throws himself for trial on God and his conntry, which country you are." This idea is the correct one, for a jury is supposed to he selected from the country without prejndice against either the accused or the State

If all controversies between citizens had to he decided hy "the Bench" alone, a privileged class would arise, the existence of which would he prejudicial to Americau liberty. For to give one man the power to determine facts, and then to apply the law as he might interpret it, would he dangerous to both citizens and State: indeed it would he only needful to give him one more function, viz.: that of low making, to invest him with absolute power. Even if such a class were culled from the best citizens, the danger would still exist, for the best of men err sometimes, and prejudice often colors judgment, even if the judge he uponscious of its existence. A jury, however, prevents the possibility of this danger; and besides this, they view the evidence in a fresh, common-sense, practical sort of way, that would he impossible for a man or men, to do, whose lives were passed in professionally listening to evidence. For, say what we will, every one of us has his mind more or less hent hy the peculiarities of his profession or avocation.

According to the doctrine of chances, it is evident that twelve men are less liable than one to fall into any one particular error; and as unanimity of juries is required in most States, it would *seem* almost impossible that glaringly ridiculous verdicts should he rendered. Evidence strong enough to lead twelve different minds to the same conclusion, must he pretty strong in itself, and the verdict of a jury represents the mean impression made hy the evidence, the extreme views of none prevailing. Such, very briefly told, is the theory of trial hy jury.

In practice, trials hy jury often become little better than travesties of justice, and in all our large cities, different trades are organized into what are called "Exchnnges," and all controversies are decided hy arhitration. For instance, A. and B., belonging to some exchange, have a controversy: they agree to leave it to arhitration: A. selects one arhitrator, B. another. The two arhitrators, thus chosen, select some third party, who is learned in the law and custome of the the tradc. Before these three, the parties at variance state their respective sides of the question, and are governed hy the decision made. This system of lay courts for the trinl of civil cases has been adopted mainly because of the delays and expenses incident to litigation in the regular courts, but in no small degree because of the strange verdicts brought in by some petit juries. Intelligent citizens too often shirk their duties as jurors, and leave the jury-box to be filled with men without education or moral sense, and it is from such juries, that extraordinary verdicts may he expected. A

celebrated wit, in speaking of the uncertainty of the weather in New England, declared that there was only one thing more uncertain in this world, and that was, the verdict of a jury. This is not as expounded hy the judge, or related hy counsel; they have nothing to discuss about the law, nor about any imaginary case, they have only to do with the testimony they have heard

desire to raise the grade of our schools and press our classes forward, we leave the foundation of all knowledge unsound. The higher knowledge can take caro of itself, if we take care that the lower knowledge is sound

Resolutions were passed hy the Association, commending the work of Hampton Institute, and of thanks for the use of its chapel; and also for the hospitality received from citizens of the town. The committee recommended

celebrated wit, in speaking of the uncertainty of the weather in New England, declared that there was only one thing more uncertain in this world, and that was, the verdict of a petit jury.

It is part of the theory of trial by jury, that the accused must be tried by his peers, or equals: but before the law in this country, every citizen is deemed the equal of every other citizen, no matter how far the two may be removed in morality, culture or education. A man who is decried by the law too degraded to sit in the jury box is degraded indeed. Take the average juries as drawn in our courts, and to how many individuals of them would a citizen care to leave the decision of any important question? Yet perhaps before twelve of the most ignorant men in the panel, a citizen may be compelled to try a case involving the nicest question of fact, and one that can only be explained in technical language, which to the majority of them is as intelligible as so much Chinese or Sanscrit.

Another serious trouble about trials by jury is the sentimentalism of some jurors, who will hesitate to keep sacred their oaths, and decide according to the evidence, because they know that severe punishment will follow their verdict. In this jurors are wrong; they do not make the laws; the united juries of America, as juries, could not make a paragraph of law. Jurors have simply to say that a certain set of facts exist; having done this, their duties end. The law bearing on this set of facts existed before they took their seats, and they are no more responsible for it than any other citizens.

That jurors are sometimes bribed, it is useless to deny; but this is an argument against the venality of man, and not against the system of trials by jury. A juror accepting a bribe sinks into a depth of infamy, than which there are no deeper depths: he is perjurer, thief, and unjust judge in one, and severe as are the penalties inflicted for this crime, they are none too severe, if its heinousness be considered. When a man, who has sworn to do justice, to weigh evidence, and render a verdict accordingly, deliberately closes his ears to the evidence, and renders a verdict for a price, he shows the same moral deficiency that leads a trickster to play with loaded dice, or a desperado to murder for hire. In some respects he is even worse, for he dons the mask of Justice to do injustice in, and after calling on the Almighty to witness the uprightness of his intentions, deliberately lies before God and men. Are such crimes never punished?

As before said, too many good citizens fail to do their duty as jurors; they grudge the time, and complain of the irksomeness of sitting for days in a crowded court-room, to the neglect of their own affairs. Such views are not the right ones. Jury duty, should be looked at from the standpoint of citizenship, as one of the taxes imposed by the State, and one which should be as cheerfully paid as any other. It should be remembered, that a citizen who forms part of a jury to-day, may to-morrow have need of the services of a jury; and I know no sounder rule for jurymen, than to apply the Golden Rule, and to enter the jury box determined to act as they would have others act toward them, if their positions were reversed, viz: with attention, patience, and impartiality.

The law supposes that a jury when drawn, knows nothing of the merits of the controversy they are to try, or at least that they have formed no fixed opinions. Jurymen should always try to make this presumption of the law a fact; and have their minds resemble blank paper on which the testimony of both sides is to be written, and their verdict should be as the evidence on one side outweighs the other.

Sympathy has no place in the jury box: the suitors are equal before the law, without regard to "race, color or previous condition"; youth and beauty, age and repulsiveness are not parties to the suit, but only accidental attributes of plaintiff or defendant.

The time demanded for jury duty every year is not much, and in doing that duty a citizen only performs a part of those duties, whence come the inestimable right of the protection of the Law. When a man votes for legislators, he indirectly shares in making the laws: when he serves on the jury, he indirectly shares in executing the laws. In these two ways, "We the People" act individual parts in the legislative and executive branches of our government.

The duty of a juryman is hard under any circumstances; but most citizens make their duty harder, by considering matters not pertinent to their duties. All they have to do, is to determine a certain set of facts; what these facts may be, they cannot help; they did not do the deeds, nor are they responsible for them, any more than they are responsible for the law applicable to the case. The attorneys on either side elicit the testimony of the witnesses, and from this testimony, *and nothing else*, must the verdict be made. It is not a function of a jury to discuss the propriety or impropriety of the law as expounded by the judge, or related by counsel; they have nothing to discuss about the law, nor about any imaginary case, they have only to do with the testimony they have heard.

To give strict attention to the testimony is among the first duties of a juror; for however trivial the matter at issue may seem to him, it is of interest to at least one citizen. The juror is in the jury box to be a judge of facts, and not to decide as to the importance or absurdity of the case.

In my opinion there is no position in which a citizen can be placed, where, if he does his whole duty, greater responsibilities rest, than when called to sit on a jury. He has to put aside his individuality, his passions and his prejudices; he must become a purely intellectual being, listening attentively to all each side has to say, and deciding accordingly. He should be as sensitive and insensible as a goldsmith's scale; he is, in fact, an intellectual balance with a moral fulcrum; he weighs the evidence of both parties in a mental scale, of which his solemn oath is the balance point.

T. T. Bruce.

THE STATE EDUCATIONAL CONVENTION.

According to the announcement previously made in this paper, the thirteenth annual convention of the Virginia Educational Association was held July 9th, 10th and 11th, in the chapel of Hampton Institute.

Educators were present from all parts of the State. The three day-sessions were given chiefly to business and reading of papers upon various scientific and practical subjects connected with the profession of teaching; the evenings, to addresses of more popular character, which were listened to by quite large and appreciative audiences.

TWO KINDS OF COURAGE.

In his interesting opening address, Prof. Thomas R. Price of Randolph-Macon, President of the Association, stated that it had been his purpose to have read to the convention the statistics of the last year's educational work in Virginia; but he had found such unexpected, and he might say, inexcusable, hindrances that he had been forced to forego that part of his duty. He recommended to the Association, the appointment of an annual committee to aid the President in the collection of such statistics; to find the number of scholars taught in Virginia schools, colleges and universities; the number of students from other states attracted here, and the proportion of time and number of students given to the essential studies. Prof. Price frankly pointed out what he thought a grievous fault in the State's present system of education, which he said is, "compared not with other systems, but with its own ideal, more ambitious than solid." He said, "We are all trying to teach too many things—striving to push our scholars forward too fast from the departments into the higher branches. Thus there is a painful lack of proportion between the puny foundation and the swelling superstructure. In all the departments of knowledge I hear the same complaints and see the same faults. Everywhere we are sacrificing the lower to the higher. In efforts to remedy this, this Association can render the best service to the State. The two elements which form the basis of all education,—proficiency in which is itself an honest education, deficiency in which is inability to achieve any education at all, is life-long paralysis of the mental powers,—are, 1st, practical and scientific knowledge of the mother tongue, so as to speak and write it with ease and correctness, and to read it with pleasure; 2d, exact knowledge of elementary mathematics. I grieve more and more, from year to year, at the neglect of the mother tongue in our schemes of education. In our desire to raise the grade of our schools and press our classes forward, we leave the foundation of all knowledge unsound. The higher knowledge can take care of itself, if we take care that the lower knowledge is sound and honest and full. Let us make ourselves, then, the interpreters to our people of Plato's maxim, wisest of uninspired words, 'Of everything the beginning is the greatest part; for at the beginning whatever shape one wishes to give is formed and imprinted upon the soft material.'"

In these words, Professor Price struck the key-note of the convention. The same convictions were again and again reiterated by the speakers.

Col. Wm. Allen, however, (Principal of McDonnaugh Institute in Maryland), in the second evening address, expressed the belief that "a far more important consideration for the progress and safety of the state is the higher education as given by its universities, colleges and high schools," regarding these as designed to educate leaders to guide the masses, and pointing to the "labor combinations, strikes, riots and movements of every kind that pervade the North," as evidence of the failure of its theories of the advantage of common schools in preparing the masses for citizenship. He thought that we should "provide for the high schools first, and then look to spreading elementary knowledge."

The papers read before the convention embraced the subjects of the Natural Sciences, Methods of Teaching Languages, ancient and modern, History, Mathematics, and Mental Science, a Teacher's Life Assurance Society, and the Higher Education of Girls. Dr. Brooks, director of the Johns Hopkins summer school of Biology at the Rip-Raps, gave by invitation an account of the methods of Biological study at the University. The third evening address was by Rev. F. C. Woodward of Murfreesboro', N. C., on the Relation of Colleges to the Professional Tendencies of Our People, extracts of which will be found in another column.

By request, the Principal of Hampton Institute gave some account of the school. He invited questions from the Association, and said that, "as far as negro intelligence is concerned, we are not troubled by the question of brains as a race question. While there is a great deal of dullness, as there is in all races, there is also a great deal of first-class mental capacity. Our great effort now is upon the English language. I consider your President's words last evening very timely. Col. Parker, the very successful primary teacher of Massachusetts who has been conducting our Normal class lectures this spring, urged us to sweep away all the higher studies. Let us at any rate teach our students to do the elementary work thoroughly. You are the teachers of thousands, and your general idea seems to be the same. Our work is to make men and women. First-rate material is scarce everywhere. You can do great good in sending it here—not to increase our numbers, for we are full and more than full, but to send us the best material that will justify these advantages and be made useful to the people and the nation. The course of the school has drawn the fire of the negro press because of the rudimentary course here. We are not troubled by this, but it shows the line on which this question will have to be worked out by those who want to bring the race up. There is no difficulty between our graduates and the Superintendents, nor with the body of the people. There is no more encouraging work. We notice in our graduates coming back to us in a year's time, increased weight and force, and they are doing good, honest work. Gov. Kemper asks Will they hold out? Generally, yes. Some seed falls on stony soil, but much in good soil, always fruitful."

Resolutions were passed by the Association, commending the work of Hampton Institute, and of thanks for the use of its chapel; and also for the hospitality received from citizens of the town. The committee recommended that the Association meet here again next year. Some delicacy being manifested as to returning so soon, the Principal assured the Association that when he had heard of the appointment to meet at Hampton, he had felt it a simple duty, as well as a pleasure, to put the buildings at their service. He was the steward of property designed for, and devoted to, the interests of education, and felt that he was but carrying out the wishes of its founders and trustees in using it for those purposes. Hon. John C. Whitin, the noble founder of Virginia Hall chapel, was a man who never liked to see any of his property lying idle, and he would prefer that this should not. The Principal considered that in an important sense the place belonged to them and all educators of the State, and hoped they would feel at home in it whenever they would come.

After some discussion, the next annual meeting was appointed at Hampton, and the convention adjourned.

The members of the Educational Convention generally, found time to look over the school buildings and industries, and to visit the Indian classes which excited great interest. Some of the professors made a note of an ingenious method for teaching them addition, devised by Mr. J. C. Robbins, a Hampton graduate who has charge of their instruction most of the summer, and the readiness with which the long columns were footed up.

TWO KINDS OF COURAGE.

It is a fine thing to be brave. Rather than be called a coward, boys and men will often go into great danger. But did you know that there are two kinds of courage? Of course you would rather have the best. Once there were two boys, James and Walter; they were walking one day with some of their friends by the river, looking at the fishing boats and nets, and all the sights that interest boys so much about the water. Some of the boys amused themselves by walking across the bridge on the rail.

"Come on Walter," called James.

"No" said Walter. "Some of you fellows will be tumbling in before you know it, and you don't know how to swim."

"Ho! and you do know how, and yet you're afraid," cried James. "Before I'd be such a coward."

As he said this, he felt so fine that he gave an extra spring to show how brave he was, his foot slipped on a wet spot, and down he went into the deep water with a splash that frightened half a dozen crabs so that they let go their hold on the pier, flopped in after him, and scuttled away as fast as they could go. The water closed over his head, the boys shrieked and shouted, but before the nearest fisherman could come to the rescue, Walter had slipped off his jacket and dived off the bridge so quickly that the first time James rose, he struck out for him and caught him before he could sink.

There would not be much danger for a person who can swim, in saving another, if it were not that the one who does not know how to swim, almost always seizes his rescuer so as to impede his motions and draw him under water. The grasp of a drowning man, it is almost impossible to shake off. This fact makes it very likely that there will be two drowned instead of one, and any one who thus tries to save another does so at the risk of life.

Fortunately for James and Walter they were very near the shore, and with a few struggles in which James swallowed a good deal of water, Walter succeeded in reaching it and holding his own head and James's out of water. The other boys then drew them up on the bank one after the other, and so happily ended their adventure.

But which do you think was the best kind of courage, James's or Walter's? James had that unthinking sort of boldness which many have. He risked his life for nothing, because he did not think enough about the danger, to fear it. Walter understood all the danger, and braved it all to save another's life.

General Scott, the famous old veteran of the Mexican War, was once riding to the battle field with one of his young *aides* at his side.

General, were you ever afraid in your life? asked the young lieutenant. "Yes, indeed," said the General, "were not you?" "I don't know what the feeling is" said the Lieutenant with a boastful air. "Well sir," said the old General, "If you were half as afraid as I am now you would run away."

That is the best kind of courage, you see, which keeps a man to his duty even when he is afraid. That is moral courage, and the man who has it will not throw his life away foolishly, to prove himself a hero; he will not be afraid to be called a coward; he will be afraid of nothing so much as to do wrong.

THE RELATION OF COLLEGES TO THE PROFESSIONAL TENDENCIES OF OUR PEOPLE.

By courtesy of Rev. Frank C. Woodward of Murfreesboro', N. C., we are able to give our readers the following extracts from his very eloquent address on the above subject before the Virginia Educational Association, at Hampton Institute, July 10th. While all his address was of great interest and beauty, we have selected those parts which have most direct bearing—the more striking because, of course, unstudied—upon the educational necessities and tendencies of the colored people as well as the white. His broad and liberal ideas will commend themselves to them, and his strong, common sense views of the higher general education to be desired we urge upon their careful attention. A young man, knowing the ambitions and feelings of young men, and yet lifted far enough above them by position and experience of life to see better than themselves their necessities, he presents these with a force and clearness as apparent in reading his paper as in listening to its eloquent delivery.

He said: "When I used to write what, in the Old Field School, were called compositions, I was given some such abstraction as Virtue, Happiness, Contentment, as a heading, and allowed to scratch down, without regard to correctness of conception or consecutiveness of thought, whatever came uppermost as I stirred up my brain-shallows for words and ideas. And when your President did me the honor of asking me to talk to this learned body at this time, I could have wished most sincerely that, as in my juvenile days, I might be suffered to take some figure-head subject and maltreat or desert it, while the virtuous mantle of small expectancy and great allowance should be stretched, if possible, to cover my wide-spread shortcomings. But I feel that no man dare stand before you who has not something to say worth your while to hear, so because I feel that the theme I have chosen, viz., The Relations of Our Colleges to the Professional Tendencies of Our People, suggests, whether I shall be able to set them forth or not, thoughts worthy the attention and consideration of Virginia educators, I am emboldened to crave your patience a short time this evening."

He regards the college as "the centre force in education, that both fixes the scope of the lower schools," which lend up to it, "and determines the course and standard of the universities" which meet the student where the college leaves him, while it is the finishing school of many. "The interest of those of our people who show any care at all for education is fixed on the college. They associate the ideas 'education' and 'college' together always. The children go to the neighborhood school to learn history, grammar, arithmetic, &c., but to get an 'education' they must attend college.

"But the colleges fall short of doing the work they have or should have set themselves. It matters not how well they may train a few men, they are certainly below their mark, if failing to reach the masses of the people, they thus fail to make higher education popular and widely useful. * * * The popular error about colleges is that they are looked upon by nearly all classes, both in their design and effect, as training schools for those who intend to enter the professional life,—to be established and conducted almost solely for the benefit of that class who are to brandish the ferule, handle pill boxes, carry the green bag, wear the straight breast coat, and drive the editorial quill."

Mr. Woodward believes that this popular idea is fostered by the colleges themselves, which do adapt their course chiefly to the training of professional men and encourage the student's feeling of distaste and contempt for any other career. He says:—

"Should you make inquiry now, I think you would find that quite two-thirds of the young men in any Virginia college are getting ready for some sort of professional career—and look down with lofty commiseration upon the spiritless minority who can suffer their lights to be busheled by an agricultural measure, or to burn in the dirty socket of some low mechanical calling. That most of our young men prefer the professional life, and that our college men almost universally enter it, are facts patent to clear eyes and ears. The professional tendencies of the times, and of our own people especially, would be laughable if not so appalling. Philo-professionalism—if I may coin a word,—always a characteristic proclivity of the better sort of Southerners, is now become an epidemic, breaking out among all classes. Having been long accustomed to see the hand-work done, almost solely, by the lowest class among us, we have come to look upon the accidental association of this class with this kind of work as a necessary fact, and upon this assumption have proceeded to fit that work upon that class, as we do yokes upon oxen and collars upon mules, taking for granted, most illogically, the meanness of the class from the lowness of the work and the lowness of the work from the condition of those who do it; so have we gotten a distaste to manual work and a contempt for those who have to engage in it. We like not hard hands, soiled garments, blunt fingers, the homely, solid look of a spade, a plane, an anvil, and not because we think the occupations these stand for to be degrading, when we use our common sense, but first, because we are physically very lazy, and second, because we have not yet been able to break from the thrall of prejudice which associates these with villanage and slavery and makes them badges of the ignorant and the base. We are still ruled by the whimsey, that the life of a herd-working farmer or mechanic is not compatible with intelligence, refinement and with that high-sounding, vague, modern *summum-bonum* that, without defining, we are pleased to name, culture; whoever, then, would attain these must abstain from those employments that are held to be without their pale: hence, our young men, in the struggle for social existence, feel driven to withdraw themselves from such work and such workers and to, at least, affect some one of the learned professions and the collegecourse that fits for these."

Mr. Woodward sees with regret that this same "propensity to glorify the professions and devote the colleges to them" is also "driving the boys and young men out of the field and workshops where men are now most sorely needed." They are "growing ashamed of dusty, manly toil—and crowding into occupations fancied more respectable because in them the amount of hard work is reduced to a minimum." Those who are shut out from professional life see no use in going to college, and are not far from the truth. "Have we not, in our colleges as now conducted, if unintentionally, yet really, a system of class education that is driving from them the very people who most need help?"

"WHOSE ARE OUR COLLEGES?

"If their aim is simply to drill the leaders and let the rank and file go by, then let us know it distinctly, and cease both our talk and work in behalf of general higher education.

"But if, as I suppose, the colleges are the people's schools, open to all, irrespective of professional or non-professional preferences, intended to give higher education alike to lawyers, farmers, ministers and house-builders, to make all men, regardless of place or of calling, sounder thinkers, more faithful workers, more intelligent voters, better neighbors, more Christ-like christians, then let us find, very presently, a remedy for this harmful misapprehension that now cripples our educational plans and shuts, for the people at large, the way to the higher intellectual and social life. Can educators permit the extension of this vulgar error? Our educational system, from infant-school to college, is *meant* to give to the whole people the best possible chance for getting the mental training and cultivation necessary for their social and literary improvement and success in life: to the people, I say; for whatever reputation may be reflected from a few big, bright names, no society is better, either socially, intellectually or morally, than the average of its constituents. In order to make the masses honest and self-helpful we are not to train them exponentially, by educating a representative here and there, we must reach the individual. The body of farmers and mechanics is not to be cultivated and enlightened by making some, or many, of them lawyers, doctors and teachers. And it will not help them to enlarge the scope and requirements of the course of education before they have been brought up to your lower course. The higher you put your standard, so long as it touches only the professional class, the wider you make the breach between this and the other classes, and the more difficult does it become to get at the people. To the degree that the sympathy between the professional and laboring classes is weakened, a sympathy dependent upon common enlightenment, is there fostered: upon the one side, an exclusive aristocracy, and upon the other, communism and socialism; the bloody straw that in the late riots showed us the direction of the wind is warning, not only against the centralization of capital but also against monopoly of educational advantages.

"General enlightenment, and to this end as far as may be, equal educational opportunities, is the first need of a people who stand on a political level, where the illiterate farm-band is as strong an individual factor of the government as the scholar of world-wide fame. We want perfect understanding among our classes and common ground to stand on. Special schools should exist; but as to general education, whether low-school, high-school or collegiate, it should supply the wants of the body of the people and should even be adapted, as far as possible, to their state of ignorance, prejudice and indifference; should stoop low as well as tower high, and should stoop first. Educational systems to succeed must be adaptive in their forms, their matter, their methods. It is not reasonable to think that the same educational methods and standard are suited to all times or to all people; we want something that will attract and help our own people, and we are not to conclude, for instance, that the course of a German or French or English school, because it is to their liking, can be at once made available for the same class here. What could we do with a Gottengin University at Charlottesville, a Johns Hopkins at Richmond, or a respectable high school in some parts of the Moorfield Valley? You must adapt your educational machinery to the needs and capacities of those whom you would instruct. Certainly it should be well organized, well administered and up to as high a standard as the people can be expected to appreciate and try to attain; but, in the organization and management of popular educational institutions, what their course shall embrace and require is not, it seems to me, to be arbitrarily determined by scholars, according to their advanced ideas of what a college should teach, but, before all other things, with reference to the intellectual needs and powers of their pupils and with a view to their occupations and interests, otherwise you will lift your college out of the pupils' reach and they will turn their backs on it.

"The faculty of an institution that promises to give general training to all classes of pupils should consider what sort of people they will have to do with and try to help them on,—not in the way that makes the people conform to preconceptions of what an educational course should be, but by making the course suitable to the actual needs of the people. Not that it should teach mining chiefly, if adjacent to a mining district, or become an agricultural college, because most of its men are young farmers; but should so regulate its course and standard as to commend itself at once and alike to miners, farmers or any other class, as helpful to all.

"We need a system of college-training equally adapted to the wants of all who desire higher education, no matter what they intend to become. It is not the business of the colleges to know what a pupil is going to do with his knowledge; but to give him what will stand him in stead, wherever he goes and whatever he does. We do not want such a course that a man has to go through with it before he can see the use of it! You may build universities, and make their faculties outnumber the body of attending students; you may found colleges and prop them out of people's reach with a high standard; you may ignore the masses, who do not, because they cannot, fall in with your advanced opinions, and despite their low statue claim high honor for the education work in your state; but, if you do not reach the proletarial, do not touch the 'great unwashed,' do not lift the commonalty from the low, dark reaches of life to something brighter and better; do not weld the extremes of your heterogeneous society into a circle of true neighborship and companionship, your boast is only brag, your vaunted improvement, a pretence, your claim to culture, a veneering of the thinnest. Education, to be helpful, must be equable; over-education and accompanying under-education have time and again brought defeet to plane for general enlightenment, as an army, whose either victorious wing pushes on too fast, soon finds that the inequality of the advance has turned its flank to the foe and forced retreat along the whole line.

"I know that there are many who claim that general education is harmful to the masses, that by it men are made discontented with their condition and unfit for those places from which the education provides them no way of escape; and, if their's were the only correct definition of what education means, we should all have to agree with them; but, as opposed to their narrow-eyed view, common sense will teach us, not that education is dangerous to the people, but mal-education, or that which is not suitable to their case. The position assumes that to educate people is to make them dissatisfied with the lower places in life and with hand-work, and I do not know but that the present system sustains it; but that does not to prove the correctness of the notion, but rather the falseness and inefficiency of the system. It may be said that not the system of education or the policy of educators is responsible for this state of things, but that cannot shift the duty of correcting it from those who alone have the power to do it. The leaders must show the way; the masses will not go forward of themselves; will not drill themselves; and their providential improvement, by what Mr. Mieawher would call, 'a fortuitous combination of propitious events,' is not to be awaited. In vain shall you bids till they shall feel their need and desire a remedy. The earnest teacher shall not sit quietly in his professional chair and wait for the world to come and be taught, but shall, like the Ancient Mariner, button-hole the world and make it listen to what he has to tell.

"There is no self-help in ignorance, no elasticity in prejudice, no outward-shining light from darkened minds, on the better way; but it is the glory of enlightenment that, though it be high, it can bend low at need; though its clearer eyes are fixed on the by-and-by where it sees all truth converging, it can still look out the way for the short-sighted world stumbling through the present; though its step is the swinging stride of a giant, it can time its tread with that of the weak feet that shuffle and halt beside it. It must not go ahead too fast, it must wait now and then for the lame strugglers, it must even turn sometimes from its diametric course, humoring blindness and weakness, to go to its goal around a semi-circumference. The educators are foreworkers, they must blaze and clear the way and then so lead that the slow-footed army may follow.

"Shall we not have in Virginia that system of education that is best suited to the wants of Virginians? Whatever the future may have for us, at present we are agricultural or nothing. We need educated professional men and educated mechanics too, but more than all, educated farmers; this is the class to which more than one-half of our college men should belong, but I venture that not one-tenth of our Virginia college-boys is looking to this life, and that not one-third of that number remains at college longer than two years. Our colleges hardly touch the big body of the people. Does not everything depend upon the intelligence of the dominant class? The farmers are the bulk of our people, are the wealthy men of our State, and have the power to make or mar its fortunes; they hold the purse and dole the pay to us professional men, who, though in some sort the leaders and teachers of the people, are still their servants and employees. We want intelligent followers when we lead, capable pupils when we teach, and also enlightened masters and liberal payers when we serve. We must educate the dominant class, for in its improvement, after all, is conditioned the best interests of the whole people. Let this unhealthy philo-professionalism be discouraged by all true people, and a fondness for honest, manly hand-work fostered instead. Let the faculty of any one of our colleges set its face against the present professional tendencies of our young men and bend their influence upon popularizing the mechanical and agricultural pursuits, and very soon would you see a marked change in the life-purposes of the boys brought under their teaching; they are blamable if they fail of their duty in this matter. But, better still, let the parents raise their boys and send them to college with the avowed purpose of making them educated farmers, machinists, architects, cotton-merchants, tobacco-manufacturers or what not, and, if the boy must have a professional title, let him be baptized major, judge, professor or doctor; it will do him as much good and no one will care a whit for how he got it.

"It seems almost a pity that any of the Indo-European, Anglo-Saxon, American-Virginian stock should needs be farmers and mechanics; it had been well, could our Virginia have been a world's hot-bed for forcing legal, medical, ecclesiastical, professional and editorial seedlings for the supply of the nations; that she should have been a land of courthouses, churches, school-houses, hospitals and sanctums, and evermore the mother of statesmen, philosophers, judges, editors, professors and doctors of divinity; but it is not so,—she is a land of farms and farm houses, and the mother of farmer-boys. But she has all reason to be proud of her brown, brawny sons, for they have made her first in whatsoever things are true and honest and of good report; they have fought her battles both upon the fields where fall the leaden trail of war, and no less bravely in the peaceful fields where the snow-covered fallow crumbles and the golden grain rustles musically on the scythe-edge; we want them now to stand for her honor in her own legislative halls.

"As has already been said, the course of study should be adapted, not only in its standard, but also in its matter, to the popular needs. We need not, perhaps, introduce many or any new studies, but by a reorganization in which the comparative importance of some studies shall be made less and that of others greater, we might, I think, get a new collegiate course that would suit our purposes and needs better than the present one. In the philosophical department, we might have less of Metaphysics and more of Natural Sciences; in the Mathamatical, less of advanced pure Mathematics and more of the applied;

in the department of philology, less Latin and Greek, and more English. Would it not be better, while still granting to foreign languages, ancient and modern, to metaphysics, and to the higher mathematics all they merit, and, in special cases, providing fullest instruc-

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA. H. PHOEBUS, PROPRIETOR.

TERMS: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

☞This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 19 years, as taken from the notes of the Meteorological Observatory, shows an average of 60°, 74°, 76°, for Summer; 70°, 56°, 46°, for Autumn; 45°, 44°, 42°, for Winter; and 48°, 52°, 63°, for the Spring months. —Open for guests all the year.

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 32 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

FREE TRADE AND TARIFF.

To the colored men, the questions concerning "free trade" and the "tariff" must be novel and confusing beyond measure. It might naturally be so, by reason of his very recent attainment to an estate, which enables him, and more than that, forces him into active relations with these questions. However, if he is startled, perplexed and confused, he is in no worse plight than his white neighbor. Remarkably few of the merchants of this country have consdiered it worth their while to take the trouble, or pursue the close study necessary, to become fair and intelligent judges of these vitally ecnomic questions. So long as they make money, so long as business can be done by the simple rule of three, buy for less and sell for more, they will ask themselves the question, why waste time in anxious study over these abstractions? And probably any little ventures in the line of abstract study have proved an enervating specific for sleep. The farmer, while taking in rich prices for crops, indulges in the same meditation. But panics and crises come and rock the financial world like an earthquake, trade falls off, pinching times come, and at the last moment, these merchants and farmers begin to ask the reasons for the disasters, and are generally content to put up with grossly ahsurd ones. It is possible that the utter contradiction of views respecting protective tariffs, among men of reputed intelligence, may be explained in a way that will enable the colored men to see the real nature of the conflict. Tariffs are taxes on imported articles, which make the cost of these articles, when they reach the consumer, much larger than they would be if brought at cost of simple importation. Iron can be imported from England at a cost of twenty dollars per ton. The tariff tax is, however, about ten dollars per ton. So the consumer pays thirty dollars for it. Under the "free trade" system, the iron would be subject to no tariff tax, and the consnmer would pay but twenty dollars per ton.

The free trader claims the right to buy articles for his own consnmption, wherever he can get them cheapest, whether in the town in which he lives or in any other place on the Earth. It certainly seems like a sound, simple, and most reasonable doctrine, and if the people of the world were under one government, this doctrine would prevail. But there are many nations and many governments, and each nation seems to think that its first duty is to look out for itself; to develop its resources of all kinds, and make itself wholly independent of all other nations, and its own people prosperous even at the expense of all countries. The grand Christian idea of the brotherhood of nations does not appear to be very welcome in the matter of national prosperity, and, like some other important questions, is cordially ignored, where temporal matters are in hand.

On the other side the tariff people claim that unless there is "protection" by means of high dnties, there can be no competition with foreign articles, and if there can be no competition, there can be no manufactories, and the country must become at once simply agricultural, and there will be no wealth or prosperity, or diversified industries.

The free traders reply that the increase of prices by tariffs, is simply compelling the mass of the people to support the few who are engaged in manufacturing those srticles, which can be bought cheaper elsewhere. They insist, moreover, that all kinds of indnstries will spring up in a natural way in the course of time, and without the need of protection. Ontside of the scholars, and those interested in it as a mattter of science, the disputants have "axes to grind" quite generally. Those insist on protection who are making, or think they will make money if there is a high tariff. And the rest believe in free trade, because it is for their interest to buy in the cheapest markets, wherever they are. While these views are hitterly antagonistic it is probable that the real difference is one of expediency in the education or development of the nation. The free trader believes in a slow, natural growth from agriculture up to the most complex system of industry, although it may take a long time to do so. The protectionist believes in taxing the people, in order to educate the nation, at once, in many industries, and develop many resources.

The taxation for the purpose of common school education is quite analogous. It is a taxation to provide education for individuals who are without capital or means of self-culture, and without which, the average education would become very low. The theory is, that the nation is better off, although by this method many are called upon to pay considerable sums for general education, even after providing liberally for the education of their own households. There are hitter opponents of this protective system for common schools, especially in this State. They say, "we educate our own children; let other people do the same, hut do not make us pay for it. In time other people will do as we do; and education will become universal. It is unwise to put the nation into an educational hot-house and force its growth." It must be admitted, that there is force, in the argument; free trade may be the soundest doctrine, and if it prevailed articles would be cheaper. At the same time protection may be regarded as an education in various industries, which finally ends in skilled labor able to compete with those industries which flourish in free trade soil. American stoves and glass ware from Pittsburgh are exported to Germany. American cloths, and hardware, and sole leather are largely sent to England. Locomotives are built as cheaply here as in Europe. These commercial triumphs are claimed for the system of protection, and apparently, with reason. But the facts concerning the matter are not all developed. Vast amounts of money have been paid by the people for this "protection." Thousands have been tempted to engage in manufacturing when the protection was unstable, and ruin has resulted. Legislation has been demoralized, and business made speculative. Trade has been overdone, and multitndes taken away from real production. There are abont four hundred and fifty blast furnaces in the United States, for iron has been well protected. It is said that two hnndred of these could supply the demand of the conntry in ordinary times. Millions of money have been lost, and armies of men left idle, in consequence. There are cotton mills, now in running condition, sufficient to supply the wants of the country, for the next fifty years. So the qnestion is asked, Does "protection" protect? It is not our object to give any opinion on the subject, but simply to put before colored men the points at issne. It is possible that the selfish interests of the nation may settle these questions, before the colored people are called npon to take sides.

SELF-PRESERVATION being the first law of our nature, it is remarkable how little known or cared for are the simplest rules of health and life. That one-half the ills which flesh is heir to, in the way of fatal disease, are absolutely preventable hy intelligent care is probably an under-estimate. If a knowledge of the body and its laws, perfectly within the comprehension of the unscientific masses, could be generally diffused among them, one-half, at least, of the agony of disease, and the sorrow of bereavement, one-half of the "dark and mysterious providences" which people groan over with eyes shut and hands folded, would be taken out of the measure of human woe, quite full enough without them.

True, it is not ignorance only that is the trouble, but indifference, and that to an astonishing extent. It is a curious inconsistency of human nature, and not a glorious one. Even the Christian man of business teaches his children the ten commandments one day in the week and breaks the greater part of God's health laws himself, six days out of the seven. Even the doctor neglects his own advice. In the intense pursuit of wealth, or fame, or power, men cut short the only life in which they can enjoy their gains. Perhaps there is a hint of our immortality in this royal carelessness of the most precious treasure we possess. To each of us every man is mortal hut himself. It is not, however, the best way of keeping up the delusion long.

Ignorance, after all, accounts for a great part of the recklessness. Ignorance and its associate superstition, confined to no one rank or condition in life, are chargeable with much of the unnecessary mortality that prevails in all. One has only to look about him with his eyes open to be convinced of this. Anything that lets in the light of reason and common-sense upon this ignorance helps, so far, to

> "Ring out the shapes of foul disease,
> Ring in the thousand years of peace."

An effort to this end has been begun at Hampton in the publication of a series of sanitary tracts for the people. The details of its motives and plan will be found in another column. The cordial endorsement and encouragement which the project has received from the American Social Science Association—whose resolutions are given with the prospectus—shew with what seriousness the most intelligent and scientific thinkers of the country regard the need of such work.

WE are pained to learn of the sad death of ALBERT J. LEE, one of our students. He was drowned while hathing in the surf, at Atlantic City, N. J.

WE publish below interesting extracts from the letters of Mr. A. B. Williams, a Virginian, a correspondent of the Charleston, *News and Courier* of Charleston, S. C., who accompanied the colored emigrants who, in the early summer, embarked in the "Azor" for Liberia. We know of no account of that colony so well worthy of confidence as that of Mr. Williams, whom we believe to be a candid and competent observer. In assuming the expense of sending him, and in selecting so fair and so able a man the *News and Courier* has made a most liberal contrihntion to the cause of African progress, and is entitled to the thanks of the friends of that race.

Liberia has, in the words of her representatives, "received great harm by being painted in too high colors." We now have the truth abont her and it will do her more good than harm. The history of the emigrants, so far, has been one of mismanagement, to some degree criminal, and the exposure of it by Mr. Williams is a valuable service to the colored people. We skip his well founded charges against the company that got up the expedition, and present, in part, his Liberian experience. Our readers cannot fail to be interested. In spite of infinite folly and faults there is progress in Liberia, and there is a carcer there for brainy and muscular young colored men, who chafe at their limitations in America.

"LAND OF PROMISE."

Liberia lies on the west coast of Africa between the 4th and 7th parallels of latitude, and the 7th and 12th meridians of longitude. Her territory runs along the coast for six hundred miles, at a depth varying from forty-five to one hundred and fifty miles; the land having been generally acquired by purchase from the natives. The inhabitants consist of colored immigrants from America and their descendants, variously estimated in at number from eight thousand to twenty thousand, there being no reliable census. From the best information that I could get, I am inclined to think that they number from twelve thousand to fifteen thousand, and that they have about hold their own with probably a very slight increase. Besides these there are a few native Africans, taken from captured slave-ships and brought here, uncivilized detachments of various native tribes, a number of civilized and semi-civilized natives scattered about among the Americo-Liberians, and about a dozen white men, generally traders. The Government is called a Republic, and is, in general features, about in the form of our State Governments, there being a president, vice-president, secretary of State, ditto of the treasury, attorney-general, comptroller and auditor. These officers compose the Cabinet, like our National one. The Republic is divided into four counties—Montserrado, of which Monrovia is the capital; Grand Bassa, of which Buchanan is the capital; Sinoe, of which Greenville is the capital, and Maryland of which Harper is the capital—each having its own local government. The towns are governed hy municipal officers, just as ours are. Monrovia, which is named after ex-President of the United States Monroe, is the capital of the country, although Grand Bassa, which is situated south of it on the coast, is said to greatly surpass it in the amount of business done. Each county elects four delegates to the National Legislature, and two Senators, except Montserrado, which elects three of the latter. The Congress, or Legislature, is, therefore, composed of sixteen representatives and nine senators. The Vice-President presides over the Senate, and the lower house elects its own chairman. Every head of a family is given hy the Government twenty-five acres of land, and each male adult ten acres, selected from any unallotted lands. *Only property holders can vote*, after taking the oath of allegiance. There is no prescribed term of residence before becoming a voter. *No white man can hold property*, and that race is, therefore, disfranchised, which is a practical satire on the universal suffrage dogma to which the American negro and his particular friends have ever been so especially devoted.

BRIGHT SIDE OF LIBERIA.

From all I can see, I know no reason why Liberia should not, with proper care, become one of the great cotton-producing countries. There is no replanting necessary, except every twelve or fifteen years; the plant bears the first year, and soon becomes strong enough to defy grass. Nature seems to provide everything here. In rambling around my companion showed me the fever plant, the leaves of which made into tea, are almost a sovereign cure for fevers; the soap tree, the leaves of which when bruised, lather like soap, and are almost as efficacious for cleaning rough surfaces; the tooth plant, a white leaf, which, as I ascertained by experiment, by a little rubbing cleans and pelishes your teeth beautifully; the hamorrhage plant, the leaves of which when applied to a wound stanch the flow of blood; pepper plants, licorice, ginger and lemon plants, a leaf smelling and tasting like lemon, and an admirable medicinal agent; then the mangrove ash makes the strongest sort of lye, and the nnes of palm and bread fruit trees everybody knows. Cassada is a long root, generally about two inches thick, which is palatable when properly cooked, and is very nutritious. Indigo is abundant. Walking about Clay-Ashland you kick up pure silicate from the ground in flakes at every step, and I was shown specimens of ore, I am told yields eighty-five per centum of pure iron. The natives bring pure gold from the interior to trade, and we procnred a ruby picked up from the ground. The Liberians claim that there are diamonds also, hut precious stones seem very scarce. These I do not give as rumors, hut as the result of diligent inquiries among different people, at different times and places, and of personal inspection

KINDNESS TO EMIGRANTS.

Whatever else may be said of the Monrovians, they certainly displayed great kindness to the strangers, who were in many instances utterly destitute of provisions, sending them cooked meals and delicacies for the sick, liberally and continuously. This was no light matter, by the way, as provisions are fearfully high and hard to get. The people in the country do not think of producing anything to sat beyond their own immediate wants, and hardly that. Although there seems to be plenty of cattle, they are usually owned by natives, who never kill them un-

less they are obliged to do so, as cattle, wives, brass kettles and iron bars serve them just as the natives—an appreciation of their inferiority to civilized people. Perfect self-satisfaction

the person and house, ventilation, drainage, care of children and invalids, preparation of

lous tales of the power of those endowed with supernatural gifts.

I think it is very unfortunate that the races

less they are obliged to do so, as cattle, wives, brass kettles, and iron bars serve them just as bonds, stocks, and real estate do European or American moneyed men, as permanent investments, and outward and visible signs of wealth. Cassada, the great staple of the country, sells at 50c. per bushel, a bushel of the roots being about equal to a bushel of sweet potatoes; yams at the same price. Fresh meat is almost impossible to get. Even chickens are exceedingly scarce, and very small ones sell at twenty-five cents each. Eggs are three cents apiece by the dozen. American flour is $14 per barrel. American pork is $28 per barrel. English canned meats and vegetables are fifty cents per can. Onions (English) bring twelve cents per pound. That is about all the Monrovian bill of fare, and it is largely procured from England. Even in the country they live largely on

IMPORTED FOOD.

In answer to inquiries on the subject, I was told that it was supposed that beets, carrots, parsnips, onions, peas, beans, potatoes, &c. would grow there, but they had never tried. Everybody coincided in my expressions of wonder, and everybody re-echoed the set phrase, "Yes, it ought to be done, but you see what we lack here is enterprise; enterprise, sir, new blood and capital would make this country one of the greatest in the world. Our resources, sir,"——. It seems to me I've heard something of that sort down South in Dixie.

THE "SARCASM OF FATE."

It may be more of the "sarcasm of fate," that exactly the state of affairs exists here now that I imagine made slave labor necessary in America; that is, every man is a landholder, an owner and an equal. No lower classes have come in yet to do the manual work. There are no servants, and servants are a necessity, except in an imaginative jackass's Utopia. A few of the poorer Liberians hire out, but they are as good as their hirers, and consequently matters don't work smoothly. All such "servants" are addressed by "Mr." and "Miss." It sounds funny to hear the master of the house say "Miss ——, a glass of water, please." When I visited the President I heard him ask: "Mr. Ross, will you bring in the wine?" This is, of course, a great hindrance to the cultivation of land on any extensive scale, especially when there are no horses. It cramps fearfully the sugar production, where much and cheap labor is indispensable at certain times. So, disguise it as they will the Liberians have to

DEPEND ON SLAVE LABOR

at last, for it comes to that. They hire from a native king a certain number of his superstitionbound slaves for so much rum, so many brass kettles, iron bars and guns, and so much calico paid to him. The "hands" work well and are faithful and obedient until the king, through caprice or having been paid, end wanting them to cut rice, sends orders to them to come back. Then they leave in a body, just, maybe, as the planter needs them most, and the Liberian government is too weak to enforce contracts made with its citizens. One secret of my friend Sharp's success I was told is that he makes an excellent quality of rum, with which he pays a king for "help," and is shrewd enough to keep on good terms with the potentate by sending him an extra cask now and then. In this way he and a few others manage to secure labor when they want it for their fifty, one hundred, and one hundred and fifty-acre farms. One of a thousand acres, though, it would be difficult to work here. There are some comperatively free natives who hire cheaply, but they are unreliable and apt to "knock off" and go at any time. You can pick up a few always, enough to man your canoe or do odd jobs, and if you treat them kindly, they will hire out to you again, and do any kind of work. These natives are abjectly afraid of the white men, having acquired the idea (probably from the Liberians) that he is not only an habitual cheat, but an habitual cutthroat. It requires several months of acquaintance to get them fairly reconciled to the Caucasian. Then they like him above all, and will give him the preference in hiring. These natives will take anything, and the Liberians (who "fled here from the slaveholder's lash") do not scruple to administer unto them a thrashing when provoked thereto. The native is rarely "sassy," and the most he does is to complain in a sort of whine, in his broken English. It is a universal custom for them to address all whom they consider as superiors as "daddy" and "mammy." (This information was a great comfort to me, as I had been much scandalized by being addressed as "daddy" by a fat Kroo boy, within an hour after my landing.)

THE DIFFICULTY REGARDING HOUSE SERVANTS

is in a great degree obviated by a practice now fortunately becoming common. That is the binding of native children by their parents to serve in Liberian families until twenty-one years of age. There were from two to six of these youngsters around nearly every house I visited, and very bright, "handy" and honest they seem. In return for their services they are clothed, fed, taught reading, writing, Christianity and her handmaid Civilization. Quite an attachment in some instances seems to exist between master and servant. This shows a long step forward on the part of the natives—an appreciation of their inferiority to civilized people. Perfect self-satisfaction is the greatest bar to improvement, as it is the most unmistakable mark of a fool. Had the Liberians a little of the humbleness and consciousness of inferiority of the natives, I might have more hopes of them. So far, the civilized natives have made little progress. When they return to their tribes they have to doff European clothes, as, if they didn't, the medicine man would probably attribute the first misfortune that befell him to his violation of the customs of his ancestors, which are more honored in the breech cloth than in the observance of pantaloons and paper collars, and a "settling" dose of poison would remove the progressionist. Their knowledge of the reading and writing of the English language, too, is now generally employed in aiding the king in some villainy. During their residence with the Liberians, they usually pick up a knowledge of commercial values, which makes them useful in facilitating the trading operations of their tribe. As the numbers of these civilized ones increase, however, their influence is bound to be felt for good.

Apropos of the natives, it may be mentioned that the principal tribes hereabouts are Mandingoes and Veis, the former noted for their aptness in manufacturing and trading, and the latter for having invented (patent not yet applied for) an alphebet of their own. These natives generally live in thatch villages, and subsist mainly on rice and cassada, varied by occasional game, or a free lunch composed of black ants, caught by sinking a kettle in the ground and allowing them to tumble in. Wheaten bread is a very rare treat, and they beg or trade for it eagerly.

THE "VEI" MEN.

These Vei men are magnificent specimens of manhood, with broad, square shoulders, full chests, and well developed limbs, and are generally tall and erect. On Sunday they seem to clothe themselves in European raiment, although on week days they usually wear the one garment of large cloth, but so draped as to produce an effect not unlike that of the Roman toga. Their women dress very much as the Kroo women do, and are not remarkable for virtue. The Veis, however, seem immeasurably superior to the Kroos. One of their striking characteristics, I am told, is honesty, their laws mercilessly and severely punishing any breaches of the Eighth Commandment. My informant had in his employ a little Vei boy whom, he told me, he could trust with untold amounts of small change. I think the Veis are making some progress toward civilization. They certainly have that appearance. The Liberian Government allows these native tribes to have each its own magistrate, who fills, in some degree, the position of legal governor or government representative among them. They seem generally to behave themselves tolerably well, and to be law abiding.

(Owing to the length of extracts we will only publish one-half in this number, and reserve remainder for October number.)

PROSPECTUS.

The English National Association for the Promotion of Social Science has, affiliated with it, a Ladies' Sanitary Association, which for the past twenty years has been engaged in the publication and distribution of simple sanitary tracts and leaflets, intended for use in schools and families. These publications are strong and condensed statements of the fundamental laws of health, with illustrations of the results of breaking these laws, and practical suggestions and advice as to the best and easiest way of living in obedience to them. While written principally with a view to the requirements of the poorer classes, they may be made powerful agents for good in any household, and are of especial value in all charitable work among ignorant and thoughtless people. The report of the Association for the present year indicates a surprising degree of success, and demonstrates beyond a doubt, that the demand at the present day for such literature is pressing and steady. What is true of England in this respect is doubly true of the United States, where the habits of our people are largely in antagonism with hygienic law, and where the ignorance prevailing among all but the highest class of our citizens, is affecting the health of the whole nation. Indeed, the need here is so great, and so completely recognized by all who have studied the subject in any of its aspects, that the brief est statement of it is probably enough for our present purpose.

It is believed by the undersigned that one form of this need can be met in no better way than by following in the footsteps of the English Association and issuing a series of sanitary tracts and leaflets which shall supply what is evidently a widespread demand in this country. These publications will provide as simply and in as attractive a manner as possible, carefully prepared information upon all points directly connected with physical life, as, cleanliness of the person and house, ventilation, drainage, care of children and invalids, preparation of food, etc., and, as in the case of their English forerunners, they are to be sold for a sum just sufficient to defray the cost of publication and to permit a certain amount of gratuitous distribution. They will be issued in a series, printed at the office of the Normal School Press, Hampton, Va., and will be known as "Hampton Tracts."

Editing Committee.

STEPHEN SMITH, M. D., *New York City.*
S. C. ARMSTRONG, *Hampton, Va.*

THIS Prospectus was sent with the first three tracts of the series, to the American Social Science Association, convened in Cincinnati, May, 1878, and the following response was received.

AMERICAN SOCIAL SCIENCE ASSOCIATION,
5 Pemberton Square, Boston,
June 8th, 1878.

Gen. S. C. Armstrong, Hampton, Va.—

My dear Sir: At the general meeting of this Association, in Cincinnati, on the 20th ult., I submitted to the members present the first three numbers of the Hampton Tracts in manuscript, and they were referred to the Executive Committee for consideration. At a meeting of the Committee held in this city to-day, Prof. Pierce in chair, it was unanimously voted, as follows:

"*Resolved*, That the American Social Science Association learns with pleasure of the work undertaken at Hampton, in Virginia, to spread among the people of Virginia, and of the South in general, a knowledge of Sanitary Science popularly set forth; and that from an examination of the three Sanitary Tracts of the proposed series,—viz.: *The Health Laws of Moses*, *The Duty of Teachers*, and *Preventable Diseases*, the Executive Committee of this Association is persuaded that the important task, thus undertaken, will be well performed. We would therefore commend these Tracts to all readers, at the North as well as at the South, and would recommend their wide distribution in the way best suited to promote the circulation of them."

I take pleasure in communicating this vote to you, and through you to the other members of the Editing Committee.

Yours very truly,

F. B. SANBORN,
Sec'y of the American Social Science Association.

DAVID A. WELLS, *President*, Norwich, Ct.

CORRESPONDENCE.

LYNCHBURG, *July, 4th*, 1878.

Genl. S. C. Armstrong—Dear Sir:

Your articles on superstition among the colored people, several months ago, interested me very much, and I have wished ever since to write you on the subject, but have been in various ways prevented.

I am so glad you called attention to this subject of "conjuring," for it is an important one and needs watching. In slavery days, we heard little or nothing of it in Virginia, where there were comparatively few negroes. My husband, who lived in what natives know as "Old Virginia," says there was always a great deal of superstition among the slaves of this section, but it was held in check by their owners, who always forbid the discussion of such subjects, and by the laws which prevented the assembling of negroes in large gatherings, except for religious worship, even that being restricted. Now there is no check of that kind and the belief of the more ignorant colored people in "conjuring, witches, &c.," is astonishing. It is evidently a legacy handed down to them from their savage ancestors, and I sometimes think such ideas are growing with them, in spite of their chances for education. Among the negroes around us, I never hear of natural causes being assigned for the sickness and death of colored people, "he was haunted," "somebody done tricked her," "something was done to dat chile," accompanied with a mysterious shake of the head is always the answer when enquiries are made as to maladies. They have great faith in conjure doctors, and sometimes spiteful people who wish to injure another will accuse the person disliked, of being a conjurer. I attribute the strength of this superstition to their ignorance, and also to the exclusion of negroes from the religious services of white people. Most of their preachers in this region are nearly as ignorant and superstitious as their flocks, and as the church represents all their ideas of public meeting, and their whole social system turns upon it, they talk freely at their religious gatherings of "tricking" and "conjuring" and tell marvellous tales of the power of those endowed with supernatural gifts.

I think it is very unfortunate that the races are thus separated in religion, but trust that this, like other prejudices will give way to the spirit of tolerance fast spreading in our land. The point of difficulty now seems to be that the white people are not willing to admit negroes to their churches unless they will sit in the galleries, and as this was a custom of slavery, they abhor it like other usages of those evil days. As a specimen of negro faith in witchcraft, I mention the case of a little colored boy sent to the penitentiery from Rockingham County, last month, for attempting to poison the family of his employer. A professed conjurer or witch woman was called in by the prosecution to indnce the child to confess; and when the old dame informed the urchin that he had better tell her the whole truth, as she could find it all out by working signs and consulting the stars and it would be bad for him if he deceived her, the terrified child told her the whole story, which other points in the testimony corroborated. He had been driven to the crime by the threats of a woman who disliked his employer. I do not think, however, that negroes are more superstitious than other ignorant people. In Rockingham County, where there is a great deal of illiteracy among the white people the belief in conjurers is astonishing, and is not confined to the lowest class. I have known very respectable Germans to employ a "conjure doctor," to cure a child of hip-disease; and in the trial of Mrs. Lawson, some months ago, for the murder of her husband, it was proved that the woman offered a "witchwoman" fifty dollars to put a "spell" on her husband which would kill him.

In 1869 or '70, one Dr. Van Anten, came to Harrisonburg, Rockingham County, and advertise to cure all diseases by pronouncing certain words over the patient. Crowds of white and colored people thronged the Doctor's office, and among them a white woman, bent double with rheumatism, who had not walked for eighteen years. She was carried in a chair by her husband and some friends, and, at the Professor's orders, every one left the room but himself and the patient. A few moments later, a loud shriek was heard and the woman rushed out of the room passed her astonished husband and went with swift steps to her lodging-house, several squares distant. The joy of the poor men was unbounded, he cheerfully paid the Doctor's fees, harnessed his horse, and his wife having entered the wagon without assistance, the happy couple returned to their little home, so long the abode of sickness and pain. Their joy was short lived, however, the women quickly relapsed until in a day or two was the same wretched cripple as before she was charmed. The only explanation of the singular affair was that she thought the men had *frightened* her into moving. He made the room dark, then pronounced *words* over her, standing before her, pawing the air and making fearful gestures. he suddenly sprang at her and bade her sternly "arise and walk." The sequel was sad enough, for the husband, broken in spirit by his life of poverty and care, failed entirely under this double shock of joy and grief and died within a week. The last we heard of the Professor was a rumor of his being sent to the penitentiary of some Western state for forgery.

Yours very truly,
Orra Langhorne.

AGRICULTURAL.

I have had no experience in SUBDUING THE WILD ONION, but there is no doubt that it can be effectually fought by a common Summer-fallow—that is by keeping the plant from growing or appearing above ground during the season of vegetation. No plant can survive if kept from putting forth the leaf through July and August. Respiration is as essential to plant life as to animal and if not permitted to put forth leaves, which act as lungs to the plant, it must die and decay. Plough or cultivate as often as the plant puts forth a germ and before it comes to the surface, during two growing months, and destruction is sure.
—F. P. Root, in *Weekly Tribune.*

BRINE FOR QUINCE TREES.

A man had some quince-trees which grew well but did not bear fruit. Determining to get rid of them he ponred brine from old pork barrels around them. To his great surprise, the next season, the branches were so heavily loaded with fruit, that they had to be propped up. A late Report of the Western New York Horticultural Society is our authority for this statement.

LETTERS FROM HAMPTON GRADUATES.

AN OLD TIME MEETING—AT HOME FOR THE SUMMER—OBLIGED TO CONSULT HER CONFESSOR.—"CHRISTIAN CIVILIZATION" WANTED.—"PEACE AND HARMONY—EVERY ONE ATTENDING TO HIS OWN AFFAIRS.

THE following letter is from an intelligent and reliable young man, and gives a graphic account of an "old time meeting" still to be seen in many parts of the South, and exhibiting, as the discrimination of our correspondent perceived, a mixture of good and evil. We give it as the writer gave it, not to hold the people up to scorn, even in their wrong doing, but both as an interesting picture from life and—still more—as an indication of the line of work to be followed by those who do the people good. It is not to give them "dry tunes," and force them into the unnatural calmness of a cooler temperament—but so to direct their ardors and instruct their minds and develop their moral strength, that they may show their faith by their works, and learn that religion means honesty and truth and purity of life.

——, MARYLAND, *March 12th*, 1878.

Gen. S. C. Armstrong—Dear Sir:

I have been intending to write you a letter for some time. When last I wrote you, you will remember, I had been in these parts but a short time; yet I had seen many things which I did not speak of in that letter. Among the many things which I had observed is the singular form of worship which the colored people practice here. While at Hampton last term, I read Livingstone's book about Africa. Some of the religious customs related in that volume have certainly been brought over by our forefathers and are in this enlightened land found mingled with the true religion. The great belief which our people have in conjurstion: (or "throwing for each other," as they call it) signs, and the returning of departed spirits, confirm the above opinion. Not long ago, I went to one of their meetings. It was held in a little church about 22 or 23 feet long, and twelve feet wide, with three windows, which have shutters of plank, through which, when shut, little or no air can pass. In the middle of the floor sits a large stove in which a very hot fire was kept during the meeting. The preacher was to have come that night, but for some reason he disappointed them. His absence, however, did not prevent their having an "Old time prayer-meeting," as they call it. So, after waiting for some time for their pastor to arrive, they commenced the meeting by singing a hymn given out by one called "the leader of the band." Prayer and short exhortation came next. Indeed, the two last parts of the opening exercises were well performed by a young man. But in the scene which followed his excellent prayer and advice, he (though somewhat intelligent) was one of the chief actors. One or two more hymns were sung from the hymn-book. I heard some of the women say "*If those men don't stop singing those dry tunes we'll take our bonnets and* GO HOME." By the women ceasing to sing, the men discovered that there was something going wrong. The "leader of the band" seems to have seen at a moment's glance what caused the commotion, and immediately struck up the well-known "I John Saw." The women now joined in; and the woods and hills rang with the resounding melodies of that music which has never known a teacher, but yet is wonderful and almost sublime. While this "shout" was being sung the men and women gathered around the stove, the men on one side and the women on the other. The church by this time had become full of people. One could not kneel down without leaning on some one else. All three of the windows were shut, and the shutters closed. A fire was in the stove. Soon a sickening feeling came over me, caused by the impure air which pervaded the place. I asked one who was standing near the window, to please open it. "You want us to freeze, don't you," said he. I looked up, and to my great satisfaction I found that the roof was full of holes, and I knew that hot air rises, so I said no more to the man about the window. The "leader" had now become too warm it seemed, for while we were at prayers he took off his coat and rolled up his sleeves, exclaiming at the same time "Get ready, children, we are going to drive out the devil to-night!" The others, as soon as they saw him without his coat, immediately disrobed themselves of their. Had I expected to see such heathenism carried on, I am sure I would not have gone to the meeting. After this there came such a tumult and excitement—women jumping among the men, men holding each other; some of the young girls utterest screams which really could have been heard a mile. Some tore their clothes off without regard to womanly modesty. But what discouraged me *most* was to see among this seething mass some of my school-children. After the meeting was over, and all on our way home, a shameful fight came off between two of the leading shouters (females), about something which had been said during the meeting.

What shall I say, having seen such degrading things with my own eyes, (and I have not told the worst that I saw). All I can say is this. Let us work on with our might and hope for better things. "For if God be for us who can be against us."

I remain, yours truly,

D.

THE experience of the young writer of the next letter, though it seems to herself peculiar, is by no means uncommon. The isolation and loneliness felt in the sudden transportation from the refining and stimulating atmosphere of school to a distant country home where all such influences and all interest in them may be lacking, is trying enough, and demands full sympathy. Yet the very being thrown upon ones own mettle and resources, is a school from which our graduates come back to us with new developments of manly and womanly character. As for the work they can do for their people, there is tact and consideration to be used, of course, as well as zeal. The old people cannot be expected often to give up their long established ideas, and God will accept a man according to what he has and not according to what he has not. But the young people and especially the children are their fair field.

——, N. C., *July 9d*, 1878.

My dear Miss L.:

The evening I was in your room I promised you I would write you this summer. So I thought I would write before you left Hampton. I love the place so and its teachers that it is always pleasant for me to write this word. I had a very pleasant trip to R., where I get off of the cars to go home, but when I got there I have about ten miles to go before I am home; so when I got there my people failed to send for me as they didn't receive my letter, so I had to get home the best way I could. A white man who came within three and a-half miles of my father's brought my trunk and me there, and I walked home from there, and sent for my trunk the next day. I saw J., and gave her the little books you sent. We came through Richmond, and had a very nice time while in the city. My dear teacher, you asked me if all my brothers and sisters were Christians, and my answer was no, and then you asked me if I didn't think that there was a work for me to do. It is true I didn't know what to say when you asked me, because I know how the people here are. They think there is not anything for a person to do toward becoming a Christian, and if I say there is, they will say I got my religion out of the book, so I very seldom hold any contest about it. You may imagine how it is with a person with no sympathizing friends among such people. A person who can't tell a great long experience about how the devil pulled them about, they don't put much faith in them, and their every day life may be ever so different. I have some real hard hints, and blows by words, but I am thankful to God that I am able with his help to stand the storm. You dear teachers don't know one-fourth of the hardships we teachers have to meet with among our ignorant race—and white people too sometimes. I think sometimes that my road here is the hardest of any of the students; there is not one in less than twenty-eight miles of me, who has ever been to Hampton, or any other place to school, a great deal, and I had just as well try to turn water into wine as to try to turn those old people's minds from the way they believe. Though most of them work very hard and own homes, they own very little refinement or intelligence. They often speak of how foolish they think it is to send people off to prepare for the ministry. They think a Christian can preach just as well without knowing a letter as one educated.

I could tell you a great deal more but really I don't like to tell so much unless it were better. I am now staying in the neighborhood where I taught school during the spring; and the lady I am with keeps talking to me so much all the while I am writing, that I shall have to stop for fear you will think I have forgotten how to spell or to use good grammar. I hope to have a long letter from you very soon.

Your devoted pupil,

M.

A FEW of our graduates have from time to time taught in Roman Catholic neighborhoods. While never having any trouble there, their general impression seems to be—entirely unsuggested by us—that the sentiment of that church is indifferent to general education and unfavorable to any but its own sectarian schools.

——, MD., *Mar. 3d*, 1878.

Dear Miss H.:

How glad I was to hear from you, I had been thinking about you so much. I was quite sure that you were very busy, which kept you from writing. My school has increased since I wrote to you last. I have on roll twenty-eight pupils and not less than twenty-one or twenty-two come every day, unless it is very stormy. They are more orderly than when I first took them, and some of the little ones do get along wonderfully well. But the larger ones, I am almost afraid to speak of their progress; I have five now reading pretty fairly in the First Reader, who did not know their letters when I began to teach them. In the family with whom I board, there are two children, a boy of twelve years, and a girl of thirteen years. I have told them a great deal about Hampton and they are anxious to come, the boy, I think might be able to enter the Junior class in about a year. Their mother is anxious, but she says that she will have to consult her Confessor about it and if he will allow her to send him she would like over-so-much to do so, and she will try. I am hoping to see him at H., but I am almost sure her Confessor will never consent. To-day has been a real, genuine March day. It has rained, blown and hailed. But just at this moment it is perfectly beautiful. About three-quarters of an hour ago a huge black cloud hung over us like a blanket; now it is just as lovely as if nothing had happened.

I have not had my health good at all this winter. Our house is so full of draughts, and oh, so smoky you could hardly live, and every day I add a little bit of cold to what I had already the day before. Still I do not feel discouraged entirely, though as you can imagine, I have my moments of despondency. While there is life there is hope. My doctor says that a dryer climate would suit me better. So I think another year if I could get work farther South, I should be a great deal better.

Miss H., I often imagine ninety-six girls tagging after "Miss H.," for "this" and "that" and "the other," as I and many others used to do. Remember me to the teachers.

I shall be so happy and amply paid if I can feel, when I leave these children, that they have learned something. I am going to try to get over to see Sallie for I have an idea that her school is so much better than mine, and that I may pick up a new idea. Davenport I hear but little from, but I believe from what I heard a long time ago, that he has a nice school. Mother has been up to see me twice since I have been here.

Good-bye, dear Miss H.; write to me when you can.

Your loving and devoted,

N.

OUR correspondent has struck the keynote of his people's need in saying that they want what he—well-terms, "a Christian civilization." His report is interesting, and his hopeful and determined spirit is what is wanted in this work.

——, VA., *March 22d*, 1878.

Dear Teacher:—

Since I last wrote to you, my school has been considerably reduced in its attendance; yet I can't say that it has lessened my labor any for I find enough to employ me as when it was full. In answer to your question, I can tell you that I do work in the Sunday school, but have not as yet taken the stand as a lacturer, though I might be able to do some good in that direction; but in my conversations with them I tell them just what I think is right or wrong on anything that comes to notice.

You asked me to tell of their moral, intellectual and physical condition, I will try to do it. Of course different people see differently and have different opinions of things. In giving my opinion I will try to do them no injustice and to give you a correct view of the condition. The people seem to have good idea of what their morals should be, yet they sadly neglect to carry out these ideas in their religious worship; no people can have greater zeal than they, but they need what I term Christian civilization. Their prayer-meetings are conducted in a very rude way, being accompanied by a kind of dance. Outside of their church they practice such things as do not become those who profess to be followers of our Saviour. Of course there are exceptional cases, of those who strive by their daily walks and conversation to let you know that they are servants of God, and this number is not so small as you may think. I could mention many instances in which they do not conform to the laws of God, but time will eradicate many of the evils that are among them. Intellectually these people are far behind; they seem to possess the material but its cultivation has been sadly neglected. The children are quick in most instances, in any of the primary branches taught except mathematics, and for that they seem to have no talent. In their behalf I would say that they have not had the opportunity of going to school till within the last two years, and then the teachers haven't been the best. I will say again, the material is here, and all that is now needed is cultivation. The people are generally strong and capable of great endurance, and generally healthy; whether it is from obedience to the laws of hygiene, or the indulgence of nature, is yet to be found out by me in a great many cases. Their food is generally very simple with none of the luxuries, this may be partially the cause of such prevalent good health; there is no doubt but that it adds to it. Only in one or two cases (to my knowledge), are they over-crowded in their houses.

Yours, C.

To be busy attending to one's own affairs is one of the best promoters of peace and harmony we know of, and this kind of peace and harmony is growing between the races of the South.

——, VA., *April 10th*, 1878.

Dear Teacher:

I organized my school here in the colored Methodist Church, Feb. 4th, with nineteen pupils. Have enrolled sixty-nine. They are getting on very well.

Perhaps you would like to know my method of teaching little children. When a pupil enters my school, I talk to him about things which he is familiar with, and draw out all that he knows about them, and then print the names of the objects which we have been discussing on the blackboard. In this way I teach children words before I teach them letters. I find this method to be a very good incentive to the little ones. I classify my pupils according to their ability, and tell them that they can go from a low to a higher class as they advance in their studies. This seems to animate, and create ambition among them that would not otherwise be awakened. At present I have seven grades or classes. Occasionally a bright boy or girl outstrips all in his or her class. Those left behind will study and try to follow. When one gets careless about his lessons I tell him that I will have to put him back, that he doesn't want to learn. He is not willing for me to do that. He will try to do better.

One rainy day, the school being very small, only a fraction of several classes, I combined two classes to have a review; during the recitation my attention was called to a little boy who sat crying. I asked him what was the matter. He said he did not belong to that class. He thought that I meant to put him back. I could not say much to him for fear that I might destroy his ambition. You can see how this plan works. I don't whip much. None at all about lessons. I think that whipping about lessons does more harm than good. It seems to create a disliking to books. It is very hard work to teach children that which they don't like. I try to make the lessons interesting, so that the children may learn for the love of it.

The colored people of this vicinity are getting on tolerably well. They seem to be making a living and that is about as much as anybody is doing these hard times. There seems to be peace and harmony among both white and colored. Everybody is busy attending to his own affairs. I like my situation very much. Give my regards to all the teachers and students. Write soon to your pupil and friend.

W.

THE COURIER OF THE DESERT.

Our picture this month is from the New York Christian Weekly, a copy of a spirited and celebrated painting by Gerome, a French artist. The camel and his Arab rider are thrown into bold relief against the yellow sands of the desert which stretch in vast expanse behind them, under the scorching sun of Africa. Now, as in the days of Solomon, the camel and swift dromedary are the couriers of the desert, and used to carry messages and mails across the burning plains where horses would be of no avail for long journeys.

A modern writer gives the following graphic account of the manner of camel riding, which is somewhat different from riding horseback.

"Mounting the camel is not difficult, but it has some sweet surprises for the novice. The camel lies upon the ground with all his legs shut under him like a jack-knife. You seat yourself in the broad saddle, and cross your legs in front of the pommel. Before you are ready something like a private earthquake begins under you. The camel raises his hindquarters suddenly, and throws you over upon his neck; and before you recover from that he srrightens up his knees and gives you a jerk over his tail; and, while you are not at all certain what has happened, he begins to move off with that dislocated walk which sets you into a sea-saw motion, a weaving backward and forward in the capacious saddle. Not having a hinged back fit for this movement, you lash the beast with your koorbash to make him change his gait. He is nothing loth to do it, and at once exerts into a high trot, which sends you foot into the air at every step, bobs you from side to side, drives your backbone into your brain, and makes castinets of your teeth. When you have enough of it you pull, and bumbly inquire what is the heathen method of riding a dromedory. It is simple enough. Shake the loose halter rope (he has neither bridle nor bit) against his neck as you swing the whip, and the animal at once swings into an easy pace; that is, a pretty easy pace, like that of a rocking-horse. But everything depends upon the camel.—*Charles Dudley Warner.*"

DARE to change your mind, confess your error, and alter your conduct, when you are convinced you are wrong; it is manly, it is scriptural.

ONE man said to another, "Which is the heavier, a quart of rum or a quart of water?" "Rum, most assuredly, for I saw a man who weighs two hundred pounds staggering under a quart of rum, when he could have carried a gallon of water with ease."

RIGHTS AND DUTIES OF CITIZENS. VI.

EDUCATION.

The theory that every citizen has a *right* to demend from the State an edncation for his children, is firmly established in this country. As every right has a correlative duty, what is the duty correlative to this right to demand an education from the State? Is it not, thet it is every citizen's duty to avail himself to the utmost, of the advantages he has the right to demend? If this he not the correlative duty of the right mentioned, then it is to be found in the States edmitting to citizenship only those who heva availed themselves of the privileges of education, placed within their reach. There is no equity in compelling a State to give an education to its future citizens, unless it can compel these citizens to give it the fruits of such education in return. In the more densely populated Northern States, public sentiment is keenly elive to the dangers of ignorance, as is seen in the Truant Laws, end Factory children's Lews. The object of the first set of lews is, to compel children to attend some school between certain hours of the day; the object of the second is, to forbid faetories employing continuously children of tender years: if they are employed at all, it is only permitted, by tho parents showing that the children have attended school a certein number of months in the year. None of these lews completely achieve their object; but their existonce shows how keenly the necessity of education is felt in those States, where the steady use of the best faculties of man is required to gein a living. No more difficult problem confronts legislators than to frame a system of public instruction, thet will put edncation within the reach of ell, and put ell within the reach of education.

Edncation hears the same relation to citizenship that interest does to capital: an uneducated population is like the Talent, in the parable, that wes buried in the earth. Education is e mean, not an end; it is a tool, by the use of which, man can produce more with the same amount of exertion, than he can without it. An educeted man with en object in view, approeches it aided by a knowledge of the successes and failures of those who have approached similer objects hefore him: centuries sit by his sido as advisers end friends. An uneduceted man approaching the same object goes unaided; he has only himself to depend upon; his only guide is his own narrow experience, a few years at best.

As I have already stated in thesc papers, the prosperity of a State cannot exceed the average prosperity of its citizens: therefore, whatever increases the prosperity of citizens, increases the prosperity of a State. All discoveries and improvemeats in agriculture, manufacture, or commerce, can come within the ken of an educated man; while an utterly ignorant man has to make his own discoveries and improvements. If every man had to invent end construct his own steam engines, power looms, reaping-machines, or sewing machines, there would be few enough of these labor-savers in use. Compare the prosperity, end the processes of industry, in the more highly educated States of this Union, with those of the South Amerieau republics, where ignorance is general; and a glance will show, how necessary for the prosperity of a State, is the education of its citizens.

As hefore stated, education is a tool, and it is self evident, that a men with proper tools ean do more work than he can with improper tools, or with none at all. A man with an axe can split more wood than one with a stone, or a shell; and if kindling wood be the object of the State, it should supply its citizen choppers with axes, and not let them worry through their lives, poundiug with stones, or scraping with shells.

It heing clearly the duty of the State to furnish its youth with tools, wherewith future prosperity can he huilt; it follows that great care should be taken to furnish proper tools. The pickaxe and the shovel would he hut poor tools in the weeving of cloth, or the sailing of ships, excellent as they might bo in the sinking of a mine, or the building of a railroad. All tools are made from some materiel or other; now, out of what materiels are forged the educational tools, used by men in hewing the path of progress? They consist of a knowledge of reading, writing, end the relations of quentities. With a knowledge of these three, any educational tool can he forged; without them, nono. There is a sound kernel of truth in the old story of the school-boy, who, when asked what he studied at school, replied, "The three R's, readin', ritin', and 'rithmetic." To meke a sound tool, sound materiel is required; no amount of varnish will make fine steel out of poor iron; and a tool made from the latter blunts into hopeless dulness as soon as its owner tries to use it. On our primary schools then, depend the usefulness of all others; for in them is forged the steel, out of which must be made all the tools, with which our youth will have to cut the knotty planks of social advanecement.

To the quality then, as much as to the quentity of its primory schools, should the attention of the State be given: to go on the principle that "anybody can teach a primary school," is to make a certain end expensive hlunder. It is just the same, as if some great iron master should take np the idea thet any brewny fellow could temper steel. Put such a being in e mill, give him iron, heat, water, everything thet is needful, and let him go to work: some sort of a product will follow, hut the likelihood of its being pure steel, is about as remote as the discovery of thet long-lost needle in the fahled hay stack.

The duty of the State to furnish good primary schools, as well as plenty of them, being conceded, the next duty of the State is to efford its youth opportunities to study those branches which will most directly benefit them; that is, those things of which they will have the most need in the the future. In different parts of the country different branches should receive different degrees of attention: for in a country so large as this, the educational needs of men are as as different as the sizes of their bodies; and how idiotic would any one seem, who, if beving determined to give every man in the nation a coat, should have ell the coats made of one size and texture. Dr. Frank C. Woodward, in his recent address before the Edncational Assoeiation of Virginia (extracts from which appeared in the last number of the Workman), has handled this subject in the most thorough manuer, end left little, if anything, further to be said.

In this age of progress, when improvements so tread on the heels of improvements, men must keep up with the times, or fell hopelessly in the rear; to stand still, is simply to be drowned in the flood of betterments, which now, at least, seem "to knaow no retiring ebb." A system of education which was deemed sufficient for the needs of the people half a century ego, is no more fitted to the present age, thau a canal boat is to carry "express" freight. A glance at the reports of the departments of Edncation in some of the newer States, show clearly how the needs of the present are eppreciated and met; and how little respect is paid to any theory, simply because it is old.

COMING DOWN THE MOUNTAIN.

Education is a loan the State makes to its youth; a loen on which the interest is always paid, and the principle of which is never repudiated, or to use a modern euphemism, never "readjusted." A good system of edueation costs no more then a bad one, if results be considered. Any system, however, must be expensive; for one cannot enjoy interest without investing capital, and no small capital will yield large interest, unless dangerous risks are taken. If the appropriation of a State for school purposes is meagre, and invested in second-class edueational machinery, the results will he meagre, unless some miracle occur, that has never as yet taken plece. Every State should appropriete the largest possible part of its revenue to school purposes: such use of its revenue is practically making a sinking fund, for the payment of its debts, present and prospective. I believe it auceptible of accurate proof, that those States whoso school expenditures, for the last twenty years, heve formed the largest percentago of their whole expenditures, heve more material prosperity to-day, and better credit in the money markets of the world, then thosa States where the school expenditures have formed hut a smell part of their whole expenditures. In our own country, comparo Massachusetts with South Carolina, Kaasas with Arkansas, California with Florida, and a glance will show how directly proportionate the relative prosperity of the States is to their expenditures for education in the last twenty years. If these comparisons seem narrow or sectional, compare the United States with Turkey, or Germany with Spain. All the revenues of a State come from direct or indirect taxation, and I believe thet so much of the taxes as ere to he epplied to school purposes, should be kept as a speciel fund; end such fund secredly devoted to the purposes for which it was created. In most of our States such a constitutionel provision exists, end is obeyed. The school fund of e State *does differ* from other funds; for on its proper expenditure depends the equipment of those, who in e few years will be the workers end tax-peyers of the State. It is not exaggeration to say, that ia the school fund is found that which nourishes the ective prineiple of healthy growth in the State. If expenses heve to he cut down, let the school fund he the last to which the knife is epplied. If it were necessary to reduce the expenses of a factory run hy steam, it would be poor economy to stop the purchase of fuel. No doubt there would be a saving, a considerable saving, hut when the stock of fuel on hend was hurned out, revenue would stop—as ehruptly and absolutely as the expenses for fuel. Suppose that no child horn after this dete should be permitted to be educated: how loag would it be before the world would sink iato utter barbarism, commerce flicker and die out, agriculture and manufacture he lost arts, and even history itself hecome a myth?

The argument that public schools are luxuries, and that the State cannot afford luxuries, is as hollow as it is heartless. One might as well say that an axe is a luxury to the woodman, that merchandize is a luxury to the merchant, or that the luxurious part of a sewing machine is the needle, as to say that popular edueation is a luxury, in the sense that luxury is used by the holders of this argument. Any process of reasoning, by which the conclusion can be reached, that public schools are luxuries, would make bread end water *the* luxuries of a Sybaritic banquet.

It is gratifying to see how almost unanimously public sentiment, in this country, fevors public schools: the most finished scholars and the utterly illiterate heve the same faith in their necessity. The educated man knows them to he means to a wished-for end; the illiterate men imagines, that in them, hy some magic or "conjuring," are obtained certain powers, in the non-possession of which, he feels himself poor indeed. The same faith exists in hoth, however different may he the reasons for the faith that is in them.

The open opponents of public schools are few in number, and daily growing less; they belong to that "stand still" class, who, contented with little, if others heve less, oppose the education of the masses, as the surest and easiest means of maintaining their present superiority. They rarely offer any arguments in support of their position, hut content themselves with quoting such words of comfort, as "Ignorance is bliss," "A little learning is a dangerous thing," etc., etc. Under the old system of slavery, the theory of universal edueation was bitterly opposed by the advocates of the system: for they knew full well, thet liberty and learning were fast friends, and that the introduction of one, meant the introduction of the other. While on this point a few words mey be proper, in reply to an argument thet crops out now and then, in the discussion of the lehor question and kindred subjects. It is to the effect that edueation tends to make people dissatisfied with their lot, makes them want something better, and that private discontent soon ripens into public broils. This argument is as full of fallacies as a seive is full of holes. The keynote of progress is dissatisfaction. Suppose everybody were satisfied with everything as it is; what possible chance would there ba of there aver heing anything better? Nothing, from man down, is perfect in this world; and so long as an appreciation of the absolute hovers in man's brain, just so long will ho reach toward it, and want something a little better then he has. Dissatisfaction has led to every known improvement: if the world had been satisfied with wegons, railways would never heve existed; if post horses had been fleet enough, the telegraph would not be in constant use. That ell men went something, is the motive power of humen society; when men stop wenting, they stop breathing. The intensity of men's wants measnres the intensity of tha efforts to supply them; or, if the expression he preferred, it measures the activity of trade. Few men wenting little, means a dull market; meny men wanting much, means activity, industry, exchange, prosperity.

There is no ergument against public schools as means of edueating the people: the only velid objections that can he raised, are objections to the menner in which they are conducted, or the course of stndy pursued in them. If only a smattering of this be thinly spread on a smettering of that, and a youth's education he ell roof and no foundation, people can justly find fault; but the feult is with the style of architecture end not with the usefulness of a house; feult is not found with the hoys being educated, but with the wey he is edueeted. If a student he given Homer and Virgil before he can read Milton and Shekespeare, if he ettempt conic sections and the calculus, hefore he can extract euhe root, or compute compound interest, he is eequiring something which resembles an edueation ahout as much as the pasteboerd sword of the harlequin, resembles the eutlass of e men-of-war's men. Against such en edueetion, (if edueation it can he called) strong objections can ho made: it is like the description of a "wild-eat" railroad, given hy a disappointed share-holder, who said "It hegen nowhere, ended nowhere, and ren through a swamp." Yet many young persons in the vanity of their ignorance, yearn after just such e "wild-eat" edueation; and refuse to believe they will only find in it "vanity end vexation of spirit," after they have bought end paid for it. The panic of 1873 killed for a time "wild-eat" railroads in this country; over confidence worked its own eure; so, too, sooner or later, will "wild-eat" edneetion receive a check, and seekers after knowledge appreciete, there is no royel road to learning.

No matter how good en edueation the State may offer, its usefulness will be limited, if the co-operation of parents end guardians he wanting. Laying the table and hidding the guests is not all of a hanquet: if the guests come not, the feast is a failure, and silence sits in the place of mirth. That eny child should be entirely shut out from school privileges is a pity, nay, in this country it is a disgrace; a disgrace not only to the parents, but to the commereial segeeity of the community in which it occurs, to work day after day with dull tools, and have no better exeuse than "no time to sharpen them," certeinly shows a degree of mental obtuseness, that is fortunately scarce in this nineteenth century of ours. That grinding poverty exists in some sections, and that every hand has to be busied, that every mouth may he fed, is lamentably true: but in every year of childhood, there are months that can he spent in the public schools, with no appreciable benefit to the child's future.

The gains of public edueetion are not one-sided, but mutual: public educeation is neither charity nor theft, it is a just exchange—the State gives that it may receive, and the citizen receives that he mey give. Mutual wants are supplied by mutual efforts and mutual satisfactions ensue.

The Latin word, Education, in sturdier Saxon is "leadiag out." Igaoranee is darkness, learning is light; and the leeding of the people out of darkaess into light, is that duty of the State called Public Edueetion.

T. T. B.

COMING DOWN THE MOUNTAIN.

It is generally thought that going up is easier than coming down. But these look as if they were finding the coming down quite difficult. You will say that is because it is only too easy, end of course you are right. Mountian climbing is hard enough, going up or coming down, but meny people like nothing better.

There is a society of gentlemen in Europe, called the Alpine club, formed for the very purpose of climhing all the highest mountain, they can master. Some climb for sciences some for pleasure, and indeed there is pleasure in standing on a great monntain top,

> "Whose head in wintry grandeur towers,
> And eloads with eternal sleet,
> While Summer, in vials a of flowers,
> Is sleeping rosy at his feet."

After the long ascent, there is a sense of triumph over conquered difficulties. The air is sparkling, the sunlight falls with dazzling splendor on vast snow-fields, peak after peak rises around you; far, far down you look on the tops of the pine forests, and catch glimpses of green mountain meadows, and the roofs of the dairy huts. Clouds drift along below yon, but overheed the sky lifts its unapproachable arch as far away as ever, while the solemn Sabbath stillness of the monntain top awes your spirit into silence and worship.

Looking from a distance up to snowy sum-

mits that seem to float soft as summer clouds in the sky, one cannot make the dangers of the ascent seem real, the wild gorges, and washing torrents, and dangerous precipices,

could be made; and thet no paper can be used to represent them, unless it can be converted *on demand* into these precious metels. Money could ba made of anything, if civilization

and pieces of gold, the gold then and there would have no value. But let some other men come alongside, with water, food, and means of safety, then the gold would have

ceive something of use in return; the reverse of this doctrine is unromantically called *theft.* Plain as this matter is, viz., that honest labor should be paid in honest money, thou-

mits that seem to float soft as summer clouds in the sky, one cannot make the dangers of the ascent seem real, the wild gorges, and washing torrents, and dangerous precipices.

In Switzerland, the strongest mountaineers make it their business to guide travellers up the mountain. I think our little picture must be designed to represent a sad accident which happened some years ago to a party of such guides and travellers who climbed one of the loftiest and most difficult mountains in Switzerland, the Matterborn, fourteen thousand feet high.

With them was a young man not so much accustomed to climbing as the rest, whom they were persuaded to take with them to gratify his ambition. They went up safely and were quite proud of their feat which very few had ever accomplished. On their descent, the guides tied all together with a strong rope passing from the waist of one to another, as is often done for safety, so that if one should slip and fall, the rest might all together hold him up. On the edge of an icy precipice that descended in one sheer, awful wall, four thousand feet, the young man's feet slipped, and falling against the foremost guide he knocked him with himself over the brink. The rest of the party braced themselves back with their "alpine stocks" for one moment of straining nerve and muscle—then, terrible to tell, a sudden lightening of their load threw them back upon the snow and told the awful fate of four of their companions. This rope had a weak spot, it had parted with the strain, and down, down the awful abyss the unfortunate men plunged like lead, dragging two more with them; the rest, horror stricken, clung trembling to the ledge, on which they were for hours, even the bravest of the guides too much unnerved to go back or forward. At last the advancing sun warned them of the absolute necessity of making an effort to get down before night should overtake them on that dreadful brink, and bracing their shuddering nerves as best they could, they crept past the ledge, and down their dangerous road till they reached shelter and safety without further accident. The bodies of the unfortunate men were recovered and interred in the hamlet at the foot of the mountain, where a little memorial church has been erected by their English friends.

MONEY.

BY T. T. BRYCE.

There is no commodity so much used, and so little understood as money. Ignorance of the nature and functions of money is not confined to any section or class, indeed the deepest ignorance is often found in the highest places, as the debates and acts of the last Congress of the United States abundantly prove. The country fairly teems with wild theories about money, and the national craze, if I may use the expression, is directly traceable to the fact, that this generation has only used and known promises to pay money, instead of money itself: the financial heresies, which are rife among us, are diseases growing out of the tainted atmosphere of inflation, through which we have passed, and are still passing.

The only difficulty in the way of everybody's clearly understanding what money is, is that it has a two-fold nature; and people are apt to confound the nature of money as a *medium of exchange*, and of money as *a measure of value*. Real money combines in itself these two properties, and nothing but real money does.

Let us first consider money as a medium of exchange. If a man who had a jackknife, wanted a bushel of wheat, he could find a man with a bushel of wheat who wanted a jackknife, the two could exchange their commodities without the use of money. But suppose the men with the jackknife could not find anybody with a bushel of wheat, who wanted a jackknife; then he would be forced to adopt some other way to obtain the bushel of wheat. Just here, comes in the use of money. The man with the jackknife must find somebody who wants the jackknife, and who can offer, in exchange for it, something, which the man with the jackknife knows the man with the wheat will take in exchange for it. This something is called money. It is evident this something we call money, must be made of some lasting material, or it would wear out in the constant passing from hand to hand. Again it must be of some substance so rare, that its bulk will not be unwieldy; for instance, iron dollars would never answer the purpose of active trade. Thirdly, it must be something that all civilized men desire, and for which they are willing to exchange other things they may possess. Fourthly, it must be of such material as can be readily and accurately divided and sub-divided for the convenience of commerce: for example, the purchase of our daily necessities would be almost impossible, if we had no other denomination of money than dollars. There are other requisites for the material, out of which money must be made; but these four are the leading ones. The experience of centuries has convinced civilization that gold and silver are the only materials out of which real money *could be made;* and that no paper can be used to represent them, unless it can be converted *on demand* into these precious metals. Money could be made of anything, if civilization would agree on that particular thing; but civilization *has agreed* on gold and silver, and it is idle to speculate on what it might have agreed upon, if it had not agreed on these two metals. By the unvarying laws of trade this question has been settled in the Supreme court of commerce, and the legislation of no one nation can reverse the decision. Paper by itself is not, cannot be, money: it can be a *promise to pay money*, but it is no more money than any promise is its performance. The Continental Congress, and the late Confederate States issued thousands of pounds weight of paper, and called it money; but calling it so, did not make it so, any more than calling a picture a man would make it human. What are called Greenbacks are not money; they are bills of credit; they represent the plighted faith of the Government; they are promises to pay money, but are not money any more than eggs are chickens. Greenbacks are debts of the Government, and the only way these debts can be paid, is by taxing the people. When demagogues cry for "more greenbacks" they cry for more taxes; and as taxes for the most part are finally paid by labor, it needs no profound wisdom to see how staunch friends of the working men, are those people who argue that the best way to pay debts is to double or treble them.

Let us now look at money as a measure of value. This word value is about the best abused word in the English language; accurately defined it is the "relation of mutual purchase established between two things by their exchange." If, for instance, I sell a day's work for a barrel of potatoes, the value of my day's work is a barrel of potatoes; and the value of the potatoes is a day's work on my part. Value then, is a relation, not a substance: you cannot weigh value in the grocer's scales, or say it is white, black, or copper colored; neither can you say it is a foot high nor a yard long.

The only appreciation of value that is possible, is our ability to compare two things with a third, or to measure one thing by another of the same sort. If I know that I can buy a coat that I want, for five dollars, and can sell a barrel of flour that I have, for five dollars, it is evident my barrel of flour will buy me a coat. If I sell my flour to Mr. Jones for five dollars, and then give the five dollars to Mr. Smith for a coat, I have simply exchanged my flour for the coat. In one sense the money was a tool I used to save myself time and trouble; it was an instrument quite as much as the cart on which I brought the flour to market. In another sense, the five dollars were a measure of values, for with it were measured both the flour and the coat. It would make no difference to me, if I received one dollar or a hundred dollars instead of five, for the flour, if the coat could be got for a dollar, or for not less than a hundred. The usefulness of money is not in its name, nor its quantity, but in its purchasing power. The best dollar is the dollar that will buy most in the greatest numbers of places.

As all other commodities are measured by money, and as all men are willing to take money in exchange for what they have, it is natural that money should be desired by all men. Although this desire is universal among civilized men, the majority of people do not appreciate the fact, that they do not *desire money for itself, but as a means of procuring whatever else they desire.* One cannot eat money, drink money, wear money, nor use it as building material, yet these and all other physical wants can be gratified, if one has money to offer in exchange for their gratification. Only misers want money for money's sake, and as their name indicates, they are miserable beings. Money is a mean, not an end—man desire it, not for what it is, but for what it can get.

When we speak of measuring everything, we mean that it contains some arbitrary unit of measure so many times, as a foot, a pint, a pound, a dollar. In every measurement the unit of measure must be of the same nature as the thing to be measured: for example, we do not measure length with a unit of capacity, nor capacity with a unit of weight; we do not say it is so many bushels from Washington to Richmond, but so many miles; we do not say that a horse weighs so many feet, nor that a man is so many pounds high. That with which we measure length must have length, that with which we measure capacity must have capacity, and in like manner, that with which we measure values, must have value. While the unit of measure of value must have value, it must be remembered that value itself is a relation, and therefore its unit of measure must be relative, not absolute. By themselves, neither gold, nor silver, nor paper have any value, it is only when they can be and are compared with other things, that the relation we call value springs into being. If a man were alone in a boat in the middle of the ocean, with nothing on board but a thousand pieces of gold, the gold then and there would have no value. But let some other men come alongside, with water, food, and means of safety, then the gold would have value, for it could be exchanged for something.

All absolute units of measure, as of length, capacity, time, weight, etc., must be constant—that is, they must always be the same. But as values are relations, their unit of measure cannot be absolutely unvarying; therefore, that thing has been selected by the commercial world, which compared with other things, *varies least;* and that thing is a grain of pure gold.

The necessity of steadiness in a standard or unit of measure is self-evident: what sort of estimates could a farmer make if a ton should mean 1500 lbs. to-day, and 2240 lbs. to-morrow? Herein lies the danger of having anything but gold as the standard of values. Compared with gold, silver has varied in a single year as much as eighteen cents per ounce, and what has happened before, may happen again. Still this question need not be considered at present, for in a few years silver will be our only standard, for the poorer currency always drives out the better. No man would pay his debts in gold, if he could legally discharge them with rags of other rubbish. To show the necessity of having for money, that which, compared with other things, is steady, let us carry a little further the illustration of the man who sold a barrel of flour and bought a coat. Let us suppose he sold his flour and received five bits of coin, each marked one dollar, which he put in his pocket, concluding not to buy a coat at that time. A year after, however, he wants to buy a coat, and going to the tailor asks the price, and is told, seven dollars. He naturally inquires why the price has been raised two dollars, and is told that there are so many of these dollars now, that it takes more of them to buy anything than it did. The tailor has to pay more for his cloth, more for his labor, and more for everything he has to buy, so he must ask more for everything he has to sell. This man would appreciate how dangerous it was, to have a measure of values so liable to change. If he had sold his flour for gold, the gold piece would have still bought the coat, or if he had kept his flour, he could have exchanged it for the coat; but instead, he had exchanged his flour for a commodity that had no fixed value in the commercial world, and had to suffer the consequences.

The stamp on a piece of money is only a certificate that it contained, when coined, so many grains of pure gold or silver; it adds but little to the exchangeable power of the coin, and its main use, is that people handling it can tell at a glance, exactly its denomination. If a man sells a watch for a ten dollar gold piece, he does not exchange the watch for the eagle on the coin, but for the exchangeable power that is vested in the bullion, on which the eagle is stamped. If the United States should make a coin, containing only 11.61 grains of gold, and stamp it a dollar, it would not be the gold dollar we now have; neither could it be exchanged for more than half as much as could a standard dollar containing 23.22 grains. Calling a pint a peck, or a peck a pint, does not make them so. If Congress should conclude to stamp all gold dollars, "one cent," it would not affect their buying power. The name of a coin has hardly more to do with the coin itself, than a man's Christian name has with his manhood. Money in old times was counted by weight entirely, a practice still continued in the Bank of England. The fineness of the work on coins is to make counterfeiting more difficult; but when they are to be melted, to make jewelry, plate, or other coins, the fineness of the work goes for absolutely nothing, and it is only the bullion that counts.

The amount of actual money in the world is an extremely small fraction of one per cent. of the exchanges that yearly take place between individuals and nations. The practical use of money in commerce is to balance accounts. If a planter receive from his factor one thousand dollars worth of provisions and send one thousand dollars worth of cotton in return, there has been an exchange of commodities, each one of which could have been exchanged for one thousand dollars, but which, in point of fact, have been exchanged for each other without the intervention of a dollar. If the planter should send eleven hundred dollars worth of cotton, it would require one hundred dollars, or some other commodity worth one hundred dollars to balance the account. This law applies to nations as well as to individuals.

Money being so important a thing, as to be the adjuster of commercial differences, and the measure of value of all other things, it follows that the best is none too good, and any man is a fool, who says that "so and so" is good enough money for him. A very dangerous theory is now afloat in this country, that the Government can stamp bits of paper, call them dollars, and give them to the people in exchange for their labor or the products of their labor. If a man gives anything of use he is entitled to receive something of use in return; the reverse of this doctrine is unromantically called *theft.* Plain as this matter is, viz., that honest labor should be paid in honest money, thousands of unthinking people, of the very class that will suffer most, are clamorous for a condition of affairs, under which they will be paid in poor money instead of good. A man who does a day's or a month's work is entitled to be paid in money that is good to-day, to-morrow, and every day; good in the place he earned it, and good in any other place where he may wish to exchange it. By good money, I mean money, that compared with all other things, will vary least in the course of a lifetime, and which has a definite purchasing power in the great markets of the world. To declare that labor or anything else should be paid for, by a thing which, compared with a gold dollar, may to-day be worth 80c., to-morrow 75c., and next year 35c., is to declare in favor of the grandest kind of grand larceny. During the war there was a kind of hair oil, the wrappers of which resembled greenbacks. Unscrupulous persons gave these wrappers to the ignorant freedmen in exchange for chickens, eggs, services, etc., paying what seemed enormous prices. The poor freedman, when he tried to exchange one of these dollars (?) for something he wanted, discovered how he had been swindled. The inflationists to-day went the people to vote to take "wrapping paper" for money.

All languages have two different words to express the idea of exchange. In English we say we buy and we sell: but in reality we mean, that we exchange. No man can buy unless somebody else sells, and *vice versa.* If a man buy a loaf of bread with a dime, the baker buys a dime with a loaf of bread. If dimes become relatively more abundant than loaves of bread, the baker will ask more dimes for his bread; in other words, bread will be higher. If bread become relatively more abundant than dimes, the baker will get fewer dimes for his bread; in other words, bread will be lower.

It is not concerning the quantity, but the quality of the currency, that our people need worry. If we were on a gold basis, and more money were needed for our commerce, more money would come; for money is merchandise and is governed by the same laws of supply and demand. If flour be twenty dollars a barrel in London, and ten dollars in New York, flour will go from New York to London until the equilibrium be restored. If money be worth 7 per cent. here, and 2 per cent. in England, on equal security, money will come from England to America, as surely as unrestrained water will run down hill. We read a great deal about the duty of the government to make money plenty. How can the government make money plenty? If the government coins a dollar, somebody has to earn the dollar before it gets into circulation. If it prints a promise to pay a dollar, somebody has to be taxed to redeem that promise. In either case, the coin, or the promise, has to be earned; the government cannot give money without an equivalent any more than it can give food, clothing, shelter, or gold watches. If citizens could get paper dollars from the government for nothing, they certainly would not give each other everything in exchange for them. Who will pay for anything they can get for nothing?

It is boldly asserted by the Inflationists that the government should issue what they call National Money, that is bits of paper stamped so many dollars, and declare it legal tender; then, they argue, this money would perforce become the currency of the country. To this scheme there are two insuperable objections: first, the Constitution forbids any ex post facto legislation, so this National Money could not be used to pay debts contracted before its creation. Second, the government cannot make people trade, and no man of sense would exchange valuable things for valueless things: in other words, they would not sell for this sort of money; and whatever of it got in circulation would be what was paid to the poor and ignorant, who either could not help themselves, or who had not learned by experience what a dollar was. Suppose a man were paid one thousand of these dollars for a day's work, and that these thousand dollars would not buy an ounce of bread, would that be prosperity? Yet it is the kind of prosperity urged on the workingmen by the Inflationist leaders. Honest labor should be paid in honest dollars; and the dollars of sophistry reserved for the sophists who claim to be satisfied with them.

MORNING PRAYER.

We thank thee, Lord, who through the night,
Hast kept us till the morning light.
Lord we would now meet humbly pray
For grace and mercy through this day.
Keep us, O Lord, from every sin;
From every evil thought within:
Under thy care our dear ones take,
And hear our prayers, for Jesus' sake. Aman.

Hampton Normal and Agri-

LIBYA.

THE earliest historical discription possessed by modern studeots of Africa or Libya, is probably that of Herodotus the Greek, and from the mass of proof which he offers us as to the success of the first attempts to overpass the dangerous defences witb which Nature bas surroonded this wild land, ws choose tbis following account of the first circumnavigation of the African peninsula. It is the opening scene in the drama of a people's life and in its brief boldness is a fitting introduction to the history that follows it.

Between the years 610 and 594 B. C., says Herodotus, Pharaob Necho, King of Egypt (Kings 2d chap. 23d,) despatched vessels, manned by Phœnicians, with instruction to sail round Africa, through the Straits of Gibraltar into the Mediterranean Sea, and thus return to Egypt. In their heavily manned, awkward vessels, without compass or pilot, ignorent elike of sea and shore, they worked slowly down through the Southern ocean, and when the autumn came landed oo the strange, savage coast to sow the ground and wait for the harvest, which was to give them food for the year of difficult discovery before them. By the deep channelled mouth of some broad river, or under the shadow of some great mountaio range, they cast anchor, and gave into tbe keeping of the rich, virgin earth the precious seed, which the Southern sun soon ripened. The unknown barbarians upon whose dominioo they encamped were friends or foes as might be, the luxuriant tropic mantle of fruit and blossom and harvest, covered wholesome fertility or fatal melarial poison and the life and death of these brave wanderers hung always in that bslance. But none the less did they cling to their first purpose, and their respiog accomplished, tarried not at all for tempting of gain or pleasure, but held to their appoioted course till in the third year they passed through the pillars of Hercules and reached once more their Egyptian homes.

Other and still other expeditioos followed upon this one, and increasing were the attempts of Romans, Greeks and Carthaginians to plant themselves upon the Northern African coast, until in the year 323 B. C., a Grecian colony was established in Egypt, and then opened that cuormous trade with India, which a few years ago led to the successful enterprize of the Suez Canal. From this time on wa read of direct intercourse between the half-civilized tribes of Northern Africa and their more luxurious and cultivated neighbors on the other side of the Mediterranean. Roman Emperors had their studs of African elephants, their pet monkeys from Algeria, their birds of brilliant plumage from desert oases, while their feasts were enriched with glowing tropical fruits, and the fierce battles in their blood-stained amphitheaters were fought by majestic lions and beautiful, cruel panthers, brought for the people's pleasure from far African jungles.

At this time, too, communication was obtained with the interior provinces through the Carthaginians, a people who used armies of elephnnts in time of war, and dealt largely in gold, ivory, and slaves, a form of trade which could only have been kept up by constant intercourse with Central Africa. Soon, however, the victorious Romans overran this attractiva Carthaginian territory and became the virtual rulers of North Africa, when, as their custom was, they sought new worlds to conquer in the boundless solitude of mountain and desert which to the south of them tempted their lusty pride to fresh endeavor. It is more than probable that these bands of Roman warriors pierced their way through the sandy heart of the Great Desert to Timbuctoo, Lake Tsad and the river Niger, thus establishiog the line of traffic between the Mediterranean coast provinces west of Barca and the fertile districts of the Upper and lower Niger, which has been maintained to the present day.

Bare as are these outlines of Africa's earliest civilization, they frame for the imagination a picture of weird magnificence. Across the bare Saharan sands sweep Romen legions, eagle-crowned, mail-clad, triumphant. Before them fly the unknown denizens of this strange, changeless wilderness, — by day, bright tropic birds wheel above their helmeted heads, or shriek shrill warnings at these white-faced men who holdly break at noonday upon the stillness of some deep-shaded oasis. By night, the migbty roer of lion and leopard, the hateful hyena-howl, the swift, distant galloping of zebras and wild asses drive the patient, unhurdened camels nearer their human allies, and arouse from dreams of Coliseum shows, many a weary Roman legionary. Now and egain, as tbe train moves slowly onward the pitiless sun burns some soldier, weaker than the rest, into fever and madness, and he drops on the scorching earth to die alone, for the many dare not tarry for the one, and death becomes as cruelly familiar in Libyan desert as on Punic battle-fields.

But at last the day comes when stunted shrubs and prickly grasses chenge into great branching cotton-wood trees and stately palms, when gratcful fruits tempt juicily on avery hand, when golden oranges, grey plums, and coolilng limes hang balf hidden by clusters of rosy bindweed and yellow laburnum and brilliant parroquets swing saucily on bending branches. From rocky, buttressed bsights fresh, springing water falls into deep, green valleys where harded sheep and oxen give promise of feasts which shall blot ont the memory of the loog desert fast, while graduelly the wandering native tribes of the Sahara are left bebind, and ths permaneotly settled country of the true negro is reacbed, the promised land of these conquest-seeking Romans.

Here we can fancy them halting impatiently, before the walls of some ancient city, whose palaces and temples of sun-dried brick, rise in vivid contrast, from groves of palm and mimosa. Richly coltivated gardens and well-tilled fields show the expectant Romans that the stories of kingly possessions to which they have listened with eager ears are no mere traveller's tales, but that in truth, these distant provinces offer to their conquerors, wealth, wondrous and inexheustible, wealth, too, which does not lack defeoders, for in opeoings amoog the acecia trees is drawn up in battle order, an army whose thousands of muscular, not unskilled soldiers are no mean enemies for the Roman cohorts, broken and disorgaoized as these are by their long, perilous march. The nativs troops, mounted upon beautiful Mandara horses are clothed from throat to knee in iron chain mail, with helmets for themselves, and heavy, protecting head gear for their horses, while their general is distinguishingly draped in bright, softfalling silk.

Is it to be war or peace betweeen these two confronting powers? A word, a look may turn the scale, and so it is that sometimes the invaders are received with hospitable welcome, and sometimes with savage cruelty.

The treasures which they came to seek, they do not win without a struggle, for the sultans and the people of these rich kingdoms are keen in trede and terrible in war, and their civilization though certainly not that of the Romens has still a grandeur of its own which is at this time at its climax.

So there are cities to be sacked, armies to be overcome, shrewd merchants to be bargained with, potentates to be persuaded, and the advantages is oot always with the strangers, though at last even their imperisl greed is satisfied and the long caravsn of camels and slavcs strikes once more the northward routo across the dreaded desert. The spoils which they bear with them of rough gold ore and heavy ivory tusks are destined for the palaces of Roman magnates, and the black captives whose wistful backward glances rest for the last time on the gorgcous distances of their tropic home are to become the toys and victims of corrupt Latin luxury.

Strange must have been the intercourse between these old Romans and Africans, strange it still is tbe after history of both, and the shsdow of its mystery, its crime, reaches even down to us, frea children of a free country.

To-day this all-conquering nation, these merciless, magnificent Romen masters are nearly vivid visions, more dead than death, while the people whom they enslaved are rooted as firmly in their native soil, as though no fierce intruder had ever broken their barbaric slumber—and the children of their blood have planted themselves afresh upon a mighty, new continent, with whose national life they have so intergrown thet tha whola world shook when a few years ago their fate hung trembling in the balanca. The mystery is not for us to read, bot surely every step that we take as wa ratrace tha faint imperfect records of Africa's long sleep, shows us that deeper than all our theories, than all our philosophic explanation lies God's eteroel purpose. As wa go on from century to century and find bow continuously this great country with its immense extent of seacoast and enormous interoal riches, has defied intrusioo, the conviction is ioevitable that Africa's silent resistance to the finer influences of civilization, is full of meaning. She has not baan kept in the rear of the world's progress without a reason, and in our contemplation of external forces whicb heve, more or less, affected her, this thought may help us to a more williog sacrifice of prejudice, a more patient acceptance of bitter truths.

With the downfall of Roman power, ended, historically, Africa's connection with ancient Europe, and from that time she remained under Arabic influence, until in the 19th Century her story passes into the hands of modern European explorers, a brave company, to whom all bonor is due.

M. F. A.

NEWS OF THE MONTH.

FOREIGN

THE occupation of Bosnia, in pursuance of the Treaty of Berlin, has not been a bloodless expedition. Serious fighting has resulted, the occupation being vigorously opposed. Austria and Russia are both having to take possession of their new territory by force of arms.

THE International Monetary Coogress opeaed its first session at Paris on the 10th of August. M. Leon Say was elected president. After secretaries were appointed, and a few words of welcome were spokes by the president, Mr. Reuben Fenton, of New York, briefly explained the object of the conference; which is to establish an international standard for gold and silver coin.

A GRAND naval review and inspection by the Queea of England, took place on the 13th of August. The fleet consisted of twenty-six vessels carrying 219 guns and 6,691 officers and men, aggregating 99,541 tons, and 78,350 horse-power.

EMIL HOEDEL, who attempted to assassinate the Emperor William of Germany, last May, was beheaded at Berlin on the 16th inst. Fifty persons including public officers, witnessed the execution, which is generally approved. Since the 2d of June, when Dr. Nobeling attempted to kill the Emperor, there have beeo 563 persons arrested for insulting the Emperor. Of this number 521 have been convicted, including thirty-one women.

A DISPATCH from Havre says that ex Queen Christiana of Spain is worse. No hope is entertained of her recovery.

CAPT. GENL. Martinez Campos, of Cuba, has issued a circular directing the governors of provinces to allow, in all parts of the island, meetings of persons for electoral purposes, with liberty of speech, but prohibiting attacks upon the integrity of the nation, and to allow newspapers ample liberty for discussion on all subjects.

PARIS is now entertaining five "real live" American Indians, and they enjoy the new and wonderful sights very much.

DOMESTIC.

DURING the last fiscal year the total aumber of letters and packages registered was 4,348,187, while $327,488.98 was collected in fees. The percentage of ordinary letters lost was about one-fiftieth of one per cent. As many as 345,642 packages of stamped envelopes and postal cards, valued at $124,147,040.54, were forwarded for the Government without charge for registration, and of all these, only two small parcels of little value were lost. Not a penny was lost out of the immense sums carried for the U. S. Treasury Dept.

Notwithstanding the horrible warnings constantly recited in the daily papers in regard to the great danger of a careless use of kerosene, many pay no heed to the admonition. At Newark, N. J., a young woman, in order to start the fire more rapidly, poured kerosene oil on the embers. An explosion took place, and the unfortunate woman was so terribly burned that she died next day. She was but eighteen years old and and had been a bride but three months.

MORE than 20,000 Americans have visited foreign countries this year.

THAT most dreadful of all diseases, yellow fever, is still raging at a fearful rate in some of the Southern states. A report from New Orleans on 23d inst., stated that there had been more than 1,000 cases and 333 deaths, since the beginning of the epidemic, in that city alone. The chance for patients is, about one to four, fully 60 per cent. of the deaths are of foreigners or unacclimated people, and fully 75 per cent. of the remainder are children.

From Grenada, Miss., comes the most heart rending details of the terrible suffering of the wretched victims of this malady. Scenes in the plague stricken town are beyond description. Entire families have been prostrated, one after another, and swept away in a few short hours. The strongest men as well as the most helpless children are either sick, dying, or dead. The town is almost depopulated, containing but 200 people, of whom not more than 30 or 40 are well, while two weeks ago there were more than 1,500 inhabitants in the place. Eighty deaths have occurred.

A telegram from Canton, Miss., Aug. 21, says— To illustrate the terrible panic reigning here it is only necessary to state that four days ago the place contained 1,000 inhabitants where to-day 125 cannot be found. There are eighteen cases now here, but old residents say that it is impossible for fever to spread owing to every one having left the city except those considered plague proof. The streets were deserted at eight o'clock last night: not a human being was to be seen about the place.

At Vicksburg, Miss., there are also many cases reported, 300 to Aug. 22. The death rate is quite high, 25 having died in a single day, being one more than in any one day during the epidemic of 1853.

The disease at Memphis, Tenn., is spreading rapidly, 12 deaths and 48 new cases reported in one day. The report also says—The colored population, which is now largely in the majority, are acting well in heartily co-operating with the whites. A meeting has been called by the prominent colored men for the purpose of organizing to assist the whites in relieving distress, and guarding property which people in the panic of last week left unguarded. Among the most efficient on the police force now are negroes.

Louisville, Ky., is free from the scourge; has not established a quarantine, and is doing all in her power for those who come to her from the plague-stricken districts.

Cincinnati and Pittsburg have decided to quarantine all boats coming from the South.

The Howard Association, of the Masoolc fraternity, and the Odd Fellows are doing a noble work in caring for the sick and dying; acting as relief committees and as nurses. Appeals for aid are promptly and gladly responded to by the numerous cities of the United States.

POLITICAL.

THE Potter Investigating Committee is still investigating. No new developments, and no prospects of any.

DENNIS KEARNEY, the great agitator, is still on the war path. Having organized a workingmen's and anti-chinese party in California, which was partially successful in the late campaign, he felt it his duty to come East and drag the unlaboring men onward to victory. Kearney spoke in several Eastern cities, denouncing the administration, denouncing capitalists and office holders, declaiming everybody and calling upon the laboringmen to "pool their issues," proceed with the fire-brand and torch if necessary, and strike terror to the hearts of all who had opposed them and those who had not—guilty and innocent. But the workingmen of the East failed to recognize the leader in Kearney and he is now going West, a wiser and sadder, if not a better man.

THE hill allowing women to vote at school meetings in New Hampshire has become a law.

THE Marquis of Lorne is to succeed Lord Dufferin as Governor-General of Canada.

THE Chinese Embassy have arrived and taken up quarters in Washington.

$66 a week in your own town. $5 Outfit free. No risk. Reader, if you want a business at which persons of either sex can make great pay all the time they work, write for particulars to H. HALLETT & Co., Portland, Maine.

U can make money faster at work for us, than at anything else. Capital not required; we will start you. $12 a day at home made by the industrious. Men, women, boys and girls wanted everywhere o work for us. Now is the time. Costly outfit and erms free. Address, TRUE & Co., Augusta, Maine.

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of this institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable, &c., &c.

For further information address,

S. C. ARMSTRONG, *Principal,*
Hampton, Virginia.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers of that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

BY

PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR

BY

W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY

BY

MONTEITH & McNALLY.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. VII. HAMPTON, VA., OCTOBER, 1878. NO. 10.

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, H. W. LUDLOW, } *Editors.*

MRS. M. F. ARMSTRONG, MR. W. N. ARMSTRONG, MR. T. T. BRYCE, } *Regular Contributors.*

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,

Business Manager, Hampton, Va.

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

WITH this number the supplement of the Southern Workman is resumed, and is to be continued till next July.

THE Hampton Institute opened September 26th, with good prospects. During the vacation, from June 18th to September 26th, over eighty students, including Indians, have been employed at the institution, not being able to find work elsewhere and being unable to go to their distant homes.

Four hundred thousand bricks have been made on the premises, half of them by students, of which nearly 200,000 will be used in building, and the rest sold.

On the knitting-machines 2,400 dozen pairs of mittens have been made since the 15th of June.

The boarding department has been in charge of Mrs. Davis of Danville, Va., a very worthy colored woman of remarkable executive ability and force of character; and the routine office business has been conducted by Mr. James C. Robbins, Principal's Clerk, assisted by Mr. Frank Banks, both graduates. All have done admirably.

We invite attention to Mr. Robbins' account, in this number, of the vacation experience of the Indians

---

INSPIRED by the success which has thus far attended the effort to educate Indians, seeing that the weak point in the work is the absence of Indian girls, knowing that the condition of woman is the gauge of civilization, satisfied that the Hampton methods are as well adapted to the elevation of Indians as of Negroes and that such opportunities and resources (costing in all $200,000.00) are nowhere else offered, and feeling that the band of Providence is in this work so naturally yet curiously thrown upon us, the officers of the Hampton Institute, upon conference with the Secretary of the Interior and the Commissioner of Indian Affairs, agreed, at a charge to the government of $167 apiece for one year, to educate fifty Indian youth from the plains, half boys and half girls, between the ages of fourteen and twenty years.

We agree to give, then, as fully as the time of their stay will allow, a knowledge of the English language, training in the decencies of life, and a manual labor drill that shall qualify them to earn their living and be an example to, and an influence upon, their people.

This work will be at no discount of our efforts for the colored people, who are, this year, coming in full numbers. The number of teachers is increased. The capacious dining room in Virginia Hall has room for all. We have recitation rooms for them, but not sleeping rooms to provide decently even for our colored students, of whom about thirty have for years occupied a rough and open attic not intended for such use.

On the 12th of September ground was broken for a new building to be called the "Indian Cottage," thirty-five by ninety-five feet, three stories in height, to be built of home-made bricks, and to be divided, by solid walls, into three separate compartments with as many entrances, to provide fifty students' rooms, and to cost, finished and furnished, $10,000; at least ten of the rooms to be occupied by colored young men.

Ten new rooms in Virginia Hall, for the Indian girls, are already done (and they will have others), which, complete and furnished, will cost $2,000.00.

The cost of the sixty rooms, ready for use, will be $12,000.00 which the Hampton School is to provide, and which, when done, will be done, once for all, and be devoted, so far and so long as needed, to the cause of Christian education for the Negro and Indian races.

The average cost of each completed and furnished room (twenty-five will be double) will be $200.00.

The government should, and doubtless will in the future, assume, as it already has for the coming year, the current expenses of this work, if successful.

EIGHTEEN THOUSAND DOLLARS NEEDED!

Will the friends of education and of the Indian assume the cost of these rooms, and thus supply sixty-seven Indians, of whom seventeen are now at Hampton, with the shelter and the decent, cleanly quarters they need; the care and the influence of which upon them will be no small point in their training.

In the past five months of experience with Indians at Hampton there has been no friction of race whatever. The red and the black men have taken most kindly to each other.

Capt. R. H. Pratt, of the U. S. Army, who showed such tact and skill in humanizing the Indians at St. Augustine, Florida, is assigned the duty of collecting these fifty youth and to aid in their management at Hampton.

He is expected with his wild party about the middle of October. The building was commenced the day he started for the plains, though not a dollar was in hand for the purpose. But cold weather was nearing and the "red skins" were upon us. From his first station at Fort Berthold he reported eight youth secured and excellent prospects for the rest.

To provide mechanical instruction for our Negro and Indian students, a workshop, one hundred and twenty by thirty-six feet, three stories, of brick and heavily timbered, is required. The building will cost $6,000.00. Our agricultural facilities are excellent; our mechanical very meagre.

Mr. George H. Corliss of Providence, R. I., has generously offered to place in our work-shop a new and improved sixty horse power Corliss engine, without expense to the institution. This magnificent and valuable gift is in process of construction, and will soon be waiting for its work. We hope to build in the coming spring.

It is for the friends of industrial education to say whether the shop shall be put up. It will give peculiar emphasis and strength to that phase of the Hampton work which has most commended it to thinking people; and will open the door to the education of many a poor and deserving youth whose capital in life is a stout heart and willing hands.

The moral force and true value of our graduates, in the past ten years, has been, not according to their natural abilities, but according to their spirit of hard work, as brought out by our labor system. Give us the work-shop, and we will send men out of it.

Ten days after the ground was broken for the Indian Cottage, in faith in the need and the rightness of it, and in the friends of the races Providentially placed under our care, a lady in Boston, Mass., sent a contribution of $2,000.00 to aid in carrying out these plans.

Three other friends in the same state, by paying $200.00 each, have just assumed the cost of three rooms.

The following is just received from Capt. Pratt, and is the latest news from him:

STANDING ROCK AGENCY, DA., *Sept.* 21, 1878.

Dear General:—The Sioux will come, boys and girls, more than I want,—fine specimens, splendid physique.

I leave in the morning for Cheyenne, 130 miles, to be made in three days by Mr. Mad Bear, a Blackfeet Sioux Chief, in his spring-wagon; and I pay him $15.00 (stage fare). The stage left this morning, and does not go again for a week. No boats and no other transportation worth having.

I shall have a novel ride, but a safer one than if with some of these border men.

Yours faithfully,

R. H. PRATT.

Many besides the friends of Captain Pratt will be interested in the following private letter from him, which seems to insure the arrival of the Indian contingent, and to make more and more clear the wisdom of the government in this effort for their education:

BISMARCK, DAKOTA TERRITORY, *Sept. 19th*, '78.

Dear General:

I reached here Saturday morning. Left Sunday morning, and Monday noon was in Berthold, 86 miles away. Special extra conveyance, a common wood wagon and two mules, driven by a drunken Irishman, myself the only passenger. As I anticipated, it took time (a day and a half) to get them up to it, and then only one of the three tribes responded favorably, so I took the whole six from them. All from the goody element and a little schooled. These come slow, but think when I return to get them there will be no trouble in getting fifty, if wanted. I think of re-arranging them. Will go through by stage to Standing Rock (60 miles) to-morrow. Rode in the wagon from Berthold to here (86 miles) between 8 a.m. yesterday and 11 a.m. to-day. Am very tired.

The Lord certainly seems to intend this work to go through, and I shall push it the best my strength will allow. Boats are not one-third as plentiful as I was told, and I shall have to stage it mostly, which is simply wrenching.

The pictures were a capital help. Of them all, Mrs. A—— and the children attracted most. I was right about E-tah-ma-ah to help. I would have saved a day and caught the lively element with him.

There was a little half-breed Ree girl I wanted badly. May get her; she is only eight, but is noted and loved by every one; bright and cleanly. She would make her own way, if once east. Some friend would rise up to pay her way, if the Government would not.

If not successful below, will find a way to let you know promptly, but you can build on a certainty, for I can carry the Rees by storm on my return, and get all from them. Have to hasten for this mail.

Yours faithfully,

R. H. PRATT.

THE NEGRO IN THE NORTH.

In the Middle and New England States, many towns and cities have a colored quarter, or a fringe of negro population, which does not, as a rule, command the respect of the whites, though many individuals and families of the race are held in high esteem.

The more energetic and progressive the white population, the more the blacks seem repressed and confined to menial duties, yet to this, as to all general statements, there are exceptions. The competition of the "irrepressible Yankee," together with the prejudices against color, still potent in the North, overbalance the advantages, whatever they are, of free and "mixed" school privileges and of civil rights, which are freely accorded. Colored young men become barbers, bootblacks, or waiters. They are pushed out of competition for higher places by their want of vigor, and by the tremendous rush of whites for every foothold. For all that, they sometimes win distinction in Northern colleges where students are willing to give negro youth a fair field. There are colored lawyers of excellent standing in some of the large cities.

The race is represented in many kinds of business and in art, and a goodly number have acquired wealth. We believe that the backwardness of the negro population, in the North, is due, about half, to their peculiar difficulties, and about half to their lack of wise and persistant energy. A sensible and talented young colored man is pretty sure to find friends and to make his way; he appeals to the sympathies of a large class more quickly than would a white boy in similar circumstances. The average white has a better chance for parental or family aid; the average black, a better chance for the help of the rich and tender-hearted.

Color works both ways; it hurts and it helps. Socially, the negro is every where thrust out; for his mental and moral progress there is great sympathy. The North will give him the best education it can afford, and leave him in the most wretched condition: a cultivated man with no place among cultivated people.

He has ceased to be a negro of the negroes, yet a college education does not necessarily bring him up to the social standard, and if he is blackballed in society he must not assume that it is all due to prejudice; his culture may lack completeness; he may retain much that he would not have, had his education commenced in early childhood. The few who are not lacking in the finer ways and instincts suffer severely from the presumption that lies against them by reason of their color.

At any rate an accomplished colored man has no place; life is embittered and he inclines to skepticism; this is, we

think, common and almost inevitable.

Those who go to work at any profession my then indeed are we a blind and foolish people.

operations. Secondly, that a military caste would grow up, with its habits of exclusiveness and command, and influence the tone of poli-

law allows or demands, and elevate him to his utmost capacity, which we know is but of low degree at best as a general thing, and if

think, common and almost inevitable.

Those who go to work at any profession or business have unusual difficulties; but if they have unusual talent, or grit, they succeed, and content themselves with their command of mental and other resources, rather than in social recognition. Their experience does not develop a strong sympathetic side; as a class they are not the ones to look to for aid for the needy and deserving among their own people. Yet some of them have made valuable charitable endowments. A lack of *esprit de corps* is, however, a trait of the race.

In twenty years the better colored class of the North has not made the slightest social progress toward white people, in spite of their growth in wealth, and knowledge, and civil rights, even among those whites who have done most for them. Their *statu quo* in this respect is a curious fact. It points to a race fact or instinct; it proves the utter absurdity of that bugbear of many Southerners—a social invasion by the negroes as the result of their enlightenment.

Now that the virulence of the yellow fever epidemic is exhausted and its frightful work so far accomplished as to enable us to judge fairly of its results, would it not be well for us, as a people, to soberly count the cost, directly to the stricken cities, and indirectly to the whole country, of such a summer as this through which we have just passed? The horrors of the plague must be by this time familiar through description or by experience to every man or woman in the United States, but do we realize fully what they mean? We can trace the course of the fever from its outset; we can look back to the first two or three isolated cases in a poor and filthy quarter of a great Southern city, followed by a fortnight in which the foe made gradual but almost unnoticed advances, until, as it were by a sudden leap, the fatal yellow flag was firmly planted and there was no more hope. Gradually along the lines of communication leading out from the plague centre, the disease took its course, enshrouding city and town and country, until, at last, it became evident that no human skill could check it, and that safety could come only through the silent, heaven-sent frost.

The three months during which the fever has had its way, have cost us thousands of human lives, millions of money, and an amount of human suffering which is not to be computed. Surely this is a terrible total and it must be remembered that it is one which can never be paid off, and that it represents a burden which must fall, more or less heavily, not upon one city or state, but upon the whole country. In view of this we may well ask if nothing can be done to stay the course of this devastating fever, or better still, to prevent its gaining a foothold upon our soil, to which it is most certainly not indigenous.

The testimony given by experts during this epidemic seem to show conclusively,—1st, that yellow fever is, in the first instance, invariably brought to our Southern ports from South America or the West Indies, where it always exists. 2d, that filth, if not a necessary condition of its existence, does, at least, so foster it that cleanliness is the best safeguard against it. 3d, that at present there are no known means of checking its ravages when it is once firmly established in any given locality.

The question for the future therefore presents itself in this shape, "is it not possible to keep our Southern ports so clean and so thoroughly quarantined during the hot months, that this awful enemy shall never again succeed in getting a foothold among us?" Science both in theory and practice answers this question in the affirmative, and the experience of other cities and nations answers it as well. It can be done, but it will take time and money, and, more than all, wise and honest men to do it. On the other hand, however, no outlay in these directions can compare with the cost of the fever, in hard money, setting aside the terrible uncounted cost in human life and human agony. Our Southern ports would be kept clean and quarantined for fifty years at the price of one epidemic, and if the past summer has not taught us that this is the only true economy then indeed are we a blind and foolish people.

We call the fever "a scourge," and we can give it no truer name—it is the scourge for our sins of uncleanliness and disobedience to those laws which our health has ordained shall regulate and control all human life. Science and Christianity both assure us that to cease from our sin is the only way to whereby avoid its punishment, and for us, the lesson of the summer of 1878 is not hard to read. The future alone can show how far we are going to profit by it, but can we more fitly honor those noble dead, physicians, clergymen, nurses, and their co-workers, men and women, black and white, Romanists and Protestants, who lie at New Orleans and Vicksburg, and Memphis, and Grenada, than by declaring that, if, as now seems probable, it is within the scope of man's power to prevent such epidemics, we will see to it that this experience is never repeated within our national boundaries.

M. F. A.

We regret very much to learn that Mr. Edward S. Morris, of Philadelphia, one of Liberia's most devoted friends, has recently sustained serious injury from a fall, and hope that the journey to Europe which he has undertaken for his health may fully restore it.

Mr. Geo. W. McNealy of the National Soldiers' Home at Hampton, late of the Sixth Iowa Regt., has, since December, 1877, been engaged as instructor in the Normal School broom-shop and has taught the art thoroughly to a few of the students. He now returns to the Dayton Home in Ohio, and has the best wishes of all at the school.

NEGRO BOYS AND WEST POINT.

A graduate of the Hampton school, Fred Phillips, was, recently, with eighteen others, (he the only colored one,) competitor for the appointment to West Point from this district. We are informed that Phillips and a white young man won the highest and equal marks at the recent examination; but at a subsequent and severer test between the two, the white man won the first place.

The only other negro from this institution who has attempted West Point, John Williams, was admitted and remained nearly a year; but, though excellent in mathematics and other things, failed in French and was dropped. He always spoke well of his treatment there, and had no complaints to make. Phillips is now teaching school.

John Williams became a druggist's clerk in New York City, and when his employer, an Englishman, became heir to a large estate in his native country, he took Williams with him and made him his confidential clerk.

We reprint several paragraphs from a review in the N. Y. *Tribune*, of the Hon. W. E. Gladstone's article in the *North American Review*.

The contrast between the results, so far, of English and American emancipation are striking.

Of the million and a-half soldiers, at whose return to peaceful pursuits at the close of the Civil War Mr. Gladstone is "struck with wonder," two hundred thousand were negroes. Many of the negro regiments were not only schools of discipline, but peripatetic academies in which excellent rudimentary instruction was given, much moral restraint was practised, and the men fitted for their coming responsibilities.

England emancipated a million negroes by peaceful legislation; America liberated four or five millions by a bloody civil war; but the industry and exports of the Southern States are maintained, while those of the English colonies have dwindled; the South enjoys all its franchises, while the peace and order of Jamaica is preserved by doing away with its representative institutions.

Mr. Gladstone is struck with wonder at the return of the soldiers to peaceful pursuits on the close of the Civil War. A million and a half of men, on both sides, were embodied in arms, presenting the greatest military forces in the world. Here was supposed to be a double danger. It was feared that the habits of the camp could not be thrown off at the close of the war, and would lead the country toward an aggressive policy, or still worse, would find vent in predatory or revolutionary operations. Secondly, that a military caste would grow up, with its habits of exclusiveness and command, and influence the tone of politics in a direction adverse to Republican freedom. But both of these dangers, says Mr. Gladstone, have proved imaginary. The innumerable soldiery was at once dissolved. Cincinnatus became the commonplace of every day. The whole enormous mass quietly resumed the habits of social life. The generals of yesterday were the editors, the merchants, the lawyers of to-day. The standing army, expanded by the heat of civil contest to gigantic dimensions, with the returning temperature of civil life, became a power well-nigh invisible from its minuteness amid the powers which sway the movements of a society exceeding forty millions.

The financial sequel to the great conflict, in the view of Mr. Gladstone, is no less extraordinary. The taxation for Federal purposes, in obedience to an exigency of life and death, was made to exceed every present and every past example. It pursued and worried all the transactions of life. The interest of the American debt grew to be the highest in the world. In sixty-three years from the close of the great French war, England had reduced her national debt by about one-ninth, or a little over £100,000,000, or scarcely more than £1,500,000 a year. But the United States in twelve years has reduced her debt by £158,000,000, or at the rate of £13,000,000 in every year. In each twelve months, America has done what England did in eight years. Thus, says Mr. Gladstone, her self-command, self-denial, and wise foretbought for the future have been, to say the least, eight-fold that of England. These are facts which redound greatly to her honor. The most unmitigated democracy known in the annals of the world has reduced at its own cost prospective liabilities of the future which the aristocratic Government of the United Kingdom has been content ignobly to hand over to posterity.

The practical workings of the British Government are set forth by Mr. Gladstone, in a lucid exposition, which gives a more distinct idea of the complicated system than is to be found in any previous treatise on English statesmanship. The curious machine, he remarks, is so subtly balanced that it seems as though it were moved by something as delicate and slight as the main-spring of a watch. This power has not been the invention of human thought. The Cabinet, and all the relations of the British Constitution, have grown into their present dimensions, not as the fruit of a philosophy, not in the endeavor to give effect to an abstract principle, but by the silent action of invisible forces. Its composite harmony depends on a peculiar union of competing influences and powers. More than any other it leaves open doors which lead into blind alleys, for it presumes, more boldly than any other, on the good sense and good faith of those that work it. When these reasonable expectations fail, then, it must be admitted, the British Constitution is in danger. Apart from such contingencies, the offspring only of folly and crime, it is peculiarly liable to subtle changes. Its old particles daily run to waste, and give place to new. What is to be hoped is that which has usually been found, that evils will become palpable before they have grown to be intolerable.

SOUTHERN IDEAS.

From the Charleston News and Courier.

POLITICAL.

There can be no tranquility, no impartial justice, no public economy, no low taxation, and no progress in South Carolina, in these days, except under Democratic rule. The choice is between that and ruin. In the North one political party is, very likely, as honest and intelligent as the other. This is not the case in South Carolina. Unless the Democracy govern, ignorance and vice, under the name of Radicalism, will lord it over the State. The Democracy will not swerve a hair's breadth from their pledges. They will have equal and exact justice for all classes. They will "protect the persons, rights and property of all the people, and bring to summary justice any who dare violate them." In order to do this they must retain the mastery in public affairs. Without that they can do nothing. For the colored people outside of politics, as fully as for the whites, Democratic rule is a supreme necessity. And for their own sake, as for the sake of the colored people, the Democracy must, we repeat, retain the predominance, which is due to superior culture and experience, and which they now enjoy.

SOCIAL.

We do not wish ever to see a white man brought to this State who will have no higher ambition than to excel the negro in muscular power, or to compete with him in his ability to chop, hoe or plough, or do any other kind of menial labor. The negro is among us, and he fills a peculiar position that can never be occupied by the white man. We should take care of the negro, give him all the rights the law allows or demands, and elevate him to his utmost capacity, which we know is but of low degree at best as a general, thing, and if, in the Providence of God it proves to be his destiny to return to the land of his ancestry, we say, with all kindliness, help him along.

But when we discuss immigration the negro seldom occupies our thoughts. We only wish we could believe that the representative negro could be made as valuable a citizen as he is a suitable laborer for the South. We would then be for his sake hopeful of his future; but we can entertain no such idea. In another century, we believe, there will be no negroes in the United States. What will become of them Heaven only knows; but we *feel* that we *know* that progress is the Divine mission of the human race, and there is no progress in the African, and hence he will be obliged to "stand from under."

[When "we *feel* that we *know* that" a thing can't be done, we have about fixed its failure, so far as our own efforts are concerned. "There is no progress for the African" is the refrain of Southern Bourbons. Yet the colored people of Georgia since emancipation, as shown by the official reports, have accumulated over three million dollars worth of property, and over three hundred thousand acres of land. In Louisiana they own over twenty millions of dollars worth of property. Over forty millions of dollars of money earned, mostly, by them, were placed in the Freedmen's National Savings Bank, of which more than four millions remained on deposit. Delegations of solid Southern men have repeatedly examined negro institutions, and declared their belief in the negro's capacity for progress.

Neither the Negro nor the Indian questions are likely to be settled by their dying out; the former, between 1860 and 1870, increased, by the last census report, by ten per cent.—Ed. S. W.]

The negro is here and we must utilize him to our profit and his benefit. He is not to be superseded by an influx of cheaper labor. We do not believe such labor exists. He is good enough for us in *his place*, and we do not want any other race in *that* place. But we do want immigrants; men and women of a higher intelligence, who will come and settle among us, and assist us in developing the resources of our State. We want farmers to come among us who can and will buy our unoccupied lands, and fertilize and improve them. We want mechanics to come among us, who will by their skill convert our timber and minerals into merchantable products. We want co-operative associations of manufacturers to settle here, and utilize our unlimited water powers. We want producers of every style and character to come here, that we may become a more thrifty people; have better schools, more liberal education and, withal, be made a better and more progressive people.

INDUSTRIAL.

In regard to a new cotton mill at Vanclusc, S. C., the *News and Courier* says: The building is one of the most solid and substantial in the United States. The foundation is made of granite, quarried a hundred yards distant. The stone is hard and close grained, and it is said that no better can be found in the South. Above the stone foundation arise the main walls of brick, carefully laid. The building is three stories in height (exclusive of the basement), and is 236 feet long by 74 wide. The first story is used as the weaving room, the second as the card room and pickery, and the third as the spinning room. The capacity is 300 looms, 10,000 spindles. The machinery is all of the most improved pattern. The greater part of it was manufactured in Biddeford, Maine. A part was purchased in Lowell, Mass., and the "slashers" were obtained from England. The mill altogether is one of the most complete and best equipped in the South, and is a credit to the stockholders of the Graniteville Manufacturing Company, as well as an honor to the State of South Carolina. About two hundred operatives will be employed in the mill, a considerably smaller number, we understand, than is usually thought necessary to work a ten thousand spindle mill; but the machinery is so improved and the mill so admirably constructed that experts say that number of hands can run it without any trouble. The dam is built of granite quarried at the spot, and is a solid and lasting structure.

DEATH OF MARY WRIGHT.

Mrs. Mary Wright, formerly a Hampton student, died at her home in Warwick County, on Thursday the 29th ultimo, after an illness of two days.

Mrs. Wright was a student of the Hampton Normal School during the term 1870–1. She was a devoted wife and a consistent Christian. She was beloved by all who knew her.

"Peaceful he thy silent slumbers."

M. D. W.

HARD TIMES.

And, observe, wages are low because there are too many hands in the towns, too much com-

the whites have perhaps not very much on their conscience. Extermination was too often inferred from change of locality; and again, while

on paper exhibit his talent as a master workman.—*Christian Recorder.*

HARD TIMES.

A Boston paper comments thus on the testimony of Col. Wright, before the Congress Committee appointed to investigate the causes of the depression on business:

"One of the standing complaints of shallow labor agitators is that machinery makes against the interest of labor; and it will be remembered that recently in the West, at the very time when farmers were offering $2.50 a day to laborers, lawless tramps who were unwilling to work at any price devoted their energies to destroying the farmers' reaping and binding machines, under the pretense that their use was an injury to labor. Col. Wright maintained that the use of machinery is a direct benefit to labor, because, although it displaced muscular labor for a time, it gave more employment to the masses, gave them more of their own time and better wages for the time employed. If all the machinery were stopped and manual labor substituted, the whole wealth of Massachusetts would be eaten up in a year, and the condition of the people would be as bad as that of the Chinese. To do the work now done by machinery would require the labor of four hundred thousand men and one million five hundred thousand horses, and it would cost four hundred millions of dollars instead of twenty millions, as now. Machinery enables a much larger population to subsist on a smaller area than would be possible otherwise.

"The statement of Mr. Walker, a large boot and shoe manufacturer of Worcester, that 'the demand to be employed in a particular class of labor, at certain wages, is a hundred-fold more the cause of depression than actual want of work,' has a good deal of truth in it. A good many people are idle, not because there is no work for them, but because they want only certain kinds of work, at certain wages. There is some wisdom, as well as pungency, also, in Colonel Wright's remark that the best thing Congress could do for labor, very often, would be to adjourn its session when it was sitting, and that it would be better for the workingmen if Congressmen were paid $25,000, to stop at home, rather than $5,000 to sit at Washington. It is less legislation, rather than more, which the industrial interests need. The incessant Congressional tinkering of the tariff and the currency paralyzes capital and destroys confidence. The constant looking to Government for employment or assistance takes all the vitality and independence from labor. The very best thing that capital and labor can commonly ask of Congress is to be let alone." —*Journal.*

The *Boston Pilot* uses some vigorous words on the remedy for the hard times in the North, which we quote. The crowding of the laboring class of the South into the cities is an unmixed evil. The remedy, to scatter, is easy to see, but difficult to put in practice:

"There are too many men and women employed in the manufacture of goods, and too few employed in the production of raw material.

The mills and workshops are crowded till the crowd overflows, and the streets are filled with idle and hungry people; at the same time the fields and farms are deserted, and in consequence the whole people are forced to pay three prices for all sorts of food and clothing.

The curse and the disease of modern civilization is the formation of great cities and towns, where all the men and women live on the skill of hands and brains, making something out of something else, and depending for the something else on foreign countries or on our own half-tilled lands.

The natural cure for this disease is to spread the labor; let half the crowd leave the mills and workshops, and go out on the farm lands.

Let every inch of soil on the continent be used for the production of food and clothing, and timber and stone, and coal and metal. Then the furnaces will roar day and night; the mill-wheels will never stop; there will be plenty of money, for money only represents material wealth; the schools will be full and the homes comfortable; travel will be cheap, clothing plentiful, flour and beef for every one; and a hundred kinds of sweet vegetables and comfortable fabrics now known only to the rich will be sold in the common market to the laborer's wife.

This is the possibility—this could all be made true and practicable—this is the only lasting cure of the labor evil.

Let every man study this for himself. *All wealth lies in the crust of the earth.* In this country, embracing all climates, capable of producing all fruits, vegetables, minerals, under the sun, thousands are starving, and millions are only just able to live; yet the rich earth lies untilled, unpeopled, while myriads crowd into the cities to prey upon each other, and to listen to the demagogues and the quack doctors.

It will be answered to this that we already produce more than we can use. This is not so; we produce now *more than we can buy* at *the high prices we pay while wages are so low.* And, observe, wages are low because there are too many hands in the towns, too much competition; and prices of living are high because there is too little produced, too little competition in the fields.

No matter what is said to the contrary, the man who produces something useful can always sell or barter it to others who produce something else. Real wealth is not money, but the good things that money represents. Produce the good things and you produce the wealth.

If every field in America were yielding its full riches of grain, cotton or minerals, it would then be time to consider the shortening of hours of labor, and stopping the machines. But until there is no more power of producing raw material, the true question is, How to get the crowds from the cities and spread them at productive work over the fields?"

The *Sentinel*, of Rome, N. Y., quotes from the WORKMAN of September, commenting as follows:

"The Hampton (Va.) SOUTHERN WORKMAN for September contains an able article on 'Money,' by T. T. Bryce. It is a plain, comprehensive explanation of the difference between money of real value and promises to pay. The article is so thoroughly sensible throughout, that we surrender a considerable portion of our space to give it entire. No reader of the *Sentinel* should fail to peruse it."

A New York mechanical engineer, who superintended the erection of the steam and water works in Virginia Hall, at Hampton Institute, was so pleased with the way the students who assisted him took hold, that he has since employed negro help, and has placed negroes in important places as engineers in that city. Colored men are, through his influence, running elevators in two of the best apartment buildings in New York.

The editor of the *Memphis Appeal* treats the charge that colored nurses had, in yellow fever cases, taken advantage of their helpless white victims, especially women, as follows:

"No man, white or black, would be allowed to breathe a second breath after such a crime became known. No such crime has been committed, and white women have not been reduced to the necessity of taking negro men for nurses. The statement is a libel upon the negroes of Memphis. All honor to them! They have done their duty. They have acted by us nobly, as policemen and as soldiers, as well as nurses. They have responded to every call made upon them, in proportion to their number, quite as promptly as the whites. A few of them threatened trouble at one time about food, but they were at the moment suppressed by a company of soldiers of their own color. The colored people of Memphis, as a body, deserve well of their white fellow citizens. We appreciate and are proud of them."

OUR INDIAN POPULATION.

The following is significant. If Colonel Mallery is right, and there can be no question as to the thoroughness of his research and his competency as an investigator, the most vigorous work to promote Indian civilization is timely.

The public conscience seems to us more tender than ever on our duty to the Indians. There never was a better time than now for fresh efforts for this race that will share and help make the national destiny:

"Lieut.-Col. Garrick Mallery, U. S. A., who has undertaken to show that the American aborigines are not red or copper-colored, and had no notion of a Great Spirit, read at Nashville last August, a still more important paper on 'The Former and Present Number of Our Indians.' This has been printed in the proceedings of the American Association for the Advancement of Science, and also separately. It is an effective piece of destructive criticism, and proves the utter baselessness of the traditional estimates of the Indian population of this continent. The author depicts the natives as moving gradually from the head waters of the Columbia and Fraser Rivers towards the Mississippi Valley and the Atlantic coast, following the lines of rivers and lakes on account of their fish, and leaving one area, great tracts of the highest fertility, which the imagination of the early settlers peopled as thickly as their immediate neighborhood with dusky inhabitants. When the time came for the Atlantic tribes to be pushed into the interior, not only there was room for them in abundance (sometimes not very far off), but the same civilization that pressed the Indian race from its chosen water-courses provided the facilities for its enjoyment of land which without them was uninhabitable.' As for the wars with the whites, the state of warfare was normal to the Indians, at least to the more powerful tribes and confederacies, and if diminution is traceable to this cause, the whites have perhaps not very much on their conscience. Extermination was too often inferred from change of locality; and again, while on the one hand the multiplication of names for the same tribe enormously swelled the estimates of Indian strength, on the other the disappearance of the name was taken to mean extinction of the tribe. The contagious diseases of the whites have, Mr. Mallery thinks, destroyed more tribes by dispersion and absorption than by actual deaths, and he makes the noteworthy statement that the small-pox 'has ceased to be a scourge to the tribes, the reports of fifty-six agents in the years 1874, 1875, and 1876 not including one fatal case.' The most striking example of over-estimate given by Mr. Mallery is that in regard to the Indians of Alaska, who even in the census of 1870 were set down by the Superintendent at about 70,000. Dr. Dall has lately carefully reckoned them for the same date at 25,704. 'If such change,' says our author, 'had been made after the Alaskans had been under an Agency, it would have been attributed either to fraud in the first enumeration for the purpose of swelling the ration return, or to the fated sudden mortality of all tribes connected with whites.' Mr. Mallery's conclusion that the Indians are more numerous than they were when the country was first settled, and are increasing against all odds, has a practical bearing; for there can be no question that the popular notion that the Indians were passing away has at once encouraged the vile to speed their going, and deterred the good as if from a struggle against destiny."—*The Nation.*

Of the 8,000 youth of legal school age in the Indian Territory, over 5,000 are enrolled as attendants at the common schools, and an average daily attendance of over 3,000 is reported. There is a *per capita* expenditure upon the total school population of the Cherokees of twenty-five dollars, while New York State expends but six. The total expenditure in all the tribes is very nearly $200,000 a year. If money can make good schools, the Indians certainly ought to have them.

COLORED INVENTORS.

It is asserted that the colored race is imitative rather than inventive. The inventive faculty even when existing latent must be developed by circumstance and opportunity. And to make successful inventions that will "work," and come into general use and notice, requires usually not only a talent for invention, but an intimate acquaintance with mechanics, and with the history of former experiments in the same direction. Whatever popular need a man sets himself at work to invent a remedy for, whether in mechanics or politics, he has to remember that the best thought of the world has probably been directed upon the problem for years, if not centuries, and that if the solution were easy it would have been discovered long ago, and so must prepare himself accordingly.

Yet there are colored inventors, and we give below an account of two of their recent inventions, one of which, at least, seems to be a success.

The *Louisianian* says: "Dr. J. H. Smith, who resides at Monticello, Drew county, in this State, has invented several ingenious inventions, one of which, on account of its special utility and adaptedness to the great industry of the South, deserves special mention. It is a fact well known to all cultivators of cotton that the task of ridding the ground of the stalks after the gathering of the lint is one that consumes much time and labor, and thus contributes very largely to the cost of production. At the prices at which cotton has sold for the last few years it becomes of vast importance to the South to add to the profit of cotton-raising by diminishing the cost of production, and this is exactly the object of Dr. Smith's invention—the Stalk Puller—by which he claims that one man can clear up ten acres per day. It must not be supposed, however, that its use is restricted to cotton; it is equally effective with any and all stalks. The machine has been examined by the best mechanics of this part of the country, and the best proof of its merit is the fact that Dr. Smith has already been offered $10,000 for his right."

"A colored man in Mississippi has invented a steam engine which consists of only one wheel and two steam-boxes. The steam is applied directly at the circumference of the wheel."

Georga H. Wells, colored, has won distinction as a master miniature ship-builder. In ten years he has built and rigged about 700 vessels of all classes, ranging from six inches to eighteen inches in length. He has finished forty-one of these tiny vessels in one week. His orders are greater than he can supply. In many cases his work has been sold before it was finished. Mr. Wells, or "Commodore" Wells, is as expert with the pencil and brush as he is with his plane and chisel, and models on paper exhibit his talent as a master workman.—*Christian Recorder.*

At Memphis, a telegram says, the colored population are acting well in the emergency, and heartily co-operating with the whites, and adds:

"A meeting has been called by prominent colored men for the purpose of organization, to assist the whites in relieving distress and guarding the property, which the people, in the panic of last week, left unguarded. Their action in the present emergency speaks volumes, and has greatly increased the confidence reposed in them by those who were their masters. Among the most efficient on the police force now are the negroes."

DISINFECTANTS.

The article commonly used to disinfect foul places is chloride of lime, but in reality it is not of much value. It may, and generally does, remove bad smells, but the cause still remains, as the chloride simply destroys gaseous emanations. The much advertised disinfectants are usually catchpenny nostrums, and unworthy of notice. One of the very best known disinfectants is old-fashioned "copperas," or sulphate of iron, which can be had very cheap. A barrel of copperas would weigh probably three hundred pounds, and can be purchased at wholesale price for a cent and a half per pound. And every family ought, especially in warm weather, to have a supply of it on hand. A couple of handfuls of copperas thrown into a bucket of water will soon dissolve, and it can then be used freely, and is a valuable disinfectant. The best plan is to fill a half barrel or keg with water, and suspend within it a moderate-sized basketful of copperas. In this way it dissolves more rapidly than when thrown to the bottom of the wooden vessel: and thus a supply is always at hand ready for use.—*Scientific News.*

Agricultural.

SUPERPHOSPHATE FOR POOR SOIL.

F. P. Root, Monroe Co., N. Y., writes to the WEEKLY TRIBUNE: "Your inquirer, C. F. F., says he has rented for one year a field which was too poor to grow oats, and he wishes to know how he can enrich it so as to get a crop that will pay for cultivation. This is rather a hard problem to solve, and yet if the soil is of fair quality, lacking only fertility, it may perhaps be made to produce a remunerative crop of potatoes or beans by the use of some kind of manure and cultivation. Land thus exhausted requires more than one season to bring it into a state of productiveness without a very liberal use of manures. If your inquirer has no stable manure, compost or hen manure, with which he can manure in the hill (that is, by ploughing a furrow where each row should be planted after the land is well cultivated, and putting a small shovelful, according to quality of manure, where each hill should be planted), I would recommend bim in the absence of such means to use a commercial fertilizer, to be applied in like manner in the hill.

Of these fertilizers there are many different manufactures, of mostly equal value in relation to cost. A good ammoniated superphosphate for immediate action is as valuable as any on the market, in common use, and on nearly all soils can be relied on as a profitable investment to the farmer. It should be applied at the rate of 200 or 300 pounds per acre in the hill, though not in contact with the seed; it should be covered with a little earth, on which the seed should be dropped and covered. There is some incredulity on the part of many farmers about the benefit of these fertilizers, but it has arisen from the poor quality sold by dishonest manufacturers. There are some soils, however, which are not lacking in phosphate of lime, on which but little or no effect is seen from the use of superphosphate, but such soils do not become unproductive under good cultivation, while these elements remain, so that superphosphates do not improve them."

Horses become, after a little, almost passionately fond of skimmed milk. I have known a few cases in which it has been thus utilized with great economy, and a pail of it three times a day, will keep a work horse in better condition than the average ration of four quarts of oats.

O. S. BLISS, in the *Country Gentleman.*

LETTERS FROM HAMPTON GRADUATES.

A friend of the school, who devotes a large measure of time to the very practical benevolence of friendly personal correspondence, has kindly sent us the following letters from graduates. They tell their own story, and we need not add a word:

I am teaching in a small school house about two miles from Mr. ——'s. I have a very interesting school. I have about thirty-five scholars. I have a Sunday-school every Sunday. I have a class in it. I have a very pleasant home. I am very much pleased with my work. I am trying to do all the good I can. I am trying to live a Christian life. I am trying to get my scholars to live Christian lives. I am trying to get them to go to Hampton. I am trying to get them to go to Sunday-school. I am trying to get them to go to church. I am trying to get them to go to prayer-meeting. I am trying to get them to go to Bible-class. I am trying to get them to go to Christian Endeavor meeting. I am trying to get them to go to missionary meeting. I am trying to get them to go to temperance meeting. I am trying to get them to go to Young People's meeting. I am trying to get them to go to Epworth League meeting. I am trying to get them to go to Christian Endeavor meeting. I am trying to get them to go to missionary meeting. I am trying to get them to go to temperance meeting. I am trying to get them to go to Young People's meeting. I am trying to get them to go to Epworth League meeting.

I am trying to get them to go to Christian Endeavor meeting. I am trying to get them to go to missionary meeting. I am trying to get them to go to temperance meeting. I am trying to get them to go to Young People's meeting. I am trying to get them to go to Epworth League meeting

LETTERS FROM HAMPTON GRADUATES.

A friend of the school, who devotes a large measure of time to the very practical benevolence of friendly personal correspondence with many young workers from Hampton and elsewhere, sends us the two following letters from a Hampton graduate:

VA.

Miss L., My dear friend:—

I opened my school the first of October. I have sixty on roll at present, and expect to have nearly as many more. This is my third session in this school. I receive thirty dollars ($30) per month, which is no more than I received before taking my course at Hampton. The white male teachers receive forty dollars ($40) per month, and the females receive thirty and thirty-five dollars per month. Some townships in the county pay the same to both colors, and the advantage in this one is that the schools are open seven and eight months which is longer than in any township in the county. Contracts are made for five months only, but for the last four years they have gone on for seven and eight. I have six pupils that are qualified to enter the Middle class at Hampton. Their parents are not able to pay their share of the personal expenses and furnish them with suitable apparel. One—the most proficient—has passed a creditable exauination and will teach in this township, providing he succeeds in getting a house. I invite the Trustees to call in and see my school, believing that they would be more favorably impressed as to the progress of the colored people, and their ability to acquire and attain the same degree of proficiency as themselves. They say they cannot lose the time.

The colored people in this community are improving in nearly every grace that adorns and ennobles a people. They are also improving in religious intelligence. This sensational shouting caused by working upon the feelings is receiving a discountenance, by members, as well as by a large number of ministers. The children are well clothed, and are intelligent, on the whole. I like the work. I am not tired looking to "that Rock that is higher than I." Please do not forget my books—something to enlighten my religious views.

Sincerely yours, W.

VA.

Miss L., Dear friend:—

I have read several pages of the life and character of George Stephenson, contained in a book entitled "The Life of George Stephenson." The book was presented to me by Miss M., with the understanding you gave it and others which I have. Please accept my thanks for your kindness. May the Lord bless you with a happy and long life, that you may see your work crowned in behalf of my race. I have read your letters of advice in the "Workman," and assure you that reading them once did not satisfy me. They are *so* interesting and to the point

If the Good Lord permits, I shall teach next fall. There are many things to impart to the race, but I place the whole work under three heads,—good morals, intelligence and religion. I need not say industry, for they *must* be industrious to enjoy the three. I need a book to open the Scriptures to me so I can teach them correctly. I believe God is a God of intelligence and should be worshiped in an intelligent manner. By the aid of the Master I intend to make my people know and feel that the eyes of the intelligent workers are watching them, and what they must do for *themselves*.

Hoping to hear from you soon, I am with great respect, Yours, W.

The following letter illustrates the prevailing sentiment among our graduates who owe the school for their education. To build up such a sentiment is no unimportant work. It adds a cubit, morally, to a man's stature to pay his debts, when he has to struggle as do many young colored men in Southern schools.

VA., *Aug.* 25, 1878.

Gen. S. C. Armstrong,

Dear Sir:—It was my intention to have written you a letter just before the close of my school; but Providence interfered. My brother was taken seriously sick, and as my father had died some months previous, this left my mother without support, as none of the rest of her children were at home. Of course this made my presence at home very necessary. I arrived at home to find my brother *very* low, doctor's bill very large, and my mother laboring under many disadvantages. Here came two questions with two obligations: Must I take my seven months' earnings and relieve my suffering brother and distressed mother, or send them to Hampton to pay an *honest* debt? At *last* I decided that "Charity begins at home." Acting according to my decision, I went down into my pocket "right manfully," and it resulted greatly in restoring my brother to health, and making my mother both happy and comfortable.

Thus was I left without a *dollar* to send to Hampton. I am in no way discouraged by being disappointed in my earnest endeavor to cancel the debt which I owe the school. I had no trouble about getting employment for the summer. I am working with the same man I used to work for before I went to Hampton. He intends helping me until October 1st, unless I am willing to leave before that time.

I *will try* to pay some on my school bill about the time I leave here. Please let me hear from you soon. Yours truly, Wm. B. D.

The following far from dismal letter from the Dismal Swamp was mislaid for awhile, but has not lost in intereet. It ie from a member of the first band of "Hampton Student" Singers, who has devoted herself very heartily and successfully to the work of teaching.

Dear Teacher:

I intended to have written to you long before this, to give you an account of my struggle in the educational cause, but the days passed away and left me to find out that the old maxim, "Time and tide wait for no man," is a true one.

I am delighted with my work of teaching, though it is very hard, and requires the patience of Job, on the part of the teacher. If I should say that I had that patience, I fear that it would be a great mistake, for many times when a little boy or girl spells and pronounces s-t-a-r moon, and w-a-l-k bird, I am not as gentle as I should be. Yet with all these little annoyances, I love to teach them and help them to find their way over the little pebbles that lie in their path. My school is not as large as it was some weeks ago, for now spring is coming, and the children that are large enough have to leave their books and take to plowing up the fields to raise the next year's "crop."

The people here work very hard and put what they make to very good use. A very few of them own land; they mostly live as tenants on white people's land. But it is scarce to find one that does not own a mule and tumbling cart. The white people and colored get along very nicely, and a great many of them will sit down and eat with the colored people. They are extremely polite to me and never fail to speak when I pass them, especially the white children when they meet me, going to their school.

They have preaching here once a month, and the minister always comes to see my school; he takes great interest in the work, and does all he can to stir the parents of the children up to send them to the place where they never had the chance to go. I go to their meetings quite often. I thought that I had had the chance of hearing some good shout-singing at Hampton. But here, I never heard such beautiful singing in all my life, of the jubilation style. It seems as if the roof of the church will part asunder sometimes. I often wish that the teachers at H. could just step in, when they are in their happiest moods, and hear them. I would go a long distance to be with them when they meet.

Please remember me kindly to all the teachers, and write when you can spare the time.

From your loving pupil. M.

AVERY STATION, MENDI MISSION,
W. AFRICA, *July* 31, '78.

Dear R.:—

Your letter came to me on the 29th, and indeed gave no much pleasure to read. You can't tell how glad I was to hear from you. I have not had a letter from Hampton nor from home for some time, and I began to think that you all had forgotton that there is a *White* missionary in Africa. I hope you will not take it as personal, but I must say that your last letter was the best one I over had. I am anxious to have another such soon.

On the 17th of June I came here to stay. I had been here before, but not with the expectation of staying, though I stayed two months. Dr. James was here with his wife; his wife died here in May, and for the benefit of his children he got me to make a change with him, which I did; now he is at Bonthe and I am here. You may have heard of Mrs. James' death.

The wet season is fully on us now and we have rain at any time. I can't tell the day that it didn't rain, and sometimes it comes down as if there were no such thing as stop. This is the sickly time of the year and people are dying very fast, but I am happy to say that my health has been very good for the last two months.

I think now I had better answer the multitude of questions you asked: 1st, How I make my children understand me? By repeating. 2d, Do they learn very readily? Some of them do, while others are dull and stupid. 3d, What is your work? My work is teaching. 4th, Climate, water, and food? The sun is very sickening.

If I go out into it only a short time, it makes me feel stupid and it is very apt to give me the fevor. The water agrees very well with me. My food is, mainly, chicken, rice, cassada, sweet potatoes and wheat bread. It is prepared as nicely as at any hotel in Amorica. I give orders how I want it, and if the cook doesn't know how to make it, I do it myself. All my extra dishes I make, and now I cook my own breakfast.

The wild animals are not as numerous as they used to be here. The monkey, deer, goat, leopard, and the alligator, are found here; of the first and last I have seen a good many, but the rest are very rarely seen. The lion and elephant have both kept out of my sight. The fruits are orangos, limes, pineapples, bananas, mangoes and the cocoanut, all of which are fine. The Coffee is near me, even in the yard. We have six or seven hundred little trees on this farm.

My school-room is under the church and reminds me very much of the recitation room No. 6, at Hampton. The church is small but neat; it was built last year by Mr. Kirk. Now I think all your Yankee questions are answered.

Now about the boy. I would like to have him come in time for the next term, but I have not the money; if any one were to give it, you could send a draft on an English bank which would be as good as gold to me. I hope he may be able to get there this year. I am happy to say that he has given himself to Christ and united with the church the first Sunday in May.

You asked about the clothing you would need. My clothes are like what one needs in America in the summer. The blue suit which you had last summer would be very nice here. Dear R., I do hope we may meet again in this world.

I am happy to say that I can cast all my trials and temptations on Christ, and he always carries me through. If any one were in this dark and lonely land who did not know how to trust the Lord, I don't think he could live.

I did want to send you some leaves, but I guess you had rather have a long letter, so I will not send them. Don't think that this is the long one, but I should have written much if I had had more time.

Please give my love to all of the students whom I know, and all to whom you write. Now I shall have to stop. I hope you will excuse all the mistakes you see, as I have not the time to correct them. "Pray for me and I for you, that is the way the Christians do." May God bless you in your work.

Your beloved brother,
ACKREL E. WHITE.

To an absent teacher, the graduate teacher, Mr. Robbins, in charge of the Indian class for the summer, writes,—

"Our evening study-hour continues to be well attended. The young Misses B. and the little girls and lady visiting at Capt. R.'s, are nightly visitors, and four or five day scholars living near the gate come in. We are now having something about flowers—the different parts of the flower, as calyx, corrolla, stamens, pistils, &c., &c. The B's are perfectly carried away with it, and come to me very often to have a flower analyzed. I made the class spell the word with the letters, and point out different parts of the flower. I gave them two large words—monopetalous and polypetalous. I first let them see mono, and its meaning, then poly and its meaning, then petal and petalous. Then I put the parts together. After study-hour, Estabrook went behind the blackboard, and without looking at my writing wrote the words correctly.

"Cohoe came to me after study-hour last night and said, 'I want to go to Hampton.' I did not say 'No; you cannot go,' for then he might have gone my way and I would have lost all control over him. I told him, 'Not good to go to Hampton at night, go in day. You may go, but come back soon.' 'Yes,' he said; 'I come right back.' They come and ask me if they can go, so I know pretty nearly how often they go. I believe that I like one boy quite as well as I do another. You don't know how Tsadle-tah improves in writing.

"With kind regards,
"Yours &c., J. C. R."

Perhaps our readers would be interested in seeing how the Indians succeed in writing English. Most of them write a very legible hand, which they acquired during their three years at St. Augustine. They are improving both in handwriting and ability to express themselves. The following letter was written by one of them to a teacher this summer. It is copied without any correction.

HAMPTON NORMAL SCHOOL, *Aug.* 1, 1878.

My dear friend, Miss L.:

I am real sorry when that you are going away and when used School, then I think about you. One a boy was sink in the water in two days ago before yesterday. I am very sorry for the boy. I am very well, have no sick and the rest too. We have no study hour in four nights. I often wish since you left at the Hampton, and when going to study hour, then to think about you. I now like the white people because those I meet have good will and are my friends all the white people and I want to love Jesus like the white people. We pray to God in every night and morning, and I trying to talking English, but I want to talk English. I am learning hard and try to be good boy like the white man and trying to learn a better way. When I go away, no often think about you and never forget you always. I hope you well, must to me very soon. Your Faithful

Friend, Soaring Eagle.

LATE AT SCHOOL.

"School time! school time! where's my slate?
Where's my book? I know 'tis late.
The school's took in! oh, dear! oh, dear!
I'll catch it awfully, I fear."

SPEAK gently, little folks; for a kind *no* is often more agreeable than a rough *yes*.

LABOR.

BY T. T BRYCE.

Of all the many wonderful things we can see in this world if we keep our eyes open, perhaps one of the most striking, is the omnipresence of motion. From the sweep of the most distant planet in its tremendous orbit, to the disintegration of the hardest rock, there is motion everywhere; different in degree, but the same in kind. Everything about us is in motion, and all motion is work; but it is not with work in general that this paper has to do, but with that small, yet important part of work, called Labor. What is labor? Labor is any definite human exertion put forth voluntarily in exchange for something desired. The Chinaman, who toils all day for two cents, and the eminent advocate, who receives thousands of dollars for a single plea, are both laborers; they both put forth well-defined exertions and receive in exchange something they desire.

It is an error, then, popular though it be, to speak of the "laboring classes" as distinct divisions of society. Every man who puts forth any exertion, in order to obtain something in return, is a laborer, and I fail to see how any living man can be excluded from the so-called "laboring classes." If the expression, "laboring classes," has any distinctive meaning, it means free men as opposed to slaves. The toil of a slave is not labor, it is not definite exertion put forth with any exchange in view; and, scientifically speaking, it differs in no way from the work of a mule or an ox. Viewing labor in this the only true light, the consideration of the labor question becomes simpler, for there are no class feelings to irritate, no color line to fight over. Even with this simplification, the labor question is a vast one, embracing as it does every voluntary human effort not put forth from pure selfishness, from charity, or a sense of duty.

Labor forms a greater or less part of everything that is exchanged; therefore the universal laws governing exchanges can be applied directly to labor. To illustrate what I mean by "labor forming a greater or less part of everything that is exchanged," let us suppose we had a ton of pig-iron: we could exchange it for perhaps fifteen dollars; but if this ton of pig-iron were "worked up" into watch-springs, it could be exchanged for many hundred dollars. Whence comes this increase of cost to the buyer of watch-springs? Mainly from the increased labor that has been bestowed upon the raw material, which was, in both cases, a certain quantity of iron ore. The ton of pig-iron was the result of comparatively little labor; the ton of watch-springs of much labor.

God has made mankind a brotherhood with reciprocal wants; and in this truth is founded the grand law of Mutual Dependence. This law is universal; there are no "ifs" nor "excepts" about it; it is based directly on the endless wants God has implanted in men's natures, which are the muinspring of all human activities. Man's life is a series of wants not even ended by the grave; in the faint cry of the new-born babe, in the last gasp of extreme old age, and in all between, is sounded the refrain, "I want, I want." Not only has God implanted unnumbered and unending wants in man's nature, but He has also given endless meaus of gratifying them; and it seems part of the Divine plan that our own wants must find the means of gratification through others efforts, and that our own efforts be the means of gratifying the wants of others. This is the law of "Mutual Dependence;" and perhaps I cannot state it better, though the statement is far from perfect, than by repeating the words with which this paragraph was begun, viz., that God made mankind a brotherhood with reciprocal wants.

Any man who should attempt to gratify all his wants without the aid of his fellow men would be a savage, and little better than "the beast that perisheth." As an example of the satisfying of the three first wants of life—food, shelter, and clothing—let us imagine a frontiersman, clad in jeans, living in a log-cabin, who has just finished his dinner of boiled pork, washed down by a cup of coffee. Certainly the picture is not one of luxury, yet atoms of labor on the part of countless men have been put forth, before our frontiersman could even have the iron pot in which his dinner was boiled. The ore from which the iron was smelted, was perhaps dug from some deep English mine, where hundreds of brawny workers sold the exertions of their tough muscles for wages; raised to the surface, the ore had to be smelted by another gang of workers, and the pig-iron carried to some town, Birmingham perhaps, where it had to pass through many other hands before it was fashioned into a pot. From Birmingham, it had to be transported to Liverpool or London, and many were the hands employed on the railroads that carried it. From Liverpool or London it was shipped by some steamer or sailing vessel to New York, in the sailing or steaming of which vessel, many other men were employed. Landed in New York, it had to pass through many fresh hands before it started to the Far West, on some of the great railroads, which employed thousands of men in

merely running the trains, and in whose construction tens of thousands of workers had been busied. Yet this pot required an atom of the labor of all these men before it could be used to cook the frontiersman's dinner.

Let us take one step deeper, and remember that every one of the many who shared in the work of putting the iron pot in the log-cabin, man shall receive less wages than fifty dollars a day. How many men will be employed? Clearly, only so many as employers think will give them a product of a day's labor that can be sold for more than fifty dollars. Again, suppose the rate were fixed at five cents a day, how many men would accept the wages? Clearly, only so many as thought that five

ment they appeal from reasonings to bludgeons, they pass from benevolent beings to bandits.

As before stated, love has nothing to do with exchanges; self-interest is the only guide, and the price paid for labor is the result of a bargain, that it takes two to make. One man cannot make a bargain, neither can employer nor employed, fix the rate of wages without

Wages during the past year have been lower in this country than perhaps ever before, and capital never received so little interest.

As remarked in a former part of this paper, no government can fix the rate of wages; but the government can stimulate *all the industries* of the country, by offering to those who want to sell, the opportunity of finding the greatest number of buyers, and those who want to

merely running the trains, and in whose construction tens of thousands of workers had been busied. Yet this pot required an atom of the labor of all these men before it could be used to cook the frontiersman's dinner.

Let us take one step deeper, and remember that every one of the many who shared in the work of putting the iron pot in the log-cabin, depended also on the labor of millions of others for the necessities of his daily life. The multitude of laborers thus conjured to our view is almost beyond the grasp of our intellects, and gives us a faint idea of the universality of the law of Mutual Dependence. This meagre sketch of the atoms of labor that heve centered in the iron pot sufficiently illustrete the law; although the very mention of the coffee hrings to our minds another multitude of laborers, who planted, raised, picked, cured, bagged, shipped, handled, ground, and packed the fragrant berry. The cotton fihre in our frontiersman's jeans at once suggests some plantation in our Southern States, and the dusky laborers who plowed, planted, hoed, picked, ginned and packed the cotton, before it was ready to be sold to some Eastern or English mill, where it was spun and woven into cloth. Again remembering thet all these laborers had to be fed, clothed and housed, and that for their food, clothing and shelter they were in turn dependent on millions of others, the brain becomes fairly dizzy, contemplating the multitude arroyed.

The next great law of exchange thet I would apply to labor, is the law of demand and supply. If there he one man with a harrel of flour for sale, and two men want to buy it, the one will get it, who offers most in exchange. If, however, there be two men, each with a barrel of flour he wants to sell, and only one buyer who wants one barrel, he will take the harrel that he can get by giving the less in exchange. If for flour wa read labor, the truth is none the less self-evident. If there be two men wanting to buy labor (that is, to hire it), and only one man to sell his labor, it is certain the man who offers most in exchange will secure the labor. If, on the other hand, there be two men to sell their labor, and only one to buy it, it is equally certain that the one will be hired who will sell his labor the cheaper. This law of demand and supply is a law of nature, and no amount of legislation can change it, any more than it could prevent the earth turning on its axis.

The first deduction that I draw from this law of nature is, that the more employers there are, and the more prosperous they are, the better for the employed. If there be two factories in e town, with sufficient demand for their goods to run them night and day, it is hetter for the laborers than if there were only one factory run under the eight-hour law. In like manner, it is better for the factories to have enough help to run all their machinery, than to have to work helf-handed. The factory is also benefited by having the same set of hands steadily employed, as the skill of each oue in his particular department is increased by constant practice.

Labor does not hire itself to capital, nor does capital hire labor, *for love*; not a bit of it—each one looks for some gain from the use of the other, and ever seeks the largest possible gain. A factory will not buy a man's labor for a dollar a day, except it thinks it can sell the products of the man's daily labor for more than a dollar. Neither will a man work for a dollar a day in one factory, if he can get a dollar and a dime in another. Dollars and cents (or means to satisfy their respective wants) are the objects of both factory and "help." Self-interest makes the bargain on both sides; love has no more to do with it than a cock crow has, to do with an eclipse.

Labor has its market price, just as corn or cotton; if there be a large supply and small demand, prices will be low; if there be a small supply and a large demand, prices will be high,—and no amount of law making, nor mass-meetings, will prevent it. Everyone tries to buy as cheaply and sell as dearly as possible; the man with labor to sell will take the highest price he can get; the man with labor to buy, will give as little as possible; the price they may agree upon is the market price, and neither close the bargain if they really think they can do any better for themselves. Buyer and seller *together* make the price, *neither* can do it *alone;* and a Government has no more to do with the price of labor (that is, the rate of wages) than it has with the price of potatoes. No Government can fix the price of labor, that is, it cannot say wages shall be so much or so little. No man can be compelled to employ labor he doesn't want; and no man can be compelled to labor for wages that do not suit him. Let us look for a minute and see how futile would be any attempt of the Government to interfere with the price of labor. In the first place, we would have to give the Government the power to say what wages should be poid, which would he a terrible surrender of our rights as freemen. Having granted that right to the Government, it can of course fix the rete where it pleases. Suppose it fix the rate at fifty dollars a day, and pass a law that no man shall receive less wages than fifty dollars a day. How many men will he employed? Clearly, only so many as employers think will give tham a product of a day's labor that can be sold for more than fifty dollars. Again, suppose the rate were fixed at five cents a day, how many men would accept the wages? Clearly, only so many as thought thet five cents were all they could earn anywhere else, and were satisfied with it.

Every man in every civilized communnity hires labor, and is hired. No free man is only employer or employe. The poor man who is hired to work in the field at twenty-five cents a day, hires in others, when he pays his rent or buys his food and clothing. Mr. Vanderbuilt, the great owner of railroads, hires a multitude of men, but is hired by another multitude to carry them and their merchandise on his railroads.

We have now got deep enough into the labor question to see that labor has its market price, like corn or cotton; and that every man is daily exchanging his labor, or the fruits of it, for atoms of the labor of an infinite number of his fellow men. The next point in the labor question that demands attention, is the fact that every freeman's labor is his own; it is his property, as much as his purse or his life. Everyone who attempts to steal another's purse, or deprive him of his life, is seized and punished by the law. So, too, with a man's labor; he has a right to the peaceable enjoyment or employment of it, and anyone who attempts to interfere with such peaceable enjoyment or employment by the use of threats, violates the law, and should be punished by it, as much as if he had tried

FISHING IN THE TROPICS.

to wrest from him his purse or his life. This truth does not seem to be generally appreciated—and many a so-called "leader," who would hesitate perhaps to steal a man's dinner, would not hesitate to steal the labor, whereby he gets his dinner. All "strikes," or rather all forcible strikes, arise from a misconception of the right of property that is vested in every man, as regards his own labor. Every man has an inalienable right to his own labor, but to nobody else's, except he gives something in exchange for it. If I see fit to work eighteen hours a day for sixpence, it is my business and nobody else's; if I see fit to give a man a dollar for blacking my boots, that is my business, and nobody else's. In both cases I may be doing foolishly, but I am doing with my own. If a man come to me and tell me I shall not work for the wages I see fit, but for the wages he sees fit, and I obey; I am his slave as verily as ever one human being was the slave of another. If one man or a hundred come to me, and by force make me stop work, then they rob me, just as much as if they took the product of my labor. Hence, the conclusion is a plain one, and needs he put in plain words: those people who interfere with others' work by violence or threats are either slave-catchers or thieves. The whole question of strikes centres in this: if I do not want to work, or am dissatisfied with my pay, I have an absolute right to stop work; but no right to make Jim, Pete or Bill stop work, unless they wish to do so.

That all men with particular interests in common should unite for mutual protection and encouragement is most proper; that they should endeavor to get the best pay, or, in other words, the most in exchanga for their services, is right and just; but their efforts must be through reasoning, and the means of the market-place—and not through violence or threatenings. So long as such organizations aimply seek to get the most possible for what their members have to sell, they are following God-given impulses; but the moment they appeal from reasonings to bludgeons, they pass from benevolent beings to bandits.

As before stated, love has nothiug to do with exchanges; self-interest is the only guide, and the price paid for labor is the result of a hargain, that it takes two to make. One man cannot make a bargain, neither can employer nor employed, fix the rate of wages without the consent of the other. If a certain set of workmen think their employer can afford to give more wages, they have a right to ask for the advance, but the employer has *an equal right* to refuse. They have a perfect right to stop work, but no right to interfere with others who are willing to take their places. A peaceable strike is only a fluctuation of the labor market, which will adjust itself the same as a fluctuation in the market for corn or cotton, according to the law of demand and supply. But any violent interference with labor is a breach of the peace, and should be put down speedily and effectually. That such breaches of the peace often and quickly develop into riots, is well known, and no one has any sympathy with rioters. If a mob grow into rioters, every one present is either upholding or upsetting the law—there are no innocent spectators of a riot.

Labor can never force capital to give employment, unless capital thinks it can make or save by giving such employment. If, for example, a factory paid a dollar a day to a workman, and could sell the labor in its product for $1.05, the factory would be happy to continue paying the man a dollar a day. But suppose the man should demand $1.10 per day, and the factory could only get $1.05 for his labor in its product, is it not manifest that the factory would decline to pay the advance demanded? No "strike" is ever successful, unless the wages being received by the help are under the market rate. If you are employing one hundred men at ten cents an hour, and they demand an advance of two cents per hour, it is simply a question of market price. If you can get another hundred men to do your work for ten cents per hour, you simply employ others and let your first hundred go seek some other employer. This rule holds good, if the positions are reversed: if two mills "start up" at the same time, and one offers a dollar a day, and the other a dollar and a dime, the first mentioned mill will have no "help" until the last has secured its complement of workers.

The most pernicions quack, who peddles political nostrums, is he who attempts to excite the multitude by declaring that "all the ills that flesh is heir to" come from the employers of labor. People of this sort hold it as an axiom that there is an unending feud between capital and labor; and that the former ever seeks to extinguish the latter. Some of these mischief-makers, assuming this statement to be true, are logical enough to declare that labor should try to extinguish capital. This is the doctrine of communism. Now if there he two things in this world between which the utmost amity should exist, and between which the most intimate reciprocal relations do exist, they are Capital and Labor. One is absolutely useless without the other. Ten million willing arms are no better than no arms at all, if there ho not the *means* of employing them; and the means of employing two arms or ten millions are useless if there be no arms to employ. Capital suffers when work is scarce, and work suffers when capital is scarce. The earnings of capitel, or interest, and the earnings of labor, or wages, vary directly as each other. When capital is earning little or nothing, many willing hands are idle. Wages during the past year have been lower in this country than perhaps ever before, and capital never received so little interest.

As remarked in a former part of this paper, no government can fix the rate of wages; but the government can stimulate *all the industries* of the country, by offering to those who want to sell, the opportunity of finding the greatest number of buyers, and those who want to buy, the greatest number of sellers. This can he done by permitting the citizens of the United States to buy in the markets of the world, and to sell in the markets nf the world, and not limit them to themselves for a market. This is the policy of Free Trade, a policy founded on the belief that it takes two to make a bargain, and that the whole is greater than any of its parts.

The gratification of every one of our wants that God does not gratify without our asking, as air, sunlight, water, etc., requires some exertion on our part. Now it is plain, that any means which enable us to gratify any particular want with only half the exertion we have been accustomed to put forth in gratifying that want, is a benefit to us. The benefit exists in our saving one-half our exertion, or with the same amount of exertion gratifying twice as many wants. This saving of labor is just what is done by machinery; yet it is strange to see quite a large number of people in this conntry who declaim against labor-saving machinery, as working harm to the poorer classes. They say that if a machine he invented whereby two men can do the work of five, that three men are injured.

Let us look carefully at this argument, for it is one of those specious pleas that mislead meny candid people; its apparent exactness is just wherein its danger lies. If such a machine were invented, say in the making of shoes, the profit of using it would he the wages of three men, less the wear and tear of the machine and the intcrest on its cost. Now the use of any such machine would give the shoe factory a very large additional profit, and new capital would at once he drewn in its direction; in other words, new shoe-works would be started where much more labor would he required—for capital is argus-eyed, and ever on the alert to invest in those enterprises which promisa the greatest interest, coupled with the greatest security. Now any machine that would reduce the cost of any product to nearly the extent of three-fifths of the labor that it formerly cost, would start probably ten shoe-works where there was one before; and instead of being a demand for five shoe-makers, there would he a demand for twenty. Let us carry the argument a little further: if the production of shoes increased tenfold, and the cost of them to the maker were rednced by nearly three-fifths the labor formerly put in them, it is manifest, that through the competition of the factories, the price of shoes would fall sharply, and many more people be able to buy better shoes than before the invention of the machine. Again, every machine would require a human mind to guide it,—a machine that thinks for itself is among the absolutely impossible things. Hence, every new machine that is put in motion increases the demand for skilled labor; this demand can only be supplied by educating the unskilled workman, and surely it is a blessing but thinly disguised, that thins the ranks of ignorant toilers and forces the development of deft skill out of hrute force.

If God Almighty had not intended all men to work, he would not have made man the most perfect machine the world has ever seen. It is no more evident that he intended birds to fly and fishes to swim, than that he intended man to work. It is not alone in man's physical fitness for work that we see the Divine intention, but in his being ever filled with ungratified desires, prompting the use of his wonderful physical machinery. How incomplete would God's work have seemed, if man had been made simply a perfect physical machine, uninspired with those desires which keep the machine in motion; or if he had been filled with such desires, but not possessed the physical machinery to gratify them. In labor, then, is the creature, man, carrying out the design of his Creator, and in obedience to God there is honor to man. That labor is honorable is thus susceptible of a very complete and direct demonstration. As all labor is the same in kind, varying only in degree, let it not be said that the labor of the lawyer, the physician, or the merchant, is *more honorable* then that of the fisherman, the farmer, or the smith; the honor rests in the effort, not in its direction. Honor may vary in degree, but the honor of labor varies only as man uses, wholly or partially, the means Heaven has given him of carrying out its designs.

In birds and beasts, as well as in man, God has implanted certain desires, and supplied the means of gratifying them; but compared with those of men, their desires are few, and their gratification direct. Man, and man alone, gratifies his desires by exchanging his labor for the labor of others; there never was a dog, nor a horse, so sagacious as to voluntarily seek to give something he had to some other horse or dog, in order to get in exchenge something the other horse or dog had. One

horse might steal another's hay, and one dog another's bone, but the idea of exchange is beyond them. In no other way, perhaps, is man's superiority over other animals shown.

inches wide, and of any required length. These strips are subsequently woven together into the cloth, which is traded to the Liberian storekeeper, who sells it out again to his custo-

growing up better educated, trained and supplied with the requirements of intelligent men and women. I saw the Liberians, (especially the younger ones,) brought into contact, and conse-

Arithmetic. The boys take their places at the black-boards, and examples are given to them. At present they are working in Subtrection; Addition has been well mastered by most of

horse might steal another's hay, and one dog another's bone, but the idea of exchange is beyond them. In no other way, perhaps, is man's superiority over other animals shown, than in the fact that other animals work—men labor.

FISHING IN THE TROPICS.

If, as some scientific men have thought, a fish diet is good for the brains, the native islanders of the tropic seas ought to be a very intelligent race. A people whose island homes have few land animals, and few rivers, their shores washed perpetually by the sounding sea, whose chief sports and occupations, from their birth to their death, are among its billows, must naturally be a race of fishermen, and so they are. One of the most curious sights to a foreigner in Honolulu, the capital city of the Sandwich or Hawaiian Islands, is the fish market. Here are found many fish which are never seen on an American table, many which are never caught in American waters, some which a foreigner would shrink from an introduction to perhaps. As Miss Bird, a bright English lady who visited the island, says in her picturesque description of the market: "Some of the stalls are piled up with wonderful fish, crimson, rose, blue, opaline,—fish that have spent their lives in coral groves under the warm, bright water. Beautiful creatures, the *kihi-kihi*, or sea-cock, with black and yellow bands across his body; the *hinalea*, like a glorified mullet, with bright green bands along a dark, shining head, a purple body of different shades and a blue spotted tail with a yellow tip. The *ohua*, too, a pink-scaled fish, shaped like a trout; the fish, as common here as mackerel at home; purple spiked sea-urchins, and many other curiosities of the bright Pacific. It was odd to see the pearly teeth of a native meeting in some bright colored fish, while the tail hung out of his mouth, for they eat fish raw."

Beside these beautiful creatures was the repulsive form of the cuttle fish which looks like a nest of twining snakes, with its eight long arms or teatacles, and its pulpy body in the centre. It would be hard work for a foreigner to taste one of these raw as the natives like them, though some of the foreign residents admit them, dried and salted, to their table, under the name of squid, in which form they taste something like raw salt codfish, but are very tough.

The flying fish, called by the Hawaiians *malolo*, are one of the most beautiful of fish. Supported by their fins, which are broadened into something like wings, they rise several feet above the water, and dart from crest to crest of the waves, flying thus from their pursuers beneath the waves, only to meet others above them, the gulls which are ready to swoop upon them. The flying fish also are most beautifully and variously colored; white with black wings, black with white wings, silvery white with bright scarlet wings, or fins, to speak more truly. As the steamer approaches the beautiful harbor of Honolulu, they fly up in shoals on each side of the vessel, making a brilliant display long to be remembered.

LIBERIA.

Extracts from the letters of Mr. A. B. Williams continued.

THE COFFEE TREE

is a beautiful one, generally growing, when developed and under cultivation, from six to ten feet high, with a large dark green leaf, (here, like everything else on, evergreen.) It is generally planted by scions or slips, the little trees being taken from the beds when well started, and transplanted. The coffee grows in thickly clustering bunches along the branches, and is green in color, until ripe, when it turns red. A thick pod or case envelops the grains, which is beaten off when gathered, and dried. The grains are very large, and the coffee itself is delicious, to my taste fully equalling, if not surpassing, Mocha. The coffee trees are usually planted about 400 to the acre, and begin to bear well the third year. The trees yield from one to five pounds of coffee grains each, which sell at twenty cents per pound, wholesale, at Monrovia.

COTTON GROWS WILD

about the country, and nobody seems to pay any attention to it, except the natives, who, with their primitive looms, manufacture from it a coarse, strong cloth which they wear almost universally. They weave strips about six inches wide, and of any required length. These strips are subsequently woven together into the cloth, which is traded to the Liberian storekeeper, who sells it out again to his customers. The cloths generally sell according to width, about 12½ cents being charged for each "strip" contained in them. They are dyed usually with indigo, which also grows wild, in blue stripes of different widths on the white ground. One I saw, however, which was quite elaborate, there being rude attempts at reproducing the shapes of flowers on it.

LIBERIAN SUGAR

is coarse, but of a good quality and color, and brings from seven to eight cents per pound from American refiners. The Liberian production is from 3,000 to 3,500 pounds per acre. They make from their sugar boiling also an excellent quality of syrup, and rum, which is pronounced by connoisseurs to be very fine. This yield of sugar shows what the soil is—magnificent. It can be cyphered out readily, that there should be money in sugar-raising at this rate, especially as a crop is to be obtained in one year, and the cane does not require replanting for years, a new growth springing up every season from the old stumps.

RICE

also grows in a wild and half wild state, and but little care seems to be devoted to its production. It is kept in the husk until wanted for use, when the required quantity is put in a wooden mortar, and hammered on until it is cleaned, and tolerably well broken up. It is a good article to the taste, being richer than our fine white rice. The Liberians claim that this effect is produced by keeping it unhulled. Notwithstanding its growth at their very doors, however, they import India rice for consumption. Although in the country with cattle all about, we had English canned butter at Clay-Ashland. I only saw milk at two places in Liberia, and then it was in the coffee. They say that the cows give so little milk that it's hardly worth while feeding them. I believe, though, that the experiment of carefully feeding and attending to milch cattle has not as yet been tried.

NO HORSES IN LIBERIA,

although I am informed that they are abundant and cheap in the interior. The *Azor's* people turned up their noses, (figuratively speaking,) at the statement that horses will not live here, and declared their belief that they only lacked proper attention. Inquiry on the subject leads me to coincide somewhat in their opinion. From all I can learn, what few equines were here in years gone by were left to shift for themselves about the streets just as the cattle and hogs are now.

TRAFFIC WITH THE NATIVES.

Exchanging calicoes, kettles, guns, beads, &c., for country cloths, palm kernels, coffee and rice. The palm kernels are the nuts gathered from the palm tree, and, with the oil pressed from them, form one of the chief articles of export, the oil being extensively used for the manufacture of fine paints and soaps. The English and French manufacturers extract the oil from the kernels, and press the remainder into cakes, which said to make an excellent food for cattle. Almost everybody handles palm oil; nearly the whole of Liberia seems to smell of it.

LUXURIOUS CONVEYANCES

are made of the long "dug-outs" having cushioned and backed seats near the stern, in which the "boss" reclines beneath the shade of his umbrella and smokes his pipe, or leisurely discusses a lunch or a bottle of wine, while the seven, eight, nine or ten natives who compose the crew paddle away singing merrily. In several places, on each side of the river, small creeks flow into it. These are generally bridged just at their mouths by flimsy foot bridges, supported on long, insecure-looking poles. These creeks are the great resorts of the hippopotamus, (river horse.)

CULTIVATED LIBERIANS.

There is one feature of Liberian life worthy of commendation. As soon as they acquire means, they seem generally to go out to enlarge their ideas by travel and observation. Many of those whom I met had been to, and generally through, England and America, and several over the Continent of Europe. It is hard to imagine how any one could go to Europe, and be contented to come back and live in Liberia. It is said, however, that "the Lapiander loves his home."

THE GENERAL LIFE

of the older and wealthier planters along the St. Paul's, resembles in many particulars that of the Southern planter in the "good old days." Having a good brick house built, and his coffee, or sugar plantation well underway, the tiller of the soil generally takes his ease, wears good clothes and smokes, only exercising supervision of his affairs. The spirit or wine decanter is almost invariably at the service of his guests, and when he goes visiting or to Monrovia, he steps into his canoe, calls his crew together, and travels comfortably and sedately. As the present generation is growing old, the children take charge after the return of the heir from his schooling and "finishing tour." In view of all this, it is ridiculous to suppose that the Liberians are relapsing into barbarism. On the contrary, it is apparent that *each generation is bringing them steadily nearer to perfect civilization.* While these old lords of the soil, in their conscious or unconscious aping of their former masters' former lives, present, occasionally, ludicrous contrasts to their models, by ignorance and lack of culture; their sons and daughters are growing up better educated, trained and supplied with the requirements of intelligent men and women. I saw the Liberians, (especially the younger ones,) brought into contact, and consequently contrast, with the *Azor's* immigrants. It showed, then and then, that whether the negro is capable of attaining the white man's level or not, he is capable of becoming much nearer a perfect man than he is in America. It showed that there is more capability in him for improvement than we have developed. It is conclusive evidence that there is a vast amount of good mental ground lying fallow, wasting or running to noxious weeds, in the negro. It is as well to say it right here—despite their many ignorances, their conceit and their improvidence and inertness, the average Liberian is, in most ways, immeasurably superior to the American negro, and those at Sierra Leone are as far above him in acquirements as the clouds are above the earth. In the social refinements the better classes of colored people there, seem perfect. In one thing I could notice distinctly the three degrees of progression, as illustrated by the English Colony negro, the Liberian negro, and the American negro.

THE OBSERVANCES OF TABLE ETIQUETTE.

This is a small matter at first sight, but it tells a story when looked into. History will show that in proportion as men have become civilized, they have paid more and more attention to the little niceties and daintinesses that redeem the taking of food from the uncleanly and disgusting obedience, to necessity and exercise of gluttony of the savage, to the pleasurable, graceful and cleanly indulgence in a luxury, of the well-bred European or American. It is very well to spout Burns, but even the most rabid universal social equality lunatic would find it difficult to realize that the man who sits opposite, who makes of his mouth an open sepulchre in which he interns all of his feelings, sensibilities and intellectual developments, shovels in on them huge and indiscriminate masses of food with his knife, and gulps his wine as if it were a dose of medicine, is "a man for a' that." People's style of eating is generally a fair indication of their progress in civilization. The Bushman eats his fish half raw with his hands; the Chinaman conveys it neatly and deftly to his mouth with chopsticks; the Englishman carefully, and as deftly, "scoops" it in with a silver fork. These are the three degrees. (I don't mean to say that a man is uncivilized because he eats his fish with a bit of bread and a fork, but the civilized man, however he does handle his food, does it cleanly.) Tell it not in Gath, publish it not in the streets of Askalon, but almost every meal I took while on African soil was in company with colored people.

The Sierra Leone people display a spontaneous and unconscious scrupulousness regarding the observance of all points of table etiquette, such as is hardly seen in the best American households, and puts an habitual sitter at hotel tables to diligently recalling the precepts inculcated in his youth, regarding the proper manipulation of table-furniture, &c. The Liberians are apparently much less enlightened on this subject, and seemed with one or two exceptions, to pay little attention to it, while the *Azor's* people had each their own original and untrammelled style, the main object seeming to be the consumption of the greatest possible amount of food in the least possible time. Almost everybody, both in Sierra Leone and Liberia, had claret at dinner, and there was usually a glass of sherry or Madeira tendered before or after the meal.

VACATION AT HAMPTON.

WHAT THE INDIANS HAVE BEEN DOING—THE SCHOOL-ROOM—THE FARM—CAMP LIFE.

By James C. Robbins, a Hampton graduate, in charge of the Indians during summer vacation.

The vacation life of the eighty students who remain at the school during the summer is a very busy one. In a tour through the grounds and buildings, hard and earnest workers may be seen. There is not the old-time indifference as to the amount or quality of the work; each one feels that there is a great deal at stake in the turning of the machine, the handling of the hoe, or the setting of type,—for these are to be the self-made men and women of Hampton. In this concentration of energies, this determined perseverance, this working for an end, one realizes that among the richest blessings Heaven gives to man is the opportunity to work for self.

Of these eighty students, seventeen are Indians. Three years ago these young men were wild and warlike blanket Indians on our Western Plains; now they are working out one of the greatest problems of the day, "Can the Indians be civilized?"

Mondays and Tuesdays are for study; other days they work. On school days the bell is rung fifteen minutes before nine. The exercises for the day begin with a select reading by the Indians from the Scriptures. Afterwards, they sing one of the Gospel Hymns, then all unite in repeating the Lord's Prayer. At 9:30, A. M., they have their writing, the first lesson on our programme. In examining their copy-books we are not surprised to see many well-developed hands, for it is well known that the taste for copying and making drawings is a characteristic of the race. At the close of the writing exercise, we have Arithmetic. The boys take their places at the black-boards, and examples are given to them. At present they are working in Subtraction; Addition has been well mastered by most of them. It is rather amusing to watch them while at work. Those who do not know how to do an example will see all the devices so well known to school children to get the answer from others; but they do not give evidence of the pleasure that the others feel who have mastered it for themselves. Of course there is a difference in their several abilities; some are very bright and quick—others, "slow but sure." After Arithmetic we have a recess of ten minutes; most of them prefer to remain in the room to work examples. Geography follows the recess, beginning with their homes in the Indian Territory; they are learning all about its rivers and mountains, the location of the different Reservations, and to draw maps of the Territory itself. After this exercise they have gymnastics and the elements of elocution; the object of the former being to bring into use all of the muscles of the body. The morning exercises close at 12 o'clock. At 2 o'clock the school-bell rings and all the boys assemble for their afternoon lessons. The first hour we have a talk and oral exercise on the art of speaking correctly, then a few hints concerning their "habits and manners." Afterwards we have reading, spelling, and defining of new words. So much for our school days.

Every evening, except Friday, Saturday and Sunday, we have a study-hour from eight until nine o'clock. Many word games are played in order to teach them how to speak and spell with accuracy. During one of these games it was agreed that we should try and see how many words we could find in the teacher's name. To the great amusement of all, one of the Indians, with a roguish twinkle in his eye, went to the black-board and wrote "Sambo," as his contribution. Finding such words as mess crabs, Moses' rib-bone, kept the party in constant laughter. We have also had talks about how plants grow. A few seeds of oats and wheat were given to each of them to plant; now when one passes many of their rooms he can see little flower-pots or boxes with the oats and wheat in a flourishing condition. We do not expect much from these little seeds, but we trust, from the lesson taught, there is yet to be an abundant harvest.

Apparently, they are much interested in farming, and go with even more promptness to their hoes than to their books. At the ringing of the work bell at 6:30 A. M., all of the boys are expected to be at the barn ready for work—planting, hoeing and harvesting has thus far been their part; their work is well done. One of the best things about them is their readiness to do whatever they are told, but it is evident that they have not the strong constitution of the negroes. I have no doubt that many think it would be well for them to give all of their time to acquire our language, but when we remember that they came here to be educated for home usefulness, we will see that the labor plan is a wise feature in their education. Work is the lever that lifts a people from barbarism to civilization. At home theirs is to be more muscle than brain work, and that school system is most perfect which best fits a man for his great life work.

One of the pleasantest experiences of the summer was our tent life on the beach. It is very singular that in preparing for such excursions the most important things are invariably the last thought of. Such was true of us. I remembered my bathing clothes, but forgot my blankets. The large sticks of wood were carefully packed in the wagon, but not until we had started did it occur to me that we had neither the axe to cut or the matches to light it. The Indians went on ahead and reached the ground some time before the wagon.

Soon after the wagon got there we had a very lively time, pitching two large tents, cutting wood, making fire, bringing water and getting supper. I was made *chef de cuisine*, and with my two Indian assistants we soon had supper ready; we ate our evening meal in ons of the tents. After supper we decided to have guards to protect our things while we remained in camp. Two men went on guard at a time; they were relieved every two hours in the night. During the day we had but one man on duty, with a change at the end of every two hours. That they might know when to come off duty, Mr. Banks (a Hampton graduate) let them take his watch. About 4 o'clock in the morning the watch ran down. Observing that it ceased to tick, one of the Indians on guard went running with it to "Banks' Exchange," calling, "Mr. Barntz, Mr. Barn-tz, your watch dead." Mr. Banks quietly asked him, "What time did it die?" "Four o'clock," was the reply.

Before every meal, two boys were appointed to wait on the table, two to wash dishes, and one to wait on the waiters and on Mr. Banks and myself. After all the supper dishes had been washed and put away, the boys who slept in "Robbins' nest" went into "Banks' Exchange" for evening prayers. It was comforting to read the ninety-first Psalm, to sing,

"I need thee every hour," and to make a supplication, at the close of which all united in repeating the Lord's Prayer. It filled my heart with gladness when I looked upon the

SECOND DAY.

"I need thee every hour," and to make a supplication, at the close of which all united in repeating the Lord's Prayer. It filled my heart with gladness when I looked upon the red men sitting in a circle round me, listening to the words of Scripture, singing hymns of praise and prayer.

We retired very early the first night, as all felt the need of rest. I prostrated myself before the god of sleep, ready to obey the mandates of so kind a master; but a hundred thoughts of breakfast and what we should do without baked beans, rudely forced themselves between his majesty and myself. By chance I turned my head and saw an Indian reading his Bible. I thought to myself, this desire for a knowledge and practice of the truths of the Bible is a true indication of progress—for civilization without the Bible is like a dangerous harbor without a lighthouse.

The next morning, with aching bones, we went around preparing breakfast. After breakfast, we went to the beach for a bath. And so it went on, cooking and eating, until night drew nigh; then we had a sham fight of the allied tribes of Kiowa, Cheyenne and Sioux against the Utes. The smhuscades, the daring assaults, the stealthy sttacks, were splendid, but in vain, for the Utes were victorious. The Indian courtship would have drawn a smile from the most stoical. The Indian maiden, with a sheet covering her mouth and drawn tight around her body, falling below the knees, coquetted with her wooer, whose advances suggested a cock and a hen. She finally followed him to his wigwam.

Early in the evening, the wind which had been increasing in violence all the afternoon, blew a perfect hurricane; every minute we expected to see the tents blown over. The spirits of the Indians seemed to rise with the gale. They started a game among themselves and kept it up until 5 o'clock the next morning. About 9 o'clock the same night I had a desire to visit the bench, and set out with Mr. Banks and one of the Indians. When we were about half-way there we were startled by a wild laugh and the sudden appearance of one of the Indians in our path with a sheet wound around him. He had concealed himself behind a stack of corn, and when he heard us coming he sprang out. A minute's walk brought us to the beach. The breakers thundered around us. I sat down to admire them in all their grandeur, for we had one honndless sweep of the mighty deep. It was a splendid night. The heavens were black with threatening clouds; the moon, which charitably covers all imperfections, tried to shine, but an unseen power, as if ashamed to let her look upon some awful scene of desolation, quickly veiled her face; the wind hurried past us as if frightened by tha last despairing cry of its helpless victims. Rising to go to our tents, I thought that though the ocean rolls around us in this wild and lawless freedom, Jesus taught it to obey Him. At midnight I visited the beach again.

The next morning the sun came out brightly, and we had a fine day. Eating, washing, talking, bathing, was the order of the day. At 3 o'clock the order was given to take down tents and pack up. While this work was going on our attention was called to one of the Indians who sat under a tree. He was making a sketch of the head cook and his assistants; they were not flattered in the picture, but the picture afforded them much amusement. Soon the wagon came to take our effects to the school, when we said goodbye to camp life, and now say good-bya to you.

SABBATH SCHOOL UNION.

A brief account of the seventh annual session of The Eastern North Carolina *Sabbath School Union*.

Tha Union hold its last session at Naw Bethel church, near Edenton Perquimons Co., N. C., on tha 15 and 16 of August, 1878.

FIRST DAY.

At eleven, A. M., tha house was called to order by the Superiutendant, L. W. Boon. Opening services—Reading, St. Luka xii chapter to 31st verse, hy Elder Paxton of Edantou, —singing—"Jesus loves ma," and prayer hy Rev. L. W. Boon.

After which a general welcomo was extanded to tha delegates and visitors, hy tha Superintendant, who added a few hrief remarka suitahla for tho occasiou.

Tho roll of schools was then callad, the delagate answoring for tha same.

After appointing a committee on finance, tho lotters were read and delegates aurollad. But before this was accomplished the house adjourned for recess.

Tha benevolent citizens of that vicinity had prepared a long tahla in the grove, which was richly furnished, and the delegates and all visitors were invited to partaka of its contents.

At two o'clock, p. m., the delegates re-assembled. After reading tha minutes of the forenoon session they proceaded to the reading of letters until finished. After which, committees wore appointed, on nomination, missionarias, time and place of tha next session, valuation of prizes, and rasolutions. Adjourned till Friday morning at 9 o'clock a. m.

SECOND DAY.

At 9 o'clock, a. m., the house was called to order—Superintendant in the chair. Minutes of the afternoon session of the previous day ware read and received.

The various committees then made their reports in turn. And the remainder of the forenoon was spent in the general business of the Union.

Resolutions. Rejoicing in the great work of Sahhath schools and feeling the necessity of encouraging and advancing the cause of Christianity.

Resolved 1st, That we tender our thanks to the missionaries and officers of the Union for their faithfulness in the past. And that we the delegates, missionaries and officers pledge ourselves to exercise our greatest powers in prevailing with all the schools within our district to unite with us in tha work.

Resolved 2d, That this Union feels proud of the fact, that there is emulation in the Sahhath school pupils in using their energy, industry and ahility in striving to ohtain the premiums offered hy this Union for their excellence in declamations, and we furthermors tender our congratulations to the receivers of prizes of 1877 for their laudahle success, and say to them, with all others, to continue in their intellectual pursuits and at last reach the very climax of renown.

Resolved. 3d, That we tendor our sincere thanks to the henevolent citizens in the vicinity of New Bethel church, for their kindness in preparing for this meeting and their cares and hospitality toward our delegates during the sitting of this Union.

Resolved 4th, That we recommend all schools in need of Sahhath school books to apply to Rev. A. Shephard, Box 103 Raleigh, N. C. And furthermore, we cordially invite him to visit this portion of the State.

Resolved 5th, That the statistics of this session of the Union, be sent to the State Sahhath School Convention which convenes Sept. 18, 1878.

Messrs. J. H. Lana, C. W. Jordan, Thos. Sharp, E. Elliot, H. A. Drew, committee.

Recess and preparation as on the day before.

Tha afternoon was given to tha Sabhath school children who had made preparation to joiu in an exhibition and speak for prizes which were awarded to tha hast four.

* * * Adjourned to meet at the Baptist church in Murfreesboro, N. C., on Thursday before tha third Sunday in August, 1879. L. W. Boon, Supt.

J. P. Weaver, Sec'y.
Murfreesboro, N. C

NEWS OF THE MONTH.

FOREIGN.

SURGEON-GENERAL WOODWORTH of Washiagton gives the following report of diseases abroad:—

Havana, Cuhu.—For the week ending September 21st there were 31 deaths from yellow fever and 1 from smallpox.

Rio de Janeiro.—From 14 to 22 deaths from smallpox occur daily.

Morocco, Africa.—Cholera is decreasing. Smallpox prevails in the ports of Mogador and Saffi. In the latter port 15 deatas occur daily from that disease.

Calcutta.—Ten deaths from cholera and 17 from smallpox for the week ending July 27th.

Bombay.—Thirty-two deaths from cholera for the week ending August 6th.

OVER 500 bodies have been recovered of persons drowned by the disaster to the excursion steamer *Princess Alice*, on the River Thaiucs, near London, Eng.

DR. NOGLINO, who made an attempt to assasinate the Emperor Wiliam, died on the 10th, from the effects of the wounds inflicted upon himself at the time of his arrest.

THE military occupation of the Turkish Provinces apportioned hy the Berlin Conneil is going on in the face of armed opposition. The Austrians are progressing daily in their occupation of Bosnia, and the Porte now professes to be ready to act according to the Berlin agreement. The Grecian question is not yet compromised, all that the Turks are willing to yield being a few of the minor islands. It is reported that the Asiatic question can only be settled hy a war hetween England and Afghanistan, in order to prevent Russian advances toward the British Indian possessions, the Berlin treaty preventing Russia from absorhing Asiu Minor. It is also reported that England is to assume the protectorato of Egypt, in accordance with a secret treaty with the Porte.

THE King of Birmah is reported dead.

A FEARFUL tornado visited Hayti the first week in September. Several villages were almost entirely destroyed by the wind or by the sea, and many lives were lost. A similur tornado did great damage in Trinidad, Sept. 1st, especially at Port Spain, but no lives were lost.

POLITICAL.

THE election for State officers and members of Congress in Maine, Sept. 9th, resulted in a failure to elect a Governor by a majority vote, the choice now falling upon tho legislature, which will stand as follows: 68 Republicans; 2 Democrats elected by Republicans; 77 Democrats; and 57 Greenbackers. The Congressmen elected are: Republicans 3, Democrat 1, Greenback 1.

MINISTER CHIN LAN PIN has presented his credentials, and has been received and recognized by President Hayes as Envoy Extraordinary and Minister Plenipotentiary to the United States from China.

THE Treasury Department has saved during the past year in the collection of customs, $730,820.

THE Treasury Department issued a circular, which contains an analysis of the public debt of the United States from July 1, 1860, to July 1, 1878. At the outbreak of the war, the debt of the country, per capita, was $3.74. The war expenditures swelled this account, until, on August 31, 1865, the amount per capita was $78.36, with annual interest per capita of $4.39. This enormous debt has been reduced more than half. The debt, August 31, 1865, stood $2,381,530,294. The total interest bearing debt now is, $1,794,735,650, being a debt per capita of $41.57, and interest per capitu of $1.97, und there is $256,823,612 cash in the treasury.

DOMESTIC.

THE Revised Statutes, declaring that "no foreign gold or silver coin shall be legal tender in the payment of debts," beside reducing the Mexican dollar to its mero value as bullion—about 89½ cents—also reduces a number of other foreign coins which have attained greater or less circulation in this country. The Canadian 50-cent piece is worth, as bullion, only about 89½ cents, the 25-cent pieces only 18½ cents, and the other pieces in proportion. The English shilling which passes for 25 cents is only worth about 19. The U. S. Trade Dollar is worth 99 cents.

VIRGINIA is, owing to the repudiation sentiment in the Legislature, reduced to the most trying financial straits. The public schools have just been re-opened, but there is not a dollar in the State Treasury with which to carry them on or to pay arrearages and salaries due since last session. The teachers are clamoring for their pay, and in some places they have actually refused to begin the labors of the present session until they have received the amount due them for the last. The "readjusters" at the last session of the Legislature failed to make provision even for meeting the ordinary expenses of the State government, and hence the lack of funds to carry on the schools. Gov. Holliday is trying to effect a loan of $250,000 for the purpose of carrying on the public schools.

SOON after the steamer *Adelphi* left her wharf in South Norwalk, Conn., Sept. 28th, for New York, with about two hundred passengers, her boiler exploded with terrific force, instantly killing six persons, wounding about twenty others, two of whom have since died, and precipitating a large number into the water. The air of the morning was chilly, and many of the passengers had sought the sunny side of the steamer, directly over the boiler, to warm themselves. This fact accounts for the large number injured. Great confusion followed the explosion.

THE official census of the District of Columbia gives the population of Washington, 131,947; total in district, 160,051. The proportions of white and colored are as follows: Whites, 106,427; colored, 53,624, showing the proportion of one colored man for every two whites.

THE yellow fever is beginning to abate in the larger towns where it first prevailed, but it is spreading slowly into the rural districts and villages in Louisiana. The total reported deaths, up to the evening of September 23d, have been 8,557. Canton, Miss., reports that no more assistance is needed for that town. In view of the fact that the very prompt and free aid from northern cities has been sent too slowly into some localities and too fast into others, owing to want of knowledge in one place of what is being done in others, Surgeon-General Woodworth has recommended to the Washington Relief Committee a resolution to bring about concert of action in relief work, the wants of some cities being fully supplied, while other places remain in urgent need. The resolution, which was adopted, was to the effect "that the National Yellow Fever Relief Committee respectfully invite the co-operative action of the several relief committees and associations throughout the United States, and to further this concert of action, this committee, which is in official communication by telegraph with all points afflicted, will undertake to give information, so far as possible, of the needs of the several afflicted cities and towns." In the meantime, supplies are going forward to wherever a need is supposed to exist. The total subscriptions in New York City alone reach nearly $300,000; and Philadelphia has contributed over half that amount. Frightful cases are reported in the northern States where persons who left the infected cities to escape the disease have carried the germs with them, and in many cases they have died. The disease seems not to be contagious in the ordinary sense of the term, but spreading only where a peculiar condition of air and soil is caused by filth or decomposing matter, assisted by moisture and high average temperature. Remedies seemed of little avail, whatever the treatment, while a previous temperate life, when proper hygienic care was exercised in the unwholesome surroundings, in a great measure warded off the attacks, or rendered them light and of easy control.

INDIANA has a school fund larger than that of any other State in the Union. It has increased $40,000 within a year, and now amounts to $8,007,095.

THE number of emigrants who arrived at New York from January to September was 54,899, an increase of 9,000 over the corresponding period last year.

DEAN STANLEY of Westminstor Abbey, London, England, is now in this country on a tour of observation.

"THE NEW AUTOMATIC"

SILENT SEWING MACHINE.

This machine is PRE-EMINENT over all others in QUALITY and MERIT, and therefore commands a higher price. Persons seeking THE BEST sewing machine appreciate its NEW AND VALUABLE FEATURES, together with its silence, lightness, swiftness, ease of working simplicity and durability. It is the ONLY sewing machine in the world with NO TENSION to manage, and it is different from all other machines in its principles of operation, being FAR IN ADVANCE of any.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is known and popularly used in *every section of the United States*, and *by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always

THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

SUPPLEMENT.

OCTOBER EDITION, 1878.

FRIEND AND PROTECTOR.

MODE	*Singular.*	*Plural.*

FRIEND AND PROTECTOR.

An English nobleman has a wonderfully sagacious dog upon whose collar is inscribed "Beppo, Friend and Protector." This dog, which seems to have very fine manners, and a full sense of his duties, will not leeve the room, though ordered to do so, antil his master has passed out before him. When a visitor is presented, Beppo puts out a paw, and salutes him with a low short bark.

There is many another fellow of Beppo's race, who might bear upon his collar the same honorable title. The dog is the natural friend and protector often, of man, and many trua stories are told of his fidelity and sagacity, which ought to make any one ashamed of any cruelty to such a faithful friend. As the old song goes:

He is gentle, he is kind,
You 'll never, never find
A better friend than old dog Tray.

The Newfoundland dog especially deserves this praise for his affectionate disposition, his quickness of intelligence, and aptness to receive instruction, and his readiness to defend his master at the risk of his own life. How noble and serene, how gentle and intelligent, is his conntenanca. Sir Edwin Landseer, the genial and celebrated English painter of animals, declared once that "the Newfoundland dog is a distinguished member of the Humane Society." Many interesting incidents are on record which confirm the justice of this assertion. Mr. Jesse, an English writer tells the following:

"A vessel was driven by a storm on the beach of Lyddin, Kent. The surf was rolling furiously. Eight men were calling for help, hut not a boat could get off to their assistance At length a gentlaman came on the beach, accompanied by his Newfonndland dog. He directed the attention of the noble animal to the vessel and put a short stick into his mouth. The intelligent and courageous dog at once understood his meaning and sprang into the sea, fighting his way through the foaming waves. Ha could not, however, get close enough to the vessel to deliver that with which he was charged, hut the crew joyfully made fast a rope to another piece of wood and threw it towards him. The sagacious dog saw the whole business in an instant; he dropped his own piece and immediately seized that which had been cast to him; and than, with a degree of strength and determination almost incredible, he dragged it through the surge and delivered it to his master. By this means a line of communication was formed and every man on board saved.

Newfoundland dogs have been trained in France to rescue drowning persons, and are kept in readiness on the banks of the Seine. By throwing the stnffed form of a man in the river, and sending the dog to fetch it out, he is taught to do so, when it is necessary. Bnt the natural delight of this noble race of dogs seems to be in the preservation and rescue of human life. Mr. Youatt, who has written a hook upon Humanity to Brutes, says that his own experience furnishes him with an instance of the memory and gratitndo of a Newfoundland dog who was greatly attached to him. Having become inconvenient to him to keep the dog, he gave him to a man who he knew would treat him kindly. Fonr years passed and he had not seen him, when one day as he was walking along a lonely road, he met Carlo and his master. The dog recognized his old master, and they had a pleasant meeting. After e little chat the naw master proceeded on his way, and Carlo as in duty bound, followed him. Mr. Youatt hed not, however, got half way down the hill, when the dog was again at his side growling low but deeply and every hair bristling. Looking about, he saw two rongh looking fellows making their way through the hushes to the road. Their design was hardly doubtful. "I can scarcely say," seys Mr. Youatt, "what I felt when presently one of the scoundrels emerged from the bushes, not twenty yards from me; but he no sooner saw my componlon, and heard his growling, the loudness end depth of which were fearfully increasing, then he retreated, and I saw no more of him nor his associate. My gallant defender accompanied me to the foot of the hill, and there with many a mutual and honest greeting, we parted, and he bounded away to overtake his rightful owner. We never met again; but I need not say that I often think of him with admiration and gratitude."

LESSONS IN GRAMMAR.

To be Published in Book Form.

VERBS.

A verb is a word used to express the being, action or state of its subject; as, He is, Tha hird flies, The sun shinas.

Verbs are divided according to their form into regnlar and irregular.

A Regular Verb is one which forms its past tense and past participle hy adding d or ed to the present tense; as, wish, wished, wished.

An Irregular Verb is one that does not form its past tense and past participle by adding d or ed to the present, as go, went, gone.

Verbs may be divided into Active Verbs, those which express action; Attribntive verbs, those which express, or ettribute, being or state.

Active Verbs may he sub-divided into Activa Transitive and Active Intransitive.

An Active Transitive Verh is one whose action passes over (transits) upon an object; as, James canght him.

An Active Intransitive Verh is one whose action does not pass over to an object; as, James ran.

Attributive Verbs heve no action to pass over upen anything and therefore must be Intransitive.

The action expressed hy a verb may pass hack upon the subject; as, John was caught. This form of the verb is called the Passive form or voice. Evidently only the Active Transitive Verbs can have a Passiva voice.

The Passive Voice is formed hy prefixing some form of the auxiliary verh to be to the past participle of a trensitive verb.

An Auxiliary Verb is one that is employed in the conjugation of other verbs; as, He had gone.

MODE.

Mode means manner, and grammatically shows the manner in which the verb says something of its subject; as, John welks. If John go, John may go; go, to go.

There are five Modes—Indicative, Potential, Subjunctive, Imperative, and Infinitive.

The Indicative asserts or indicates something as a fact; as, I went to town.

The Potentiel implies the power to do or asserts the possibility of the action; as, He can go, She mey come.

The Subjunctive Mode represents actions conditionally: If I were there I should be happy.

The Imperative is that Mode by which we urge our wishes and claims upon others; as, Go! Honor thy father and mother; Give us this dey our daily bread.

The Infinitive expresses the meaning of the verb in a general manner, without eny distinction of person or number, and commonly has *to* before it; as, To laugh.

Participlas are words that participate in or partake of the neture of a Noun, an edjective and a verb. They are formed from the root-verb found in the Present Infinitive; as, *liking*, from To *like*.

TENSE.

Tense is the distinction of time. There are three divisions of time, past, present, end future.

Each of these divisions has two tenses, so we have Present, Present Perfect, Past, Past Perfect, Future and Future Perfect.

The Present Tense expresses whet now exists, or is taking phce; as, we go, the rain is falling.

It is also used to express all periods of time embracing the present moments—This century; all great truths: as, Sin brings misery; all habits and customs; as, Cherles smokes; and in narration to express past events more vividly—"The combat deepens."

The Present Perfect Tense is used to represent past events as perfectly finished in present time: as, We have finished our work.

This tense is used for all past events whose effects remain to the present; as, Bunyan has written a useful book; or any events when the time is not mentioned; as, God has created the heavens.

When the time of a past event is mentioned in eny way, the past tense must be used; are, In the beginning, God created the heavens.

The Past Tense is used to express past events; as, He finished his work last week.

The Past Perfect Teuse is used to express actions or events completely finished in past time, before some other actions or events took place; as, The Hampton had passed before the last bell rang.

The Future Teuse represents future actions; as, I shall be happy next summer.

The Future Perfect Tense is used to express finished actions in future time; as, The house, when finished, will have cost a large sum of money.

The facts of the Indicative Mode may have reference to any time, past, present, or futnre, therefore in this mode all the tenses are used, as, He came, He has come. I go, She will go, She will have gone.

In the Potential Mode, only four tenses are used, present, present perfect, past, and past perfect: as, He can go, She could say, He can have gone, She could have said.

The Subjnnctive has three tenses, equivalent to a present, a past, and a future.

The Present Subjunctive denotes future time; as, If I be in Hampton (to-morrow) I will see you.

The Past Snbjunctive is present or indefinite in time; as, If I were judge (now) I would be just.

The Past Perfect Snbjunctive, denotes simply past time; as, If I had begun sooner I should be through now.

In sense, this mode can have no perfect tenses, for every completed act must be assumed as a matter of fact.

The Imperetive has only one Tense, the Present: Do this.

The Infinitive has two Tenses, the Present and Perfect: To have, to have had.

The Participles are in three Tenses, the Past, Present and Perfect: Been, being, having been.

Sometimes, when, till, before, as soon as, whoever, or a similar term carries the present or the present-perfect teuse into future time.

WILL AND SHALL.

These two words have a very different meaning: as, I *will* drown and nobody *shall* help me; I *shall* drown and nobody *will* halp me.

When a person resolves for himself, he uses will; as, I will ohey.

When a person resolvas for another, he uses shall, and thus implies authority; as, You shall leave this class. When e person foretells or simply predicts for himself, he uses shell; as, I shall go home in June. When a person foretells, or simply predicts for another, he uses will; as, He will go home at Christmas. Thus *will* always expresses determination or will, yonr *own* or enother's; *shall*, futurity, predicting for yourself or others.

FORMS OF THE VERB.

Verbs have three forms; the Common, Emphatic, and Progressive.

The Common form is that which is generelly used; as, I go, He wishes, He thought.

The emphatic form represents the act with emphasis. It is formed by prefixing the present and past tenses of the verb *to do* to the common form of the verb; as, I do go, I did think.

The Progressive form represents the ection or state in progress. It is formed by prefixing the various modes and tenses of the verh *to be* to tha present participle of the principal verb: as, I am writing; He was singing.

NUMBER AND PERSON.

The Number and Person of verbs arc the changes they undergo to show their agreement with their snbjects.

In the Present Tense, Third Person, while the plural of nouns is formed by adding s, the plural of verbs is formed by dropping s, consequently there is only one s between tha two.

Singular.	*Plural.*
The girl walks,	The girls walk,
The dog herks,	The dogs bark,
The tree grows,	The trees grow.

The exceptions to this arrangement ere the words *is* and *has*, which change into are, and have in the plural.

CONJUGATION.

The Conjugation of a verb is the correct expression, in regular order, of its *voices*, *modes*, *tenses*, *persons*, and *numbers*.

The Principal Parts of a verb are the *present infinitive* or *indicative*, the *past indicative* and the *past participle*.

The Synopsis of a verb is its *variation* through the different moods and tenses in a single number and person.

Conjugation of the Verb To Be.

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

PREMIUM.

For one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

WE HAD hoped to chronicle the arrival of the Indians at Hampton in this number. They are expected within a week.

We publish the personal and hastily written letters of Capt. R. H. Pratt, which show the spirit in which he works, and the progress of the cause in which he is engaged.

The topmost course of bricks in the Indian Cottage or "Wigwam" (95 x 36 feet) has been laid (250,000 bricks in all,) and ere this reaches our readers the roof will be on. It will require some weeks to finish, and to dry the plastering. A few Indians will be encamped in tents as an experiment, to test the question both of climate and of the best mode of shelter. All will be temporarily provided for in our present buildings in a way to harm no one.

In October three hundred and fifty dollars were sent hy friends in Massachusetts, and one hundred dollars by a friend in Philadelphia, for the Indian building. Three thousand more are promised, all from Massachnsetts.

TEN THOUSAND DOLLARS ARE NEEDED TO FINISH IT.

The pro-rata cost of the construction and furnishing, ready for nse, of a single room for Indian students, is

TWO HUNDRED DOLLARS.

There will, as a rule, be two in one room. Of the sixty rooms to be provided, fifteen will be for colored students, and are urgently needed.

One hnndred dollars is the expense for one Indian.

Of those who feel the debt to this race we ask: *How can you better do your part for them than by giving a hundred dollars—or twice that sum, the cost of a room—to the Hampton work in their behalf?*

We mentioned last month that $2,000 were needed to pay the expense of quarters for Indian girls in Virginia Hall, which are now ready; that in the spring it was hoped to erect a large work-shop, 120 x 38 feet, at a cost of $6,000, and that a sixty horse power Corliss engine for the shop had been offered by Mr. Geo. M. Corliss. We ask for

EIGHTEEN THOUSAND DOLLARS IN ALL.

There is money enough somewhere. It is a question, not of means, bnt of will; whether there are enough individuals in the lnnd who will bring this cause home to themselves.

When the buildings are up and paid for, the work is done once for all. The Government pays the current expense of the Indians at Hampton so long as it shall choose to keep them there, and shonld it withdraw them, the buildings would be precisely in the line of Hampton's needs and progress and will not be useless.

YANKTON, DAKOTA, *Oct.* 9, 1878.

Dear General:—

I am through, and have the required assurance at six of the eight agencies. Shall try to hring the fifty from the Missouri River, because the number is too small to divide and there is so much trouble and expense. Have had a hard time; rode 629 miles in wagons and stages in thirteen days' travel. Spotted Tail and Red Cloud badly stirred up, and my visit there not without danger. Have a good boy of seventeen, with considerable education and Englieh, to act as interpreter. Was at work in a printing-office here and aspires to that trade. I have agreed he shall go into the office at Hampton.

I go forward to Bismarck in the morning.

Have drawn on you for another hundred dollars. It may be that I shall hring several extra (over fifty) which we shall have to beg for. It will be hard, perhaps nnwise, to select or divide, if parties are made up. I don't think the manual labor is going to be a weak point. It can all be euccessfully managed. Look out for good ventilation in the new building: these people live out of doors. We must have boats, fun, &c., out of doors.

Yours faithfully, R. H. PRATT.

SIOUX CITY, IOWA, *Oct.* 10, 1878.

Dear General:—

I telegraphed a qnestion to yon from Fort Thompson on the 29th of September, to which I have received no response. I now ask that yon telegraph to me on receipt of thie, directing to Bismarck, whether you think we are not able to carry, through private charity, twenty to thirty over and above the fifty Commissioner Hayt will pay for. I think we can. The query of greatest importance is the immediate expense hence to Hampton. Necessarily I must have a swing both ways or hurt the chances. A party often hinges on the eize; this and that one's going, &c. I say twenty to thirty, meaning any number up to thirty. I should try to start from Berthold with fifteen to twenty, then, if other agencies falled (which I very much apprehend, because there is much disturbance along the river just now) I would come out about even, but if all came to time I would be over. I do not want to risk my health further in a visit to the Indian Territory now, and would rather chance a batch from there, through somo means, in the spring. I have lived hard, and my old enemy hurts me. Beeides, there should have been five hundred Indians from here, instead of fifty, to be educated. The neede are very great. I shall hring the fifty from here, and now, if I can.

I hope to get back here in three weeke. There will be ecurrility on the frontier about this effort. The Cheyennes leaving their agency in the Indian Territory dampens prospecte there now.

I shall meet Mre. Pratt in St. Paul to-morrow and arrive in Bismarck Tuesday morning.

Ever faithfully yours, R. H. PRATT.

BISMARCK, DAKOTA, *Oct.* 23, 1878.

Dear General:—

Have reached thie point on the way down; shall stop only two hours.

Have nine boys and four girls from Berthold. Looke as though we were to be crowded to keep below number, but may have trouhlo to get enough. Some fickleness.

Expect to reach Yankton Monday or Tuesday next, and Hampton four days after.

Last three days cold, with strong wind; Ice two inchee thick.

Yours faithfully, R. H. PRATT.

We go to press on the receipt of the following:

YANKTON, DAKOTA, *Oct.* 31.

Yon have forty boye and nine girls; leave in the morning. R. H. PRATT.

The party may be expected on the 6th or 7th of November. The small complement of girls (nine) is doubtless due to unforeseen difficulties. The Hampton School has room for, and would gladly take, at least twenty-five Indian girls.

Giving the girls an equal chance is only justice and is indispensable to success.

It costs the Government not less than $20,000 to kill an Indian; it costs less than $200 a year apiece to educate his children.

We offer to take twenty more girls—will they be sent?

We hope to give in the next issue of the Workman, an account of Captain Pratt's wanderings and adventures in search of red-skins to join our black skinned youth in their march to manhood and womanhood.

We press upon our readers the importance of this effort; we ask them what they are willing to do for the Indian, and, if they can find no better place for their money, to send it here.

UNIVERSAL SUFFRAGE.

FROM an address by the Hon. W. Porcher Miles, of South Carolina, delivered at the Commencement of Union College, Schenectady, N. Y., on the 20th of last June, we quote the following paragraphs:

"That we are threatened with evile from universal suffrage, I suppose few thonghtful and candid men will deny; especially now that the emancipated slaves of the South, without the slightest previous training or the possession of any qualification for it, have been admitted to the franchise, swamping the white vote in some unfortunate States completely, and subjecting the property and intelligence of the community to its pauperism and ignorance. Political privileges once conferred are never voluntarily abandoned. We must make the best of the situation. Many 'statesmen' (so called,) we are aware, advocate giving the ballot to the African freedman as a meane of 'arming' him against those who might seek to despoil him of his recently conferred (not acquired) rights. But in his present imbecile condition, mentally, it is like putting a blunderhuss in the hands of a poor witling to defend the house against robbere. He may blaze away at friends as well as foes—and be kicked over by the recoil of his own fire-lock. But *nulla vestigia retrorsum;* and as we conferred the ballot on those without intelligence, we must now endeavor to confer the intelligence on those who have the ballot. Of course where the numerical majority of the hour not only shapee the present but to some extent may stamp the future of the country—where 'the massee' control, if they do not make 'public opinion' (sometimee causing genuine public opinion to ewerve aside through intimidation or through the enthusiasm or the virnlence of party,) it must be desirable that the whole population should be truly educated, trained to the jnet discharge, not only of the right of suffrage, but of all the duties of citizeneliip. And for such education and such training, the State ought to provide as for ite 'cheap defence,' and men of property and capital ought to be willing to be taxed epecifically for the purpose, being assured that what they contribute to this object will, if wisely expended inure eventually to their own benefit and will practically be restored to them fourfold in the onhanced value of their property conequent upon the increase of knowledge, intelligence, ingenuity and skill.

"But it must be the right kind of education. The mere accumulation of knowledge is not Education, as a great poet has told us, is not wisdom. There must be the *educating* and training and strengthening of all the faculties that ought to be developed, and the pruning and repressing of those that ought to be kept back and restrained; so that a due equilibrium may he attained and the resultant be not an intellect or a moral natnre abnormally developed on one side and dwarfed and etunted on the other, but well-balanced and proportioned, sound and healthy."

Reaeon seems to be against universal suffrage, but experience is, we believe, in favor of it. Take it in the Southern States.

In the foregoing extracts, the Hon. Mr. Miles, a South Carolinian, argues powerfully in favor of universal education, and he represents the growing and the strongest sentiment of the South. His ground is the necessity of educating the negro, and suffrage created the necessity.

Hereafter, it will be seen that negro suffrage was a boon to the race, not so much as a defeuce, hut as a tremendous fact that compelled its education. There is nothing to do but to attempt its elevation in every possible way. In their pinching poverty, the Southern States have seized the question of negro education with a vigor that is the outcome of danger.

The ex-slave would have sunk into practical serfdom, not by oppression, but by the stagnation of his mind. We have no reason to think that the South would have fitted him to vote; hut now it must be done, and it will be done with an energy that is born of emergency.

To universal suffrage at the South, more than to anything else, is due the existence of the strong and growing class of ex-slaveholders who advocate free schools for all. They advocate it as a necessity created by negro suffrage. They admit that it is due to the colored race to enable it to take care of itself, and they believe that free labor must be intelligent to be of value; but this act of justice, requiring great outlay, would, perhaps justly, hy reason of their pinching poverty be delayed, were it not for the paramount necessity of meeting the dangers created by the endowment of the negro race with a vast political estate.

In business and in charity, we do for or give to that which presses most upon us. The first rank of duties consists of those that seem to Christian men nearest to absolute necessity. In legislation, necessity pushes to the front those questions that are vital; what is merely justice hides its time. The thing that's *got to be done* overleaps all others.

The hallot power came back like a boomerang. It did not protect. But its mission is being fulfilled. It opened the eyes of Southern men to the paramount importance of the elevation of the negro race, to the only way of saving themselves—the slow process of general education. Thousands of Southerners who don't believe in free schools advocate them because the negro vote for them is solid, because a fair trial is due the negro, and what else is there to do?

Virginia, under undisputed democratic control, leads the way in this work, and gave last year over a million of dollars to popular education, one-third of which was for the blacks.

The telling argument 'everywhere heard in the South is, "They are voters and we must enlighten them." Self-preservation is to all the strongest motive.

We believe that those in the North who give to our Southern schools give because it is the cause of national safety. The unenfranchised negro would he regarded by both North and South as a heing who ought to he lifted up, but, they would say, "He had his freedom at great expense; we must first pay the cost of the war that freed him." Neglect of any further duty would have become a habit. Serfdom would have been inevitable by the innate tendency of the blacks, by the logic of events, rather than hy any definite purpose. Reason may appear to he in favor of limited suffrage; experience seems on the other side.

The novel and dangerous element of negro suffrage forced into Southern society has made a tremendous stir, but in the end will be, we believe, an important force in working out the salvation of the negro, the aggrandizement of the South, and the good of the nation.

A RECREANT PEOPLE.

The moralist of the future will be often and sorely puzzled, in his analysis of the acts of the present generation of America, and the motives or want of motives which controlled them. No question will confuse him so completely, or utterly set at naught his advanced notions concerning moral obligations, as the Indian problem of the (to him) past nineteenth century. The confusion of right with wrong; the absurd contradiction of deeply religious professions with inhuman deeds; the offensive violation of the laws of God and man; the dark and devious ways of a people who are ever rallying around Christian churches and creeds; the rank injustice done by a Nation which has inherited a just and comprehensive system of jurisprudenee, and to whom fair dealing is always vital, will hardly fail to suggest to such a moralist the idea that there was a radical defect somewhere fixed in the individual lives of those who made up the Nation itself, and au alarming failure to illustrate by practice, what was persistently preached. It is certainly one of the imperfections of men, that what is beyond the physical eye is apt to be, in effect, beyond the mental vision. Facts do not lose their reality because they are unseen. It is not necessary to shudder through the chnrnel houses of New Orleans, or the hunger-stricken districts of the East Indies to know what misery is. Nor do we need to camp in the solitudes of the great western prairies to feel and be moved by

the intolerably shameful facts concerning our treatment of the Indians. Should the territory, now occupied by them, be mov-

contradiction of emblazoning morality on our banners, but, in fact, putting devilry in our deeds. A distinguished army officer recently said: "Our treatment of

penses of governing. Many of the laborers indulge in salt as a luxury two or three times a week. In Madras there are 19,000,000 paupers. Europeans are paid

operation of those who are able to place them in the hands of distributors, and by aiding the tracts, share the expense of their publication with the editors who have no other pecuniary interest in their

the intolerably shameful facts concerning our treatment of the Indians. Should the territory, now occupied by them, be moved up to our doors, so that our eyes could rest directly on the actual condition of things, the instincts of justice and religion which we still possess, would close the doors of the counting-rooms and keep all things in abeyance, until we had purged ourselves of the infamy of our conduct toward these red men, who, though seemingly worthless, are still human.

We are responsible for the acts of our agents; we are responsible for the government which we have elected to act for us, and for the agents to whom that government has delegated a part of its power. The principal, that is, We the People, are bound by the acts of our agents. *Qui facit per alium, facit per se.* A drunken scallawag, holding his appointment from us, the People, binds us, by his acts, in cheating the Indians out of blankets, and ponies, and beef rations. Especially is it so, where we have full opportunity to know of his acts, and refuse to know them or repudiate him. People say, "The Government acts badly. The Indian Bureau is all wrong. The agents are wicked." But it is our Government, our bureau, our agents, that do this wrong. They hold office by tenure from us. We can discharge, re-appoint or impeach them. There is no excuse for us. Every grown person in the country has the blood of butchered Indians on his hands. The facts are beyond dispute. It is useless, wearysome even, to rehearse the old story. In books of travel, in Congressional records, in reports of benevolent societies, in newspapers without number, the facts have been detailed in no dubious way. The outrages committed by us, in the way of violated faith, are of such long standing we seem to have forgotten their character. Our contact only, aside from obligations arising from contract, imposed upon us serious moral obligations to the Indian. He owned the soil and we did not. We have got it from him.

If we narrowed his nomadic life, and crowded him out of his fertile valleys, we were bound to bridge him over any disastrous consequences to a condition of existence, in which he should not deteriorate, so far as we could help it. Even more than that, we were bound to hold him as the "ward" of the nation; and, under that obligation, to elevate his condition. It was not a matter of mere good-will, of general friendliness, but of imperative duty. It called for wisdom, and patience, and a vast system of education adapted to his peculiar character and surroundings. To dismiss him with food and drink, and blankets and ponies, was criminal negligence, if we were under any obligation to him. The expense and labor would have been vast. But he paid for it in advance, by transferring to us land sufficient in extent to hold empires.

Noble efforts have been made by private individuals and religious corporations to discharge this duty. But that does not meet the case. It is the solemn duty of the nation to do it. We readily paid millions for Louisiana and Florida and Alaska, simply because we had to, and we kept our faith in the transactions. We dared not to try our "Indian policy" on foreign nations. We found the Indian weak, without ships of war or standing armies, and we trented him "accordingly." It is the act of cowards.

The Anglo Saxon race, in dealing with inferior races, is generally headstrong and vicious. The "Maori" war of New Zealand arose out of the frequently wicked attempts of the English settlers to seize the cultivated lands of the natives. He who has read the "Glory and Shame of England," knows the history of British brutality towards weaker people. We, too, are like our ancestors. The restless pioneers of our race are greedy, and bear down harshly on the weak.

Men of thought and broad moral culture are not generally found on the pickets lines of civilization. It is only when the forests are swept away, and the aboriginal tribes are reduced, and frontier life is softened, that men with less steel and iron in their frames than the pioneers, move outward toward the borders and introduce the humane ways of the old settlements. This may account for the gross contradiction of emblazoning morality on our banners, but, in fact, putting devilry in our deeds. A distinguished army officer recently said: "Our treatment of the Indians is a disgrace to the nation, and shows that we are no better than brutes." Recently the great gun of Plymouth Church, Brooklyn, which always fires shells with fuses cut to ignite directly over what is wrong, thundered along the lines of this question. Mr. Beecher predicted the outpouring of God's wrath on the American people for their heartrending treatment of the Indians. History shows, he said, that this nation is one of the most barbarous that ever lived, a stiff-necked, hard-hearted people whom God would surely punish for this vile treatment.

We cannot deny that the Indian is cruel and savage. He has committed deeds of great atrocity. He breaks faith, and murders in a pitiless way, and his ways are not our ways. After all, he lives according to his light. What do we? Infinitely superior to him in every opportunity, backed by centuries of training, and all powerful in resources, we break faith with him, assume to care for him as our "ward," and then, year after year, keep worthless scoundrels as our trusted agents to cheat him and plunder him unmercifully. So miserably weak is public opinion on this question, it is hardly possible for the Executive of the Federal Government to redress these wrongs. Therefore, we do not live according to our light, but grossly belie our professions as a Christian people. The conscience of the nation is dead in this matter.

The proper treatment of the Indians is simple enough. Educate the young Indians of both sexes, instruct them in the industrial arts, keep them in groups away from the wild tribes, until the small, growing communities get the habits and routine of civilization; give up the idea of educating a few men to be turned loose upon their old associates, male and female, only to be instantly drawn down to the old ways of savage life; thoroughly police the territories, so that neither white man nor Indian can transgress the laws; and in the fulness of time, the Indian question will be solved. To expect that this can be done in a day, is to believe that the Ruler of the Universe does His work as we do ours, "in a hurry." W. N. A.

INDIA.

The October number of the *Nineteenth Century* contains an able article on the "Bankruptcy of India." It estimates the present population at 190,000,000. Between the years 1858 and 1878, the famines have been unprecedented in number. The supply of bullocks, the main support in tillage, has decreased about forty per cent. The soil is gradually deteriorating. The wealth of India is in the soil, mainly. There are few manufactories, or "investment" properties. The rate of interest runs from 12 to 60 per cent. The debt of the State amounts to about eleven hundred millions of dollars. It has largely increased within a few years, owing to the vast amount of railway building and extensive irrigation works.

The famines that occur are "financial famines." There is food to be had, but no money to buy with. The average annual production is valued at $1,500,000,000. It is much less than that of England or America. The average annual product of each person amounts, in value, to *seven dollars and fifty-six cents.* In Great Britain, the average product per head of population is $150. In order to show the real condition of the natives, it is stated that it costs, annually, to feed the prisoners in the India jails, $11.00 per head. The native, therefore, is compelled to live on three dollars less than the prisoner. Not only, that, but out of the $7.56 must be deducted the cost of clothing, repairs, tools, rent, and food for bullock. The wages of unskilled laborers remote from railways, range from three to eight cents per day. The people live from hand to mouth, and are unable to save for famine times.

Though the income is wholly inadequate to procure the coarsest food, it is taxed by the British Government, 16 per cent., to pay interest on the debt and the expenses of governing. Many of the laborers indulge in salt as a luxury two or three times a week. In Madras there are 19,000,000 paupers. Europeans are paid from three to eight times as much as the natives would be paid for the same service.

The natives are compelled to raise crops which exhaust the soil, but bring ready money to pay off the taxes. The country has been drained of all the wealth it ever had. The North-western Provinces exported grain to England, in order to raise funds to meet the public debt, while 300,000 people were starving at home. About 6,000 miles of railway have been built at a cost of $650,000,000. Millions have been spent in irrigating the soil. Yet the railways pay little or nothing, and the irrigating works are unprofitable. It is the poorest agricultural nation in the world. During the last year, $40,000,000 was spent in public works; and in order to pay the interest on this expenditure, the peasant who is now paying 16 per cent. on his average income of $7.56, must pay additional taxes.

At a low estimate, 1,400,000 people have perished from starvation. The Government requires $250,000,000 annually to pay its expenses, including $100,000,000 for military service alone. The people seem to be sinking under the load. The English people are disposed to act justly toward the natives, but they hardly realize the task they have upon their hands, of governing and elevating these vast swarms of human beings. W. N. A.

THE prominent part now played in our national politics by financial and kindred questions, has prompted us to publish a series of articles on the subject. The third of the series, entitled "Capital," is to be found on another page, and to it we call the attention of our readers.

WE call our readers' attention to the publication, in this month's supplement, of Mrs. M. F. Armstrong's tract upon Preventable Diseases. It is the second in the sanitary series of "Hampton Tracts for the People," which are about issuing from the Normal School Press. The next eight tracts will appear like this in successive numbers of the Workman, before their publication in pamphlet form. Nos. I, II and III, viz., "The Health Laws of Moses," "Preventable Diseases" and "Duty of Teachers," have already been issued in tract form, and may be had by application to the "Editing Committee Hampton Tracts," Hampton, Va. The hearty approval which these have already received from the American Social Science Association and many of the leading journals, is enough to convince the Editing Committee that they are working in the right direction.

In England, a similar effort for spreading a knowledge of the laws of health by simple publications, has been carried on with great results for good, for twenty years, by the Ladies' Sanitary Association of London. In this country the need is certainly as great. That lamentable and wide-spread neglect and ignorance of the simplest rules of living exists in all classes, no one who observes and thinks will deny. There is a class, no doubt, below the reach of tracts or any publications—of anything, in fact, but direct personal effort. But just above this, and indeed, all the way up, are classes which can be reached by them, and can be trained by them to lift up the lowest. It is for these—for any and all of them—that the Hampton Tracts are intended, and it is to be hoped that many who believe in such work will interest themselves in their circulation. City missionaries will be able to use them to advantage in their arduous work. One such, has said that he would like to be able to put the tract on Preventable Diseases into every room of every tenement house. It would be well if that upon the Duty of Teachers, in regard to teaching and enforcing the laws of hygiene, could be placed in the hands of every school-teacher in city and country, to whom the physical and mental health of the rising generation are so largely committed. The Health Laws of Moses are of general application. Such a distribution can only be effected through the co-operation of those who are able to place them in the hands of distributors, and by aiding the tracts, share the expense of their publication with the editors who have no other pecuniary interest in their sale. The price is five cts. apiece: four dollars per hundred.

The Hampton Tracts are aimed directly at some of the greatest existing evils of our civilization. Shall not their efforts be encouraged and extended?

MANY of the graduates of the Hampton Institute will learn with sorrow of the death of Miss Rebecca Taylor Bacon who, from 1868 to 1871, was its Assistant Principal.

She passed away on Saturday the 26th of October at the house of her father, the Rev. Leonard Bacon, D. D. of New Haven, Conn.

Although it is seven years since she left, her influence is still felt in her many wise arrangements which experience has shown to need no change, and through which she is likely to continue for years, a power in this work for the ex-slaves of our country.

She was a woman of rare qualities, of wonderful clearness and force, was always doing good, and will be missed in many an effort for the needy and the lowly.

THE AMERICAN SPICED FOOD.

We have received from Messrs. Anee & Co., General Agents for the Sale of the American Spiced Food for Horses and Cattle, 34 Court Square, Boston, a donation of a quantity of the above-named article, which is very highly recommended by firms well known to us, as a valuable, economical and nutritious article. The Proprietor of one of the largest stables in that city says: "I have fed this article in most every way, with and without grain, and I have never yet seen the case where it has not done all that it is claimed it will do. I consider it the *best* article of food for a horse that I have ever met with in an experience of over thirty years in the care and management of horses, and can confidently recommend it. As an appetizer I believe it stands unrivalled, having given it to horses who had utterly refused to eat anything just before mixing it with their food, and having no trouble with them afterward. It will keep a horse in good condition when well, and will put him in condition when all other things have failed."

It is also recommended for cattle, and especially for milch cows. We advise horse owners to give this food a trial.

☞ *See advertisement.*

A FRIEND sends the following composition by a little ten year old boy in Cape Town, South Africa. It is very well written and is published without corrections.

CAPE TOWN AND ITS INHABITANTS.

The capital of Cape Colony has a population of about 36,000 among whom are many Malays. It has its own government.

The Malays are of a light brown colour, but don't always dress neatly.

Malay women wear a silk handkerchief on their head and a wide print dress.

The priests wear long robes and turbans.

The swell Malays wear a suit of blue.

Once a year the Malays have what is called a Kaliphs in which they cut themselves with knives for they think it pleases their god. When they bury a person they make a shelf and put cakes and a can of coffee for the spirit when it awakes and needs something to eat. I assure you the boys are glad when a Malay is dead, for they go and eat the cakes. Then when the Malays come again they say that the spirit has eaten up the food. There are only a few houses in Cape Town that have three or more stories.

GEORGE PORTER MATHEWS,
10 years old.

REMOVAL.

The Home Savings Bank, finding its present quarters too strait for the proper conducting of its business, will on December 1st, remove to the large and well lighted premises, on Main Street, Corner of Roanoke Avenue, of which they have taken a five years lease. The building is in as fine a location as the city affords, and is being thoroughly put in order with plate glass front, and other modern improvements. This change of base will doubtless result in a largely increased business.

U can make money faster at work for us, than at anything else. Capital not required; we will start you. $12 a day at home made by the industrious. Men, women, boys and girls wanted everywhere to work for us. Now is the time. Costly outfit and terms free. Address, TRUE & Co., Augusta, Maine.

THANKSGIVING.

BY E. A. SMULLER.

On the glorious Thanksgivings

ties and dangers of an unknown country, and also without the loss of time and the labor required to learn a new language. Africa calls for help, and I hope some of you will, at the

metic and completed Magill's History of Virginia. Seventeen are studying Harvey's Grammar. I have several good spellers and very good writers. Map-drawing is also encouraged.

I have been teaching night school for grown people, and they seem to like it very much indeed. On the whole, the people seem to like me a great deal. But they speak about me very much indeed, because I don't join with

THANKSGIVING.

BY E. A. SMULLER.

On the glorious Thanksgivings
Of the days that are no more,
How, with each recurring season,
Wakes their mem'ry o'er and o'er;
When the hearts of men were simpler,
And the needs af life were less,
And its mercies were not reckoned
By the measure of excess.

When a happy turning homeward,
On the eve of that glad day;
What a throng of recollections
Round each object on the way.
Here the schoolhouse with its maple,
Leafless now, aad dark, and grim,
Shaking with each gust that crossed it
Threat'ning rods on every limh.

There the hill whose towering summit
Boyish feet had loved to climh
When the distant peaks stood beck'ning,
In the glow of eventime;
And where boyish hearts had wondered
Till the coming of the stars,
Of the great wide world that waited,
Far beyond those sunset bars.

Ah, how gladly manhood's footsteps
Took again the homeward way,
Fain to leave the world behind them,
Were it only for a day;
Fain to seek the dear old hearthstone,
Warm with loving hearts and true,
While in simple, guileless pleasures
Youth and joy retuca anew.

Then bow sweet and safe the sleeping
'Neath the sheltering roof once more,
With the sentry poplars keeping
Guard above it as of yore.
Homely though the old square chamber,
And its couch but quaint and rude,
Still the dreams that sought its pillow
Were a bright beatitude.

Heaven send the glad Thanksgiving
Of that older, simpler time,
Tarry with us not in fancy,
Not in retrospective rhyme;
But in true and living earnest,
May the spirit of that day,
Artless, plain, and unpretending,
Once again resume its sway.

—*Christian Weekly.*

TO THE HAMPTON GRADUATES.

My dear young friends:—

Now that summer wanderings have been exchanged for settlement at home, and work is resmed, my thoughts turn to you, desiring to know how each one is situated. From what I hear of business and the dullness of financial affairs almost everywhere, I fear your prospects of remnerative employment are not very encouraging, and I sympathize heartily with you. Agriculture, perhaps, offers greater returns than teaching, and it is always useful and honorable; but *teaching* is the vocation you have chosen, and the one for which you have been educated. Besides, the great need of the people where you live is just what you are prepared to give them,—thorough instruction in the most important branches of knowledge, careful training of their mental powers, correct principles and motives of action; your great object heing to impart to them, as far as may he in your power with divine assistauce, the religious, moral and intellectual education which you yourselves received from your Alma Mater. The remuneration for even such teaching is uncertain, and may be very small. But let not that discourage you. Your work is of vital importance. The treasuries of the Southern States are, I am told, nearly empty. But you must try to induce the colored people to put their own shoulders to the wheel. We set a higher value upon what we pay for, than upon what is given to us. But, you will reply, they are too poor to pay for the education of their children. If they would give up whisky and tobacco, they would, in most cases, have the needful money. They do not calculate what the smal sums they spend daily in the unnecessary gratification of their appetites and their love of excitement, amount to in a month. You, on your part, must cultivate a missionary spirit, and he willing to deny yourselves for the general good. If I were asked what was the prevailing spirit that characterized the essays to which I have listened at the Anniversary Exercises I have attended for the last five years, the productions of your own minds, the outpouring of your own hearts, I would reply, "It was an earnest resolva to benefit your people, to give to them the blessings that had heen hestowed upon you."

There are not a few among you who would gladly go to Africa to carry the good news of salvation to her benighted people, and to labor to Christianize and civilize them. But, my dear friends, there is an Africa here at your very doors; heathen peoplo in great darkness, who need to ho enlightened, and whom you can reach without exposing your lives to storms of the ocean, the diseases of an unhealthy climate, and the numherless difficulties and dangers af an uaknown country, and also without the lass of time and the labor required to learn a new language. Africa calls far help, and I hape some of you will, at the right time, respand to her call; but at present, there is ample work for all of yau in this country, and in your own neighhorhoods.

Do not think it a waste of time to make friendly visits to the parents of your pupils; converse with them, kindly and withaut an assumption of superiority, upon the advantages of education; acquaint them with your plans; try to arouse sone enthusiasm in their minds; invite them ta come to your schoolroom occasionally in the evening, and read or talk to them about men wha have, with few opportunities, accamplished great things; have, as often as once in twa ar three months, an examination of your pupils, or an exhibition of their progress, to which their parents shall be invited. Make your school so attractive that your pupils will be not only unwilling to be absent themselves, but will volunterily make an effort to induce all their young friends to attend with them. Resolve to succeed, and you will succeed. ~ Let the three P's, Prayer, Patience and Perseverance, he your constant helpers; Prayer for Divine wisdom, Patience under triuls and difficulties, and Perseverance in effort.

When you turn your eyes toward Haupton, you will feel as you have never felt before. The sunshine, not in one home only, but all over those broad fields, is dimaed by the shadow of a great affliction, the death of your honored Principal's lovely and beloved wife. Although you may not huve words to express the sympathy which you feel, your prayers will briag comfort to his stricken heart, and the diligent performance of *your* work will cheer him in *his* labors of faith and love.

I am your sincere friend, M. A. L.

LETTERS FROM HAMPTON GRADUATES.

MECKLENBURG Co., VA.

Dear Teacher:—Since I left Hampton I have taught two terms, and now half through my third one. Upon the whole, I have gotten on very well with the people, both white and colored, aad I have made a great maay friends with the people, which is a great help to ane.

I read the Workman very attractively when I get it, and especially letters from graduates; and I often see where they speak of the white people encouraging them in their work. I am glad to say that the white people in this county are very kind, and seem to be proud of the efforts being made by the colored people of this county to raise themselves from where slavery left them.

Some of the very first families of this place have called on my school very often, and seemed to be pleased at the recliations, and when they left my school-house, said that they were surprised to see such learning among the colored children. In this county there are fourteen colored schools, nearly all taught by colored teachers, aad as far as I can judge, I think the progress made by the children is very cheering indeed. The schools have all been opened with very good attendance, to the exception of three or four.

The people are getting on quite well in this part of the state, considering the hard times.

I received the *Educational Journal*, for which I am much obliged to you. I read it with much care, and I am sure it will he of much value to me in my work. I gave it to Mr. and Mrs. W. to read; they said "that it was very useful to them also."

Yours very respectfully, F.

The daily reading of the important news of the day to the school, with proper explanations, has been found of the greatest use at Hampton Institute, in rousing the minds of students to an intelligent interest in what is going on around them in the world. We are glad to see that some of our graduate teachers are carrying the custom into their own schools, as far as possible. The young man who writes the following letter is an earnest worker, with a due appreciation of the breadth of his work.

BEDFORD CO., VA.

Dear Teacher:—I have closed my large school, which gave an average monthly enrollment of seventy. Owiag to the paralyzed condition of business and the uncertainty of money matters, this township has closed its schools at the expiration of five, instead of seven months, as heretofore. I hope you will not consider me egotistic in giving you a brief history of my work here.

This is my third session here. I found the most advanced pupils in Holmes' Fourth and Fifth Readers, and as far as "compressibility" in the speller. Their reading was as sounding brass and tinkling cymbals, for it conveyed nothing to the hearer and was too hard for the reader Arithmetic and Geography were as little known as the classics. Two were studying Grammar, and none of the tables were known in Arithmetic. I had to re-arrange all the classes. At present, I have several advanced pupils in the Fourth and Fifth Readers, nearly through Venable's Practical Arithmetic, and Maury's Manual of Geography, the second time. They have gone through Mental Arithmetic and completed Magill's History af Virginia. Seventeen are studying Harvey's Grammar. I have several good spellers and very good writers. Map-drawiag is also encouraged. Twa of my pupils have passed creditable examinatinas for teachers, and expect to teach aext sessiaa to enable them to take a course at Hampton. I made it a part of my daily programme to read and comment upon the topics of the day. I would explain and simplify what I read as best I could, with a desire to inspire them to read something besides text-books. Some kind friends up North and at Hampton have been sending me religious papers and tracts. It was a pleasure for me ta distribute them among the pupils. Sometimes, after they had had them a few days, I would call upon them alternately to state ta the school what they had read in the papers. They would state so readily and intelligently that I was encouraged in my work.

My school was second in number to the largest in the county. It was too large for one teacher and too much work for a $30.00 salary, which is all the colored teachers get in this township; while the whites get $40.00 per month, with schools not more than one-third, or half as large. There are six or seven white, and four colored schools in this towaship There is an increasing interest among the colored people for education.

The future of the race depends mostly upon parent, teacher and preacher. They must co-operate, especially the latter two. The need of an educated ministry is paramount. A sentiment is favor of educated ministers and against sensational preaching is increasing. I meet with the people in their meetings and sometimes try to explain religion to them, believing, as I do, that it is a moral science or principls implanted in the heart of man, actuating as it does the whole man. Prayer-meetings last from two and a-half to three hours.

As many as twelve families within a mils of my school have homes of their own, owning from five to two hundred and fifty acres of land. The free use of whisky is still a bane and curse to many, though there is a marked difference in its use, wrought by the "Moffet Peach Bill," pressure of the times, and sad experiences.

No teacher that compreheads his position can confine himself to any text-book, for the people need that kind of education that encompasses all the details of life. Late in the spring and all the summer the children attead market, which is only seven miles off. If the girls do not attend school while they are under ten and twelve years of age, they learn but little, for a notion to marry diverts their minds from study. The young men who are out of school seem to be crystallized, for they have no desire to study books. Politics, with a great many, seem to be a something of the past, for very few vote, unless in a State or national election.

I am proud that the school has a representative in Africa. I am teaching a small private school at this time.

Give my love to all the teachers.

I am yours sincerely, H.

The following letter graphically relates the first experience in teaching of an under-graduate who is honorably working her way through the school:

VA, *March* 27, 1878.

Dear Teacher:—I know that you have thought that I was never going to write to you; but no, dear teacher, I have often thought of you and your great kindness toward me, and I do really thank you for all you have done for me.

I must say, although this is the first time I ever taught, I find more real pleasure in it than anything else I ever did in my life. I never thought teaching would be so nice. Really, I do think I am doing the work I was made for. I am at my mission. I have a very cozy little school-house about forty yards from the main road, with four little windows, a nice little stove, a table and chair,—which makes my school-room look very nice indeed. The first month I opened school I had 58 pupils on roll; second month, 73 on roll; third month, which is this month, 68 on roll. I guess I have about 50 pupils every day. When I first came into the school-room and took my place as teacher, you can't imagine how funny I did feel; the children looked at me and I at them. Some were very poorly clad which made me feel very sorry for them. I looked around, and when I found myself, I was in a deep reverie of thought, thinking how I could start, as to open the dear little minds. I went to work and put my mind to it, and to-night I do feel as though I have done some little good.

When I first opened school I had a lot of children who never came to school before and did not know the Alphabet. Now I have only a few in the Primer; those that were in the Primer have taken up First Readers, and so on. I have three different classes, viz.: Junior, Middle and Senior. The class I call my Senior class is now in Addition of fractions. When I commenced school three months ago, they were in Long Division. I have a class which is in Division. The children seem to learn fast, and they seem interested. I whip like smoke, too. I did not think I would whip any when I first came out here, but the pupils needed it so much that I could not help from whipping them. I make my rules, and when they are violated I whip the one who does it. I don't like to whip, but I tell them if whipping will make them learn, I will surely give it to them; and it does all the good in the world. One thing I feel proud of: I think all of my pupils love me, which makes me feel happy.

I have been teaching night school for grown people, and they seem to like it very much indeed. On the whole, the people seem to like me a great deal. But they speak about me very much indeed, because I don't join with them in their prayer-meetings, and get happy and shout; they say I have not any religion. But I tell them I consider getting up and getting happy and kicking up so, *ignorance;* and I don't join in anything I consider degrading, no, not at all. They then call me selfish. I have a lot to contend with in that way; it goes very hard with me. They look for me to do a lot of things their teacher did they had before me which I think were very unnecessary, and I don't do them myself. It is very hard for a teacher to do just as the one did before her. I have a lot to stand on that account. The people are very ignorant, and they seem to think no one knows anything but themselves; they have the old ways in them.

I have only two months to teach, and I would like to go North, if I could, and stay until October, and then come again and take the same school. But the children have not books to learn out of; they were very proud of the papers you gave me for them. If you have any books or papers which you would think would be good for them, I would thank you for them.

Dear Miss L., I hope you will give me any good advice you think would be good for me in teaching. I hope to hear from you soon. I have not received any money yet; but as I get my money, I shall try and send some of it to the General to help pay my debt. I get $20 per month. I don't know whether I shall get this money or orders. I should like to see you all at Hampton very much. The many lovely instructions I received while there I have ever found a guide for me.

I must bring my long and uninteresting letter to a close. Hoping to hear from you soon, and that the good Lord will bless you,

I am your happy pupil, M.

THE RETURN HOME.

A PICTURE FOR THE CHILDREN TO STUDY.

All children are fond of pictures. Indeed, I think I might say, that all grown people are fond of them too. And, as we have said before in this paper, one excellent way to teach children is by pictures. Take a simple one at first in which there is not enough to confuse them, and let them pick out everything they can see in it.

This is a small picture, yet we can find enough in it to talk about. Now, children, what do you see in it? A gentlemen and two ladies? Would it sound better to say, two ladies and a gentleman? Notice, and you will find that people generally put the ladies first; that is done for politeness. What else do you see? A chair, a picture, a church. Is the church in the house? Then you see it through the—what? I see something else—the name hegins with s, there are several of them, one above the other; can you tell what they are? And I see some round things on the s. The name hegins with p. What are they.

Now can your bright little eyes see any thing else in the picture that I have not seen?

Now tell me about the things. What kind of a chair is it? Would you like to sit in a chair like that? Are both the ladies of the same age? How old do you think the old lady is? What is she getting up for? Does she look glad or sorry? Does she look surprised? How does the young man look? What makes them look so, do you think? Do you think the young man is just coming home, or only coming to say good-hye before he goes away? Would the old lady look as she does if he were going away? Do you think he is any relation of hers? Who do you think, is that other lady?

Whose portrait, do you think, is that on the wall? Do you know what a portrait is?

Now look through the door at the church; does it look small or large? Is a church really smaller than a door? What makes it look small? Look through the window—not in the picture, hut a real window, and look at the first house or tree you see. Does it look large or small? Hold up your hand before your face. Does your hand cover the house or the tree so that you can't see it? Is is really smaller than your hand? Now mark on the window how large thg house or tree you are looking at is—how large a part of the window it takes up. Now try it with a house or tree farther off. Does it take up a larger or smaller part of the window than the first one? Now try one off farther still. So, the farther off any thing is, does it look larger, or smaller?

Now, do you think you can tell me the story of the picture, or shall I tell you what I think it is. You tell your story first, and then I will tell mine. We can hegin.

Once there was an old lady—

Christ has to prepare a home for us. Are we getting ready for tho house?

One man said to another, "Which is the heavier,—a quart of rum, or a quart of water?"—"Rum, most assuredly; for I saw a man who weighs two hnadred pounds staggering under a quart of rum, whon he could have carried a gallon of water with ease."

CAPITAL.

BY T. T. BRYCE.

CRAZY COMMUNISTS—WHAT CAPITAL IS—CAPITAL'S DIET—SAVING IS OAINING—ALL MONEY IS CAPITAL, BUT ALL CAPITAL NOT MONEY—"CAPITALIST CLASS"—DIFFERENCE BETWEEN MEN AND BEES—CAPITAL A COWARD—PRODUCTION THE OFFSPRING OF CAPITAL AND LABOR—LIBERTY OF LABOR AND LAW OF LOANS—CREDIT'S COMPOSITION—UNEQUAL DIVISION OF CAPITAL—EVERY MAN FOR HIMSELF, YET BY HIMSELF HELPLESS—POLITICAL ECONOMY A SCIENCE, NOT A POEM—ONLY GENERAL TRUTHS HAVE GENERAL LAWS—WHAT WOULD BE WITHOUT CAPITAL.

I. A wave of lunacy, such as seems to overflow every country sometime in its history, is now disturbing the political atmosphere of the United States; and such absurd cries as "Property is robbery," and "Capital a crime," are mottoes of a party, that is respectable only in numbers, and really dangerous only to the ignorant. This form of lunacy is not a native disease, but it exists within our borders, and no amount of quarantining has served to check its importation. The malady originates in knavery, and, like the physical diseases, Yellow Fever and Cholera, flourishes best with ignorance and filth as surroundings. Mental sickness of this form is commonly called "Communism," "Socialism," or "Kearnyism," and is an interesting social study; but the object of this paper is not to discuss disease, or its symptoms, but to briefly consider what Capital really is, its uses, its nature, and necessity.

II. Going to the root of the matter, capital means "the head" or source; and when we likea capital and labor to the head and hands of the industrial body, the simile is uncommonly apt. I would define capital as anything of value, which has been saved, and from the use of which a profit may be had; or, to put it in a nut-shell, *any means of profit saved.* The bottom idea of capital is, that somebody has *saved* something. If nobody had ever abstained from the gratification of present desires, in order to be able to satisfy some future want, there would be no such thing as capital. A capitalist, then, is not the terrible ghoul painted by demagogues, who daily devours working men and women, but simply one, who has something that has been saved, either by himself or someone else. The origin of all capital is abstinence, and until self-control becoma a vice, capital and crime will not be synonyms.

III. Capital is not an element, but a product, and labor its prime factor. Man had to labor before he could have anything to save; and the height of absurdity is trod by those would-be-philosophers, who smear labor with fulsome flattery, and damn its product, capital, to depths unfathomed. If two men earn equal wages, and one save a dime a week, while the other spends every cent in the gratification of present desires, the condition of the two at the year's end will be different. One will be a capitalist to the extent of five dollars and twenty cents, while the other will not. This capitalist may exchange bis fifty-two dimes for a boat, a chest of tools, a plow, or anything else he may see fit, and be a capitalist so long as he has something *saved*, from the use of which a profit may he had.

IV. Money is only one of the myriad forms of capital, and is no more the whole of capital, than Hampton Roads is the Atlentic Ocean. This idea is not half often enough shaken to the surface, and too many people, consciously or unconsciously, confound all capital with pieces of gold or silver, with bank bills, or government promises to pay. Old Jupiter, with all his masquerading, never assumed a thousandth of the forms that capital takes. Farms, factories, ships, stocks, railways, bonds, tools, money—are all forms of capital; indeed, any material thing that has been saved, and is saleable, is a form of capital.

V. In a recent paper on "Labor," it was pointed out that the expression, "laboring classes," failed to mark eny distinct division of society. "Capitalist class" fails almost as signally; for a man, if he has only an extra shirt, is to that extent a capitalist; and any creature who, in the ordinary course of events, has absolutely nothing saved, that is salable, is fitter to be classed with beasts than human beings. The desire to save, and the willingness to sacrifice present indulgences to provide against future wants, is an attribute of man aloae. The making of such provision by tha lower animals, as hy bees and beavers, comes from instinct, not from reason. A young hee, which has never seen a snow-flake, will make and save honey as steadily as if it had lived through many a frosty night. The extent of a netion's savings is a pretty sure criterion of its civilization; the lower in the social scale a nation or trihe may be, the less capital, or things asved will be found in it. Only in the most civilized countries do we find much capital in many shapes.

VI. Of all timid things, capital ie the most timid; it ever seeks to be surrounded by strong laws that can be quickly enforced; and at the sound of war or riot, promptly seeks to change its form and abiding place. There must be tranquillity in any locality that invites capital, or tha invitation will not be accepted. A man will risk his life, perhaps, in a country where he would not buy a farm, nor build a factory; and the summary execution of writs issued from Judge Lynch's Courts is not the kind of strong law that capital likes. Once frightened, capital is slow to again "screw its courage to the sticking point." There are today as many promising ventures, as there were before the panic of 1873; yet capital, not having recovered from that fright, regards them with indifference, and nestles in the hosom of comparative safety, rather than in the lap of even prudent venture.

VII. While capital ie always a product, it is also always a means to further ends; to realize such ends, it must be united with present labor, for capital by itself is as helpless as a finless fish. A plane, a hoe, or a fish-hook, is a form of capital, hut utterly fruitless unless united with buman effort. Labor by itself is as sterils as capital; but from the union of the two come all the betterments of society. All production equals labor multiplied by capital; cut out either factor, and the result can never be production. Capital is the result of efforts in the past—canned labor, so to speak; labor is present endeavor with an object in the future; while credit is the shadow of labor yet to be performed, or of capital yet to ha creeted.

VIII. Liberty of labor is guaranteed in this country; so is liberty of capital. A

THE RETURN HOME.

man may lahor with the peaceful plow in almost perfect safety, or may risk his life in making nitroglycerine. So, too, may capital cuddle in the almost absolute safety of a government bond, or blindly venture into the wildest schemes. No man has the right to interfere with either. Labor ever seeks to get the most for itself, that is, the best wages: so does capital seek the best (not always the highest) interest. The degree of risk taken hy either enters into the return demanded. A nurse, to take care of a Yellow Fever patient, demands and gets more than one taking care of a healthy child. A sum of money lent on undoubted security earns less interest, than if the risk be great. The law of loans is a very simple one. "The rate of intercst varies inversely as the security." The security is the sum of the things pledged or collateral, plus the credit of the borrower. If the collateral he very large, the amount of personal credit need he but small; if the collateral be very small, the amount of personal credit must ha large. In loans where direct collateral is zero, as in a Government hond, the credit must bc high, for it is all the security a lender has. Credit, too, consists of two parts: first, in one's disposition or tendency to do right; second, in one's capacity to use things horrowed to advantage. This second item in the sum of credit is an important one, for no man or State known to lack capacity to use well the thing he or it desires to borrow, can horrow on favorahle terms. The first item of crcdit, that is, tha teadency to do right, must he established hy dceds, not words. The honor of a state is more accurately indicated hy the market price of its bonds, than by the eloquence of its orators.

IX. The division of capital among men is as varied as their dosires and powers; and on these diversities the whole world moves. Perfect equality would he perfect stagnation. If all men were equally good lawyers, where would be the clients? If all were merchents with equal stocks, where would he the customers? If all were equally good preachers, where would be the congregations? Indeed, if it were not for the diversity of men's tastes and powers, where would anything be? The world and its people might as well return to chaos, and in universal nothingness find the universal equality of property preached hy the communist, and practiced hy the highwayman.

X. That some men should have more capital than others is a necessity from the very nature of things; it is no more unjust, than that one man should he stronger, taller, or more healthy than another. The majority of people accept such, as the natural state of things; and the minority, who decline to accept it, are found among the vicious, who have squandered all they had, the improvident, who never have saved anything, and the lazy, who never labor for more than mere existence. Capital and labor are united in wedlock, and all forms of production are their offspring,—but their marrisge is no affair of the heart, it is wholly of convenience. You will not pay a man a dollar for ten hours' work, that you can have done equally well for seventy cents; neither will you give ten hours' work for six pounds of sugar, if six hours' work will buy it. Whenever capital and labor exchange themselves one for anotber, rest assured, each ona will make tha best possihle hargain for itself. Political economy bas nothing whatever to do with tha affections, and any attempt to weave sentiment into an economic web, always results in a fahric, that will neither wash nor wear, fair as its surface may seem. The price of capital and lahor depends on demand and supply; they are mutually dependent, and that is all about it. They are parts of an exact science, with no more poetry about it than there is in tha multiplication table. No man is ever so content with the pay received for the use of bis hrain, muscles or capital, that he would not like to receive a little more; this feeling is universal, and will he, while men are made of the materials they now are. Charles Dickens' picture of Oliver asking for "more" was only a miniature of sociaty at larga.

XI. As before etated, capital is anything saved that is capahle of producing a profit; a ebisel is as mueh a form of capital as a thousand gold dollars; and if we attempt to lay down laws to rula capital in general, they must be genaral and include all capital; thay must apply to tha tools of the village-smith as well as to tha millions of tbe Bank of England It is on this rock that the ignorant agitators of tbe labor question split; they try to divide society into two classes, laborers and capitalists; but as no such divisions exist, their conclusions are as impotent as their premises are faulty. No two of them agree where the line should he drawn; ona would draw it between those who have bonds, and those who have not; while another would regard the ownership of machinery as the dividing line; and others still would regard those who hav more than themselvee as capitalesists. The great difficulty that confronts the believers in this earthquake doctrine, that all property should be avanly dividad, is that nobody will avar want to "divide down," as the saying is,—that is, the man witb ten centa will not want to divide with the man with only five; nor ha with half a dozeu, who have nothing.

XII. If the dreams of those who would dastroy all capital could be realized, the eun would rise on the world's people, naked, homeless, foodless, and with nothing saved, not avan seed to plaut. Compare such a picture with the world as it is, and a faint conception can be formed of the use and necessity of capital.

CIVILIZING THE RED MEN.

We extract from the Washingtoa *Star* the following letter on Indians. The SOUTHERN WORKMAN will hereafter publish informatioa on the Indiaa Question aad bege its friends for facts in that liae.

AN EPISCOPAL MINISTER ON INDIAN LANOUAOES AND CUSTOMS.

The following extracts are from a letter received by the Rev. Alfred Holmead, of this city, from the Rev. J. Owen Dorsey, who is now at the Omaha Indian agency, Nebraska, making philological investigation into the languages of these and neighboring Indians:—

"We left the Omaha agency July 31st and reached Winnchago agency in two hours. There I found myself among Indians speaking a strange tongue. The Dakotas, Ponkas and Omahas call them 'Big Voices.' Nearly all the men wear citizens' clothing and many of them understand a little English. All the families have had houses huilt for them. Fifty of these bave brick basements, the upper stories heing frame. The Indians do not like that kind of a residence; so very few are inhabited. Instead, the upper stories are used as granaries, and the basements have heea converted into stables, while tha family occupy their tent, at a short distance from tha house. The other houses are either frame or brick. Tbose of brick are twn stories high, with a covered porch in front. These, I believe, are the favorites. The Winnebago tents are made of poles covered with hark, rushes, grass, &c. They differ in shape from those used hy Omahas, Ponkas and Dakotas. The former are low and generally ohlong; the letter are high. According to the census roll, tbere are over 1,350 Winnebagoes, while the Omahas are scarcely 1,000. The Winnehagoes are celebrated for their knowledge of horse flesh, all being provided with good ponies, and on Sundays (!) white men frequently engage in horse races with them. I regret to sey that the tribe is not celebrated for honesty. While they do not often steal from white men, they will now and then steal ponies from each other. Very often they take them from the Omahas, run them over into Dakota or Iowa, and sell them to white men, end there is no way of reaching the offenders. The police receive but $5 per month, and they cannot afford to leave the reservation and pursue the thieves. Nor can the agent lend any assistance, for the department insists on economy, and applications for a special fund for such cases have been refused. The Omaha agent is in a similar situation. He knows of Omaha ponies stolen, and cannot lift a hand to aid his people. This is very hard. True, there is the jail. But it is no punishment to be confined in such a building; for there are generally several prisoners together, and their friends come to the wiudow, or barred door, bringing food, changes of clothing, &c., and at night the air resounds with singing and the notes of the Winnebago flute; notes resembling those made by "young America" on the tin horn that has become such a nuisance. In conversing with some persons who have been several years with the tribe I have heard them express a strong desire for regular Sunday services. Such services, they maintain, would be attended. The Indians again and again asked for them. They wish to pattern after the whites in this respect. Could these services be started aud maintained, my informants are sure that a good effect would soon be perceived. One reason why horse stealing is so prevalent is plain. The older men have their dances on stated occasions, when they boast of their exploits, so many ponies stolen, &c., without their being caught in the act. Of course the young men wish to do as well as their elders; so by the next dance they try to steal at least one pony that they too may take part in the dance, and acquire a reputation in tha tribe. While all the men are not guilty of this fault, no one can be indnced to disclose the name of any whom he knows to be guilty. I feel very much interested in this tribe and wish that the way were open for such services as are desired. This agency is under the supervision of the Friends, who have contributed liberally toward the maintenance of tha industrial school, furnishing the clothing for the scholars, &c. The industrial school is a fine brick building four stories high, including a hasement. One wing is for boys, the other for girls. These children are of course hoarded at the school, which has accommodations for 80 pupils. Several of the children can play upon the organ and sing in Englisb. They are taugbt the usual branchee and receive their first lessons in farming, sewing, &c. There are also two day schools on tha reservation. While all the schools are in session it is an easy matter to have a Sunday-school; but during vacation the children are asbamed to come, as their good clothing is not available, having been stored away on shelves in their industrial school building until the reassemhlag of the scholars.

"The farmer, Mr. E. C. Stanton, bas been several years witb the tribe, and altbougb he testifies that they are sbarp at a bargain, and

are prone to horse stealing, he himself has bim he must wait till another day, or—as *legality* of the plan I proposed, but knew that fifty enlisted-men dotted the plain with their

are prone to horse stealing, he himself has suffered no loss, although his barn is frequently open at night.

"The evening of our arrival we noticed several young Winnebagoes playing croquet with the son and daughter of Mr. Stanton. Such games should be encouraged, having a tendency to withdraw the rising generation from the love of their old heathenish games. Indians, too, are very fond of music, and if you refuse to teach them hymns they will cling to their old songs. At the Winnebago schools singing is yet 'in order.' During the vacation this year the organ was taken up to the house of the agent.

"A Vermont gentleman spent part of a day here, and said that he was more than repaid for his trip from the East. He was no longer incredulous as to the possibility of Indians becoming civilized."

NEGRO LABOR.

DITCHING IN NORTH CAROLINA,—NEGRO MEASUREMENT,—SETTLING DISPUTES.

The writer of the following letter is a practical planter, well known to us as a driving, thorough-going, reliable man, who is farming for a living. We hope for more letters from him, and should be glad to hear from others, who will give us, by illustrations from their own experience, clear impressions of the quality and value of negro and other labor, and of the characteristics of this "peculiar people."

EASTERN NORTH CAROLINA, *Sept.* 3, 1878.

Eds. Southern Workman:—

I am directly interested in *southern workmen*, and, although I shall perhaps say less of their spiritual welfare than other contributors, I still trust that some articles treating chiefly of their material and temporal interests will not be out of place in your columns.

I have now been among these people over eight months, and while I see much that is censurable, I have found a great deal that is commendable and promising. I am much more favorably impressed, thus far, than my acquaintance with freedmen at the North had led me to anticipate.

I very soon perceived the vital importance of knowing how to deal with such people; they were selfish and suspicious, displaying very few attractive qualities, and inspiring a new-comer with very little confidence. I could not wonder at this as I learned more of their surroundings and the treatment they so often receive.

DITCH WORK.

I had ditch work for about a score of hands which I let out to several parties by the yard. A new rope chanced to be taken for a line to measure off their work. It was about ten yards long, but was doubled and a stake fastened at either end. How suspiciously the interested ones watched each length of four yards, as it was run off, to see if the stake was just at the mark! But they were not at all careful to have the line drawn *tightly;* that was for the "boss" to watch. Each one for himself and the guardian of his own interests, was their motto. I longed to see them animated by some truer and nobler principle.

MEASURING UP.

In measuring up any piece of ditch I very soon found that there was always sure to be a difference of one rope's length in our reckoning. They all had a way of counting the first length before it was measured—an error which I was forced to call attention to and which all soon understood. But to offset this they never counted the last length at all; so we were sure to differ every time. After patiently measuring a long ditch—tiring their brains with the weary count—and announcing the result as *one hundred and thirty-seven*, it was discouraging to hear me dispute it. It was sure to awaken instant opposition and a firm resolve to stand for their rights and be swindled by no one, white or black. But imagine, if you can, the expression of unutterable astonishment depicted on each countenance at hearing me insist upon *one hundred and thirty-eight* as the correct length. Every time, my count was sure to exceed theirs by one length, and on several short ditches this frequently made a difference of one or two days' work. Nothing could more effectually have inspired them with faith in my honesty of purpose; they declared it was the strangest thing they had ever met with.

AN UNCOMFORTABLE FELLOW.

One evening a stout, active fellow applied for a job at ditching, naming his informant. I needed hands and took him. We readily agreed on the price for a piece of work, and he commenced. He accomplished wonders, and I complimented him accordingly, much to his satisfaction. He soon applied for a new section, but, being otherwise engaged, I told him he must wait till another day, or—as some others had done—occupy a certain ditch till I had time to examine, and run the risk of our being able to agree on the price to be paid. I told one of my family that he was the smartest worker I had met with, but a most uncomfortable fellow for an enemy. I never before saw such a murderous eye and countenance in any man.

He went to the ditch assigned, with a small gang under him, and crowded them along. I examined his work as soon as possible and decided upon its value; but he contended for nearly double the rate of my estimate, and clearly showed that he felt he had the whip hand and was going to force his own price. I repented ever having employed him and pondered well the wisest course to pursue. I silently resolved never again to ignore my first impressions of a stranger.

ARBITRATION.

I presently commanded a halt, and said we must settle for the past before proceeding further. I told them that I only wanted to have justice done in the matter, and was willing to leave it to any fair-minded person to say what was right. I remembered that in a neighboring ditch was an old man who had impressed me with his candor and who was fond of referring to the time when he was justice of the peace, so I at once proposed to call him over and submit the question irrevocably to his arbitration. It was agreed to, and I set them to shouting to call him over, refusing to let them go and bring him lest there should be some collusion, and declining to go myself so as to avoid all suspicion of bribing the umpire.

The old man came over, and I most impartially presented the case. He was proud of the honor we were conferring upon him, yet felt embarrassed lest he should incur the ill-will of one or both of us. He said he would just tell what he should be glad to do the same work for, himself; and so he did, giving precisely the figures I had offered for each section.

I congratulated the fellow on our speedy adjustment of differences, and told him his money was ready. The change that came over him was astonishing. He said he was a working man, always anxious to be busy; and with surprising humility begged the privilege of finishing the job at the same price, which I saw fit to let him do. After this he worked in company with others, or under them, but never seemed disposed to approach me again for any favor; he acted as if ashamed of himself.

MEDDLING WITH THE LINE.

One ditcher who had but newly come, upon finding that his work did not measure as many yards as he had anticipated, boldly insinuated that my line was longer than I claimed. To satisfy him I carefully measured it in his presence, and was greatly surprised to find it fell several inches short of four yards; so that instead of cheating them, I had evidently been wronging myself many dollars. At first, I thought some one had been meddling with the line, but upon close examination, found that it was merely the new cotton rope which had shrunk. I had paid them each week for all the work ready to be measured up, and when this defect in the line was discovered, we were nearing the end of the last week's work I should have for any of them.

I reflected well over the proper course to pursue. I had been animated, from the first, by nothing but a love of justice, and now felt that in equity they should refund me about five per cent of all that had been paid them. So I at length announced that I could not make a final settlement until all their previous work should be accurately measured, and I gave a full explanation of my reasons for so doing. One after another received the decision in disappointed silence; my words seemed unanswerable.

THE FIERCE-EYED DITCHER.

The first one to demur at my conclusions was that same fierce-eyed ditcher I so much disliked. He had an interest in some ditch and demanded instant settlement. He declared that I had no right to go behind the weekly returns to rectify any mistakes, and tried his best at bullying. I firmly reiterated my decision, and told him he was the first to complain. He said every one of the men was as much displeased as himself, only they had not the courage to stand for their rights; with a significant jerk of the head he said, "You will *drop* one of these days." This threat accorded perfectly with my first impressions of the fellow. He had been chafing under his defeat at the ditch arbitration, and now saw a pretext for effectually triumphing over me.

In frankness I may say, that as I thought of the lonely roads I frequently had to travel, and of the expectant loved ones around the evening lamp, his threat gave me some little uneasiness. So I tried to see if there were not some wiser course to pursue, and one that would involve no compromise of principle. I felt that some question might arise as to the *legality* of the plan I proposed, but knew that in point of *equity* I was indisputably in the right.

CHANGE OF BASE.

I resolved upon an entire change of tactics. I turned and paid him his claim, then notified all the others that it was optional with them whether to have their work re-measured or not. I told them that I had tried to act like a *man* in dealing with them, and now was going to notice how many among them were *men*. I was gratified to see that every one of them unhesitatingly voted to have his work re-measured, although feeling certain that it would make him some dollars poorer. One or two who had finished the week before and left, volunteered to return and have all the mistakes rectified. The sequel to all of this is the most gratifying part of the story.

THE MAGIC ROPE.

A suitable pole was prepared, and the work of re-measuring commenced. To the general surprise, the ditch overran the original measurement, instead of falling short. That magic cotton rope was next examined, and lo! it was of a new length. The truth soon dawned upon us. The rope stretched and shrank with the weather, being nearly a foot shorter on a wet day than on a dry one. As measurements were made in all sorts of weather, the thing pretty nearly averaged. Some had been overpaid a few yards, but I let it pass as a reward for their manhood; the work of others overran several yards and they were paid the balance due, which, I trust, convinced them that honesty pays, even if animated by nothing higher than motives of policy. The best of feeling prevailed all around, and recalling that most of that turbulent fellow's, Bills ditches were measured on dry days, they laughed to think how much he must have lost by his foolish course—nor were they long in letting him know of it. Bill occasionally passes now, but never pretends to see me.

That ditch business so established my reputation for fair dealing that no one, since Bill, has ever called it in question; in fact, they now trust all their affairs to me.

B. WISE FREMAN.

NEGRO SOLDIERS.

In the many ways excellent "Record of the Services of the Seventh Regiment, U. S. Colored Troops," recently compiled by an officer of that Regiment, there are accounts, by two of its officers, of an attack made on the 29th of September, 1864, by four companies of that command, led by white officers, upon Fort Gilmer, north of the James River, before Richmond. We quote:—

"Companies C, D, G and K were placed under command of Capt. Weiss, who, when he received the order to charge, replied, 'what! take a fort with a skirmish line?' and then added, 'I will try, but it can't be done.' What followed can best be described by quoting his own words:

"Capt. Weiss says: 'I at once, about 1 P. M., ordered the four companies on the right of the regiment, C, D, G and K, twenty-five or thirty paces to the front, where a slight depression in the ground secured them from the eyes, if not the projectiles, of the enemy. After being deployed by the flank on the right of the second company from the right, the command advanced in ordinary quickstep against the objective point. Emerging from the swale into view, it became at once the target for a seemingly redoubled fire, not only from the fort in front, but also from the one on *its* right. The fire of the latter had been reported silenced, but instead, from its position to the left oblique, it proved even more destructive than that of the one in front.

"'Both forts were most advantageously situated for defense, at the extremity of a plain, variously estimated at from 500 to 700 yards wide, whose dead level surface afforded at no point shelter from view or shot to an assailing party. The forts were connected by a curtain of rifle pits containing a re-entrant angle, thus providing for a reciprocal enfilading fire in case either was attacked.

"'The nature of the ground and the small altitude of the ordnance above the level of the plain also made the fire in the nature of a ricochet.

"'As the party advanced the enemy's shell and shrapnel were exchanged for grape and canister, followed soon by a lively rattle of musketry. When within range of the latter, and after having traversed about three-fourths of the distance, the order to charge was given and obeyed with an alacrity that seemed to make the execution almost precede the order. For a moment, judging from the shocking of their fire, the enemy seemed to be affected by a panicky astonishment, but soon recovering, they opened again with canister and musketry, which, at the shorter range, tore through the ranks with deadlier effect. Capt. Smith and Lieut. Prime, both of Company G, have fell grievously wounded, while forty or fifty enlisted-men dotted the plain with their prostrate forms.

"'In a few minutes the ditch of the fort was reached. It was some six or seven feet deep and ten or twelve wide, the excavated material sufficing for the embankments of the fort. Some 120 men and officers precipitated themselves into it, many losing their lives at its very edge. After a short breathing spell men were helped up the exterior slope of the parapet on the shoulders of others, and fifty or sixty being thus disposed an attempt was made to storm the fort. At the signal nearly all rose, but the enemy, lying securely sheltered behind the interior slope, the muzzles of their guns almost touching the storming party, received the latter with a crushing fire, sending many into the ditch below shot through the brain or breast. Several other attempts were made with like result, till at last forty or fifty of the assailants were writhing in the ditch or resting forever.

"'The defense having been obviously reinforced meanwhile from other points not so directly attacked, and having armed the gunners with muskets, it was considered impolitic to attempt another storm with the now greatly reduced force on hand, especially as the cessation of the artillery fire of the fort was considered a sufficient hint to the commander of the Union forces that the attacking party had come to close quarters and were proper subjects for reinforcements. No signs, however, of the latter appearing, it was decided to surrender, especially as the rebels had now commenced to roll lighted shells among the stormers, against which there was no defense, thus inviting demoralization. Seven officers, Capts. Weiss and McCarty, Lieuts. Sherman, Mack, Spinney, Ferguson and Eler, and from seventy to eighty enlisted-men, delivered up their arms to an enemy gallant enough to have fought for a better cause.

"'Many, in mounting the parapet, could not help taking a last mournful look on their dead comrades in the ditch, whose soldierly qualities had endeared them to their best affections; and many, without for a moment selfishly looking at their own dark future, were oppressed with inexpressible sadness when reflecting on the immensity of the sacrifice and the deplorableness of the result. It was a time for manly tears.'

Lieut. Spinney gives the following account of the charges against Fort Gilmer:

"'The charge was made in quick time, in open order of about three paces, until we could plainly see the enemy; then the order was given by Capt. Weiss to "double quick," which was promptly obeyed, the line preserving its order as upon drill. Upon arriving at the ditch there was no wavering, but every man jumped into the trap from which but one man returned that day (George W. Washington, Company D.)

"'Upon looking about us after getting into the ditch we found there was but one face where the enemy could not touch us, so all the survivors rallied at that face. Then commenced a scene which will always be very fresh in my memory.

"'Capt. Weiss gave orders to raise men upon the parapet, which was done by two men assisting one to climb. Capt. Weiss, having from thirty to forty men up, attempted to gain the inside of the fort, but he with all of his storming party were knocked back, either killed or wounded, into the ditch. A second attempt was made with the same result, Lieut. Ferguson being wounded by a bullet across the top of his head. A third attempt was made with no better success.

"'The enemy during this time had been rolling shell upon us, and calling upon us to surrender, which was answered by some of the men in the words, "we will show you how to surrender," at the same time rising and firing into the fort. One of those men I remember to have been Perry Wallace, Company D.

"'Upon a consultation of the officers who were in the ditch, it was decided to surrender what was left of the command. I was still upon the face of the parapet, when Lieut. Sherman passed me a handkerchief which I raised upon the point of my sword. But the rebels, fearing it was done only to gain a foothold, would not take notice of it, but called upon me to come in, which I did, and met with a warm reception at their hands, being plucked of all they could lay hands upon. An adjutant of an Alabama regiment coming up, ordered his men to return to me what they had taken, but this was not done, however. I stated that our men had disarmed themselves and were ready to give up the hopeless struggle. Still they would not believe me, but made me mount the parapet first, when they had the courage to do so themselves, when the remnant of the four companies marched into the fort.

"'The march to Richmond was one continued insult from the troops that were hurrying to the front; one man being determined to kill Capt. Weiss, whom he thought was not humble enough. The female portion of the inhabitants were also very insolent.'" [Capt. Weiss, the hero of the attack, in another account says, "The kinder behaviour of that

part of the guard which had participated in the action was suggestive of the freemasonry that exists between brave fellows to whatever side belonging."—EDS.]

"'Upon arriving at Libby Prison the officer in charge asked the commander of our

NEWS OF THE MONTH.

part of the guard which had participated in the action was suggestive of the freemasonry that exists between brave fellows to whatever side belonging."—En.]

"'Upon arriving at Libby Prison the officer in charge asked the commander of our guard if the "niggers" would fight. His answer was, "by G—d! if you had been there you would have thought so. They marched up just as if they were on drill, not firing a shot."

"'After being lodged in Libby, Salisbury, and Danville prisons, we were returned to Richmond about February 17th, paroled on the 21st, and reached our lines on the 22d.'

"An article in the New York *Herald* of November 4th, 1864, copied from a rebel newspaper, arguing for the arming of slaves, has in it the following passage:

"'But A. B. says that negroes will not fight. We have before us a letter from a distinguished general (we wish we were at liberty to use his name and influence) who says, "Fort Gilmer proved the other day that they would fight. They raised each other on the parapet to be shot as they appeared above."'

"The officer referred to was understood to be Gen. Lee.

"Four companies annihilated, 70 killed, 110 wounded and 129 missing tells the story of Fort Gilmer."

We believe the conduct of these men was as heroic as that of those who charged at Balaklava. "Some one had blundered" in ordering a skirmish line unsupported to charge a fort.

We knew these officers and men well. With such leaders as Capt. Weiss, negro soldiers will fight. The fine success of the Seventh, and of some other colored regiments in the war, was due, not only to ordinary discipline, but to the great efforts of their officers (always white) to make their men manly and intelligent. We quote again from the "Record of the Seventh," to show the kind of work done in that regiment (also in others, but in few so thoroughly,) to show the capability of the negro soldier—a fact tint by the end of the war was fully appreciated by the Confederate authorities.

"In the Seventh thara was, from the beginning, an earnest determination and a common ambition to make the regiment second to none. To this end they labored uncessingly. Not in matters of drill and discipline only, but to remedy, as far as lay in their power, the almost total want of educational advantages among their men. Classes were organized, and, except when military duty prevented, were kept up almost to the day of discharge. The result may ha briefly summed up. The men came to us ignorant of hooks, ignorant in manners, and with little knowledge of and less interest in anything outside their own little plautation world. Few could read—none scarcely could write their names. When the regiment was dishanded nearly all could read; a large percentage could write fairly, and many had acquired considerable kuowledge of the simpler English branches; and, what was of even greater importance, they had learned self-reliance and self-respect, and went back to their homes with views enlarged, sympathies quickened, and their interest in the outside world thoroughly awakened. There were many instances where the longing and the eagerness of men to *learn*—to be able to "wring from books their hidden treasures—was really painful to witness. If our success was not all that could have been wished, it was, to speak frankly, more than we expected in tha beginning, and amply compensated us for our efforts."

There is, we understand, in tha Army, little, if any, confidence in or enthusiasm for the colored regiments now in the service. It has been snid on good authority that they are insubordinate. This state of things is not a surpriss in view of tha peculiar ideas on tha subject of freedom that prevail to some extent among the colored people. Negro employes in any capacity are apt to take harsh words from those in authority, harder than whites in the same position. The onc feels that "it is too much like old times," and sulks; the other thinks "it's all in tha business," and gets a better place when he can.

But officers in command of colored troops have n magnificent opportunity to mould their men almost as they choose; it requires, however, hard work, a genuine Christian interest in nnd sympathy for them, as men who need wise gnidance and help. It is easy to see how they may be a failure; it has been proved that they fought and died like men. Success depends upon their officers; upon rigid military methods, with humnne and many-sided training. Success everywhere is the *man* not the method.

NEWS OF THE MONTH.

FOREIGN.

It is announced from India that an Afghan war is inevitable. The British have 35,000 men at Peshawur, and are daily receiving reinforcements.

It is said that the Russians are fully determined to maintain their administration in Eastern Roumelia during the term of their occupation of Bulgaria.

The Russians claim that the territory between Constantinople and Adrianople is not affected by the Treaty of Berlin; therefore, under the preliminary Treaty of San Stefano, they have a right to occupy it until a definite treaty shall be concluded.

Baker Pasha is to complete the fortifications of Constantinople within two months.

Advices from New Caledonia state that the insurrection is spreading. A further massacre of whites by the natives had occurred. Two companies of marines and two men-of-war have been ordered to New Caledonia from Cochin-China.

Cardial Paul Cullen, Archbishop of Duhlin, is dead. He was born in England in 1803, and was nominated as Cardinal in 1866. His funeral procession embraced ton thousand persons, and it was witnessed by sixty thousand.

Forty thousand Lombard, Italy, peasants have been attacked by pellegra, a malady which, beginning with the skin, impairs the digestion and nervous system, and becomes fatal. It is produced by the habitual consumption of flour made from damaged maize, and by overwork, uncleanliness, and unhealthy dwellings.

The Emperor of Brazil is interested in dealing with the future prospects of the numerous freedmen children of slaves who will be thrown on the government's hands twelve months hence in accordance with the Free Birth law of September 28, 1871. In the province of Rio Janeiro, where there are 370,000 slaves, the number on their children born free since September 28, 1871, is 62,000, of whom 18,300 have died. At the same rate there should now exist in all the Empire 248,000 of these children, and in the year after the 28th of September, 1879, the government could be called upon to receive from the owners of the mothers some 25,000 children—namely, those who had attained eight years, at which age the masters have the option to retain them to twenty-one, paying them small wages and educating them, or to recede from the government a bend carrying six per cent. interest on 840 milreis for thirty years.

The Bank of Scotland closed it doors, defaulting to the amount of £50,000,000. There is much suffering in consequence.

As Alfonso the King of Spain was driving through the street known as the Calle Mayer Oct. 25, a man in a blouse fired a pistol at him. The King was not touched, and continued on his way to the palace amid the acclamntions of the crowd. The desperado was immediately seized by the soldiers and taken to prison.

POLITICAL.

On Tuesday, Oct. 8th elections were held in Ohio, Indiana, Iowa and West Virginia.

In Ohio, the Republican majority on the State ticket is from 8,000 to 10,000. The Congressmen elected are: Democratic, 11; Republicans, 9.

In Indiana the Democratic majority is about 10,000. The Congressional delegation will consist of Democrats, 9; Republicans, 8; and 1 Greenbacker. The Democrats have a majority of 6 in the Legislature on joint ballot.

In Iowa the Republicans have a largely increased majority in the State ticket. The Congressional delegation consists of 7 Republicans and 2 Greenbackers.

West Virginia elected 3 Democratic Congressmen, there being no change in the political complexion of the State.

The following elections are yet to be held: *Nov.* 4th—Mississippi; *Nov.* 5th—Connecticut, Delaware, Florida, Illinois, Kansas, Maryland, Michigan, Minnesota, Missouri, Nebraska, Nevada, New Jersey, New York, North Carolina, Pennsylvania, South Carolina, Tennessee, Texas and Wisconsin.

Oct. 19.—The annual report of General Humphreys, chief of engineers, was submitted to the Secretary of War. In the course of his report he recommends the following amounts, if appropriated by Congress, may be profitably expended: James River, $180,000; Norfolk Harbor, $100,000; Appomattox river, $300,000; Great Kanawha river, $500,000; Little Kanawha, $20,270; Cape Fear river, $50,000; Charleston harbor, $200,000. And other appropriations are recommended for the fur South.

The State Auditor's quarterly report shows the total collection of interest-tax for Louisana State consols for the first nine months of this year to October 1, $430,316. For corresponding period last year it was $318,208.

DOMESTIC.

A terrific cylone swept over the Atlantic coast on the night of Oct. 23d. Great damage was done to shipping and property from Maine to Florida. The ship A. S. Davis, from South America for Norfolk, was totally wrecked within sixty miles of her destination, and nineteen of a crew of twenty perished. The steamer Genl. Huston from New York for Savannah was lost hut her passengers and crew were fortunately rescued. In the Chesapeake Bay the storm was especially severe, scores of small fishing and oystering vessels were badly damaged or wrecked; the steamer Express from Baltimore for Washington was destroyed and sixteen persons drowned, the Florida of the Old Bay Line narrowly escaped a similar fate; the large fish-oil factories of J. S. Darling and O. E. Mallly were considerably injured, and their fishing boats more or less damaged—the Alfaretta of Hampton being completely wrecked, her captain and crew were rescued with difficulty.

In Philadelphia 334 dwellings and stores were unroofed and otherwise injured, and several completely demolished. In addition to these there were badly injured 31 churches, 23 schools, 35 factories and warehouses, 5 hotels, 2 elevators, and 50 other large buildings, such as depots, ferryhouses, mills, and railroad offices involving a loss of hundreds of thousands of dollars. The fatal accidents were six, and those seriously injured number thirteen.

Yellow Fever reports Oct. 28th. NEW ORLEANS, The weather is clear and pleasant. Twenty-one cases and twenty-three deaths were reported during the past twenty-four hours.

MEMPHIS,—Last night was the coldest of the season. Heavy frost fell, and ice lined the gutters this morning. There were six deaths in the city and suburbs.

CAIRO.—There have been no new cases or deaths from yeer since the last report. There was heavy frost this morning. All quarantine restrictions will be removed November 1st.

VICKSBURG.—Ice and black frost last night. The Howards are closing up affairs.

CHATTANOOGA.—One death and one new case—both colored. Ice this morning.

MOBILE.—From noon of the 26th to noon today, 15 new cases and 5 deaths,

The official agricultural reports for October place the average condition of the crop at 96 per cent., a decrease of 4 over the September average. New England, the Middle and Gulf States show a small decline. The South Atlantic States maintain their September condition, while all other sections indicate improvement. The out-turn of the crop will not vary largely from 1,300,000,000 bushels.

The October returns of wheat do not materially change the statistical aspects of the crop. The final returns will not be made until the December returns have been tabulated. The reports from the New England and Middle States indicate a slight advance upon the previous yield. The Gulf States show a still more decided advantage, owing to the superior crop of Texas. The South Atlantic States and the southern inland States show a very heavy decline, which however, is more than compensated by the general increase in the Mississippi Valley and on the Pacific coast. The yelld for the whole will be in advance of last year, and from present indication will exceed 400,000,000 bushels.

The indications favor an out-crop larger than the crop of 1877.

A larger quantity of counterfeit trade-dollars are in circulation in New York.

The exports from Richmond, Va., for the quarter ending Sept. 30th, to Austria, Brazil, Cuba, Denmark, England, France, Germany, Italy, Norway, Sweden, Portugal and Novia Scotia, consisting of tobacco, petroleum, flour, lard, cotton goods, rosin, hnroess, glassware, hoops, staves, hark, wheat, corn, iron, coal, &c., amounted to $1,517,761; which shows a very decided improvement in business.

A terrible railroad disaster occurred on the Old Colony Railroad, near Boston, on Tuesday evening, the 8th inst. The special excursion train of sixteen cars, one a palace car, crowded with from 1,500 to 1,800 people, returning from the Reagan-Davis sculling-race at Silver Lake, Plympton, was thrown from the track by a misplaced switch. Twenty persons were killed and a hundred and thirty injured, some of whom have since died. The cars with the dead and wounded did not reach Boston until 11 o'clock, where they were met by an immense crowd of anxious friends and a heart-rending scene of grief ensued.

The President will soon issue his proclamntion fixing Thursday the 28th of November as Thanksgiving-day.

The Manhattan Savings Bank was entered on Sunday, Oct. 26th, by professional crackamen, who succeeded in carrying off cash and securities to the amount of $3,000,000. The bonds, however, having been registered, will be worthless to the thieves. Many detectives have been employed to work up the case, but no arrests have yet been made.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

CLOTHING

HOUSE.

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always

THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

SOUTHERN WORKMAN

SUPPLEMENT.

NOVEMBER EDITION, 1878.

HAMPTON TRACTS FOR THE PEOPLE,

SANITARY SERIES.

No. I, The Health Laws of Moses.
No. II, Preventable Diseases,
No. III, Duty of Teachers.

The undersigned are about publishing from the Hampton Institute Press, a series of tracts, and leaflets under the above general title. These publications will provide as simply and in as attractive a manner as possible, carefully prepared information upon the subjects connected with healthful living, such as cleanliness, ventilation, drainage, care of children and invalids, preparation of food, etc. They are to be sold for a sum just sufficient to meet the cost of publication and provide for a certain amount of free distribution. The first three of the series are now ready for sale in pamphlet form and may be had by application to Editor "Hampton Tracts," Hampton, Va. The price of either of the three is 5 cents apiece, or $4.00 per hundred for 25 or over, and postage. Samples will be sent on application. The succeeding eight numbers of the series will be published first, in the Southern Workman, and the nine numbers of the paper including the present, are offered for 50 cents by special arrangements with the publisher.

The Editing Committee desire to make arrangements with booksellers to place the tracts upon their counters for the convenience of the people.

They call attention to the subjoined Resolutions of the American Social Science Association, to whom the first three tracts of the series were submitted last March.

Editing Committee. { MRS. M. F. ARMSTRONG, *New York City.* HELEN W. LUDLOW, *Hampton, Va.* STEPHEN SMITH, M. D., *New York City.* S. C. ARMSTRONG, *Hampton, Va.*

AMERICAN SOCIAL SCIENCE ASSOCIATION, 8 Pemberton Square, BOSTON, *June* 8, 1878.

Gen. S. C. Armstrong, Hympton, Va.—My dear Sir: At the general meeting of this Association, in Cincinnati, on the 30th ult., I submitted to the members present the first three numbers of the Hampton Tracts in manuscript, and they were referred to the Executive Committee for consideration. At a meeting of that Committee held in this city to-day, Prof. Pierce in chair, it was unanimously voted, as follows:

"*Resolved*, That the American Social Science Association learns with pleasure of the work undertaken at Hampton, in Virginia, to spread among the people of Virginia, and of the South in general, a knowledge of Sanitary Science popularly set forth; and that from an examination of the three Sanitary Tracts of the proposed series, —viz.: *The Health Laws of Moses, The Duty of Teachers,* and *Preventable Diseases*, the Executive Committee of this Association is persuaded that the important task, thus undertaken, will be well performed. We would therefore commend these Tracts to all readers, at the North as well as at the South, and would recommend their wide distribution in the way best suited to promote the circulation of them."

I take pleasure in communicating this vote to you, and through you to the other members of the Editing Committee.

Yours very truly,

F. B. SANBORN, *Sec'y of the Am. Social Science Ass'n*

PREVENTABLE DISEASES.

In an address, delivered shortly before his death, by the Rev. Charles Kingsley, to an audience composed largely of women, he said, after an earnest appeal in behalf of the neglected children in whose cause he was speaking,

"Lord Shaftesbury told you just now that there were 100,000 preventable deaths in England every year. So it is—we talk of the loss of human life in war—we are the fools of smoke and noise; because there are cannon balls and gunpowder and red coats, and because it costs a great deal of money and makes a great deal of noise in the papers, we think, What so terrible as war! I will tell you what is ten times and ten thousand times more terrible than war, and that is—outraged nature. * * * * * Nature, insidious, inexpressive, silent, sends no war of cannon, no glitter of arms to do her work. * * * * Silently, I say, and insidiously, she goes forth; no—she does not even go forth, she does not step out of her path, but quietly, by the very same laws by which she makes alive, she puts to death. By the very same laws by which every blade of grass grows, and every insect springs to life in the sunbeam, she kills and kills and kills; and is never tired of killing till she has taught man the terrible lesson he is so slow to learn, that Nature is only conquered by obeying her." Mr. Kingsley was an Englishman and he was speaking to English people, but this loss of life, and worse still these lives which drag on through years of helpless suffering, are just as common in America as in England. There are just as many preventable deaths, just as much needless ill-health in America as in any country in the world; indeed, it is sometimes said that our standard of health is below the average, and the terrible fact stares us in the face that every man and woman among us is directly responsible for this. Every woman who reads this, I may almost say, every woman in the United States can, if she likes, save in the next six months, three or four human lives. And it is not only true that this need cost but little time or money, but also that it will in the end be a direct saving of both.

Nothing costs more than illness—the doctor's bills, the nursing, the little necessary luxuries, the loss of the patient's time, all are expensive, and if we confined ourselves to figures alone, it would be easy to show that to invest money, or thought, or labor in anything which prevents illness, is the soundest economy. In these latter days we have begun to find out that a large proportion of our physical suffering is simply a direct punishment for sin. There is, for example, a large class of diseases which are known to physicians as "bad-air diseases," that is, diseases which are directly caused by bad air, and which are never caused by anything else. Now, it is hardly ever necessary for anybody to habitually breathe impure air, and those who do so have usually only themselves to blame for the result.

The first step in the right direction is to understand what makes air impure, the second is to learn how to get rid of or prevent this impurity, while the final effort should be to arrange our houses, our work rooms, our churches, in short, all buildings in which human beings live, so that the air within them can always be kept free from everything which is likely to produce or foster illness of any kind. Of course, there are many forms of diseases of which bad air is not the immediate cause, but there is no kind of illness which is not aggravated by a want of fresh air, while it is undoubtedly the cause, directly and indirectly, of a majority of the diseases of civilized life.

Therefore, in writing of preventable illness, I put the bad air diseases, or what is practically the same thing, the diseases which are caused by a want of fresh air, first upon the list, and shall try to give you such a horror of the dirt and filth which make bad air, and of the ignorance which shuts out fresh air, that however poor, you are, however small your house, or crowded the neighborhood in which you live, you will still try by all the means in your power to be clean yourself and to make the people about you, clean too.

Now everything which is thrown out from the human body is unclean, and becomes at once dangerous to human life. It should never be forgotten that we are constantly poisoning the air about us in a variety of ways, and that it requires constant care to get rid of these various poisons. The breath which we send back from our lungs, has been used and exhausted and has become a poison to all living beings. The pores of the skin are continually giving out moisture, which passes into the air, where you may often recognize its presence by the unpleasant smell which you must have noticed about people who are not in the habit of washing frequently. All the excretions from our bodies, everything which is thrown off as waste matter, that is, as matter which is no longer of use to the body, is, or quickly becomes poisonous; and this sort of poison is spread more quickly by the air than in any other way. We may and do take such poison into our systems in the water we drink or even in the food we eat, and some fevers, cholera and dysenteric diseases are frequently spread in this way, but the air is, in the main, the chief source of danger, and without pure air, health is impossible.

Many great men have, of late, devoted themselves to studying the causes of diseases, and they have almost beyond question, established the fact that all contagious diseases, that is all diseases which can be taken by contact with the sick person, or carried in clothing, or left in bedding, furniture, etc., are caused by germs, that is infinitesimally small living organisms which are thrown off from the body of the sick person. They are found in the breath from the lungs and in the secretions and excretions of the body; in fact, the whole atmosphere surrounding a person who is ill with what we call a contagious disease, as for example, scarlet fever, diphtheria, or measles, is full of these germs which possess the power of multiplying themselves with inconceivable rapidity. Now, it seems to me, that as soon as this is understood, the first impulse of every reasonable person, will be to get rid of these poisonous organisms, to kill them and cleanse the air from their dangerous presence. And yet, it is a painful fact that very few people are willing to take the proper precautions, to do what is necessary, to follow the direction of physicians or other competent authorities in regard to treatment of contagious illnesses.

We are told, and in some of the large cities it has already been proven, that by a careful and intelligent system, epidemics may be stamped out, or at least may be kept in check and prevented from spreading beyond the locality in which they break out.

When, for example, a case of yellow fever or cholera is discovered, (and such a case should be promptly reported to the nearest physician or health-officer,) the patient is if possible, removed at once to a hospital, or if there is no hospital near at hand, to some building or part of a building where he can be properly cared for and kept in strict quarantine. The house in which he was taken ill is cleaned and thoroughly disinfected, that is, carbolic acid, chloride of lime and other substances which have the power of of destroying the life of the disease-germs, are sprinkled freely through the house, walls are whitewashed, carpets taken up and floors scrubbed, bedding and clothing of the patient are washed carefully or burned in short, everything which is likely to hold the contagion is removed, and all that is left is made as clean as soap and water and disinfectants can make it. In houses where there were several cases of fever or diphtheria, I have known the authorities to order the wall-paper to be torn down and very often the sewer pipes are taken up, and the cesspools and drains closed or entirely altered.

It is better on all accounts to take the patient to a hospital, but in case this for one or another reason cannot be done, he should be separated as much as possible from every one except those who have the care of him, and they should use every precaution in going back and forth between the sick-room and the rest of the house.

The sick-room and the patient himself should be kept thoroughly clean, the attendants should see that the air is kept fresh and that plenty of clean water is used, while any vessel used by the patient should have a small quantity of chloride of lime, carbolic acid or some other disinfectant kept in it, and after use should be immediately emptied.

It is of great importance that everything which passes from the bowels of the patient, all water used in washing him, the urine, all expectorated matter etc., should be so disposed of, that they cannot affect the air of the house, and in washing the bed and body-linen or anything which has been used about the patient, great care should be taken that nothing else is washed at the same time or in the same water or tub. This applies also to everything used in feeding or giving medicine, in short, to every thing which is used in and comes out of the sick-room. In case of death the funeral should be as speedy and as private as possible, while from the moment that it is known that the disease is contagious until the patient dies or completely recovers, there should be no communication between him and any one except his nurses. The practice of running in to visit such patients is on all accounts objectionable and should never be allowed by intelligent people. It is not only bad for the patient but is a very common way of spreading the disease. By a little care and decision all this communication can be put a stop to, and by so doing, we close one important channel for the spread of contagion. This care should include not only the incoming of strangers into the household but also the outgoing of members of the household, who should quarantine themselves as much as possible.

I have known working-people who were willing to take the trouble of keeping a suit of clothes in some outhouse or similar place, at a distance from the sick-room, where they would change all their outside clothes, when they went to work in the morning and again when they returned in the evening, so that there should be as little risk as possible of giving the disease from which some member of their own family was suffering, to any of their fellow workmen. And I have known a family in which two of the children were ill with scarlet fever while the third, a baby, was still nursing and was entirely dependent upon its mother. It was certainly difficult to know what to do, but the mother, being an intelligent and conscientious woman, solved the difficulty and probably saved her baby's life. She got a woman to come in and take care of the baby and the house, while she herself, took the two sick children up stairs, allowing no one to go into the sick-room but herself. When it was time to nurse the baby, perhaps three times a day, she would go into an adjoining room, change all her clothes, sponge her whole body with water and soap, and then, dressed in clothes which had never been in the sick room, she would go down and nurse her baby. Of course this would be done only in the case of very contagious diseases, but if more of us were willing to take such precautions there would be fewer deaths from scarlet fever and diphtheria, and an intelligent following out of such a system would certainly be of immense benefit to the human race.

It is also of very great importance that children from an infected house should be kept away from school for several weeks, or until the doctor in attendance pronounces that there is no further danger of contagion, and parents who are not utterly selfish will keep them so far as possible, away from other children. All this of course, sounds very difficult, and I do not mean to tell you that it is anything else, but what I do want you to believe is, that however hard it may be, it is worth doing, because—and you cannot think too seriously of this—it is left for us to choose whether we will go on suffering and letting our children suffer from all this terrible train of contagious diseases, or whether we will, by care, and patience, and intelligence, crush out the poisonous forces and prevent these illnesses which we all so greatly dread! Now, if we choose the latter course, the first thing to do is, as I have said before, to learn what the evil is which we are going to fight, and one of the discoveries which startle us at the outset of our undertaking is, that we are in danger not on one side only, but on many sides.

For example, we have found that a large proportion of preventable diseases are directly contagious, that is, are taken by one person through contact with another, and are spread, so far as we now know, only when the germs of disease thrown off by one person are taken into the system of another. But when we come to look further, we find another large class of diseases which take their rise in uncleanliness or neglect in regard to the surroundings of human dwellings, drains, cess-pools, privies or water-closets, pig-sties, barn-yards, etc.

All these are receptacles for animal matter in a state of decomposition, and some of the gases which are given out during this process of decomposition are exceedingly injurious if inhaled, to any extent, by human beings. Air which is made impure by the presence of these gases cannot be, at any time, wholesome for people to breathe, while in certain states of the atmosphere, or of the human system, they assist directly in producing dysentery, diphtheria, etc. These and other diseases owe their contagious properties to the organic germs of

which I have already spoken, and these germs develop much more rapidly in air which is poisoned by the pres-

LESSONS IN GRAMMAR.

INFINITIVE MODE.

PRESENT. PERFECT.

which I have already spoken, and these germs develop much more rapidly in air which is poisoned by the presence of sewer-gas, or any gas which is the product of decaying animal matter. Besides which, no human being or animal, can breathe such air for any length of time without being injured by it; that is, the general tone of the system will be lowered, and both men and animals become more likely to take contagious diseases when the germs of such disease reach them. It is only fair to say that we do not yet fully understand the relations between impure air or water, and disease, but we know enough of the conditions which cause the latter, to fill thoughtful people with a very great horror of all uncleanliness. To keep our houses and everything about them clean, is absolutely essential if we wish to be well ourselves and to have healthy children; and to do this, a good deal of intelligent work is required. If you live in a city where you have a water supply, you should always take care that the pipes are in perfect order and properly trapped, and wherever there are stationary basins or sinks, you should watch them closely for any unpleasant smell from the drain pipes. Even when there is no such smell the stopper should always be kept in, and it is well to leave a little water in the basins, especially at night, for this prevents, to some extent at least, the foul gases from rising into the rooms and poisoning the dwellers in them. Water-closets in particular, should be kept in thorough order, should be ventilated as thoroughly as possible, and purified by the use, as often as once a week, of some good disinfectant. In the country, where the arrangements of a house are entirely under the control of its owner, the barn yard, pig-sty, privy, etc., should not be too near the house, and should be cleaned regularly and thoroughly, the contents being disposed of, if possible, for manure, as for that purpose they are always of value. As soon as the smell from any one of these places can be noticed in the house, you may be sure there is danger, and when you have once made a beginning in cleaning them regularly, you will not find it so hard as it seems at first. Within the house the first thing to be attended to, is that which is strictly at the foundation, that is, the cellar. This should have a cement floor (which is not expensive) and should be kept perfectly clean—no decaying vegetables or refuse of any kind should be kept in it; the walls should be whitewashed once a year; in short, the cellar should contain nothing which can poison the air of the rest of the house, for it should never be forgotten that the air of the cellar is sure, sooner or later, to become the air of the sitting-room and bed-room.

Then as to the living rooms: I do not think I can say much that you do not already know, and which I need not say at all, if you would only put your knowledge into practice. *Soap and water should be used with a free hand, holes and corners should be swept out with a will, slops emptied always once a day, beds shaken up and aired, and above all, everywhere and always, plenty of fresh air. Don't be afraid to open your window by night or day, and remember that if the climate is so severe or your rooms so small that you can't keep your windows open, there are various simple contrivances which will enable you to get a steady supply of fresh air without the danger of drafts. For example, raise the lower sash a few inches, and fill up the space at the bottom with a stout board that fits it closely: air will then enter through the space in the middle of the window, as be directed up to the ceiling. Or, you can make blinds which will act as ventilators, that is, a piece of stout cloth can be stretched tightly across the window by hooks or on a light iron frame, close to the sash below, but sloping inwards at the top, so that when the window is partly opened, the air will be thrown up to the ceiling. Or again, you can bore through the sash, five or six augur holes, through which air can freely enter, taking care that they slant downwards from the inside, so that even in a driving storm rain cannot enter, and, if you choose, make corks to fit each hole so that you can close them when desirable.

Once more I can fancy that are you saying to your selves, "This is a great deal of trouble to take for a small matter," and I should be very thankful if I could feel sure that you won't at once dismiss the whole subject from your minds—and yet I think that it must be easy for you to see that the reason for taking all this trouble about drains, and sewers, and cellars, and pig-sties and ventilation, is, that it is only in this way that you can secure the necessary supply of fresh air, and I think you must begin to see that without this supply of fresh air, you run the risk of having fevers, dysenteries, and various other acute and sudden illnesses which are caused or fostered by the poison germs thrown off by organic matter in a state of decay.

I wish I could write in letters of fire, the great truth that no human being can be strong and healthy, able to do his or her work well and cheerfully, or able to enjoy life, without a full supply of pure air. It is not only that the diseases which I have already mentioned are caused and fostered by impure air, but that the whole system is enfeebled by it, and therefore falls an easy prey to any and all disease. Consumption, that fatal scourge of our people, is often produced, and always aggravated by bad air, and it is hardly possible to say enough to people who have weak lungs, or throats, as to the vital importance to them of pure air.

Don't live in dirty rooms or houses; don't sleep with closed windows and doors, in unaired beds; don't be afraid of Nature's best food and medicine, pure air. I have told you already, and tell you once again, that it will cost you some trouble, and perhaps some money to get it, but it is money and trouble well invested, for it will save paying for drugs, and doctor's bills, and better still, it will save you and your children from suffering, from weakness, and often from death. Will you not try for yourselves and prove that this is true?

*Receipt for a good cheap soap: 6 pounds common yellow soap; 2 pounds washing soda; 2 oz. borax; 10 quarts water; put it on the stove and keep it hot, (not boiling) until the soap is thoroughly dissolved.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. VII. HAMPTON, VA., DECEMBER, 1878. NO. 12.

CHRISTMAS EVE.

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, } Ed.

While there is the excitement of novelty in the advent of the Indians at Hampton, and more than that the interest of a far-reaching and important experiment in the possibilities of Indian civilization, the work for the colored race continues to be none the less Hampton's main work, in no prejudice. A negro gentleman is admitted to the upper classes of society, there, when, even now, he would be refused by the family of a white coal heaver, here.

Colored men, gentlemen, are entertained by the English aristocracy, where there is a command of wealth, art treasure, and royal connection, far beyond the reach of loudly demands social equality, will be the least worthy of it.

W. N. A.

OFFICIAL REPORT.

GEN. S. ARMSTRONG,
Principal of Hampton Institute:

I have the honor to furnish you the

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, H. W. LUDLOW, } *Editors.*

Terms: ONE DOLLAR a year IN ADVANCE.

Speciman copias sent upon application.
To secure safaty, it is important that moasy should be sent by ohacks, Post-offics orders, or registered letters. Write plainly; giva nama in full, aad nama of Post-office, County, and State to which tha papers are to be sent.
For furthar information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

WITH the January number of the SOUTHERN WORKMAN it will enter upon its eighth year. The two-page supplement will become a four-page cover, and the paper, stitched or pasted, with cut leaves, will present a new appearance and contain more matter. The price will remain the same—one dollar a year.

During the three months of summer the old eight-page form of the paper will be adopted.

The friends of the paper are asked to aid in increasing its circulation. It is the pleasaat custom of some to send annually five or ten dollars for its maintenance.

There is abundant material for the WORKMAN in the educational and industrial interests of the South, especially of freedmen, and in the working of the interestiag experiment in Indian education now being worked out at the Hampton Institute.

THE official statement made by Captain Pratt in another column as to the individual character and circumstances—as far as these could be ascertained—of Hampton's forty-nine new Indian students, will be fouad very readable. It is just such personal touches that give life to a dry official report, and add not only interest, but real value. A test experiment, such as this effort in Indian training at Hampton, should be conducted upon the fairest possible conditions, and it is due to thoss who are watching it, to show them what the conditions are. The signal failurs of some past efforts to educate Indians at the East and return them, the better and not the worse for their learning, to be workers and civilizers among their people iastead of idle swaggerers or dangerous schemers, has thrown discredit upon ths whole project of educating them. It is believed by those who have undertaken tho new effort, that the industrial elcment in the training at Hampton is the essential one which has been wanting in the unsuccessful attempts, and which makes the present one more hopeful. It *is*, therefore, a test experiment, and looks far beyond the immediate results to the sixty-seven Indians who are its subjects, important and far-reaching as these may be. It is satisfactory, therefore, to learn from Captain Pratt's statement that the material to be worked upon is fairly good.

The only drawback to the general fairness of the conditions is felt to be in the small proportion of girls sent, the occasions of which are stated in Captain Pratt's report. It was intended that they should constitute half the whole number. It is useless to talk of civilizing a nation without civilizing its women, and no experiment in Indian education can be successful that does not prove that Indian women can be lifted, intellectually and morally, into a pure and true womanhood. No experiment can be complete that does not give its full shars to this questioa. It is to be hoped that the effort at Hampton may yet be thus perfected.

THE letters from Hampton graduates in this number are particularly fresh and interestiag; and we call especial attention to them.

While there is the excitement of novelty in the advent of the Indians at Hampton, and more than that the interest of a far-reaching and important experiment in the possibilities of Indian civilization, the work for the colored race continues to be none the less Hampton's main work, in no way to be put one side.

THE SOCIAL QUESTION.

The old abolitionist with very decided views, and the Southern fire-eater, quite equally bigoted, were wont to close a discussion on the slavery question in this way: Abolitionist, "The negroes are entitled to the same rights which we have." Fire-eater, "Then, sir, do you mean to say that you are willing to let your sister marry a nigger?" For a score of years, in the press, in the pulpit, on the stump, in the bar-room, in the halls of Congress, the color question has been discussed in the same bigoted, profitless, inconsequential way.

The relations of the whites and blacks have been radically and finally altered by the recent fact of political equality. There remains, however, the question of social equality, which will, for many years to come, be the objective point in all disputes between the two races. There can be no doubt as to the way this question should, and will settle itself. The sensible whites and the sensible blacks will find no difficulty about it whatever. The foolish, ill-mannered whites, and the equally foolish and grossly ignorant blacks, will always be uneasy about it, and provoke useless discussion, and create bitter feeling, as they will do in dealing with any question. It is true that the white race, in America, has been, and now is, prejudiced against the black color of the human skin. Toward black dresses, black shoes, black furniture, there is, not only no prejudice, but even a preference. The hand will be readily covered with a rut or goat skin dyed black, but when the human skin takes that color, some very violent antipathies arise. Recently a distinguished clergyman said to the Hampton students: "We are deeply interested in you. We were children when you were children, and we played together as companions." In the capacity of nurse the black woman was on most intimate terms with white children. When, indeed, did it dawn upon the youthful white that there was an awful gulf betweeu the two races? In spite of the color antagonism, the crossing of the white upon the black race has been so persistently practised that the percentage of those who are purely black is quite small, even in spite of the awful decrees of many States that there shall be no intermarriage between the races. It may be safely said that the antipathy to color is a mere prejudice, strongest where there is the most ignorance, and least where there is the wiest culturc. Twenty years ago Northern men refused to ride in the same horse car with colored people. "For colored people only," was painted on certain cars. And thousands of white people, living in miserable tenements clad in dirty shirts, but gifted with lofty principles, indignantly quit the conveyances, in which the blacks happened to ride, and got themselves sadly into sackcloth and ashes, over the tumbling in of civilization manifested in the awful spectacle of a "nigger riding with white folks."

Now the warning signs "for colored people only" have been takcn down, for the simple reason, that in the due course of time, the prejudice expired, and the whites became quite willing to ride with blacks.

In 1832 a lady opened, in one of the towns of Connecticut, a boarding school for colored girls. The oitizens protested, the town authorities interfered, the Legislature passed a law declaring the school illegal, the trustees of the church of God forbid the girls from entering the church, the mob destroyed the house, and the principal of tho school was cast into jail. Is there, to-day, a town in New England which will object to such a school? In scorcs of towns the white and black children attend the same school. In Europe, where social culture is more advanced than in America, there is little or none of this prejudice. A negro gentleman is admitted to the upper classes of society, there, when, even now, he would be refused by the family of a white coal heaver, here.

Colored men, gentlemen, are entertained by the English aristocracy, where there is a command of wealth, art treasure, and royal connection, far beyond the reach of any American whites, and to which the "first families" of America find most difficult entrance. Mr. and Mrs. Gladstone, recently received at their breakfast table the "jubilee" singers, of Nashville. This prejudice is, however, not on one side only. The Africans pity the white complexion of travellers, passing through the Lost Continent, and the laws of Liberia forbid the whites from holding any property in that State. The distinguished Englishman Canon Rawlinson, in an article published in the November number of the *Princeton Review*, instances, historically, many cases where the white and black race have mingled together. He cites the great Egyptian race, as one made up of Caucasian and negro, and and he advances a most questionable proposition, that the true solution of the difficulty in America lies in mingling the races. "Amalgamation is the true remedy," he writes. It is safe to say, that prejudice against color will finally die out. When this prejudice ends, difficulties will still exist. It is evident that the colored people are already beginning to grasp after that impalpable thing called "social equality." It would he well for them to analyze the matter, and come to, and act upon, just conclusions. It is not a grievance, if they are not invited to the houses of the whites If it is, they share it with the majority of the white people.

In the sense, in which the colored people look at it, there is little social equality amoag the whites. Life, with them, is largely made up of persistent efforts, to obtain social recognition. Fashion and prejudice do strange and absurd things. The black man is not more rigidly excluded from many homes of white mea, than are white men themselves. What are termed the "upper classes" in the large cities of the North and South exclude peremptorily the majority of their fellow citizens from any social recognition. The merchant's clerk looks wistfully at the grand houses from which he is excluded, and devoutly wishes he had entrance there In time, with energy and intelligence, he gains wealth, and builds a grand house of his own, from which he excludes men till they, too have obtalned position and wealth. An English merchant or tradesmen, though he be worth a million is barred out as a rule from any social intercourse with the aristocracy.

In Baltimore, Richmond and Charleston the colored people utterly decline to tolerate among themselves, any general social equality.

It is a mistake, therefore, for colored people to imagine that they only are marked out. and left to the struggle for social equality. They take their chances with the rest of mankind. The whole matter is in a nutshell. True worth, ability education, power in brain or money, and rare qualities will command, generally, the best attention of society.

Mea like to associate with those of their fellows, who bring them pleasure or profit. Educated men and women are, usually, welcome every where. Colored people must accept tbe facts, as they are, and do as other people do. There need be no fear of the future. The laws give them every chance to rise. Every black man holds the ballot, aad is a "sovereign." It may sooa happen that some colored men, by sagacity or industry in trade, will secura large wealtb. If he has money to lead, many white men who "despise the nigger" will follow bim, stick to him, be glad to ride in the same conveyance with him, and dine with him.

A colored *belle* with half a million behind her will fiad many white men quite unprejudiced on the question of color. A negro capitalist with a huadred thousaad at comaand will quickly clear away prejudices. Men who build railroads, and factories will gladly associate with blacks who have money to invest.

Keen wit, genius in music, in oratory, or in the drama, supplemented with good personal babits, make men, acceptable to all people. aad whether the color he white, blue, greea, or black, will make no difference. The antecedents of the colored people put them far behind in the race for this social recognition. It is their misfortune, and they must accept it. Of one thing they may he certain, bo who most loadly demands social equality, will be the least worthy of it. W. N. A.

OFFICIAL REPORT.

GEN. S. ARMSTRONG,
Principal of Hampton Institute:

I have the honor to furnish you the following information in reference to the individual Indians whom the Interior Department has determined to educate at yonr school, brought by me from the different agencies in Dakota. From Fort Berthold you have thirteen. Of these I have a very meagre account. The missionary promised to look up their history and forward it to me at Hampton.

Ka-ru-aach—Sioux Boy—Ree; sixteen years old, aad Tis-cahf-uh—Laughiag Face—Ree; eighteen years old, came to me with the followiag aote:

To Captain Pratt:

This is to certify that Laughiag Face and Karuaach have appeared before Mrs. C. L. Hall with the argent request that I write to you, saying tbat they botb wish to go to the "Grandfather's School" together.

Karuaach talks Sioux or Dakota iaa gusge well. He is half Ree and half Dakota. They say they know that it will be bard, but they are young aad toagh.

Laughiag Face is one of Miss Briggs' best scholars. They take to English.

MRS. HALL.

Koo-nook-te-wau—Shootiag Bear—twenty years old, was recommended by tbs agent as a good boy. He thinks he will do well.

A-hu-ka—White Wolf—Arickaree, twenty years old, recommended by the missioaary and teachers.

Say-ed-da—White Breast—eighteen years old, Mandan.

Ka-what—Bowlegs—twelve years, Mandan, recommended by tbe missioaary snd teachers.

E-corrupt-ta-ba—Man that looks around—eighteen years old, Mandan, recommended as a quiet and industrious young maa; a good subject.

Ari-hotch-kish—Long arm—thirteen years old, Gros Veatre. Ha is the son of Hardhros, secoad chief of the Gros Veatres, probably the most progressive Indiaa at the agency. It was a great sacrifice for himself and his wife to give up tbeir boy. I consider bim a fiae subject for education.

No-wa-tesh—Tom Smith—fourteen years old, half-breed. Brother of tbe interpreter, and very efficient in helpiag to get the youth to come.

Of girls, you have:—

Mary, twenty-five, aad Anna, her daughter, ten years old; Arickarees. Aana is half-caste.

Josephine Malnourie; eigbteen years old; a half-breed.

Sarah Walker, thirteen years old, a half Gros Ventre.

All these girls are recommended by the agent and missionary as proper subjects for educatioa.

The Fort Berthold Indiaas are more aearly self-supportiag than any of the wild tribes whom I have aet. They are aot nomadic, but bave lived in tbs sama village for many years They grow large quantities of corn, potatoes and other vegetables. However, they take very little interest in educational matters. The teachers and missionary find no little difficulty in getting them to sead tbeir children to school and listen to their teachings. They live in very substantial houses aad seem particularly suited for tba climate, it beiag less than a bundred miles below the British line, where tbe winters are very severe. It is the boast of tbe three tribes, tho Arickarees, the Gros Ventres and the Mandans, that they have never killed a white man, bave always been friendly to tbe whites. In all of our wars with tbe Sioux they bave furnisbed scouts and guides for tbe military, and no incoasiderable numher of their young men have beea killed while fighting with our troops agaiast the bostils Sioux.

E. H. Alden is tbe agent, and tbs Rev. C. L. Hall, the missioaary, both of them Coagregatioaal miaisters. Either of tbem will cheerfully furaish any iaformation or sct as a medium of correspondence in reference to tbe youtb from tbeir agency.

From Standing Rock Agency, you bave three boys and one girl:

Nak-a-pa-la—John Cadocte—eighteen years old, is a Yaakton Sioux who has had some privileges of association with tha whites and understands a little English. He is recommended as industrious and apt; has never been to school.

U-hah ke-um-pa—Carries Flying—a Blackfeet Sioux. He is a nephew of a former chief named Gooss. Ha is thoroughly wild, and I bave no iaformation of him; but my observation on the route leads me to think him a most hopeful subject. He is sixteen years old, a large, bold, and fine looking Indiaa.

Puh-ta-chel-la—John Pleats—a Blackfeet Sioux half-breed, eighteen years of age. He has never been at school; has a quiet disposition aad is industrious.

Rosa Pleats, his sister. Her Indian name is Wab-aeech-u-n; half-breed. Sbe is fifteen years old; never at school; is recommended as quiet and promising.

The agent, Father J. A. Stephan, is in heartsympathy with all civilization and Chris-

The above information in regard to tbe youth from Crow Creak Agaacy, comes from tbair most efficient missionary and teachar, Mrs. M. E. Duignn, who was the only person nt the agenay to act, tba agant and missionary being absent as witnssses before a United

always, a warm invitation to visit Hampton and investigate for themselves.

With great respect,

Your ob'd't servant,
R. H. PRATT,
1ST LT., 10TH CAV., U. S. A.

At last, Oct. 31st, Capt. Pratt started witb his wild crew from Yaakton by cars, having come dowa the river on tbs last boat of tha season, and aarrowly escaped a freezing up whicb would have meant indefiaite datsation aad parhaps entire failure. But all dangers were averted or overcome, tho two thousand

Rosa Pleats, his sister. Her Indian name is Wah-seech-u-a; half-braed. She is fifteen yeers old; never et school; is recommended as quiet and promising.

The agent, Fether J. A. Stephan, is in hearty sympathy with all civilization and Christian work, and will cheerfully communicate in reference to the youth from this agency.

From Cheyenne River Agency you heve:

John Robb, seventeen years old, Sens Arc Sioux; has had soms advantages which he appears to have improved. He speaks English quite well. Was two years in Ohio at school—sent there by Mr. Rohb, the trader, and took his neme. His father, White Bull, is a tall, fine looking, clear-headed Indien, and anxious that his children should heve the best influences of civilization.

Henry T. Fisherman, seventeen years old, Two Kettle Sioux, is the son of Charley Fisherman who was the first Indian et that agency to adopt the white man's dress and ways.

Charley is a man of unusual ehility and charscter, and the officer in charge thinks thet the son will prove a credit to the father.

Daniel Chantay Wahneechey, fourteen years old, is the son of Little No-heart, chief of the Minniconjoe Sioux. The officer in charge says: "Little No-heart hes proved himself deserving of all that can be done for him. Ha is a man of a very high order of intelligence and is imbued with the most nohle sentiments and aspirations. He is constantly lahoring with his people, endeavoring to instill into their minds and hearts the nohle ideas, thoughts and longings of his own. Daniel appears very like his father, and I feel assured that he will maks a good and uscful man."

Henry Brown, fourteen years old, is the son of White Horse, who is second to Little No-Heart in importance among the Minniconjoes. The officer in charge says thet he is "a very hright and engaging hoy of unusual ability, medest and meritorious."

Louis Aggeuoughwia; fifteen years old; Minniconjoe Sioux.

Leroy Shutashnay; fourteen years old; a Two Kettle Sioux.

Joseph Wahn; fourteen years old; Minniconjoe Sioux.

Samuel Wahminuyah Luzah; fourteen years old; Minniconjoe Sioux.

Charley Tahtahnkahskah; twelve years old; Sans Arc Sioux.

The officer in charge says of these hoys that they are all personally known to him, are good, hright, healthy and intelligent little fellows, and he helicves that they will make rapid progress. They are selected frem about thirty applicants, and he feels disappointed that I was unable to take the whole thirty.

The agent, Major Theodore Swan, 11th Infantry, Lieut. Geo. L. R. Brown, 11th Infantry, Lieut. Geo. L. R. Brown, 11th Infantry, or the missionary, Rev. Henry Swift, will communicate in regard to the youth from tha Cheyenne River Agency. Lieutenant Brown, the acting agent at the time, was most efficient in collecting tha party, and is in hearty eympathy with the effort and much intereated in the youth from that agency.

From Crow Creek Agency we have five hoys and one girl:

Husansan—Gray Legs—Yankton Sioux; Christian name, Edward Ashley; eighteen years old. Mrs. Duigan, the missionary teacher says of him: "The adopted son of one of our hest Indians, hright hoy and warm-hearted; was in the mission school one year; reads and writes nicely in Dakota.

Mark-pia-mouia—Walking Cloud—nineteen years old; Unkpapa Sioux. He was emong the first that applied to go, and has been quite earnest about it.

Pe-ma-ni—"One who hoots while he walks"—looke about nineteen, age uncertain; Unkpapa Sioux. He is the nephew of Wi-zi, one of the principal and most progressiva chiefs of tha band.

Tu-kan-wi-ca-cha—Old Stone—Christian name, Charley Stone; fourteen years old; the grandson of a chief of Yanktonese, Bone Necklace. His father, Dog-back, is a Christian Indian, has lately taken a farm, and is trying to come to civilization. The hoy is an only son and the pride and hope of his father and mother. It has cost them not a little heart-ache to give him up.

I consider him the most hopeful of those from this agency.

Xienga (prenounced Shoongar)—The Fox—Christien nems, Androw Fox; sixteen years of age. The missionary says: "He has been in tha mission school, and has proved himself loyal to us in various ways. He is a little odd in his manner, hut his heart is all right. He has shown great aptitude in drawing: He is a nephew of the head chief of the Yanktonese, Wi-zi."

Zia-wie—Yellow Hand—Unkpapa Sioux; about fifteen years old. She is the daughter of one of the best Indians at the agency. She was brought to me just at the last momant hy her father, who had been very anxious thnt a youngar child, a son, ehould go to school, hut as he was only seven or aight years old, he was altogether too emall, and he at last concluded to send his daughter. I found both himself and his daughter very much in earnest about it. I should say that eha is a most hopeful eubject.

The above informetion in regard to the youth from Crow Creek Agency, comes from their most officiant missionary and teachar, Mrs. M. E. Duigan, who was the only person at the agency to act, the agent and missionary being absent as witnesses before a United States Court.

From Lower Brula Agency you hava:

Ah-lah—Stepping on—Christian nams. Hanry Rencountre; a Brule Sioux; eighteen years old. His fathar, who is dead, was a half-hraed, which makes Henry three-fourths. He was at school at Yankton Agancy for a tima whare he was instructed in the Dakota language. He is highly spokan of by tha missionary.

Hay-ga-ek-tome — Elk Spider — Christian name, Francis Rencountre; seventeen years old; an orphen. Want to school at Yankton Agency two years. He is no relation to Hanry.

Ha-touch—Loud Voice—Christian name, Joseph Winnehago; sixteen years old; father dead; navar at school He is highly recommended by the missionary.

Wo-ka-sa-ka — Whips — Christiau neme, James Wo-ka-sa-ka; seventeen years old; Brula Sioux. His father is dead. Has been at school, irregularly, four years, exclusively in the Dakota languags.

O-ta-ga—Strong—Christian name, George Bush-otter; fifteen years old. His father was killed in battla. Ha has been to school one year, irregularly. His instruction has been antirely in the Dakota language.

Ze-do; Christian nams. Lezedo Rencountre; sixteen years old; parents living; half-breed; never at school.

Tha hoys from this agency are all very highly spoken of hy tha missionary, himself an aducated Indian thoroughly acquainted with his people. He selected them himself after a full knowledge of what was needed. I have no further information in regard to them, but the missionary has promised to forward me something in regard to their previous history and advantages. What I have said of them here I have obtained from the hoys themselves. Tha missionary, the Rev. L. C. Waller, takes a very deep interest in this effort, and will act as a medium of communication.

The Lower Brula Agency and Crow Creek Agency are hoth under the care of an army officer, Capt. Wm. E. Dougherty, 1st Infantry, who, unfortunately, was absent at tha time of my first visit and until tha day before my second visit to these agencies. From what I saw of him personally on my last visit, and from what I heard of him, he is thoroughly in sympathy with any effort looking to the eduoation and civilization of the Indian, and will cheerfully aid it in any manner.

From tha Yankton Agency, you have eight boys and three girls, all of the Yanctonai Sioux band. The first is,

Georga Dolina, fifteen years old, son of the old chief Dolina, now dead. Ho is three-fourths Indian; was at St. Paul's hoarding school, Yankton Agency, two years; reads and writes in Dakota, and understands some English. Ha is a member of the Episcopal church, and of good character.

Edmund Bishop; fourteen years old; full hlood; son of Running Bull, 1st Liautenant of Sihley's Scouts, a large, hold, influential Indian. Edmund reads in Dakota, has had some advantages at school, and is a good character.

Oscar Brown; thirteen years old; studious; reads Dakota; a good character and very promising hoy; of full hlood. His father is with Sitting Bull.

David Simmons, a half-hreed; his father dead; thirteen years old; hright; speaks and reads English. He has a good character.

Charley Willis; aighteen years old; full hlood; rends and writes in Dakota, and is a member of tha Episcopal church.

Tun-kan-sa-pa; Christian name, Joseph Cook; ninateen years old; son of Iron Lightning. Joseph is of full hlood, good ahilitias and good health. Ha is gantla and docila. Ha was at St. Paul's School two years in all.

Samual Four-star (Ta-cour-pi To-pa); ninateen years old; son of Standing Buffalo. Ha is of full hlood; is reasonably hright, always pleasant and obediant. He was for a faw months in St. Paul's school at Yanktou Agancy.

Frank Yellow-Bird (Zithana Zina); aighteen years old; full hlood. Hie father is dead. Ha has good health, and they have always thought a great deal of him at the Agancy Mission.

Mary Kettle; sixteen years old. Sha reads in Dakota.

Lizzie Spidar; fourteen years old; full hlood; has no education.

Carria Andarson; twalve years old. Sha reads in Dakota.

At this agency there are very vigorous efforts made for Indian education, under tha auspices both of the Episcopal and Presbyterian churches. The instruction is confined mostly to the vernacular. Tha agant, Dr. John W. Douglas, is in most hearty sympathy with this affort, and will be pleased to hear frequently from tha youth from this agancy, and to furnish information or aid in any manner.

I failed to procure the authorized proportion of girls at the various agencies, partly hecause Indian girls are more useful to their parents as laborers than hoys are, and, more particularly, because of prejudices existing against association with the colored race, on the part of soma of tha Indians' advisers.

I met very pleasantly, at all of tha agancies, the educators and missionaries at work immediately with the Indians, and extended to tham always a warm invitation to visit Hampton and investigate for thamselves.

With great respect,

Your ob'd't servant,

R. H. PRATT,

1st Lt., 10th Cav., U. S. A.

CAPTAIN PRATT'S CAMPAIGN.

It is General Sheridan, I believe, who is responsible for the *bon mot* that "the only good Indian is a dead Indien," and also for the statement somewhat worn now hy repetition, that every such conversion costs the United States $20,000 and a-half dozen soldiers.

If his estimate is susceptible of mathematical demonstration, Capt. R. H. Pratt, whose flying trip from Decota to Virginia with forty-nine Sioux children to place in school, has just been chronicled by the Associated Press, may congratulate himself upon having saved to the country $980,000, and two hundred and ninety-four lives, not counting the Le family.

He has at any rate selved completely the question of their willingness to come East and the practicahility of hringing them; and now if the Hampton Institute can turn them into tolerably good Indians, without "killing," the whole problem of our "Indian policy," of education *versus* extermination, may be helped toward a settlement whose value to the country cannot be counted in millions.

THE FIRST EXPERIMENT.

Many of our readers know that Hampton has had under instruction, since April last, fifteen (now 17) Cheyenne and Kiowa Indians from Indian territory, helped here by private benevolence after having been held as United States prisoners for three years in St. Augustine, under command of Capt Pratt.

The coming of these Indians to Hampton was looked upon as entirely an experiment, and an experiment which involved larger interests than their own. It was, as the Captain said, "preparing leaven to work in a larger lump." The industrial element in the school's training was regarded as an important factor in the question; and perhaps it was this more than anything else which interested President Heyes and the Indian Department in the experiment, and its success in this particular which decided them to appropriate funds for extending it.

WHAT WILL MAKE A MAN WORK?

Fourteen years ago, you know, the question was,—

"Will the negro work when he no longer has got to?" And the paradoxical answer had to be,—

"Yes, for he *has* got to. Freedom's spur is as sharp as slavery's whip."

The question now is "Will the Indian work, who never has had to?" After six month's trial Hampton still answers,—"Yes, with the same spur."

Perhaps the next question, ought, in fairness, to be—Would the white man work if he *didn't* have to?

I will not pause for a reply.

AFTER THE INDIANS.

Private benevolence alone is to he credited with the initiation and carrying out of the first experiment with those frou the Indian Territory. In the second experiment, undertaken hy the Government, the Sioux were selected, on the principla of takng the most pains with those who giva the most trouhle. Captain Pratt was ordered to visit the agencies in Dacota Territory, chiefly on the Missouri river, beginning with the most northern; making one expedition to select his subjects and another to pick up his parties from station to station, descending the river. This plan was carried out to the letter, with much axertion and soma dangerous adventure.

Fort Bauthold, the most northern agency, is hut seventy-five miles south of the British line. Then follow southward Standing Rock, Cheyenne River, Red Cloud, Crow Creek, Lower Brule, Spotted Tail (90 miles west of the river from Brule) and Yankton. From Fort Berthold to Yankton is about 750 miles.

Tha first expedition promised well, and from Yankton Capt. Pratt wrota Oct. 9—

"I have the required numher from six agencies. Rode six hundred and thirty-nine miles in wagone and stages. Spotted Tail and Red Cloud hadly stirred up, and my attempted visit to Spotted Tail not without danger.

WHAT SQUAWS ARE GOOD FOR.

From one cause or another—some want of interest, and some feoling against negro schools on the part of some of their advisers—the second expedition obtained hut nine girls instead of twanty-five, and the numher had to be mada up in hoys, not without much exertion. Ons great obstacle in the way was tha greater value set upon girls as the working class. An Indian girl works from the day she can carry a hucket of water. The young hrava must be called on for nothing, hut supplied with beads and war paint to an unlimitad extent. At Fort Berthold a chief told Capt. Pratt—If I had any sons you could heve them, hnt I can't let my girls go.

At last, Oct. 31st, Capt. Pratt started with his wild crew from Yankton by cars, having come down the river on the last hoat of the season, and narrowly escaped a freezing up which would heva meant indefinite detention and perhaps entire failure. But all dengers were everted or overcome, the two theusand miles of land and water safely passed, and in five days from leaving Yankton, the whola forty-nine arrived safa at Hampton.

FIRST LESSON IN CIVILIZATION.

It was a sight to arouse a strange variety of emotions, in e thenghtful looker on. And deuhtless the chief actors were experiencing some of their own. In the first place, whet must the wild lerds of creetion have theught of the manners end customs of a country where the squaws were invited to seats in an ambulance, while they were requested to walk efter them. Their first lesson in civilization et Hampton. That they hed had semo others befora beceme evident, as, seeted round an abundantly supplied breakfast table, they nsed their knives and forks with an ease that contrasted curiously with their general wildness of face and costume.

BLANKETS VS. UNIFORMS.

Of costume there was a great variety. They came as they were: seme with short hsir, and "white clothes"; some wrapped in hlankets from which their hlack, unkempt locks struck wildly out; and some in a curious mixture of apparel—one with a white bagging shirt hanging down under a short hlanket, and over buckskin leggings and moccasins.

The effect was heightened, and made significant by the appearance of the St. Augustine Indian boys who were just rejoicing in the glories of a new suit of the Hampton pniform, a neat hlue-gray with silvered buttons bearing the monogram of the Hampton Normal and Agricultural Institute.

If one's courage failed before the question, Can these wild children of nature ever he civilized, one look at the hright faces of the Cheyennes and Kiowas, and one thought of what they were three years ago, was answer sufficient.

THE MAN WHO HOOTS.

The new comers are chiefly Sioux, the rest heing Mandans, Arickarees and Gros Ventres. Their ages range from ten to twenty-five; most of them are young. There are many good feces, and seme interesting histories, as well as some peculiar names. To the roll of Hampton will now he added,—a Frauk Yellow Bird, Walking Cloud, Man that looks around, Getting on, Gray Legs, Bow Legs, White Breast, Shooting Bear, Mary Kettle, Lizzie Spider, Man who hoots when he walks, Leughing Face, Strong, Comes Flying.

One of the women is a mother who could not let her little girl come without her. Captain Pratt says their teepee was the neatest Indian tent he ever saw. Zie-wie is the daughter of a worthy Indian, who, unlike the Berthold chief, brought her to Captain Pratt himself and asked him to take her. A few can speak English a little. Two of the hoys can talk quite well, especially one who acts as interpreter—Johnny Robb—and who will he employed in the printing-office.

THE OUTLOOK, AND THE WORK TO BE DONE.

On the whole, the outlook is very hopeful. All coms pledged to do their very hest and eager to learn to read and to work. The officers of the school have faith to believe that the American people will feel the importance of the experiment and their own responsibility to ensure it against failure.

Everything hangs on the success of the send-off; Government favor and faith in the possihilities, and the Indiau's consent to the effort for his civilization.

The Government's present agreement is to pay, for food, clothing and instruction, $167 a year for each Indian so long as it shall keep him at the school. Tha school has under-000, in the erection of a new dormitory containing sixty rooms, and of a large workshop with suitahle machinery for the instruction of the Indians in trades.

Captain Pratt says that if this experiment succeeds, he could go again and hring back two or three thousand to eastern schools. He certainly could do it if any man could. The whole success thus far attained, the very inception of the experiment, has grown out of the success of his own benevolent and vigorous efforts in St. Augustine, attracting the attention of hundreds of visitors and finelly the notice of tha Government. It has vary wisely detailed him to tha command of the new hand collected by his untiring exertions, and it is to be hoped that he will he permanently retained in the position.

With such possihilities dawning in the future for this race, Hampton may well feel justified in calling upon the people to share the new responsihilities laid upon her.

Will not the response he as one who Comes Flying?

Helen W. Ludlow, in N. Y. Evening Post.

LETTERS FROM HAMPTON GRADUATES.

The following letter adds to the many testimonies received from Hampton graduates, a warm invitation to visit Hampton and investigate for themselves.

With great respect,

Your ob'd't servant,

R. H. PRATT,

1st Lt., 10th Cav., U. S. A.

CAPTAIN PRATT'S CAMPAIGN.

It is General Sheridan, I believe, who is responsible for the *bon mot* that "the only good Indian is a dead Indien," and also for the statement somewhat worn now hy repetition, that every such conversion costs the United States $20,000 and a-half dozen soldiers.

If his estimate is susceptible of mathematical demonstration, Capt. R. H. Pratt, whose flying trip from Decota to Virginia with forty-nine Sioux children to place in school, has just been chronicled by the Associated Press, may congratulate himself upon having saved to the country $980,000, and two hundred and ninety-four lives, not counting the Le family.

He has at any rate selved completely the question of their willingness to come East and the practicahility of hringing them; and now if the Hampton Institute can turn them into tolerably good Indians, without "killing," the whole problem of our "Indian policy," of education *versus* extermination, may be helped toward a settlement whose value to the country cannot be counted in millions.

THE FIRST EXPERIMENT.

Many of our readers know that Hampton has had under instruction, since April last, fifteen (now 17) Cheyenne and Kiowa Indians from Indian territory, helped here by private benevolence after having been held as United States prisoners for three years in St. Augustine, under command of Capt Pratt.

The coming of these Indians to Hampton was looked upon as entirely an experiment, and an experiment which involved larger interests than their own. It was, as the Captain said, "preparing leaven to work in a larger lump." The industrial element in the school's training was regarded as an important factor in the question; and perhaps it was this more than anything else which interested President Heyes and the Indian Department in the experiment, and its success in this particular which decided them to appropriate funds for extending it.

WHAT WILL MAKE A MAN WORK?

Fourteen years ago, you know, the question was,—

"Will the negro work when he no longer has got to?" And the paradoxical answer had to be,—

"Yes, for he *has* got to. Freedom's spur is as sharp as slavery's whip."

The question now is "Will the Indian work, who never has had to?" After six month's trial Hampton still answers,—"Yes, with the same spur."

Perhaps the next question, ought, in fairness, to be—Would the white man work if he *didn't* have to?

I will not pause for a reply.

AFTER THE INDIANS.

Private benevolence alone is to he credited with the initiation and carrying out of the first experiment with those frou the Indian Territory. In the second experiment, undertaken hy the Government, the Sioux were selected, on the principla of takng the most pains with those who giva the most trouhle. Captain Pratt was ordered to visit the agencies in Dacota Territory, chiefly on the Missouri river, beginning with the most northern; making one expedition to select his subjects and another to pick up his parties from station to station, descending the river. This plan was carried out to the letter, with much axertion and soma dangerous adventure.

Fort Bauthold, the most northern agency, is hut seventy-five miles south of the British line. Then follow southward Standing Rock, Cheyenne River, Red Cloud, Crow Creek, Lower Brule, Spotted Tail (90 miles west of the river from Brule) and Yankton. From Fort Berthold to Yankton is about 750 miles.

Tha first expedition promised well, and from Yankton Capt. Pratt wrota Oct. 9—

"I have the required numher from six agencies. Rode six hundred and thirty-nine miles in wagone and stages. Spotted Tail and Red Cloud hadly stirred up, and my attempted visit to Spotted Tail not without danger.

WHAT SQUAWS ARE GOOD FOR.

From one cause or another—some want of interest, and some feoling against negro schools on the part of some of their advisers—the second expedition obtained hut nine girls instead of twanty-five, and the numher had to be mada up in hoys, not without much exertion. Ons great obstacle in the way was tha greater value set upon girls as the working class. An Indian girl works from the day she can carry a hucket of water. The young hrava must be called on for nothing, hut supplied with beads and war paint to an unlimitad extent. At Fort Berthold a chief told Capt. Pratt—If I had any sons you could heve them, hnt I can't let my girls go.

At last, Oct. 31st, Capt. Pratt started with his wild crew from Yankton by cars, having come down the river on the last hoat of the season, and narrowly escaped a freezing up which would heva meant indefinite detention and perhaps entire failure. But all dengers were everted or overcome, the two theusand miles of land and water safely passed, and in five days from leaving Yankton, the whola forty-nine arrived safa at Hampton.

FIRST LESSON IN CIVILIZATION.

It was a sight to arouse a strange variety of emotions, in e thenghtful looker on. And deuhtless the chief actors were experiencing some of their own. In the first place, whet must the wild lerds of creetion have theught of the manners end customs of a country where the squaws were invited to seats in an ambulance, while they were requested to walk efter them. Their first lesson in civilization et Hampton. That they hed had semo others befora beceme evident, as, seeted round an abundantly supplied breakfast table, they nsed their knives and forks with an ease that contrasted curiously with their general wildness of face and costume.

BLANKETS VS. UNIFORMS.

Of costume there was a great variety. They came as they were: seme with short hsir, and "white clothes"; some wrapped in hlankets from which their hlack, unkempt locks struck wildly out; and some in a curious mixture of apparel—one with a white bagging shirt hanging down under a short hlanket, and over buckskin leggings and moccasins.

The effect was heightened, and made significant by the appearance of the St. Augustine Indian boys who were just rejoicing in the glories of a new suit of the Hampton pniform, a neat hlue-gray with silvered buttons bearing the monogram of the Hampton Normal and Agricultural Institute.

If one's courage failed before the question, Can these wild children of nature ever he civilized, one look at the hright faces of the Cheyennes and Kiowas, and one thought of what they were three years ago, was answer sufficient.

THE MAN WHO HOOTS.

The new comers are chiefly Sioux, the rest heing Mandans, Arickarees and Gros Ventres. Their ages range from ten to twenty-five; most of them are young. There are many good feces, and seme interesting histories, as well as some peculiar names. To the roll of Hampton will now he added,—a Frauk Yellow Bird, Walking Cloud, Man that looks around, Getting on, Gray Legs, Bow Legs, White Breast, Shooting Bear, Mary Kettle, Lizzie Spider, Man who hoots when he walks, Leughing Face, Strong, Comes Flying.

One of the women is a mother who could not let her little girl come without her. Captain Pratt says their teepee was the neatest Indian tent he ever saw. Zie-wie is the daughter of a worthy Indian, who, unlike the Berthold chief, brought her to Captain Pratt himself and asked him to take her. A few can speak English a little. Two of the hoys can talk quite well, especially one who acts as interpreter—Johnny Robb—and who will he employed in the printing-office.

THE OUTLOOK, AND THE WORK TO BE DONE.

On the whole, the outlook is very hopeful. All coms pledged to do their very hest and eager to learn to read and to work. The officers of the school have faith to believe that the American people will feel the importance of the experiment and their own responsibility to ensure it against failure.

Everything hangs on the success of the send-off; Government favor and faith in the possihilities, and the Indiau's consent to the effort for his civilization.

The Government's present agreement is to pay, for food, clothing and instruction, $167 a year for each Indian so long as it shall keep him at the school. Tha school has under-000, in the erection of a new dormitory containing sixty rooms, and of a large workshop with suitahle machinery for the instruction of the Indians in trades.

Captain Pratt says that if this experiment succeeds, he could go again and hring back two or three thousand to eastern schools. He certainly could do it if any man could. The whole success thus far attained, the very inception of the experiment, has grown out of the success of his own benevolent and vigorous efforts in St. Augustine, attracting the attention of hundreds of visitors and finelly the notice of tha Government. It has vary wisely detailed him to tha command of the new hand collected by his untiring exertions, and it is to be hoped that he will he permanently retained in the position.

With such possihilities dawning in the future for this race, Hampton may well feel justified in calling upon the people to share the new responsihilities laid upon her.

Will not the response he as one who Comes Flying?

Helen W. Ludlow, in N. Y. Evening Post.

LETTERS FROM HAMPTON GRADUATES.

The following letter adds to the many testimonies received from Hampton graduates, a warm invitation to visit Hampton and investigate for themselves.

With great respect,

Your ob'd't servant,

R. H. PRATT,

1st Lt., 10th Cav., U. S. A.

CAPTAIN PRATT'S CAMPAIGN.

LETTERS FROM HAMPTON GRADUATES.

PRAYING A TEACHER BACK—SUNDAY-SCHOOL WORK—NEEDY CHILDREN—TEACHING AND FARMING—A WITNESS TO PLEASANT RELATIONS—OWNING THE LAND—DON'T BELIEVE IN COMPLAINING—GRATEFUL FOR HER PAST.

—SELF-HELP.

Almost all Hampton graduates who are teaching, become also Sunday-school teachers, often beginning the work in their neighborhood.

One undergraduate who has been out teaching for a year, and has now returned to finish his course, wrote of his year's work:—"I have got up four Sunday-schools, and organized a Sunday-school Convention. A large number turned out. It was very hard work to get the people interested, but after they were with me a day they were awakened to the sense of it. Our next Convention will be in the early part of '79."

A great lack of books, Bibles, often of sufficient clothing, is found among the children. When, with all these hindrances, there is such eagerness for instruction as the following letter describes, will not the prayer of these little ones be answered beyond what they have asked or thought? Many barrels of clothing, Bibles and Sunday-school books and papers, could be distributed every year to these destitute schools, from Hampton, through its graduates. Some good friends have sent such heretofore, and there is plenty of room for others to work. Will not some Sunday-school in the North take it upon itself, out of its superabundance, to answer the children's prayers?

ACCOMACK CO., VA., *Nov.* 19, 1878.

My dear Teacher:—I wish I were at H. to help you Thanksgiving. I have opened school and I enjoy it as usual. I have thirty-four pupils on roll. I will open my other school after Christmas. I walked seven miles to open my Sunday-school. I was really happy to meet them. They told me the Lord certainly would answer prayer, for they had prayed that I might return to them." I had to borrow money to come, but I am really glad I did come. Last year I only taught Sunday-school every other Sunday, but they at once made arrangements to have it every Sunday morning, and I was compelled to promise them I would take charge. So this winter, until February, I expect to walk seven miles to my Sunday-school.

If Miss M. has any old Moody and Sankey hymn-books, ask her to please give me some; and if Miss H. gets anything this year to give away, will you please remember me? I have some very poor children here that would attend Sunday-school and day school too if they could. I have about seventy scholars now that attend Sunday-school. If Miss H has anything, please send it to me Christmas; and I will pay all charges.

Do you know where McKinney is? Do you ever hear from Dora? I heard from Clark recently. Don't know my name at all. Love to all. Hope you will write soon.

Your boy, as ever, O.

And here is another needy school, whose teacher does his best to feed the lambs:

N. C., *Sept.* 29, 1878.

My dear Teacher:—I am well and doing well. I have not had a very pleasant vacation. I was taken down sick in August, with fever; I was very sick. I have been very busy this summer, doing all the good I can for my race. I have had a very good school all the summer. I had in August sixty-five scholars. Oh, I thought I would have to give up teaching; but I made up my mind to continue. It takes very great patience and pains to teach school. I have been in this good work for three years. I don't think I could employ my time in any greater work than this, do you?

I am employed Sundays as well as Mondays. I have to work very hard for my Sunday and also every day school. The parents of the children are not able to buy their children books and clothes. Sometimes I have a meeting and ask the parents of children why it was that they did not send their children to school. Their reply is that they are not able to get their children books and clothes. My school will close the last of October, and start again in January.

I hope you had a pleasant vacation this summer.

F. E. Robinson is about six miles south of me, and M. D. Vaughn and A. R. Jacobs are about fourteen miles south-east of me, teaching and farming.

You must really excuse me for not writing before now.

Miss H., can you do anything for these *needy* ones? The little children are very anxious to *learn;* the little things are very ignorant. *Help* them if you please.

Are there many scholars at Hampton? Please tell me all the news about the school. I will close my letter with the kindest wishes from

Your sincere friend, P.

The following letter adds to the many testimonies received from Hampton graduates to the friendly kindness of white people about them. The writer is a young man whose course, in school and out, has proved him worthy of respect.

GLENDOWER, ALBEMARLE CO., VA., *Oct.* 28, 1878.

Dear Teacher:—Your kind letter of September 23d came to hand. It is true that I have delayed in giving you an answer, and I am somewhat ashamed to ask you to forgive me; yet I hope that you will.

I arrived at Glendower one week before the school opened. The last letter which I received from Mr. M—— contained two letters of introduction: one to his son, Mr. G. M——, and the other to Mr. P——, the examiner and Superintendent of Public Schools of Albemarle Co. I called on Mr. P—— first, as I wanted to assure myself of a trial in that county. I was examined and received my certificate as teacher. Next, I had to see Mr. D——, the clerk of the schools, who gave me all information concerning the school and the form for the monthly report, &c. I was next anxious to see Mr. G. M——; fortunately, I met him in town, his residence being at Glendower. Mr. M. invited me out to Glendower the following Sunday, so that notice might be given that he and the teacher would meet them the next Sunday at the school-house.

The first Sunday we saw a few at the school (who have labored during vacation to keep up the Sunday-school) engaged in the good work, and that, you know, gave me much pleasure. We met at the appointed time as the following Sabbath and found many of the old folks present. They were first addressed by Mr. G. M., who gave them a talk in the Hampton style—sound, practical and to the point, impressing upon the minds of the parents the necessity of punctuality, regularity and a growing interest in the school work. I was next called upon to say something, and as Mr. M. had said just what I had in mind to say, I, by his consent, indorsed his words, and ended with: "Send your children, if unable to send them any other way, ragged but clean."

My school is well furnished, and being situated on Mr. M.'s land, causes his interest and attention to be drawn more in that direction, especially in this line—ministering to the wants of the school. I began with fourteen scholars on the 14th of this month; the following Friday I had on roll twenty-two. Saturday, I called on R. Kelser at Scottsville, and found that he had received forty-six. I returned home with the determination that I would have my school filled the next week; on Sunday I visited church, and after the morning's services were over I was allowed to speak, which I did, and by reasoning with the parents of the children, many consented to let their children come; but some could not make it possible within a month and a-half, on account of being hired out by the year, and other disadvantages. I was invited to a wedding dinner and I had the pleasure of seeing a great many of the children's parents and conversing privately upon the school subject; many of them show deep interest in the work.

I am glad to say that most of the people here own a few acres of land, and they have comfortable dwellings upon them; on the other hand, many are too poor to pay for books for their children, the Board only providing for entirely indigent children.

R. Kelser and myself are getting along nicely, and our intentions are to do a good work here and hold high the colors which we labored for before leaving the shores of "good old Hampton." I am comfortably situated at my boarding place, and I must say that my landlord does all he can to add to the pleasure and comfort of the "teacher."

Dear General, your talks to us about receiving kindnesses and respect from the white people who live in our vicinity have been proved here, so that I have become a witness to your words. I would like our many graduates to know that none but friendly feelings exist here for the Hampton students, and those to a high degree.

On my way Saturday to see Kelser at Scottsville (five miles and a-half from my boarding place and four from the Glendower Post Office,) I was passed by two white gentlemen, one on horseback and the other in a one-horse wagon containing one seat. They had advanced some thirty or forty yards when they stopped and the one on horseback called out, "Are you the teacher of the Glendower school?" to which I politely replied. "Yes sir." Said he, "Would you like to ride?" at the same time getting down from the horse's back. "Yes sir; I thank you," was my reply. I rode the distance of four miles on horseback, and on the way the two gentlemen had occasion to stop on business, and seeing that I was inclined to wait until they started again, asked me to ride on to town and hitch the horse so that they might see him on passing through.

R. Kelser joins me in sending love to all.

I will close by saying that I am not as large as they expected me to be, but I trust that the work will be equally well done.

With love, I am yours obd't'y, D.

The writer of the following has certainly no cause to complain at present. The spirit he expresses is, we believe, one which very generally prevails among Hampton graduates. Some of them have rough experiences, but as a rule we hear no whining, and when they, from time to time, revisit Hampton, they show an increased strength of manhood and womanhood gained in their experience of life.

I have been very fortunate in getting a school. I have every reason to be thankful to God for his kindness toward me. If I had stopped in Virginia, as many of my friends wished me to do, this good place would have been lost. But I know Maryland was better than Virginia about paying teachers, so I came to Ellicott City, and was sent by the Superintendent to this place. Opened school on the 23d of September, and will keep it open until the 30th of June next. I now have twenty-seven scholars, and will have at least as many more after the people get their crops in. Have the best school-room of any of the colored schools in the county. The only fault that I find is that it is not quite large enough. Have a class in fifth Reader, one in Primary Geography, and will have one in Fractions. The teacher that taught here before seems to have been a good one. I have taken the scholars from just where she left off. Have a good blackboard, and a large map of the United States which I brought from home, having won it in a competitive examination, as a prize, over six years ago.

I am now boarding with a very nice old lady and gentleman, who do everything in their power to make "the school-massa" happy and comfortable.

There are at present but two Catholics in my school, all of the rest being of the Methodist persuasion. There can be gotten up a large number of Sabbath School scholars. It (the Sabbath School) has not been very well attended, because there were no teachers, or because the teachers would not come, I do not know exactly which. I don't say that I will succeed, but I am going to try to teach in it, and also have some of my advanced pupils teach.

You spoke of me as never complaining. I do not believe in complaining much. "Make the *best* of everything," is what the General says.

It made me real sad to hear of Mrs. Armstrong's death. I have felt the loss of a beloved father, and can sympathize with the General in his great bereavement. God is our only refuge in the time of trouble. I pray that He may look with tender mercy down on the little ones that are left motherless.

Last July I went home to see my mother. Almost three years had passed away since I had seen her. Of course, after being absent so long, my return was quite an event to her. I found her much worn out in body, as well as in mind. My brother lay for three days at the point of death; he finally recovered. I left within five days after my arrival at home (July 8th) for Jordan Alum Springs, where I remained until the 7th of Sept. Then I returned home, where I stayed eight days. Then I started once more to leave my dear kind friends and all behind. God has cared for me in the past; he will in the future.

I would like very much to have my brother Jacob go to Hampton, Christmas. He is a fine boy. Mother is anxious to have him go also. He is the best bass singer, according to his age, that was ever heard sing in Staunton. His musical talent is really wonderful. Please let me know what my chances are of getting him to Hampton Christmas.

Let me know in your next where Charles Anderson and Mary Christian are. I hope you will not forget me in your prayers.

Yours sincerely, D.

IT is natural for the young graduate to look back with tender regret and heightened appreciation upon the associations and advantages left behind. Distance and contact with the realities of life bring a juster valuation of benefits received, and gratitude is developed or increased. This is well for the graduate for whom the school is still the only source to which to look for sympathy and help in the onward course, and by the hold thus maintained upon its graduates, the school's power for good is greatly increased.

——, VA., *Nov.* 1878.

My dear Miss H——:

I received your nice, long letter, some time ago. It gave me a great deal of information. I was glad to know where my classmates were teaching. I am sure some of them are more contented and happy at their work than I am. I have come to love it now, since I have gained the little ones' love. They seem delighted to see me, in the morning, when I go in the school house. I love them all alike. I have no favorites. I haven't but five boys and eighteen girls now. I have the promise of a full school after Christmas. I have not gotten acquainted with many of their parents yet, though I intend to, but I have been sick so much I have not been anywhere much except to church, and I take a walk nearly every day for exercise. I have made out my report for one month, and it was correct. I am very well well cared for and taken care of. I do not think I would have been any better satisfied anywhere else. I like the place very much, and most of all, my work. I help in Sabbath School, and I do like it so much. Mr. B. sent me a bundle and in it were some Sunday School papers among the many other things. I gave them out Sunday and it was such a pleasure, they seemed so glad and happy. They needed help very much in the management of Sabbath School, and I am trying to get it in the right path gradually, as well as I know how. Mr. B. sent me some things to give my pupils and any needy ones I may know. I thought I would stay here Christmas eve night, and have a Christmas tree (as they never saw one here) and give the things out in that way. Have you any childrens clothes that you could send me to assist in filling the tree? If you have any of those leggings I wish you would send me a pair of them, it is so cold where I teach; the school house is as close to the water as Mr. ——house at Hampton, and it is all open underneath and the cold air comes up through the cracks of the floor, and the whole house is cold. I find it hard to keep warm. This is the best they can do. I have been quite sick with the bronchitis, so the Dr. said it was.

I miss you all very much. I am glad myself Miss H. that I came to school there. I should not had the dear friends that I believe I have now; especially you and Mr. B. are my dearest. I do love you both so much. Since I have left you my love grows more for you. I did not show it as much while there as I really had in me. Give my love to my teachers. I hope to be there Christmas day.

I would like to come Thanksgiving but I guess it is not best. Please write again soon, I am always cheered by your letters.

Yours truly,

C.

THE spirit of help-yourself, and pay-your-own-way, is the one to aim for in lifting any race—or any individual, into independent manhood. It is a young woman who shows in the following letter that she has caught this spirit, and it will make her worth more to herself and her people, when she finally graduates, than any amount of aid she can do without.

——, VA., *Aug.* 24, 1878.

Gen. S. C. Armstrong—Dear Friend:

I must say I feel ashamed of myself to think all this time I have not written to you. But when I tell you that I have been very busy, I know you will excuse me. Now I will proceed to give you a description of my "Labor." First, I shall thank you for your kindness in sending me that valuable book the Educational Journal, which was a book of great use to me. Had it not been for that book, I don't know what I should have done. But as it was, I found it one of the greatest helps in the world to me. I had a very large school, and to teach such a school as that required system, and how to do things systematically I found in that good book the Educational Journal. And the way I had been taught at good old Hampton helped me to teach my pupils. My school was one of the largest ever known to be there. The children all seemed to be anxious to learn, and the most of them attended school very regularly. The school was very comfortable and everything was pleasant. The people were quite industrious almost every one of them being farmers. The colored people seem to be getting along as well as the whites. The place I boarded was quite a pleasant place, not very far from my school house. The first month I taught, I had fifty-seven pupils, the average daily attendance being 36.06 which was considered very good indeed. The second month I had seventy-three on roll. I tell you I had my hands full. But I worked on with a free heart, and my pupils learned very well indeed. Every one was pleased with the way in which their children learned; and say they want me to teach again. I never enjoyed any work in my life as well as I did teaching school. I do really believe that it is my mission. Some of my pupils were very far advanced. They can enter the Middle class very easily. I worked on with my pupils until 28th of May. Some, when they came to me did not know their letters, but before they left school they were in the Second Reader and spelling in words of two syllables. They got along nicely. I do feel very good for I believe I have done a little good in the place I was teaching. The Sunday school was nice too. I can tell you I did feel very strange when I saw how every one looked up to me. On the whole I had quite a nice time teaching. On the 7th of June I had my closing exercise which every one liked ever-so-much. I carried it on just as you all do at Hampton. In the morning, my pupils all came to the school-house and a lot of other friends were there; not any whites though. School was opened by reading from the Bible and prayer by Mr., N. the gentleman I was boarding with; then singing by the school. My senior class in reading was examined. They read about Horatius at the Bridge; then they were examined in Arithmetic and other classes, then my Junior class and so on. Everyone thought it nice. At 12 o'clock the pupils marched up to the church, the guests falling in in the rear, where a long table was set and the children ate their dinner. Then the afternoon exercise went on, which was singing and speaking. A great crowd was there, and a lot of white people, and every one enjoyed themselves. At half-past four o'clock; the exercises

closed with singing "In that great getting up morning." The children and parents then all left for home; the children with weeping eyes, crying because I was coming away.

I am now at home. I shall not return to Hampton next term, not till the year of 1880, and then I shall be Independent and go right

was cut down—a work of twenty-five days for five men.

This gave an opportunity for finding out how old it was, by counting the rings. Perhaps you know that every year a tree grows, it adds a new ring of new wood

more of agriculture, are better housed and more industrious, but in book education are backward. They raise thousands of bushels of corn, and a great many potatoes. They *cache* what they raise, in great holes in the ground, shaped like an old-

closed with singing "In that great getting up morning." The children and parents then all left for home; the children with weeping eyes, crying because I was coming away.

I am now at home. I shall not return to Hampton next term, not till the year of 1880, and then I shall be independent and go right through. If life lasts I intend to graduate. My mind is set on that. I will close by saying I am always glad to hear from Hampton; it is as much like home to me I love it more and more.

I am ever, yours obediently,
M.

OLD-TIME CHRISTMAS.

BY E. J. W.

OUR large picture this month is from the N. Y. *Christian Weekly*, where it illustrates the following pretty story—

"My mother was of Dutch descent, brought up with her Aunt in a farm house in the Mohawk Valley where the only language used in the family was Dutch. She kept Christmas in the way in which her aunt had kept it. Our kitchen was of the old-fashioned kind. I think I see it now; its naked beams overhead, its great open fireplace with wide jambs in whose ample embrace we children could sit and enjoy the heat and glow of the cheery wood fire, where lay an immense back-log flanked by ponderous brass andirons that flashed in the blaze of the hickory wood piled high between them. With nuts to crack and apples to roast, with the doughnuts and the cider, we passed two happy hours listening to mother's stories of the Indians that her Aunt Wandel had told her, or frolicking with father who played like a boy; until we sobered down and with chin resting in our hands, gazed into the glowing coals and pictured to our minds quaint faces and forms which no one else could see. Soon little sleepy-headed Giles nods and all is over—we must go to bed.

"The boys are soon clad in their long woollen night-gowns and caps, father takes his good-night kiss and goes out to the barn. Then the stockings are brought out: such stockings! we wear none so large now. Mother fastens them on the high, old-fashioned mantel-piece with a fork from the cupboard, or pins them on the string stretched from side to side, and we gather around Will who sings a song of invocation to our loved and honored Santa Claus. As a relic of bygone days we give it to you. Mother stands, candle in hand. Will gets as close to the chimney throat as the heat will allow him and sings:

"St. Nicholas, good holy man!
Pull your best for Tobbleton,
Then drive on to Amsterdam,
From thence to Spain."

THE BIG TREES OF CALIFORNIA.

In all that land of wonders, the State of California, there is nothing more marvellous than what are known as the Big Trees. It is not surprising that when they were first discovered by a California hunter, his own companions refused to believe his story; but for many years now, travelers from all parts of the world have visited them, accurate measurements and photographs have been taken, and a slice from the fallen trunk of one has even been brought, in pieces, and set up in a world's fair. The name of the Big Trees is *Sequoia-gigantea*. *Sequoia* was the name of a famous old Indian hunter. *Gigantea* means gigantic. They are a variety of Cedar, and are worthy brethren of the ancient Cedars of Lebanon.

Bunker Hill Monument is 221 feet high, and thirty feet across the base. The largest of the Great Trees now standing, as far as has yet been discovered,—the Mother of the Forest, it is called,— is 320 feet high, and ninety feet round at the base. The Father of the Forest, whose mighty form lies prostrate on the ground, must have been 435 feet high—nearly twice as high as Bunker Hill Monument—and 116 feet in circumference at the base.

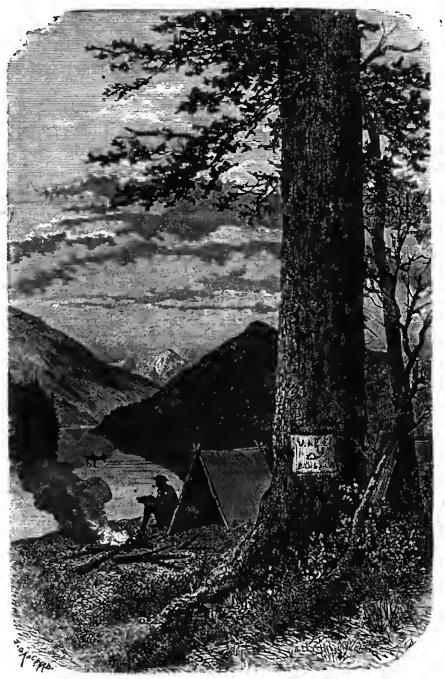
It is very hard to get a full idea of what these figures mean.

A writer who has seen the Big Trees gives this description, to help our imagination: "Suppose the tree fallen at the gable of an ordinary two-story house. You wish to cross by a plank laid from your roof to the upper side of the fallen trunk. That plank would perceptibly slope *up* from your roof-peak. Through another tree, also fallen, and hollow [probably from burning] from end to end, our whole party on horseback charged at full trot, for a distance of one hundred and fifty feet."

In 1835, one of the largest of the trees was cut down—a work of twenty-five days for five men.

This gave an opportunity for finding out how old it was, by counting the rings. Perhaps you know that every year a tree grows, it adds a new ring of new wood round its trunk inside the bark, which stretches and grows to cover it. When a tree is cut down, these rings can be easily seen, and by help of a microscope, can all be counted. Their number, you will plainly understand, must tell the tree's age exactly. Nearly 3,000 rings have been counted in the largest of the fallen trees, and it must, therefore, be nearly 3,000 years old. Twelve hundred years before the birth of Christ, two hundred years before Solomon sent for hewed cedar from Lebanon to build the temple of the Lord in Jerusalem,—far away in the fertile soil of this that we call the *new* world, the little tender shoot had started that was to grow into this mightiest of all growths.

Nine groves of these goodly cedars have as yet been discovered. The best known are the Calaveras and Mariposa groves. In the former, there are 1,200 or 1,300—



THE BIG TREE.

a hundred of them being over twenty-five feet in *diameter* at the base. There is one forest of them three or four square miles in extent; and recent discovries of young groves prove that the Big Trees are not doomed to pass away in their present generation, but will astonish the dwellers on earth for thousands of years to come, perhaps as long as the earth itself shall last.

NOTES ON THE TRAIL IN DAKOTA.

The following interesting items were noted down from informal conversations with Captain Pratt, concerning his journey among the Missouri River agencies in Dakota, collecting the students for Hampton.

INDIAN AGRICULTURE.

There are three tribes at Fort Berthold—the Arickarees, or Rees, as they are commonly called, the Mandans, and Gros Ventres. In all, there are between 1,300 and 1,400 Indians at the station, and more to the west. They were, in their original state, more advanced toward self-support than other tribes that I know of; know more of agriculture, are better housed and more industrious, but in book education are backward. They raise thousands of bushels of corn, and a great many potatoes. They *cache* what they raise, in great holes in the ground, shaped like an old-fashioned churn, three feet in diameter at top, enlarging downwards, seven or eight feet deep. They fill the holes with potatoes, or other vegetables, then cover them in with earth, stamping it hard to keep the rain out. The whole town is perforated with these *caches*. You travel over hundreds of them without knowing it.

INDIAN ARCHITECTURE.

They live in permanent houses, and their village has stood where it now is beyond the recollection of the oldest men I could find in it. Their houses are made of a double frame-work, circular in form, and covered first with grass, and then with earth. There are no windows; the light enters only at the one door, and the hole left in the top to let the smoke out. The fire is built in the centre, just under this hole, and all around the sides are ranged the beds—very snug places to sleep. The houses are very large. In some of them forty people can sleep; and in the winter, the horses too are brought inside at night. But they are kept well policed and much cleaner than you would expect. A Medicine Lodge in the village is seventy-five or eighty feet in diameter. It would hold 400 easily. In all the village there are about 1,300 people. They have about 2,000 horses, and some cattle. When the country was wild and the buffaloes plenty, they were quite able to take care of themselves. Now, the Government supplies about half of their need in rations.

NO PREJUDICES ON ACCOUNT OF COLOR.

These Indians are all friendly to the United States It is their boast that they have never killed a white man in war.

I have found no prejudice against the colored race existing naturally among the Indians anywhere.

SIOUX AGENCIES.

Standing Rock Agency is 160 miles below Fort Berthold, on the river, sixty-five miles below Bismarck. This is an agency of the Sioux, and they are under the care of the Roman Catholic church, two priests and several sisters. The priest had about twenty or thirty boys in school, and the sisters about as many girls. They were nicely clad, and there was quite a satisfactory exhibition of advancement for the year they had spent there.

TEEPEES.

The Sioux live in lodges, or teepees as they call them, made of buffalo skins tanned with the hair off, sewed together, twenty-five or thirty skins to a teepee, and stretched upon poles which are tied together near the top and spread out at the bottom. A hole is left at the top, through which the poles project and the smoke finds its way out. These tents are quickly taken down and easily transported. The poles are tied to a horse, half on each side, with the ends trailing behind; the skins, rolled up, are carried on a traverse, together with the family furniture and children.

A LADY MISSIONARY'S SUCCESS.

At *Crow Creek*, the agent being absent, I found only a lady missionary of the Episcopal church, Mrs. Duigan. She has one of the best Indian schools I have ever seen. She has worked there two years, and quite a number of her scholars can speak some English. Her school is under excellent discipline, though right among their people. She does not permit the students to leave the school much during term time. Government has recognized her efforts, and given an appropriation for a new boarding-school-house large enough to accommodate fifty pupils. One of the Indian girls is an assistant in the school, and is a fine teacher. She has had six years of schooling and speaks English fluently.

DAKOTA BOOKS.

At Lower Brule, I found an Indian missionary in charge—a full-blooded Sioux who had been educated at the East through the efforts of Bishop Whipple. He is a minister of the Episcopal church, and has just begun his work at the station with some helpers. He has a little church and school-house at the agency, and there are two other school-houses at neighboring settlements of this agency. Dakota books are used at all the Sioux agencies; the Bible and some school books and a hymn book, having been translated. They have also a newspaper in that language. Some of the Indians who have come to Hampton can read and write in Sioux, or Dakota, as they prefer to call it.

Yankton Agency is the most southern and the last agency I visited. It is a Sioux agency, on the river, 750 miles below Fort Berthold. There is an Episcopal school under Bishop Hare, and a Presbyterian school under Mr. Williamson, who has been working among the Indians for many years.

NEARLY SNOWED UP.

Just below Bismarck, we met a snow-storm which lasted two days. There were six inches of snow. The dead places in the river froze over, and there was floating ice. The captain feared that we wouldn't get through, and it was the last boat of the season.

FIRST IMPRESSIONS OF THE CARS.

What were the Indians' impressions on seeing the cars?

Some had seen them before, and others had quite a good general impression of them. As the cars started off some apprehension was manifest. They would hold their blankets up before their faces, peep out for a moment, and then cover their faces again, not liking to see how fast they were going.

DOCILITY—ADVANCEMENT—POVERTY.

Were they docile?

All the way.

Do you think that some are not good material, and will give trouble?

A few may not turn out good material. But they are as docile as any class of people; they will give no serious trouble.

How many have never been under instruction?

From one-third to one-half have never been to school at all. Those that have been to Indian schools have been taught chiefly in Dakota.

What about their poverty?

They are very poor. Some of these tribes have been deprived of their ponies and arms.

INTERJECTIONS.

An Interjection is a word used in some excitment or sudden emotion: as O, Oh! Alas!

3. Good boys.... The teacher....
4. The wheat and corn....
5. The storm ... The wind.... The thunder....
6. The dog.... The squirrel.... My nussy....

What about their poverty?

They are very poor. Some of these tribes have been deprived of their ponies and arms.

GIVE THEM ENGLISH AND TRADES.

What is our work here for them?

Give them as much English as possible, and a knowledge of manual labor, trades, &c., I don't care of what kind. They need farmers, carpenters, blacksmiths, tinsmiths. There is Indian tinner at Yankton Agency, who, I am told, is making a living; and there is an Indian blacksmith at Fort Berthold who has been there two years or over and is doing well. There is nothing the Government needs more just now than English-speaking Indians, and we want to get them into a condition where all Christian people can get at them. Here we must the greatest effort.

ACCOUNT OF THE FORTY-NINE DAKOTA INDIANS.

From *Yankton Agency*, three girls, eight boys. Sioux tribe. Most advanced of all. Have been under Episcopal and Presbyterian teaching in their own language.

From *Lower Brule Agency*, six boys, mostly orphans, bright and hopeful. Sioux tribe; Brula band. Taught in Dakota language—in care of Episcopal Church.

From *Crow Creek Agency*, one girl, five boys, mostly good specimens. Sioux tribe; Uncapapa band. Taught principally in Dakota—in care of Episcopal Church.

From *Cheyenne River Agency*, nine boys, all under seventeen, exceptionally bright, a careful selection. Sioux tribe; two of the Sans Arc, two of the Two Kettle, five of the Minnecoujos bands. Two of them are sons of noted chiefs. Raw material—had no teaching.

From *Standing Rock Agency*, three boys, one girl. Roman Catholic Station.

From *Fort Berthold Agency*, four girls (promising,) nine boys; good material. Congregational teachers.

LESSONS IN GRAMMAR.

ADVERBS.

Adverbs are words used to modify verbs, adjectives and other adverbs; as, She walks *rapidly*. He is *very* kind. John reads *tolerably well*.

According to their meaning and use, adverbs are divided into three classes: adverbs of manner, time and place; answering the questions, How, when and where; as, quietly, now, there.

An Adverbial phrase is a combination of words used as an adverb; as, in short, at all, by and by.

Many adverbs are manufactured by adding *ly* to adjectives; these and some others may be compared by prefixing more and most, less and least. A few are compared irregularly; as, wall, better, best; ill, worse, worst; little, less, least; much, more, most.

In is improperly used for *into*. He went *into*, not *in* the house. It is necessary to go *to* a place before being *in*.

Between is used for two only; among in reference to more than two; as, He sat between his two friends; He was among his friends.

PREPOSITIONS.

A Preposition is a word that shows relation. Either the relative position of objects to one another, or the relations of words and ideas. as, The book is *on* the table; The book is *under* the table; The book is *in* the drawer; The book has dropped *to* the floor; The book is *against* the table; I take the book *from* the table *toward* the wall *with* my hand. You may use above, over, within, without, down, out of, before, behind, up, underneath, in the same manner. While other prepositions; as, I thought *of* him; She went *with* me; She called *for* me; show rather the relation between words and ideas.

The Preposition should generally be placed immediately before the word that it governs; as, With whom are you going? not, Whom are you going with.

Since is often confounded with the adverb ago; as, He called four days since. Since should be used only in measuring time from the past toward the present, and ago in measuring from the present toward the past; as, It is three months *since* school began; It began three months *ago*.

CONJUNCTIONS.

Conjunctions are words that connect words, phrases or sentences; as, Washington *and* Jackson were generals. The words generally used as Conjunctions are: also, and, as well as, but, because, for, if, inasmuch, lest, neither, nor, notwithstanding, nevertheless, or, than, though, since, unless, when, where, while.

Conjunctions couple the same cases of nouns or pronouns; and the same modes and tenses of verbes, unless the nominative is repeated; as, John and James are here; He came and went; He saw, but he would not hear.

Correlative Conjunctions are composed of two corresponding words; when one is used the other should be; as, either—or, neither—nor, though—yet, same—as, not only—but also, as—so, other, or the comparative degree,—than; *Either* you *or* I; *Neither* he *nor* she; *Though* I could *yet* I would not; None *other than* he. He is *better than* she is; They are the *same as* mine; *As* I heard *so* I spoke.

INTERJECTIONS.

An Interjection is a word used in some excitment or sudden emotion; as O, Oh! Alas!

Other parts of speech may be used as Intarjections; My son! Behold! What!

Interjections have no relation to any other part of the sentence.

CAPITAL LETTERS.

Capital letters are used at the beginning of every distinct sentence, to begin every line of poetry, for proper nouns and titles, or adjectives derived from proper nouns.

The pronoun I and interjection O are always capitals. The names of the days of the week, of the month; every name of God; every noun and principal word in the titles of books; common nouns personified; also the first word of a sentence directly quoted, should always begin with a capital. Examples:

Deal with another as you'd have
Another deal with you;

Hampton; Judge *Smith*; *Sir Walter Scott*; *American*; *Ciceronian*; *Sunday*; *July*; *Jehovah*; *Lord*; "*Guyot's Geography*"; O *Freedom*! *The Apostle John* says: "*The Word* was made flesh and dwelt among us.

PUNCTUATION.

The Comma (,) is used when a slight pause is necessary; to separate three or more words used alike, simple sentences, words in apposition, or when a verb is understood; as, A friend, always faithful, is beyond price; He was good, wise and great; Who can he say, when all around are sad? Scott, the great novelist, was a fine poet, essayist and historian; Some delight in study; others, in idleness.

A Semicolon (;) is used where a longer pause is required between clauses, or before as, introducing an example; as, A noun is a name; as, boy, man.

The Colon (:) is used where a still longer pause is required, between clauses, and before direct quotations; as, Sterne says: "God tempers the wind to the shorn lamb."

The Period (.) is used at the close of a sentence, and after abbreviations.

The Interrogation Point (?) is placed after every direct question, when an answer is required; as, How old is your friend? When the question is only said to be asked, it is not required; as, I was asked, how I liked Hampton.

The Exclamation Point is used after expressions of sudden emotion; as, Oh! Ah! Alas for frail man!

An Apostrophe (') is used where one or more letters are omitted; as, 'Tis, o'er.

Quotation Marks (" ") should be used immediately before and after a quotation; as, A wise man says: "Know thyself."

A Caret (∧), used only in writing, shows that the word or letter placed over it was only omitted by mistake; as,

thy
Honor father.
∧

LANGUAGE LESSONS.

Never let a grammar lesson—or any other lesson—get to be dull. Vary the exercises, and, if you see the little faces growing weary or inattentive, change the subject for the time—tell a story, or have a lively general exercise. These exercises can be made very useful and instructive. Those given below have all been tested, and found of great value in waking up pupils' minds, suggesting ideas, and teaching their proper expression.

The examples given will suggest many others to the mind of the teacher. They are quoted by permission, with some adaptations, from "Kerl's Composition and Rhetoric."

1.

Give a noun, or object word; as, *chair*, *stove*, *roof*, *star*, *clock*, *clay*, *water*, *fire*, *dust*, *spring*, *summer*, *umbrella*, *boot*, *city*, *baby*,—and let it go round the class in a spirited way, each pupil making a different sentence in which the word is used correctly.

Example:
1. I have a little chair.
2. See that chair.
3. Our baby has a high chair.
4. We have a rocking chair.

2.

Write a subject on the blackboard, and let the class supply different predicates, and different forms of the same predicate.

Example:
The boy walks.
The boy is walking.
The boy walked.
The boy was walking.
The boy did walk.
The boy talks.
The boy reads.
The boy writes.
The boy laughs.
The boy studies.
The boy plays.

In connection with this and all other exercises, the teacher should correct mistakes; such as, "I seen him;" He done it."

3.

Write or recite predicates to the following subjects; that is, complete the sentences:

1. The horse..... The horses..... The ox..... The oxen..... The army.....
2. The sheep.... James.... Alice and Mary....
3. Good boys.... The teacher....
4. The wheat and corn....
5. The storm ... The wind.... The thunder....
6. The dog.... The squirrel.... My pussy....
7. The tree.... The buttercup.... The rose....
8. The opossum.... The raccoon.... Our cow....

4.

Write or repeat subjects to the following predicates:

1. ...plays. ....play. ....swims. ....swim.
2. ....rests. ....rest. ....runs. ....run.
3. ....neighs. ....lows. ....cackles . ..crows.
4. ....is a good scholar. ....does not boil his hook.
5. ....is useful on a farm. ....is useful in a school.
6. ....is found in the woods. ....grows in swamps.
7. ....grows on old stumps. ... is green. ....is blue.

5.

Write or recite four sentences about a *Horse*.
Four about a Brook.
Four about the Sun.
Four about Houses.
Four about Geese.
Four about Spring.
Four about Summer.
Four about Boys.
Four about Girls.
Four about Lambs.

6.

Now we will take a boy named ——— (put in some name not in the school, and not personal, as Ebenezer,) and call him everything we can think of that begins with some letter—say G:

1. Ebenezer is good. 2. Ebenezer is gay. 3. Ebenezer is gallant. 4. Ebenezer is greedy. 5. Ebenezer is graceful. 6. Ebenezer is great. 7. Ebenezer is girlish. 8. Ebenezer is gracious. 9. Ebenezer is grasping. 10. Ebenezer is gentle. 11. Ebenezer is generous. 12. Ebenezer is giddy. 13. Ebenezer is a gentleman. 14. Ebenezer is a goosey. 15. Ebenezer is gasping.

7.

Pronouns, you have learned, are words put into the place of nouns, so that we need not repeat the same name too often.

In the following sentences, give the right pronouns instead of the repeated nouns, and supply a suitable pronoun when the word is left out:

1. John has learned John's lesson.
2. Mary has torn Mary's book.
3. The apple lay under the apple's tree.
4. The apples lay under the apples' tree.
5. Thomas has come home, and Thomas is well.
6. The gun was brought, but the gun was not loaded.
7. Laura was good, therefore Laura's teacher praised Laura.
8. Julia will buy you a basket, if Julia can buy the basket cheap.
9. Samuel and William went to meet Samuel and William's father, but Samuel and William did not meet Samuel and William's father, for Samuel and William's father came home another way.
10. John and I must start early, or John and I shall be too late.
11. Mary may have the doll, but.... want the sled.
12. I will take this book, and.... may take the....
13. The boy had an apple, and gave.... to.... sister.
14. The boy.... is good will be loved by.... teacher.

8.

Another excellent exercise for a class is to give them a short sentence, or the beginning of a sentence, and let them enlarge it, each one adding a little. If there is a blackboard, the teacher can write it down as they give it, and when it has gone round the class, the children will be delighted to see that they have written quite a little story, and will be interested in going over it again to correct mistakes, and improve it.

Example: We walk.

We walk in the garden.
We walk in the garden to see flowers.
We walk in the garden to see the flowers and watch grandfather plant cucumber seeds.
We walk in the garden to see the spring flowers, and opening buds; and to watch grandfather while he plants the little cucumber-seeds which will soon grow to be large green vines with yellow blossoms.

Enlarge the following sentences in like manner. Of course the first sentence need not be written over each time, as in the example which was written thus to show what each child might add.

Rain fell. Soldiers marched. Johnny went. We study. The boys ran. The boys worked.

9.

Conversation with the teacher may be made very useful to the pupils. Encourage the children to talk with you. They may bring objects to school to talk about. Lte them ask questions about it, and tell you all they know about it. Then tell them anything you can about it, and call on them to repeat the information you have given; correcting their mistakes in language after they have finished.

10.

Tell or read (better tell) the class some short interesting story. Then have them—at once, or the next day, as they are able—repeat it to you, using their own words or each of yours as they can. Be careful, first, to make sure that they get all the simple facts. Then criticize their language.

A VETERAN OF THE INDIAN SERVICE.

Agent Jno. D. Miles, who has charge of the Cheyenns and Arapahoe Indians

Don't give yourself any trouble about the "Sioux Cheyannes" who ran away; they loved the country up North, and would not be persuaded to remain here. I have told the

four days, and more than half the fam lies along the road have at least one case, and in some all the children are down with it.

The new City Hall just completed at Providence, R. I., at a cost of about $1,000,000, was dedicated on

Hampton Normal and Agricultural Institute,

A VETERAN OF THE INDIAN SERVICE.

Agent Jno. D. Miles, who has charge of the Cheyenne and Arapahoe Indians in the Indian Territory, and has given eleven of his best years to Indian agency work, paid Hampton a visit on the 19th. He came to see the eleven Indians belonging to his agency, who were sent here last spring from the Florida prisoners. After some exhibitions of their stock of knowledge in reading and arithmetic, he listened to and made notes of messages sent back to their friends and relatives by Matches, Roman Nose, Nick, Koba, Ohettoint, Bears Heart and Soaring Eagle. The teachers, and school management generally, were much pleased to hear the many expressions of satisfaction made by Agent Miles in regard to the advancement of his boys.

The Indian teachers organized a raid on the Agent in pursuit of the best methods to teach Indians, and found themselves well repaid, in having their present work confirmed, and new resources provided. The details of the good work on a similar scale going forward at his agency, under the management of his school contractor, Mr. Seger, who has 157 Cheyenne and Arapahoe boys and girls in training at a manual labor school, were most interesting. The fact that by their own labor these boys and girls have earned money enough to buy over 400 cattle, and have such interest in them as to seek to increase their number from year to year, is a very significant one. The teachers were highly pleased with several incidents of the school related by Agent Miles, particularly with an account of his taking a party of the children to the Wichita County, Kansas, fair, and of one of the Indian boys having carried off the highest premium for penmanship, when brought in competition with the white boys of Wichita.

Every minute of Agent Miles' stay at Hampton was used by him most industriously in examination and inquiry. He noted and invited attention to the circumstance that all the Cheyenne and Kiowa boys who sent messages to their relatives by him, spoke particularly of their mothers, saying that he always felt safe about his Indian boys when they grew anxious about their mothers. He regarded it as a very marked sign of advance in civilization. Having withstood the wreck of administrations, the mutations of Indian official service, and of harrowing Indian wars, for eleven years, we think Agent Miles a most competent judge. We hope he may visit Hampton School often.

STILL ON THE WHITE MAN'S ROAD.

AN ORIGINAL LETTER FROM A CHEYENNE CHIEF.

The friends of the St. Augustine Indians will be gratified by the evidence the following letter affords, that those who have returned to their wild homes are disappointing all fears and prognostications of their speedy relapse into savage ways. The letter is from Minimic, the old Cheyenne Chief, who will be remembered by all familiar with the prisoners at Fort Marion. It is written verhatim from his dictation by Agent Miles:

Cheyenne and Arapahoe Agency, }
DARLINGTON, IND. TY., *Oct.* 26, 1878. }

CAPT. R. H. PRATT, *Hampton, Va.:*

When I met Agent Miles at Wichita I was very glad, for I knew thet he was my friend. When I errived at the Agency I saw thet a great many of my friends end relatives were still "Indiens," end I wondered what I could do for them to get them to be like good whites. Howling Wolf and Ishen helped the Agent, and we got quite a number of our relatives to cut their hair and put on American clothes and go to work. You gave me the whole white man's road, end I still hold to it, have thrwn nothing ewey, nor do I expect to get tired. I am with the Agent and expect to assist him. All my femily ere living, none died while I was awey with you.

I often find that the Cheyennes do not do as they ought to, end I get discouraged. I then take out your photograph and look at your face and remember your words, end I am encouraged to persevere on. I would like so well to see your wife and children, end talk to you face to fece. I often wonder if you heve forgotten me, as you heve not written to me for so long a time. I would like to see all the Cheyennes at school. I know they must be doing well, for we often hear from them—would like for you to write me all about them. Don't give yonrself any trouble about the "Sioux Chsyennes" who ran awaj; they loved the country up North, and would not be persuadsd to remain here. I have told the Agent to "throw them away," for they were foolish. I hevs sat with the Agent in council end have helped him to talk to "Dull Knife" and party, but they *would* not listen to good talk. Your friend, his

MINIMIC. X
mark.

NOTE. Minimic has dictated every word of the above, and wished me to say that he is still a "white man." As ever,

J. D. MILES.

Roman Nose, in his speech to Agent Miles said: "I stey here three years. I learn English. I learn to work. I know something. Then I go to Indien Territory, I teech my people, all my friends." After he had concluded his speech, Agent Miles replied: "I want to say to you, Ronan Nose, end to all these boys, that you heve begun to teech your people already. Your letters, Roman Nose, that you havs written back to your father, have had such en effect on the old men thet he has thrown away his blanket and wears white men's clothes—and has gone to work regularly. He comes into ths egency regularly to hear from you. He is reelly very much changed and that entirely through the influence of your letters. Every letter eny of you write home to your fathers, mothers, brothers, sisters or friends is read in one or meetings, end to meny of your people, end they do lots of good. You ere doing good now. You are on the right road. Stick to it."

NEWS OF THE MONTH.

FOREIGN.

THE late European Turkish provinces are still in an unsettled condition.

THE Turkish Government has indefinitely postponed the carrying out of reforms in Asia Minor, professedly for want of funds.

THE directors and other officials of the City of Glasgow Bank have been committed for trial on charges of fraud and theft. The relatives of John Stewart, one of the directors, have offered $500,000 as his bail. Several person prominently connected with the bank have disappeared.

The Scotch High Court of Judiciary has definitely refused to admit to bail any more of the City of Glasgow Bank directors.

The Scotch relief fund for the benefit of the stockholders of the City of Glasgow Bank has reached $825,000.

There have been numerous failures in England and Scotland.

THERE have been heavy floods and a great destruction of life and property in France.

A TELEGRAM from Rome says the negotiations between the Vatican and Germany are progressing slowly. Both sides are anxious to arrive at a prompt settlement concerning the dioceses of Alsace and Loraine, which are still administered as when they belonged to France. The Vatican will take advantage of the recent defeat of the radicals in Switzerland to establish relations with that country. The exiled Swiss bishops have already been notified to return.

A CONVENTION concluded at Paris between the countries of the Latin Union provides that the coinage of gold shall remain free, and the coinage of silver, suspended indefinitely, cannot be resumed without the consent of all the members of the union. The convention requires ratification by the Chambers of the countries of the countries in the union.

THE favorable result, to the Republicans, of the election for French Senators is confirmed. The Republicans, it is said, will carry 46 of the 75 Senatorships to be filled, a gain of 28.

A SECRET treaty between England and Austria has come to light.

AN attempt was made on Sunday, Nov. 17th to assassinate the King of Italy as he was entering Naples.

SNOW storms of exceptional severity for this time of the year prevailed on the 13th in the north and northwest of England, and throughout Scotland.

A COAL field has been discovered in India.

THE Marquis and Marchioness of Lorne have arrived at their new home in Canada.

A LITTLE war is going on between Afghanistan and England.

LONDON, November 26.—The Hamburg-American Line steamship Pommsrania, Captain Schwensen, which sailed from New York November 4th for Hamburg, and arrived at Plymouth at midnight on the 24th instant, came into collision last night about midnight, during a fog, about four miles southwest of Folkstone, with a British Bark. The Pommerania at the time was on her way from Plymouth to Hamburg. The steamship foundered in about ten minutes. One hundred and seventy-two were saved by the iron screw-steamer Glengarry, of Middlesboro', and landed at Dover. Fifty-eight persons are missing. The Captain and all the crew were saved. The vessel with which the Pommerania collided is reported off Folkstone with bows stove forward. Her compartment was full of water, and a tug had gone to her assistance.

DOMESTIC.

THE annual report of the Patent Office, submitted to the Secretary of the Interior, shows that for the year ending June 30th last, 19,057 original applications, were received and 14,019 new patents issued. There were 872 reissues and 722 patents granted for designs, and 9,757 caveats were filed. The total receipts of the office were $734,888 and the total expenditures $665,906. Of the amount expended, $50,000 was for the restoration of models injured by the fire last year. 1,505 trade marks were registered, against 938 the previous year.

A DISPATCH from Parkersburg, West Va., says that along the line of the Baltimore and Ohio Railroad, for forty miles east of that city, diphtheria is raging to a greater extent than was ever known in that region. Twelve children have died within four days, and more than half the families along the road have at least one case, and in some all the children are down with it.

THE new City Hall just completed at Providence, R. I., at a cost of about $1,000,000, was dedicated on the 14th.

L. D. PILSBURY, Superintendent of Albany Penitentiary, has paid over to the County Treasurer $42,437.51, being the net earnings of that institution for the year ending Oct. 31st.

NEW YORK POLICE STATISTICS.—During the quarter ending September 30 the New York city police made 20,208 arrests, the proportion of men to women arrested being about two to one. Of the total number arrested 7,173 were married and 13,026 were single; 5,449 could neither read nor write. The ages of those arrested were as follow: Under twenty years, 3,857; between twenty and thirty, 7,285; between thirty and forty, 5,033; between forty and fifty, 2,542; over fifty 1,491. The nationalities represented were: United States, 9,105; Ireland, 7,494; Germany, 1,949; England 545; colored (United States), 325; Scotland, 224; Italy, 203; France, 148; British Provinces, 133; Norway and Sweden, 42; Spain and Cuba, 38; Poland, 28; Russia, 17; Switzerland, 14; China, 1); Prussia, 4; Turkey, 1 and Africa, 1. Among the occupations of those arrested 3,885 labors head the list; there were noticeable 1 politician, 17 dog catchers, 6 clergymen, 26 editors and reporters, 28 lawyers, 15 physicians, 227 printers, 7 telegraphers, and 1 sexton; 5,089 had no occupation. There were 4,099 arrests for intoxication. Then in numerical order came disorderly conduct, assaults and battery, larceny, vagrancy, burglary, forgery and robbery. There were 19 arrests for homicide. There were 42 suicides reported—6 by poison, 7 by hanging, 12 by shooting, 8 by drowning, 9 by the knife and 2 from jumping from buildings. There were 36 attempted suicides and 146 sudden death; 1,222 lost children were found; 226 persons were found; 295 persons were found sick and destitute and were taken care of by the police.

THE tomb of the late A. T. Stewart at St. Mark's churchyard, New York City, was robbed of the millionaire's remains on the night of Nov. 7th. A reward of $50,000 is offered, but no trace of the body or of the robbers has been found.

THE United States Government has paid to England the Halifax Fishing award, amounting to $5,500,000.

PENSACOLA, FLA., November 11.—The Australian, for Liverpool, cleared to-day with 6,500 bales of cotton, $300,000, the largest cargo ever shipped from this port.

MACON, GA., November 11.—A fire at the State Lunatic Asylum at Milledgeville destroyed several out-buildings, storehouses, and supplies. There were no accidents to the inmates, but much excitement prevailed. Loss about $4,000.

THE excess of exports from the U. S. over the imports for the ten months ending Nov. 1st, amount to $237,070,012. The excess of imports of bullion over exports for the same period were $2,446,461. During the ten months of 1877 the exports of bullion exceeded the imports by $24,999,949.

Begin right, boys. Don't indulge in any kind of bad habits, thinking that hy-and-by you will break them off. Begin right, and keep on right. Ask God to make you strong. The manliest thing you can do is to give yourself to God, and seek his help day by day, The very best thing that can be said of any young man is, "He is a Christian." OAK.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States*, and *by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

WHO FOUND JAMIE?

BY HELEN W. LUDLOW.

The door bell rang.

That was not an uncommon occurence, as you may imagine, at No. 1, Rivington Square, an uptown, city boarding-house with a doctor's office in the basement. So I don't know why a sudden impulse of feminine curiosity should have stopped me on my way upstairs, and made me look back over my shoulder, through the opening door.

Feminine curiosity, however, was for once justified. A picture for a painter was framed in the doorway. It held me suspended between the first and second floors.

Just a pretty little frish woman, with a pretty bit of a baby in her arms.

It was the baby that did it, I know:—gave the mother's shoulder that tender droop, with the faded shawl dropping from it in a few artistic folds, pushed the rusty bonnet back out of sight, and laid its own red-riding-hood and flower-like face against the black locks straying over her eyes; while winter roses blossomed on the brown cheeks below, and the dainty ones above; and the slow-falling November snow and gray pavements dimly showing through it, made a soft-tinted background for all.

"An' is the Docther at home?"

A voice like music I turned, ran down stairs, and held out my hand.

"Ah! it is you, Mrs. McGuire. Come in. The doctor will be at home presently. Bring that baby in, out of the cold—the dear little dot!" and with another feminine impulse, I took it from its mother's arms and kissed it. I never *was* proof against a clean, sweet baby, and this was dainty enough for any one to kiss.

Besides, little Mrs. McGuire was an old pensioner of ours. Some sympathetic, out-giving souls have a way, you know, of attracting to themselves all the odds and ends of humanity. I always told *my* "beloved physician" that his sign ought to read,

"Come ye disconsolate."

At any rate, they came all the same as if it did, and this was one of the best of them; that is to say, the most needy—not so much of silver and gold, as of general advice and comfort, and human cheer, which the richest are not always rich in. For this she had come to us often in the five years since the stormy night when Hugh found her nearly frozen in the streets, flying from her old husband's abuse and drunken rage, turned out of doors with her baby to die.

Since our first introduction to her, we had moved from the suburbs to the city, and had not seen her as frequently as before, though never quite losing sight of her. I thought to myself, What new trouble now? as I asked her in; but before any questioning, I took her into the study and established her by the fire, hung her dripping shawl and limp bonnet to dry, and gave her a good hot cup of Hugh's own tea as tenderly as I know he would himself, the pretty blue-eyed baby, which I had not seen before, supplying, meanwhile, a safe and pleasant topic of discussion. Then, after it had received its own appropriate consolation, and cooed itself to sleep in its poor little mother's arms, and been laid away on a rug on the lounge, I said:

"And what is it that has brought you so far this stormy day, Mrs. McGuire? You are as wet as if you had walked all the way."

"An' that's what I did, ma'am, ivery shtep, barrin' the ferry."

"What! Two whole miles—three miles with the other side? You don't mean to say that——"

"No, ma'am; he gave me tha fare himself," she said, divining and turning aside my suspicion of some new outrageous demonstration on the part of her tyrant.

"But what then? That baby ought not to have been out so long in this weather—though it does look like a daisy. And you must be perfectly dragged out, carrying it! What is it?"

The winter roses had faded out of the brown cheeks, but a flush of excitement rose in their place as she looked at me. I noticed how thin the cheeks were, and how hollow and haggard the pleasant, deep blue, frish eyes, heavy with unshed tears, and weary to exhaustion. She only said:

"It's Jamie, ma'am."

"Jamie? Is he sick? Oh, you don't mean he has run away again?"

"Ha has, ma'am. He's been away goin' on four months."

"Four months! You poor, or woman! Why didn't you come and tell us sooner?"

She glanced at the sleeping y.

"I couldn't, ma'am. I was y had with the worry, and I couldn't iver get so far, ti ow."

It seemed cruel to search her f further, but, with some hesitation, I said:

"It wasn't his father, this time, I hope."

When Jamie was scarcely five years old, his unnatural father, in a fit of anger against his wife, carried him off to spite her, and after keeping him all night in no one knows what dens of low drunkenness, came home without him. If it was true that time, as he declared when he woke from his heavy sleep, that he had not done it on purpose, having once discovered this original and effective means of torturing the poor little creature in his power, he redeemed himself from any suspicion of a lack of purpose, by repeating it again and again. Three times in as many years, the child was thus carried off and dropped, like a forlorn little kitten, in the dark streets at night, not so far from home, fortunately, but that every time a friendly neighbor or the street watchman brought him back, pityingly, the next morning to the distracted mother.

But, whether from these infantile experiences of night revelries and sleeping under the stars on ash-heaps or area steps, the boy had acquired a love for street life, or was instigated to it by his father, or, more likely still, had inherited from him some perverse distortion of nature, as he grew older, he developed a fondness for wandering on his own account, and was fast becoming a little wild street Arab, restrained by small love for his long-suffering mother. He had been gone for a fortnight the last time, and when he came creeping back, dirty and ragged and half-starved, his mother, roused to unaccustomed energy, placed him in the safe keeping of the "Sisters" in a Roman Catholic reform-school.

So it was with some uncertainty that, surprised at his escape, I asked whether his father had helped him off.

"Deed no, ma'am. The ould man has been pretty dacent to to me lately. An' I thought Jamie would get along all right at the Sisthers. I felt real safe about him. They were teaching him a trade, don't you see—hoop-skirt making—all the b'ys worked at it. He didn't like it very much; but it wasn't hard work, and he had enough to eat, an' they taught him his book, an' I wint to see him myself ivery week, visiting day, so he shouldn't get lonesome. Och! whin I wint up to see him—it was some time last May—an' they tould me he had run away, you could have knocked me down wid a shtraw just, I was that weak."

"What did he run away for? How did he get away?"

"He got tired o' stayin' an' workin', an' he shpoke up right saucy to one of the Sisthers, an' threatened to run off, an' she gave him a whippin' for it. I don't suppose he got more than he deserved, but he never would take whippin' well. The ould man has been him often, but I'd niver raised a han' to him, an' he wouldn't shtand it from a woman. So thin he wouldn't stay anyway, an' he got off that same night—got over the big high garden wall; however he did it I don't know, but he could do anythin' in climbin'."

"And you've never seen him since?"

"Oh yes, ma'am. He came shtealing home that very night to me—watched his chance when he saw his father go out. 'Och, Jamie!' says I, after I'd kissed him an' cried over him,—'however could you?' 'Don't say a word, mother,' says he; 'if you wont send me back, an' father'll promise not to beat me, I'll niver run away again; but I'll niver go back there alive,' says he—an' he just a little feller of ten years old, but he shpoke up as fierce as a man.

"Well, I gave him his supper, an' told him to go into the neighbors', till I'd shpeak to his father; an' so I did, an' the ould man was good natured, an' promised fair he'd niver lay a finger on him, an' no more he didn't. An' Jamie was just as good wid me, an' kind as iver you'd ashk, or expict, an' shtayed around home, an' helped me wid the childer, an' ran on errands, an' always came back just as good. I thought all my troubles was over, ivery wan!"

"Wasn't I tellin' you how good he was till me, ma'am? An' so he was—just like a little lamb. I took all the comfort in life wid him, and the ould man, him so clever, an' the childer well—ah! them was the happy days! An' so it wint on till one mornin'—I think it was just about six weeks since I'd had him home, a Monday mornin'—I got the breakfast out of the way, an' the ould man off to his work, an' I got my tubs out an' thought I'd have my washin' done up in a hurry. An' I hadn't a bit of soap in the house, an' Jamie was takin' care of Mary Ellen and Johnny, makin' pictures for them, just as nice; an' I said, 'Jamie, I'll look afther the childer, till you run to the grocery an' fetch me a bar of soap,' says I. 'Yes, mother,' says he—just as cheerful—an' he got his cap, an' I gave him the six pinnies, niver uishtrushtin' nothin'. Jamie niver did lift a cint off me; he was no thief; there wasn't a thievin' hair on him. 'Now run quick, Jamie dear,' says I. 'Yes, mother; I'll be back right off;' so he shouted to me from the shtreet, an' turned about an' smiled at me, so he did, an' swung his little cap, an' darted off like a flash; an' Johnnie a callin' afther him, an' me a shtandin' there in the doorway, smilin' an' thinkin' what a comfort he was, afther all.

"An' that—was—the last—minute—I've iver—set eyes onto him—from that blessed day to this."

She was not crying, poor, heart-broken mother, but I was, and I hope you are.

"It was two months an' over before I was able to raise a hand about it meself. While he didn't come, an' I got frightened, I took Johnny an' Mary Ellen into the neighbors, an' wint round to the grocery—it wasn't five minutes' walk—an' they told me they'd given him the soap, but hadn't noticed whin he wint out;—no more they wouldn't, you know, ma'am, av course. An' I looked about a bit for him, an' thin I thought maybe he'd be home before me, an' I wint back, but he wasn't there. An' I wint out again, but I couldn't get no word of him. An' whin the ould man came home for his dinner, there wasn't any for him, an' I didn't care. I charged him with takin' Jamie off, but he shwore he didn't. An' thin I wint out of me head like, an' didn't know much how things wint till afther baby came, poor little thing, an' afther that I wasn't able just to raise me head, not for two months, as I told you. The ould man seemed sorry, an' kept pretty sober, an' got his daughter to come an' get the meals. He did what he could about it, I believe. He wint up for me to the Sisthers, but they hadn't seen him there. An' so it wint on, in hopin' he'd come back, day afther day. He'd niver been gone so long before. When I got able to walk, the neighbors were good an' had an eye to the childer, now an' thin, an' I wint out a little ivery day, lookin', till I got shtrong enough to go further an' carry the baby. Thin I just took her in my arms, an' came across to the city, an' walked an' walked till I knew I mustn't walk a shtep further if I iver wanted to get back. Many's the mile poor hahy an' I has walked, lookin' an' lookin', but we've niver got as far as this before."

Ah—looking and looking—many a mile. How my heart followed the image that fancy called up, of the poor little woman and the baby born to sorrow, walking wearily, how wearily, through the long noisy streets of the great city so overpowering in its vastness, so lonely in its fullness, to a mother who seeks among its great, hopeless throngs for one little lost child!

As we sat cozy and comfortable that night by the bit of open grate fire that Hugh, I am glad to say, always will indulge in, I told him the sad story in few words; and, in fewer still, his practical, common-sense kindness responded promptly, as I knew it would.

"The police stations must be notified at once. It ought to have been done at first. And I'll send a description of the case to the Children's Hospital, and House of Refuge, and to all the private asylums where such little waifs would naturally drift. If the poor soul wants to go herself to look, I'll give her letters and get passes for her. He's most likely safe in one of them, poor little scamp."

O Hugh, do you really think so?"

"Yes indeed, dear; there's little that escapes those nets."

Hugh went himself, the first thing next morning, to the nearest police station to give a minute description of little Jamie and his disappearance, and instantly, from station to station round the great city, the message flashed, till the whole beneficent strength of the law's keen vision was focussed upon this one little vagrant. The police officers shook their heads, however, over the length of time that had elapsed, and said,

"More chance at the Refuges."

Just as soon as the necessary passes could be obtained, we sent for Mrs. McGuire, and, with heart throbbing wild with feverish hope, she started upon the new trail among asylums and lodging-houses and hospitals. When it was possible, we went with her to make her reception surer and her search easier. Ah, the thousands of homeless little ones in a great city; the hundreds of childish faces that passed before us, of all colors and nationalities! But among all the hundreds, no Jamie.

"She'll bo down sick, to-morrow," I said to Hugh, as the cab rolled off in which he had sent her home from the last Refuge on our list.

"Yes; poor soul," he assented. "I've a call over there to-morrow afternoon,"—he still kept a few patients in our old home—"and I'll try to run in and see her."

We certainly did not expect to see her in the city, and were surprised enough when, as we were sitting at lunch, the familiar message was brought in:

"The little Irish woman is waiting in the office for the Doctor."

I ran in first to see her while Hugh finished his lunch. I almost doubted her sanity, as I met her hungry, restless eyes, and noticed the burning spots under them. As gently as possible, I told her that no word had come to us yet from the police, but she hardly seemed to hear what I said.

"Didn't you tell me, ma'am, that there'd be some way found yet to get him? An' it's this it is, maybe."

She held out with trembling hand, a dingy, ragged bit of newspaper.

"Well, what is this?" I said, turning it over and over, gingerly, and reading only various advertisements—Houses to let—Board wanted—Use Dr. Killdear's Baby Mixture—ah!—

"Seventh Daugbter of a Seventh Deughter. Grandchild of an Arabian astrologer. Medams Latour, the well-known clairvoyant, from Paris, discovers what is lost, reads the past and the future, reveals the destiny, tells name and shows likeness of future husband or wife. Fortunes told told by card reading, palmistry, or consultation with spirits, and clairvoyance.

on each one of us, though, somehow, when it was my turn, I felt transfixed.

"Do you come to consult me, ladies?"

Her accent did not suggest the Arabian astrologer, nor the Parisian extraction, and my courage rose, while I briefly explained that it was only I who wished the consultation.

"Dat lets you out, for I am in trouble," retorted the Madam.

and triumphant as I meant it to be. I was ready to give up all my theories of treatment, and very much afraid I had killed my patient with an overdose of stimulants.

"Well, cheer up, dear; we did the very best we knew," he said, kindly taking a share of the responsibility. "I'll tell you how we can use up some time at least. The settlements along the Pacific Road are not innumerable. We can find out every one, and send a note to the postmaster

"Seventh Daughter of a Seventh Daughter. Grand-child of an Arabian astrologer. Madame Latonr, the well-known clairvoyant, from Paris, discovers what is lost, reads the past and the future, reveals the destiny, tells name and ehows likeness of future husband or wife. Fortunes told told by card reading, palmistry, or consultation with spirits, and clairvoyance.

Madame Latour is conenlted by the first ladies and gentlemen of the city, and never fails to give satisfaction. Gives equal attention to rich and poor. Ladies hours, 8 to 4; Gentlemen, 5 to 8. Evening seances twice a week, with materialization of spirit forms and faces."

I felt those hungry eyes on my face as I read, and tried to meke it impassive.

"Yes, thet's it just, ma'am. It was Mrs. McGraw gave it till me when I got home last night. Wasn't she waitin' for me, with the childer all ebed, and a hot cup o' tay for me, and when she was after makin' me drink it, sure she says, 'There's thim as knows where Jamie is,' she says, 'an' can bring him back till ye,' says she, an' she gives me this bit as she'd found in the peper that very day, that come round the tay she'd bought for me, bless her. An' I was that worn ont I went to ahlape like a behy, with it clutched right in me hand, an' I had a drame about Jamie how he'd come home till me—an' O ma'am, if you an' the Docther will lend me the money to go the Madam, I'll work me fingers off, but I'll pay back ivery cent till ye."

Lend her the money! I knew well enough she meent what ehe said, and would do it; hut to lend her only new disappointment and misery—

I heard Hugh's step,—"Wait a minnte," I eaid, and ran to stop him in the inner office, drawing the door shut after me.

"O Hugh, only look at thet. The poor women really wants to try it."

He read the Madam's elluring annouucement. What reply would you expect a "regular" physician to make? Of course—that's just it. He said,

"Nonsense!" and thet with some vigor.

I put my hand on his arm.

"Yes, Hugh, hut somehow I can't quite go back and tell that poor heert-broken thing so."

"Would you rather raise false hopes, dear, that would only prolong her agony?"

"The hopes are raised already, Hugh. Besides,"—I went on, arguing as much with myself as with him, "I do believe ehe would die, without some sort of hope; and you know, you give etimulents sometimes to keep a patient up on false etrength till he has a chance to rally. Perhaps this would occupy her mind for awhile, and tide her over ehe worst, and meantime something might turn up, or ehe might at least get over the dreadful fatigue of these expeditions and gain a little hit of strength."

"Well," said Hugh, smiling at my medical theories, "there's something in that view of the case. And do yon propose to take her to thie ehrine of the prophets?"

"Why, yes, Hugh, if you don't mind. That is, unless you have some wiser plan to offer," I said a little artfnlly, for I was quite enre he hadn't.

"No, there's nothing left that I can see but to wait for some clue from the police, and I've no idea now that it will ever come. These little nobodies are as hard to identify as a stray cat. You may try yonr treatment, if yon like, hnt let me meke eure it's the the best piece for you to go to. One may have e choice of oracles, I suppose.

"Oh, Medame Latonr; I am pretty sure it's the best there is, Hugh. She's all the feshion. Mies Roye and Mr. Seundera were discussing her last evening at dinner. Miss Roye has heen to one of her seances, and saye that though she doesn't believe in euch things herself, Medame Letour certainly does do most wonderful things that cannot be explained."

"Seneible woman—I mean not to helieve altogether in such things. You had hetter take her with yon. I don't like to heve you go there alone, with Mrs. McGuire. She might go into hysterics, and you would need help. Well, good-hye dear."

"Good-hye, Hugh. I shall heve some sort of a etory to tell you to-night."

I went back with the comfort of consent to her petition, to poor Mrs. McGuire, feeling, in epite of my plausible arguments, very doubtful whether I was more kind than cruel, and yet that she could not have borne a refussal.

Miss Roye was delighted with my invitation to accompany us to the medium's: poor Mrs. McGuire was beyond minding the presence of a stranger, and at two o'clock we mounted the steps of a brick house. My light touch of the bell was answered instantly, and the door was thrown open by a respectable looking colored waiter. Yes, the Madam was at home, to ladies, and we were ushered into a reception room to wait till she was at liberty.

A French nurse with a daintily dressed little girl, was preparing to leave, with a pair of flushed cheeks that a walk in the Park might cool, hut I wondered how the "little pitcher" could he prevented from pouring out a story of the visit to Mamma when they got home. In twenty minntes more, which seemed twice as long, two women draped in the deepest mourning, passed slowly by the door and went out, the elder supporting the younger who was weeping violently under her long crape veil.

We were then at once summoned into an inner parlor, larger and darker, empty of any human presence, and not suggestive of spiritnal occupancy. It had only the ordinary scanty furniture of any unfashionable city rented honse.

A door opposite the mirror opened quietly, and the seventh grand-daughter of the Arabian astrologer stood before ne. A tall, stout woman with masses of black hair puffed and piled high npon her head, in the style then prevailing on fashion plates, a face that would have been simply coarsely expressionless, but for a pair of quick, searching black eyes. If they looked as sharply into futurity as they did around them, they ought to have seen much. They rested a scarcely appreciable moment on each one of us, though, somehow, when it was my turn, I felt transfixed.

"Do you come to consult me, ladies?"

Her accent did not suggest the Arabian astrologer, nor the Parisian extraction, and my courage rose, while I briefly explained that it was only I who wished the consultation.

"But it's *you* that are in tronhle," retorted the Medam, turning suddenly upon Mrs. McGuire, who, startled completely off her guard, clasped her hande convulsively and sobbed out:

"An' sure that's thrue for ye, ma'am. An' if ye'll help me out, it's the Lord himself will bliss ye."

"You have met with e loss," said the Madam, calmly, seeting herself at the table. "You huve come to the right place for help Now"—addressing me—"will yon conenlt hy the c ds, or the spirits, or clairvoyance?"

I hesitated.

"An' which wan (im ways is the best thin?" asked Mrs. McGuire, appe (to the oracle herself.

"All are equally , and perfectly satisfactory as far as they go. Of rse, you can't do as much with cards."

"*Spirits*," mc d Miss Roye's lips behind her hand.

"The only ' in consulting the spirits," said the Madam, as if ng an audible suggestion, "is that you can't always he sure they are not lying spirits. In clairvoyance, I tell only what I see myself, so I know it is reliable."

So the question was settled.

"Please draw up to the table," said Madam Latour, handing me a long strip of thin brown wrapping paper, "and write upon this, the name of the lost. You will observe that I shall not look at it, hut you can make the test as perfect as you please hy covering your writing, end when it is written, double the peper over and over till it is a mere strip."

I took the paper with a feeling that it was all a child's game, and I had to consider what the consequences were and what the world would say. The Madam turned her keen eyes religiously awey, and, screening one hand with the other, in small feint characters, I wrote the name, Jemie McGuire, at the top of my peper, folding it over and over, as she had said, giving the strip thus formed en extre fold across. It was no sooner done than the Medam extended her hand, without a word, and without turning her eyes which seemed to be closed, her head resting upon her other hand, her elbow supported by the back of her chair. I dropped the folded slip into her open palm, her fingers closed upon it, and —still without her head'e turning—went through a series of manipuletione with no effect thet I could see, but to crush and twist the slip more and more hopelessly for any examinntion, at last giving it a careless toss over her head into the fireplace, where it lay with the other wisps and explained their presence.

Her arm, returning, sank listlessly on the table, her head droopeel lower; ehe seemed to heve dropped asleep with the facility of the fat boy in Pickwick. In a few minutes, however, her breast began to heave and pent as if she were struggling under some mysterious influence, "Is it not ewe inspiring?" murmured Miss Roye.

The convulsive gasps ceased, and in dreamy, slow utterance, with eyes still closed, our oracle began to speak.

"Where—em—I? Snow—snow—snow—stretching everywhere as far as I can see; and long bleck lines running straight through it. They are railroad tracks. No hills, all flat like fields or like the sea. Far off I see something moving—like a lot of animels running. Now I see a few houses in a line along the track. A little further off, I see a lerge log house. A men is working outside. The sides of the house are growing like glass to me. I can see right through into the room. It is a pleasant looking room—like a kitchen—warm and bright. An open fireplace, and a coal fire. A woman is clearing off the table. A baby is in a cradle. In front of the fire a little boy is sitting, mendiug a sled. He is a small boy with derk hrown heir and red cheeks. Now the woman is speaking. What is ehe saying? Be still now, and let me listen. She says:

"'You'll go to echool to-day, *Jamie McGuire*,'"

A faint scream from the over-taxed little mother started Miss Rose and myself to our feet. What other sentences the clairvoyant may have spoken, if any, we did not heed or hear, as we caught the poor fainting woman and laid her on a sofa. She did not lie there long. How Madam Latour came out of her trance we did not notice; hut ehe rose from her chair, exclaiming—

"Where am I? Oh—what have I been saying? What is the matter?"

The fainting mother heard her, and, rousing, in a frenzy of excitement, was down at her feet on her knees.

"An' couldn't ye," ehe pleaded, "find out the name of that far place, an' let me go there for him—or maybe you could get thim creatures to send him back till me?"

"Well, I've almost given up snch efforts. It is a great exertion, a great strain upon my nervous system," sighed the Madam. "Now I see that you are a poor woman," she added, benevolently, "and you had better save your money for yourself, as long as Jamie is so well off. For it would take a great deal to bring him back."

"How much, then?" broke in the mother.

"Put it as low as I could, for you—it's really a dangerous exertion for me. Put it as low as I could, because I know you're poor, I couldn't in conscience, ask less than twenty dollars."

"I could work an' get it, yes, I could, if you'd only be so good as to wait for it, or let me pay up a bit at a time. I'd pay you ivery cint, that I would, an' bless you too, ma'am."

My impatience rose over its bounds, the more because I was angry with myself for having brought myself and the poor little woman into euch a position. "Come, Mrs. McGuire," I said, "you had hetter go home and think this over. Madam Latonr will trust you if you decide to come to her."

My story for Hugh that evening, after Mrs. McGuire had had her dinner and gone home, was not as bright and triumphant as I meant it to be. I was ready to give up all my theories of treatment, and very much afraid I had killed my patient with an overdose of etimulants.

"Well, cheer np, dear; we did the very best we knew," he said, kindly taking a share of the responsibility. "I'll tell you how we can use up some time at least. The settlement along the Pacific Road are not innumerable. We can find ont every one, and send a note to the postmaster or station-keeper and inquire if any such family with euch a child lives there."

For all Hugh's generosity and ingenious devices, I ley awake most of the night, thinking over the difficulties of the case, pitying a weary mother, indignant with the woman who, I believed, was deceiving her, and feeling with shame a sense of having assisted the fraud. I went to hrenkfast next morning with a nervous headache which received a sudden impetus when the office bell rang, and the old message was brought in.

"The little Irish woman to see you, ma'am, and the Doctor."

"We'll go together," said Hugh, and so we did.

Was she really insane this time? I thought so when we opened the office door. She looked ready to spring at us. Her eyes were almost black with excitement. Her cheeks burned. She was quivering all over, laughing hysterically hetween sohe, and then the tears streamed forth as I had never seen them in her darkest dnye, as ebe clapped her hands and exclaimed:

"O Doctor dear—O ma'am! Blessed be God! He'e found! Jamie's found!"

"Thank God!" we both exclaimed.

"But where—how—out West?" I stammered, hardly knowing what to think. The mere suggestion calmed her.

"Ah, ma'am, sure the Lord was better to me than that false desayvin' creature—though it's too happy I am, to be nagger with one one now. Wasn't I goin' home last night ready to pay her ivery cint I had in the world, and believe ivery word of her foolishness, an' didn't I find, right there in me own house, a hit of a letter writin' for me, just like an angel had brought the same, an' it right from that blessed man Mr. Christian himself—him ne kapes the Shepherd's Fold, ye know, sir—sure it's Christinn he is by name, and Christian by nature. Mary Ellen an' me made it ont together, an' it sayin', how four weeks ago, only just a hit afther we'd wint there, you know, ma'am, a poor little b'y was brought in by a newe-girl who had found him sick in the streets, an' he come right down with the faver, an' couldn't say a word. An' when he got better, he gave his nnme as Johnnie Mellin, don't you see, an' said he hadn't any home, an' they kep' him in the school, an' took care of him. But his tacher found him cryin' ivery day, do you see, ma'am; cryin' an' cryin'; an' wouldn't play with the other b'ys; an' he wouldn't tell wan of them what the matter was, till, at last, they were so kind he lost fenr of them, an' owned up his name wasn't Johnnie Mellin, but Jamie McGuire, an' he had a mother just over the river, only he was afraid to go home hecause they thonght he'd run away. An' so Mr. Christian said I'd best come over an' see him first, instead of his sendin' him home."

"*Thought* he'd run away? But hndn't he?"

"That's just what I don't understend yet, ma'am; for, don't you see, when you'd been so good helpin' me an' upholdin' me, sure I couldn't do onything till I'd come an' towld ye."

And so, within an hour, we had the pleasure which nny one might think a rich one, of seeing that mother heart clasp to its closest embrace, the little hrown head so long missed, thet poor little waif taken np into the warmth and tenderness of a mother's love, that love satisfied for all the long days of cruel pain.

And this, perhaps, would he a good place to stop; hnt I know you will want, as we did, to listen to Jnnie's poor little story, and learn how it was that "they thought he'd run away," and he thought he hadn't.

"And oh, I'm so sorry, mother," he sohbed, "and sure I never meant to leave you. But after I'd got the soap, and went out of the store, there was Pat O'Brien, and Tim Rooney, and Johnnie Sullivan, and we got playin' and cuttin' up, and I left down the soap somewhere, and it went just clean out of my hend. And we went down to the docks to play, and jumped on a canal boat a lyin' there, and before ever we knew, there ehe was out in the middle of the stream, and an old tug takin' her down to the locke. Oh, wasn't we scared, though! And the captain he swore at us; but when we got to the locks, he let the boye off. But it was an awful waye from home, and I was afraid to go back so late, and without the soap or the money. So I begged the captain to let me stay on board and work, and I told him that my father and mother was dead, and there wasn't nobody to say I shouldn't—I didn't know how awful mean that was till Mr. Christian told me—and so, at last, he said I might, and so I went all the way down into Pennsylvany with the boat, down among the coal mines. Sometimes the boye let me ride the horses. Thnt was hully. Only, sometimes, they knocked me about too. When we got down there. I went ashore, and hired out to a farmer to do the chores; pick beans, and help make hay a little. I liked it pretty well, and he was good to me. But in the fall, the same boat started up on its last trip, so I thought I'd had about enough of farming, and the captnin said he'd take me hack. But when we got up here, I got the old scare hack again, and dursn't go home. So I tried to make a living off the streets, hut I had bad luck and took sick, and thought I was going to peg ont; hut a girl they call Shouting Sallie found me and brought me here. And you know how they got it out of me who I was—I'm awful glad they did—and I'll never run awny ngnin—which I didn't that time neither—if you'll make father not beat me. And I'll work, and pay you back that six cents for the soap I didn't fetch you. Mr. Christian saye it's the square thing to do, and I expect it is. And I told the fellers here I was an orphan—hut I'm awful glad I aint. That's all."

It is a true story I have heen telling you. So Jamie was found, and we might say with him, that's all. But will you not think for a minute who found Jamie?

It was not the seventh daughter of the seventh daughter, the grandchild of the Arabian astrologer, the most popular medium of the day, with all her gifts, natural and acquired, and eyee that saw what was not to be seen, the oracle at whose shrine hundreds waited with awe and left their gold and silver behind, the "false, deceiving creature," chuckling over human credulity and her ill-gotten gains.

Not she; but the ministers of true and noble and rational charity which—not for gold or gain—seeks by systematic, common-sense effort, to make up for eome of the world's ein and folly, half of whose hnttle would be gained if the superstitions epun by ignorance could be swept like dusty cobweb, from the houses of rich and poor.

Standing--waiting—on the threshold—
Half in hope, and half in fear--
For the Temple gates to open
Of the strange, the glad New Year.

Dim the pathway lies behind us
O'er the rugged ways of life;
Weary are our feet with travel,
Weary are our hearts with strife,

Weary are our hands with warding
Off the pelting storms of Fate,
But at last we take fresh courage
At the New Year's Temple gate.

On the blast comes voice of scorning—
"Childish hopes, from childish fears!
"What has been is that which shall be,
"This shall prove as other years."

But the child heart brave within us,
Heedeth not the warning dull;
Fair the New Year's Temple rises
O'er its Gateway Beautiful.

Gifts are scattered at its portal;
From its courts, our souls to cheer,
Music streams and warm light flashes—
Let us in, O Glad New Year!

CORRESPONDENCE.

LONDON, *Nov.* 30, 1878.

General Armstrong,
Hampton Institute Va.—

My Esteemed Friend:—I arrived in England for the first time about two weeks ago, when my attention was called to a sympathizing notice kindly inserted in the "Southern Workman" relating to my health, which when I left the United States in July last, was far from satisfactory, but I am happy and thankful to be able to say, that a few months "off guard" has so much restored me, and I feel so well, that I am about to undertake the serious and exposing work of lecturing in this country telling of "Liberia as I saw it,"—and of Africa. My first effort will be in the Hall of the Young Men's Christian Association, and second in the "Friend's Institute," both of this city. I propose to be on duty here for the next four months, and if encouraged, will go from city to city, throughout England, and reach Scotland—Liberia and Africa require this at my hands—may I ask for your earnest prayers on behalf of my self-imposed service.

I find here the Liberian Minister Plenipotentiary, Edward W. Blyden LL. D., well-known to you, a pure Negro not too much cast down on account of the present condition of his race, the regeneration of which has his every heart throb. Fortunately for Liberia he is not a colored, but a black man, full of faith and works, and looking to Africa—not away from it. Had he been at the Court of St. James years and years ago—Liberia to-day would not be so far behind in the race of nations. He has had his audience with the Queen of England and was kindly received by her, he is received into the best society here, and was lately elected an honorary member of the Athenæum, one of the most exclusive clubs in all England. He is invited to the meetings of the learned societies here, and his ever appropriate remarks before them, find their way into the press. What will the wheel of time not do for individuals and nations!

At the Foreign Office there this interesting fact is on record,—that the only two *independent nations* sending their dispatches in the English language were those from America and Liberia. I ask no pardon when I say if America is the son of England — what is the American settlement of Liberia but her grandson. The time is fast approaching when the entire Anglo-Saxon race will be proud of the Negro Republic, "Christian Liberia the open door to heathen Africa." Be patient, my good General, and you will see that your ploughing and seed sowing at Hampton have not been in vain.

On the subject of the heavy work in which I am engaged, I send herewith copies of correspondence between Dr. Blyden and myself, which will be interesting to your flock in every fold.

For the first I visited Westminster Abbey this P. M., accompanied by Dr. Blyden. I went there for the sole purpose of standing at the grave of Livingstone, and to have my own train of thoughts, to do this, I willingly passed the graves of Wilberforce, the Poets' Corner, and others of the "mighty dead,"—and as I turned away, remembering the dust of Livingstone was there; I could not forget the interesting and appropriate fact, that his heart was left in Africa—I saw nothing else than Livingstone's grave. I did not want to break the spell of the influence of the mighty name.

Please remember me kindly to Miss L——, and know me to be as ever, your friend,

EDWD S. MORRIS.

P. S. My address while in England will be, "Friends Institute," 13 Bishopsgate St., without London, E. C.

EDUCATION AND CIVILIZATION.

Correspondence between Edw'd S. Morris and Edward W. Blyden LL.D.

MONROVIA, LIBERIA, WEST AFRICA.
April, 1877.

Edward S. Morris, Esq.,
No. 128 *So. Front Street,*
Philadelphia, U. S. A.:

My Dear Sir:—

I avail myself of the earliest opportunity to congratulate you on an occurrence which took place in this community not long since, which I was told was brought about through your orders—I refer to the destruction by your agent of twelve hundred bottles of Gin,—That article of trade which is unfortunately so common in the business prosecuted by Europeans on the Coast, was introduced into your business here, I learn, without your knowledge, and against your positive orders. Such an act of wholesale destruction of the poison done in West Africa by a Christian white man deserves to be forever remembered, and the intelligence of it, ought to be spread far and wide. "Publish it in Gath, and tell it in the streets of Askelon." It is a standing and serious reproach against Christians among Mohamedans in the interior of West Africa, among whom I have travelled, that they introduce with their religion, that which destroys both soul and body,—that they bring the Bible with their left hand, and Rum with their right. I have had in my travels in the interior, to meet this charge again and again. In my article on "*Christian Missions in Africa*" in Fraser's Magazine, Oct., 1876, I said, and I repeat it here,—for I am very much impressed with the feeling. "It is a very "fortunate circumstance for Africa that the "Mohammedans of the interior present so for-"midable and impenetrable a barrier to the "desolating flood which, but for them would "sweep across the continent. The abstem-"iousness of Islam is one of its good qualities "which I should like Africans to retain, what-"ever may be the future fortunes of that faith "on this continent."

It is sad to reflect that Christianity, with its professors often weakened by indulgence in the poison must be helpless to contend in this country against a faith which besides some elements of spiritual truth, has in its practical teachings that great physical truth for Africa and the Negro,—*viz.:* "that fermented liquor is a snare and a curse from the devil," and the recognition and observance of which by the robust followers of that faith is preserving for the Negro race. these men of magnificent physique and intellectual strength who are the active propagators of Islam in the interior.

Your testimony in favor of temperance by the public destruction of that large quantity of Gin at great pecuniary loss no doubt to yourself,—will not be lost upon the natives. The Mohamedans, many of whom frequent a village very near the spot where the Gin was destroyed will hear of it, and carry the news to the interior, and who can tell the effect of that single deed.

"How far that little candle throws its beams,
So shines a good deed in a naughty world."

On purely natural grounds, desiring and laboring for the incorruptible integrity of my race, I must thank you for doing that which must be done on a larger scale than I am afraid Christian merchants are yet disposed to do, before Christianity will make any progress in Africa, *viz.:* the execution and annihilation of Rum the murderer. Wishing you every success in your great work, I remain,

Yours faithfully,
EDWARD W. BLYDEN.

PHILADELPHIA, *Oct.* 1, 1877.
OFFICE, 120 SOUTH FRONT ST.

PROF. E. W. BLYDEN,

Dear Sir:—

I received your kind and appreciative letter dated Monrovia, April 4th, and thank you for your kind words, and trust the results you anticipate may in the smallest measure flow from the act of destroying the Gin. I already have my reward in having done the deed.

I see by the papers that you are now Liberia's Minister Plenipotentiary at the Court of St. James. I must congratulate our struggling Republic on having secured the services of such a representative—and sincerely hope you will succeed in all your efforts for the Republic. The friends of Liberia in this country cordially endorse the appointment.

Yes; my effort is not only to destroy Rum in Africa, but to supersede the cultivation of sugar-cane from which Rum is made—by the excellent Coffea, which is indigenous to Liberia, the best in the world. You know my efforts for years past in that direction. But not only do I wish to save the bodies of the Negro race in Africa from the ravages of the murderers. I want to educate their minds. I want to see the Christian school-house scattered in Africa far and wide. I have had in my possession, as you know, for several years, on the St. Paul's River in Liberia, twenty miles from the sea, 800 acres of the most fertile land, and it has been my desire, from the outset of my acquisition of that land, to make it a very nursery of industrial as well as literary education, not only for the Liberian youth, but *for the sons of Native African Chiefs*, who will in due course inherit their father's official position; so that when these educated sons assume authority over their tribes they can and will, with one sweep of the pen, abolish every heathen custom, cast aside their idols, and worship only at the footstool of our common Father. These proposed school-houses should also receive and teach the native girls from the bush. The children of Liberia's future citizens, the thousands of freedmen of America now looking to your Republic as their natural and happy home, will also be welcomed to them. These school-houses can be multiplied from one to one hundred, and I have matured such a plan, based upon work, system and prayer, as must secure a successful operation.

The General Superintendent of the schools should not only be a man of letters, but a Christian gentleman—a Negro beat on the elevation of his race; one who can bring the sons of chiefs to the school-house and delight in training them as the future men of Africa; one whose heart is for the advancement of all Africa into the paths of Christianity and civilization; one who practically believes in our Great Standard-bearer, and can tell of His holy example and precepts, as contained in the four gospels of the New Testament.

Now please give me fully, and without hesitation, your views as to the practicability of my plan, and make my suggestions which you think may be useful to me.

There are enough of the great and good in America and England who will be glad to give their mite to the African school-houses, and read with pleasure the annual Reports of the workings of the same which I will send them.

Yours truly, and for Africa's sake,
ut commend,
EDWARD S. MORRIS.

LEGATION OF LIBERIA, LONDON,
November 6, 1877.

My dear Sir:—

I am so anxious to do what I can to cooperate with men of your earnestness and zeal in the cause of my country and race that I hasten to acknowledge the receipt of your letter of October 1st, to thank you, in the first place, for the deep interest you continue to manifest in the cause of Africa and the Negro race,—and, secondly, to express my conviction of the entire practicability of your views on the subject of education in Africa. There is great anxiety among the natives for schools—an increasing feeling on their part as to the importance and necessity of having their children instructed. Their wants in this respect ought long since to have been more generally met than they have been. I am sure there will be no lack of scholars of both sexes for the schools. And, fortunately, you have an interesting tract of land on the St. Paul's River, twenty miles from the coast, and on the direct highway to the vast interior, which may be made the starting point and nursery of education for a very large area of country; and you are further favored for the work, I think, in being, as you have said in one of your letters to me, "a Committee of one with power to act."

Teachers I am sure will be forthcoming. It is not without a Providential purpose that numerous schools are now thrown open in your country for the instruction of the Freedmen and their children.

It is, I venture to say, under the impulse of an inspiration higher than mere human benevolence, looking to an object of a wider grasp than mere human sagacity can compass, that hundreds of self-denying men and women of your own race in America should be devoting their time, talents, energies and wealth to a work which to some seems far from promising—a work almost smothered in its incipient stages by the unsympathizing, but persevered in by those whose hearts were in it, until it has obtained the mighty proportions of to-day,—the work, I mean, of establishing, supporting, and teaching the numerous Institutions of learning for the instruction of some of those who were formerly slaves—Institutions which now form so many interesting centres of light throughout the southern portions of your country. Those schools are at this moment preparing the workmen who are to engage in the work you are now endeavoring to inaugurate. And from what I know of the natives for hundreds of miles interior, I am satisfied it is quite practicable to extend a line of Christian schools and civilized farms from the malarious sea-board across the beautiful, populous and salubrious highlands to the banks of the Niger, and beyond the Niger to the heart of Soudan.

Liberians and their friends can aim at nothing more glorious than this, and they should aim at nothing less. The Negro youth now being trained in your schools in America, can have no nobler aspiration than to penetrate those remote regions of their Fatherland with the Primer and Bible, the Hoe and the Plow. This is a work of magnificent purpose—a work of the highest promise.

Three hundred years of European commerce with West Africa has left the people worse than it found them. Agriculture and schools are to be the great means of building up the tribes and starting them on the road to a Christian and successful civilization.

Believe me yours faithfully,
EDWARD W. BLYDEN.

To EDWARD S. MORRIS, ESQ.,
Philadelphia, U. S. A.

LIBERIA.

THE *Charleston News and Courier* generalizes as follows about Liberia:

In a land so fertile and productive as Liberia the accumulation of property should have been rapid, but the assessed value of the real and personal property in the Republic is only $3,000,000, and this is said to be an over-valuation. It is not surprising that the "shabby-shoddyism" which forms the ruling political class in Liberia should oppose white immigration. Whites in Liberia make thousands where the colored people make hundreds, and if they were admitted on an equal footing with the blacks, they would crowd the present settlers out, or make them move on. There is, however, some cheer in the outlook. The people are religious. Churches are seen everywhere. In every settlement there is a school. The inertness of the Liberians keeps back their educational institutions, and causes them to languish; but the principal institutions of learning are passing into more vigorous hands, and Mr. Williams is confident that the coming generation, in acquirements and opinions, will be far in advance of the present. Good order is kept in the Republic. There is little or no drunkenness. Now and then one of the Liberians is killed by a native, which can't be helped; but, on the whole, Liberia, in temperance of habit and the absence of brawling, is an improvement upon too many American communities.

From the letter of Mr. Williams, its correspondent, we make this extract concerning Religion and Education in Liberia:

UNIVERSAL RELIGIOUS FEELING.

From the highest to the lowest, all seem to have an unalterable faith in the Almighty, and believe in His active interference in human affairs. Solomon was a wise man, and knew more and had seen more of real life than nine hundred and ninety-nine thousands of us, with all our steam and telegraph, and when he said, "in all thy ways acknowledge Him and he shall direct thy paths," he must have meant it. Or, looking at it from an entirely outside standpoint, there is another proposition. Christianity, where it exists, must be progressive. For that we have the word of its greatest exemplars and teachers. The progressiveness of Christianity is certainly toward perfection, and the nearer a people approach perfection their creations must keep pace. This isn't a sermon, but a practical view of matters, which the veriest infidel can agree with. Churches are everywhere, and in almost every settlement in Liberia. The Methodists largely predominate, but there are quite a number of Baptists, with a fair sprinkling of Presbyterians and Episcopalians. Of the latter church the Rt. Rev. Dr. Penick, a Virginia clergyman, is the bishop. His residence is at Grand Cape Mount, and I had no opportunity of seeing him, but on all sides he is most highly spoken of, both as a minister and a man. From all accounts, he is setting the Liberians a good example of the quaintly expressed principle,

"Pray to God devoutly,
And hammer away stoutly,"

as I was told of his having been engaged in the woods, cutting away with his own hands, preparing timber. The Missionary Society of the Methodist Episcopal Church has its agents always at work here too, and is one of the props of Liberia. Its drafts are printed, and circulate here at par, as currency. This society supports a number of primary and intermediate

SCHOOLS,

and with the government schools there is a well attended institution of learning in every settlement. Besides the children of settlers, a number of those of the natives attend. There is thanks to this American society, no lack of educational facilities, although the government schools are said to be much injured by political wire-working obtruding on their management. It is very rare to meet a Liberian who cannot read and write, and most of them have progressed much further. Besides these, there is Liberia College, supported and controlled by the New York Colonization Society and another body; the Alexandria High School, supported by somebody else, and the Monrovia Seminary, under the auspices of the A. M. E. Church Missionary Society, and of which Rev. Royall J. Kollogg is principal. The Liberians manifest the same inertness regarding their schools that they do about everything else. Politics are allowed to mix in the public schools, and the appropriation for their support is spoken of as "merely nominal."

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, H. W. LUDLOW, } *Editors.*

MRS. M. F. ARMSTRONG, MR. W. N. ARMSTRONG, MR. T. T. BRYCE, } *Regular Contributors.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.
For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

WITH this number the SOUTHERN WORKMAN enters upon its eighth year.

During the three summer months, it will appear in the old eight-page form.

The regular monthly edition is a little over 1,600 copies, about half of which are sent to regular subscribers, North and South, and the remainder, without charge, to contributors to the Hampton Institute, to a considerable number of Southern public school officers, to some prominent men in the South, and to exchanges. The work and results of this school are thus kept before many thinking people, and we believe that the WORKMAN is doing good in a quiet way. It has been most kindly referred to by papers in this state.

While it has claimed much for the Hampton Institute, we believe no one who has visited or studied the school has complained of over-statement in these columns or elsewhere.

We hope to give, during the coming year, interesting facts relating both to the negro question and to that of the Indian race. From the reference to the Hampton experiment in the President's message, the results of the training of sixty-seven Indians here may be considered as having an important relation to our future dealings with that race. Those who take the WORKMAN will be kept informed of the progress of the work here.

The President says:

"We owe it to them as a moral duty to help them in attaining at least that degree of civilization which they may be able to reach. It is not only our duty—it is also our interest to do so. Indians who have become agriculturists or herdsmen, and feel an interest in property, will thenceforth cease to be a warlike and disturbing element. It is also a well authenticated fact that Indians are apt to be peaceable and quiet when their children are at school, and I am gratified to know, from the expressions of Indians themselves, and from many concurring reports, that there is a steadily increasing desire, even among Indians belonging to comparatively wild tribes, to have their children educated. I invite attention to the reports of the Secretary of the Interior and the Commissioner of Indian Affairs, touching the experiment recently inaugurated, in taking fifty Indian children, boys and girls, from different tribes, to the Hampton Normal Agricultural Institute, in Virginia, where they are to receive an elementary English education and training in agriculture and other useful work, to be returned to their tribes, after the completed course, as interpreters, instructors, and examples. It is reported that the officer charged with the selection of those children might have had thousands of young Indians sent with him had it been possible to make provision for them. I agree with the Secretary of the Interior in saying that 'the result of this interesting experiment, if favorable, may be destined to become an important factor in the advancement of civilization among the Indians.'"

WHILE many are excited about the rights of the colored *man*, few—indeed who?—in all our Northern country are working for the rights and the welfare of the colored *woman*.

Newspapers fill their columns with appeals for the one, and say never a word in behalf of those on whose condition the whole fabric of civilization is based. The nation can stand the loss of negro ascendancy in some of the states, although their votes may entitle them to it, and even of a few Republican Congressmen which may reasonably be claimed, but it cannot stand a state of society among its five millions of blacks in which woman's virtue may be tampered with without practical redress.

The fact that the most intelligent and admirable colored girl is, among her own people, without the advantages of a pure social atmosphere, and beset, not only by bad men of her race, but by a class of whites who recognize no "immoral quality" in the act of compassing her ruin, makes her position, with her face as fair and beautiful as that of any Anglo-Saxon girl, and her mind well endowed and cultivated, a tragic thing. That such an one may, without legal or social redress, receive treatment worse than death is a possibility and sometimes a fact in our American life that is beyond expression shameful. We hope that, among all those in the North who have wealth to give or leave, there will be one or more who will richly endow some existing or some new institutions for the training of negro girls, that they may be, in mental and moral strength and in practical skill, better able to do their work in the world. This has not yet been done.

Apropos of this we quote from a letter from a Southern lady who knows whereof she writes:

"The white and colored people are on very good terms: but alas for the virtue of the colored girl! My father, who has felt some interest in negroes all his life, says he is growing almost hopeless of the race, because of the position of the colored woman whom no white man treats with respect, and who too often thinks it more honor to be a white man's mistress than a black man's wife. I think this evil is actually increasing in some districts, and it reacts on the white race by preventing the white men from marrying. A gentleman from Charlotte Co. told me lately, that he did not expect to marry at all; he had observed that white ladies could not get on with colored servants, and he would have no others. When my father was in the Virginia Senate in '65–6, he introduced a bill making it lawful for a colored woman to claim a support from the father of her child. The bill was defeated by one vote, but many people believed it had passed, and it was for a time a great check to immorality. Last year the subject was revived, and, as a result, the Legislature repealed the whole clause in the pauper law, so that there is now *no woman* in Virginia who in degradation and shame can secure assistance from the partner of her guilt. I have searched the Scriptures diligently, and can find no warrant for the position of Americans on this subject."

EVIL DAYS.

Have we fallen on evil days? The civilized portion of mankind seem to have dropped into a bad way. Every man counts his own state as one of peculiar misery, and we hear some talk of the simple delights of barbaric life. The gearing has parted, the steam is low in the boiler, the cars are off the track, the floods are having wild sport, the timbers of the social fabric are swaying about, and the mourners go about the streets. Riches breed strong and rapid wings, and fly away in vast flocks, like migrating pigeons. Values of property have sunk out of sight. Factories stand idle, as if the workmen were stricken with plague. Ships rot at the docks. National banks impair their capital. All this in America. In England, trade has withered up as if swept by a dry monsoon, and the channels of commerce are becoming shallow with sand-bars. Germany has gotten into bankruptcy. Russia is insolvent. Austria is accustomed to the "poor debtor's oath"; and France is now anxious about the future of trade. The condition of India presents a vast, intricate and complicated problem, apparently beyond the control of any human wisdom. A few years since, there was great commercial prosperity. To-day there is distress wherever man is above the savage state. There is a cause for this, and it is time the blunders were recognized, and the remedies applied. The laws that govern human life, social, moral and political, have been outrageously violated, and we hardly know or believed it. Each community must make the diagnosis of its own particular disease, and find out and apply its own proper remedy. Each has its special law of life and growth, and to the study of that law the most serious consideration must now be given everywhere, or the "evil days" will remain with us.

Here, in the Southern States, is need of the boldest inquiry, and the unflinching application of remedies. The people of the North have enough to do, in solving very serious political and social problems of their own. They will not, for some time to come, understand the complicated state of our affairs. While we do give them credit for the desire to act justly, it still must be said that their methods of investigation are hardly sound or just. The "facts" upon which Northern people rely for judgment, are such as are furnished by newspaper reporters. In matters of business, it is safe to say that they would instantly reject this kind of evidence.

The time is near at hand when the Northern people will take no further interest in local matters at the South. The people of the South must work out their own salvation. But they are hardly in the right frame of mind to discuss economic or social questions. There are here many able and just men, and if the questions which vex us were left to them for determination, it would soon be well with us all. These men are in a minority, however, and it is the average man who must settle the problem. For men to criticize their own institutions, to attack peremptorily their own habits and ideas, to account for present misfortune by their own social and economic mistakes, is to reach a standard of culture rarely attained in the most advanced communities. The "evil days" will remain like heavy mists upon the South until it is recognized here that we, like other communities, are capable of committing, and do commit very grave errors. The mariner is always correcting his reckoning, because he believes it is liable to error. The inventor perfects his machine by a vigilant watch upon its weak points. The wisest statesman knows the infirmity of human judgment.

The true reconstruction of the South is in the reorganization of its social and economic ideas. Many of the best men here are afraid to speak boldly, and are uttering truths in secret which they hesitate to speak openly. In this reticence there is no hope of progress. There is need of men militant, men vigilant and ready to take up arms against any sea of trouble. The silent but irresistible forces which underlie all life are working here, in ways that few suspect. In a score of years there will come political and social changes which few now anticipate. There has not been presented to the thinking men for a century a more absorbing, profound and interesting question, than that of the relations between 4,000,000 of blacks, set at liberty by a fiat, and of 8,000,000 of whites, lately a dominant power. To those who are beyond the mere physical boundaries of the innumerable questions raised by the novel relationship, it may not be a vital matter, but to those who must face them daily it is a serious and almost distressing matter.

Near us one of the grandest rivers of the earth, the James, comes broadly down to the sea. In 1640, upon its banks, were busy communities and great plantations. It was the national seat of empire. A superb harbor, the Hampton Roads, gave an anchorage which broke the stroke of wind and wave. Its imperial position called for tribute from commerce. Two hundred and fifty years have passed. On the banks of this great river there is a scanty growth of trees, and vast stretches of wilderness holding neither city nor village nor crop. Land has almost ceased to have value, and there reigns a primeval silence. Men have ceased to reclaim the wilderness. The wilderness has triumphed over man. If the traveler upon this river, in 1878, held the ancient note-book of the tourist in the time of James I., he could add nothing to it. Yet since the earlier settlement upon this river, 40,000,000 of people have covered the land with States. Wealth and commerce have reached immense proportions. Great cities have grown up on all the other large water-courses. Is it not about time to ask the reason of this desolation? Is it possible that the causes of this commercial abeyance, this comatose condition, shall remain for two hundred years more?

Kansas has taken 105,000 immigrants during the last year, yet her corn brings only eighteen cents per bushel. The banks of the James River, though on a direct line of transportation to every port of the world, are deserted, though the corn upon them brings forty cents per bushel. Is the land accursed, or is there some reason for these contrasts in prosperity? The people of the South must come to some understanding in these matters before the evil days will be over. If thinking men were the executive men, in this region, there would be hope indeed, and we should see the flushes of daylight over the distant seas. W. N. A.

THERE is one way of fighting intemperance which is not, we believe, sufficiently understood in this country, although it strikes, with the weapons of commonsense, straight at the root of the evil. For example, can we in America present anything like such testimony as that which is offered in late numbers of English journals (and which has been, we are glad to say, the subject of a good deal of notice in this country) to the great success of the attempt in England to compete with gin palaces and rum shops, through "coffee palaces" and "cocoa taverns?" In the city of Liverpool alone, there have been established twenty-nine such places, under the care of a society which has a subscribed capital of $100,000. The object of this society is, of course, to benefit the working classes, by providing them with places where they can get good, wholesome refreshment and real nutriment at the same cost, and with the same attractive surroundings that tempt them into bar-rooms and corner groceries. But to the astonishment of the subscribers, it has been found that the coffee and cocoa rooms not only had a marked effect on the morals of the people among whom they were established, but that also they have paid as high as ten per cent. on the capital invested, a proof of success so satisfactory that the company propose at once to double their capital and still further extend their work.

In any village or town where the people have money enough to pay for liquor, they have money enough to try this experiment of coffee houses, and the attempt can be made, either by an association, or by a single individual who has a little capital at command. A wise and gracious fashion has been set by our English cousins of starting these houses as memorials to some good and beloved person—as in Portsmouth, where one has recently been opened in remembrance of John Pounds, the founder of the ragged-school movement.

If every town in the United States had a warm, bright, cheery room in which simple, well-cooked food, with tea, coffee, and cocoa, could be had at a small cost, not only would none of us be the poorer for it, but, on the contrary, the gain to our nation in mercy, in physical vigor, and in purity of life would be beyond counting. M. F. A.

AN ENGLISH paper publishes as a curiosity the following statement of "her Majesty's Inspector of Schools" at the east end of London, in his report for 1877:

"The great defect of which all examiners complain is want of intelligence. It is to be lamented, but certainly not to be wondered at. Persons who have had the advantage of a liberal education are apt to ignore conditions under which their own minds have been formed, and which are altogether lacking in the education of the children who frequent elementary schools. Our own education was in fact going on, unconsciously to ourselves, during most of our waking moments. We learned as much, like the ancient rabbi, from our companions as from our teachers. It is not so with the children of our schools. Their education is almost entirely confined within the school hours. The vocabulary of their families is extremely limited. Home influences are destructive of school influence. This is the case even with reference to pupil-teachers, whose reading up to the moment of entering college is often as deficient in accuracy, intelligence, and expression as that of the younger children. It is, perhaps, natural that little children who know what a donkey is, or a 'moke,' should not know what an 'ass' is, or that if asked how many legs a fish has, they should say 'four,' 'two,' or 'one;' but it is almost incredible that great girls, pupil-teachers in the east end of London, should not know what is a 'mushroom,' or that both boy and girl pupil-teachers should habitually understand as a 'churchyard' the 'rampart' to which

... where there is no proper sense of ... increased accommodations. The Acade-

the body of Sir John Moore was hurried. One of the most favorite pieces of prose learned by pupil-teachers in their fifth year is the famous speech of Lord Chatham. I have not yet had one who understood what is meant by 'extending the traffic to the shambles of every German despot.' The meanings of the words were not always known; the sense of the entire passage, never. An amusing story about a sow was lately given out for the compositions of the pupil-teachers. A good many understood 'cow' instead of 'sow,' but the animal, whether as 'cow' or 'sow,' was in almost every case spoken of as 'he' or 'him.'"

No one who has had much experience in teaching the less favored classes will find it difficult to credit these statements—or to match them. The English inspector suggests no remedy for the "lamentable lack of intelligence," as far as appears from the extract, but his very just explanation of it makes it clear that the only help must come through the schools themselves—through the teachers and the school books, the home influences being all adverse. No books can take the place of the personality of an intelligent and expert teacher, and yet they fill an important place and exert their silent influence where the teacher's must stop. Great improvement has been made in text-books, no doubt, since the last generation went to school, but it has been mainly in adapting them to varying ages in one class—the class of those that have some culture at home. It seems as if, in the extensive tendency that exists to compile every year new histories, new readers, new grammars, new text-books of every species to take the place of those which were last year declared to be perfect, the idea might occur to some one to find originality and distinction in preparing special text-books for special classes of students. Is not this a new field?

For example, all the primary readers, as far as we know, are written for little children But we take pride in this country in the idea that all the nations of the world are coming to school to us, and they do not all come as little children.

For the last fourteen years, we have been teaching the Negro to read, and now, rather late in the day, the notion is reviving that education may be as good as extermination for the American Indian, while, at this very moment perhaps, the girl-faced Celestials are shouting out their reading-lessons in the Babel of the San Francisco evening schools. For Indian braves, Chinese merchants, colored young men and women who have been supporting themselves for years perhaps, and any others who take their first readers in hand after having passed out of childhood to say the least, many of them with minds matured by the practical lessons of life, it is not very stimulating to struggle on with a reading lesson only to learn that "John is a bad boy, he will not go to bed," and "Jane has a nice new doll." Could not words of one syllable be found to express ideas more valuable or congenial? The baby books are just right for the babies, but for a grown up primary their advantage is doubtful, even over the practical old saws that "Health is wealth," and "Haste makes waste," and "A bird in the hand is worth two in the bush."

Then, as the course proceeds, there is another trouble. The more advanced common school books, say the Sixth readers, histories, ancient and modern, and other books of the same grade, presuppose an advancement of the student in English not by any means represented and secured by successive steps in his school studies. They, too, may be admirable for the pupil who is surrounded by an atmosphere of good English and general information in his own home, whose education "goes on unconsciously to himself, during most of his waking moments;" but the student who has had no such preparation takes up each higher study only to find himself unaccountably bewildered at the outset, in a tangle of strange words, and unfamiliar expressions, and intricate sentences. It is no wonder that he gives up in despair, or enlivens the dullness for his teacher now and then by an amusing mistake.

We would suggest to text-book makers, the preparation of a set of books to supply his special need, on the basis of nature ideas in the primary books, simpler and clearer expression in the higher ones, remembering that he is a man and thinks a man's thoughts, but that English—beyond the colloquial—the English of books, is to him almost a foreign tongue. It would be well if each progressive text-book of every kind should have at the end a glossary of all the new words and idioms in it, arranged in vocabularies corresponding to the lessons or chapters; if it can be pictorial, so much the better. The student will then know a rampart from a graveyard, and how could *we* know except we were taught? As for the peculiary profitableness of such an edition, simplicity and clearness would by no means injure the more advanced books for any class, and the mature primaries, if good, would be sure of a clear market in that they were designed for, for the present at least. What degree of simplicity and clearness should be arrived at, may be inferred from the English Inspector's report.

The want of such books is felt, often seriously, at Hampton, and an effort has been made to partly supply it in one direction by preparing a small pocket-grammar for the assistance of its graduate teachers. This little book, which has been published in numbers in the Southern Workman, is not expected to supplant others which the teacher may find in use in his school district, but to help him in handling them, containing in few pages the principle elements and rules and paradigms of English grammar which he would otherwise have to search for through the unfamiliar pages of a large text-book. A number of very excellent language lessons are added, by permission, from Kerl's Composition and Rhetoric, which are exceedingly suggestive and helpful and will employ his little school profitably for months.

Unity in diversity is the problem of our country; not only in the variety of its interests, but in the diversity of its people.

From across the water have come many branches of one race, and, from Africa, an entirely distinct race; each with its peculiar ideas and instincts; each with more or less strong centripetal tendencies, the African having decidedly the strongest.

Commercially and politically, the movement is, and must be, concentric; for there can be but one system of trade and of government. Socially, the movement is eccentric; the play of social preference or of instinct is free. The various branches of the white race have their own separate centres, but with no decided barriers to a commingling, which, though frequent, is not general, but, so far as it goes, invigorates the population.

The Negro, a distinct race, is by its inherent qualities led into close relations with the whites, chiefly by way of service, but by its instincts, into a social and religious life of its own.

This is fortunate, because not only practical men, from long experience, believe, but Professor Agassiz, as the result of close observation, especially in Brazil, was satisfied that the races are better in their purity, and that the mixture tends generally to a weaker rather than to a stronger and more valuable product.

In Northern cities where, for more than a generation, colored people have lived by thousands, have had the advantages of schools, of wealthy and devoted friends, have made remarkable progress in their political rights, in education and, to a degree, in wealth, yet, on the general social line, they have not advanced a step.

Brilliant success on their part has won recognition. Color emphasizes more than it cripples shining talents. The colored class orator at Brown University, Rhode Island, attracted more attention than all the other class orators in New England of that year. The negro graduate of West Point who received his diploma with the cheers of his classmates, is known throughout the land. Successful colored business men have a scarcity of grievances.

Indeed, the tribute of universal respect and confidence is within the reach of the humblest colored man, quite as easily from the whites as from his own people.

The Hampton graduates and those of like institutions in the South, make few complaints of their treatment in travel or in their honest efforts for the welfare of their people, and find no little encouragement from all enlightened men.

Only where there is no proper sense of "*noblesse oblige*," will a favored and superior people refuse the needed stepping-stones to the earnest and deserving who would struggle upward from a lower plane. This sense often fails where it should be found. Prejudice enters here; it decides beforehand the limits and capacity and place of the colored man, instead of giving him a fair chance and an open field. From the changes of the past fifteen years we may hope that prejudice will finally disappear, and that there will be no white man so timid of his foothold or so uncertain of the power of his race as to tremble at or oppose any wise effort for the advancement of the colored race.

Prejudice is one thing; race instincts or tendencies are another: the former will be, or ought to be, transient; the latter are of their nature permanent.

Among the sensible of both races there is a decided movement toward the "unity in diversity" that on the side of the colored race has long been a vexed question.

Again there is a solid South and a solid North. The latter is aroused by alleged wrongs to the negro. The aim is to create a strong public sentiment against such practices.

But not a word to arouse anybody to a sense of the condition of the negro which is the bottom fact in his misfortunes.

Ball-dozing is bad enough, but what of the sight in a city in a recent election where the whites were divided, and the votes of the ignorant and low of both classes were paid for in half-dollars and in whisky. Crowds were, we are informed, driven to the polls and paid off publicly in drinks and money. Being sold on the auction-block was no more debasing than this selling themselves. Violence from without is not so bad as the moral poison of such doings to the head and heart.

Everywhere men will be found to buy cheap votes. Freedom at the polls to vote decently or disgracefully as he chooses is not the paramount need of the negro. It is his right and he should have it. But to be a respectable, intelligent man is the first thing, and means to this end are not beneath a statesman's notice, especially since the negro is the ward of the nation.

What measure has Congress adopted since 1870, looking to the mental poverty and needs of the freedmen? Far reaching and slowly working means to this end have little interest to those whose championship of the negro is loud, but whose hearts are fixed only on carrying the next election.

The best part of the colored people are chiefly interested in getting land and in educating their children. These matters are not involved in politics. Those who hope for offices make a good deal of demonstration, but a large class has relapsed into indifferentism and they no longer vote.

Some day we may read more of their being pushed to the polling places, rather than from them. There is among them a vast and cheap supply of material for the demagogue; and their grade of intelligence invites the worst class of leaders and managers, whose characters and doings are a most important factor in the disturbed condition of things in some of the Southern States.

GEORGIA.

The Augusta *Chronicle* of November 8th has the message of the Governor of Georgia, from which we glean the following items:

The State debt of Georgia is $10,644,500, which is one twenty-third of the taxable property of the State; and the annual income, after paying expenses, suffices to liquidate from $200,000 to $300,000 of the debt. The Governor recommends the establishment of a Branch Agricultural College in the old Capitol Buildings at Milledgeville. The trustees of the Lunatic Asylum, which has now a capacity for 800 patients, ask $25,000 for the enlargement of the negro buildings, the necessity for which is pressing. The Governor says the number of insane colored people is increasing yearly, and the proper and humane care of them demands increased accommodations. The Academy for the Blind at Macon has sixty-three pupils. The Deaf and Dumb Asylum has seventy-three inmates, and is in need of more accommodations for both colored and white inmates. There are said to be 300 deaf mutes in the State needing the benefit of this institution. The report of the State School Commissioner shows an encouraging condition of the public schools in the state. The statistics show the steady growth of the public school system. In 1873 the attendance was 83,677; in 1877, 190,626, of which 61,664 were colored. While there has been an increase in the population, there has been a decrease in the illiteracy in the state. In 1874 the number of persons between ten and eighteen unable to read was 106,444, of which 26,552 were whites and 79,692 colored. In 1878, the total number of illiterates was 85,630, of which 22,323 were whites and 63,307 were colored, thus showing a decrease of 4,229 whites and 16,385 colored. An encouraging result, as Governor Colquitt justly observes, of the free school system.

We print the following extract because it goes to the root of the matter.

In missionary operations the world over the boarding school is used as affording the best leverage on the races.

The savage or semi-savage needs a training that covers the twenty-four hours of the day, rather than verbal or book teaching during six or eight hours. The one is radical, formative, but expensive. The other is cheap, but superficial, though often surprisingly effective. It is only second best, but the best is needed. Work for the women of all the races, whether degraded or civilized, is of equal importance as that for the men. We regard the Indian question as this: "Can Indian girls be led up to Christian civilization?"

In the Hampton Institute the question is being answered, only on too limited a scale.

AN INDIAN BOARDING-SCHOOL AND ITS HINDRANCES.

("Chips from a North-Western Log" in "Sunday Afternoon."

Here I found in operation a boarding-school for boys and girls, organized on the only plan at all available with Indian children, the manual labor system; the first and most vital point in the education of an Indian boy being to convince him that labor is not degrading. Only those who have attempted it, realize in even faint degree the difficulty, nay, the almost impossibility of accomplishing this, in the face of an instinct strengthened by generations of inheritance, and rising involuntarily against such subversion of all Indian theories and beliefs. But let the fact at last take possession of the mind, as in many cases it does, that chopping wood, or breaking land, or planting crops, is not only honorable, but brings comfort and security from want, and the Indian becomes a patient, steady worker, eager for guidance and assistance in the new line of life, and almost pitifully anxious that his children should be taught and trained.

The difficulty in this school, which included some twenty-five children, was deficient appropriation from Congress, an evil with which all have to contend, and on this point Mr. Wright spoke, with no indignation fully warranted by facts:

"I have worked," he said, "for twenty-five years, steadily and hopefully in spite of every opposition and discouragement. I know the language as well as my own, and I know the Indian character. Year after year new agents come to us, each one a little more ignorant and headstrong than the last, and each one sure *he* is going to solve the problem of civilization. All of them pooh-pooh the idea of a boarding-school, and affirm that it is only an Indian dodge to have their families fed at the government expense. I must do what they say or give up the work, and so we resort to the day-school, which is simply useless. How am I to alter things, when a child returns each night to a filthy wigwam, and, very likely, gambles away the clean clothes put upon him in the morning? To accomplish anything they must be under your eye day and night. You must force them to be clean; to eat at regular hours; to acquire some sort of power of mental application. The wigwams are scattered for miles around. The spring sugar-making, the hunts, the planting and watching the fields, divert them from school; and at last when the agent finds rows of empty benches, he begins to see the justice of what I have said, and allows the original plan to go on. Then Congress steps in, has an economical streak, and cuts down the school appropriation five hundred or a thousand dollars.

It takes a million dollars to kill one Indian in WORK OF THE PRESIONS SOCIETIES

It takes a million dollars to kill one Indian in war, if I read the army reports aright; so, of course, you must save this five hundred on the education fund. Thers is sverlasting shilly-shallying with the whols question, and it's all in a nutshell. Banish from the Reservations every half-breed nnd white maa not directly io government employ; for there is not an Indian atrocity on record that cannot be traced straight back to half-breed lies or white man's whisky. Take the children from the wigwams, bain them to decent life, and I guarantee no more Indian troubles. The whole thing, I tell you, lies in a nutshell; but God knows whether those fools of Congressmen will ever see it."

Hon. W. H. Ruffner, Superintendent Public Instruction of Virginia, has issued a circular on Histories to be adopted in city schools, from which we quote:

Almost in the first decade of American independence a great controversy began between the northern and southern sections of our country, which culminated in 1861, and nnhappily continues even yet. Hence, by the law of the human mind, a history of the country written by an American author is and must be a party history. It being peculiarly difficult for any one to write a teachable history for children, we have examined all United States histories offering, and whilst some of them are good as to form and style, and the most of them are respectful in tone, not one written by a Northern man does jnetice, in our opinion, to the leaders, ths character, the principles, or the actions of ths Southern people, in respect to either the later or the earlier periods of American history. And if this be true, not one of these histories ought to be taught in our schools. The two Southern histories on the State list may not be perfect books, bnt it is certainly better that our children should learn from them than from those written from an opposing standpoint. Would England allow France to write a modern hietory for English schools?

TRADE OF CHARLESTON, S. C.

A striking example is, the trade in Carolina phosphate rock. The shipments of the crnde or unmannfactnred rock in 1868 were 11,862 tons. For the year now closed the shipments were 170,978 tons, besides a local consumption of 20,000 tons. This phosphate rock is found in the sarth and nnder the waters of the rivers around Charlsston. To the State is paid n royalty gverling on $150,000 n year. The whole of the selling price of $6 or $7 a ton, less the royalty of ona dollar on river rock, is covered by the payments for supplies and to laborers, and by the profits of the mining companies. In like mannar, the difference between the price of crude phosphats and that of ths manufactnred fertilizer is realized here in Charleston, to the extent of the manufactnres by the extensive and well-equipped Phosphate Manufacturing Companies. So too is it with the frnit and vegetable trade. Last year, within the sound of St. Michael'a chimee, 600,000 qnarts of strawberrias, 43,000 barrels of potatoee, and 20,250 crates of peas were raised, besides vast quantities of other similar produce. Join to such salient facts the remarkable healthfulness of ths city, tha death rate among ths whites being only twelve to ths thousand, and Charleston finds in the past year substantial cause for deep satisfaction.—*News and Courier.*

We copy (without chnrge) the following suggestive advertisements, taken from *The New England Weekly Journal*, printed on Monday, April 8, 1728, at Boston, Massachusetts:

1. "A very Likely Negro Woman twenty-two years old, to be sold. Inquire of the Printer."
2. "A very Likely Negro Girl 13 years old, to be sold. Inquire of the Printer."
3. "Mr. Math. Pigott intends to open a School on Mondny next, for the Instruction of Negroes in Reading, Catechizing, and writing if required. If any are so well inclined as to send their servants to said schoul near Mr. Checkley's Meeting House, care will be taken for their instruction as aforesaid."

Feeding Stock.—Economy and effectiveness, are the main points to observe. The best food, fed in the best way to the best stock, must be the most profitable, and to reach this conclusion is more a matter of care and skill, than of money. Money can procure food, stock, good huildings, and labor; but good management always depends on the intelligent application of known facts to practice.—*Amer. Agri.*

WORK OF THE RELIGIOUS SOCIETIES AMONG THE FREEDMEN.

We reprint from the "Indépendent" of New York the following account of the work of the Religious Societies among the freedmen.

We think the work of Catholics among the colored people, has been usually overrated and that this article has the truth about it.

The three societies most largely engaged in the educational work—those of the Methodist Episcopal and Baptist Churches and the American Missionary Associntion—have together twenty-one chartered schools and twenty-four high and normal schools, besides a few special and common schools, with 9,030 pupils in all of them. The Presbyterian Board has thirty-seven parochial schools, five of which, with 1,977 scholars, are of a higher grade, with 3,989 pupils in all. The United Presbyterians have two schools, and several other denominations maintain one or more high or other schools each. These institutions are scattered through all the Southern states, being most numerous in Tennessee and the cotton states. They were all begun at the primary grade, and have raised their standards as their students have been advanced, until the best of them now provide courses of instruction approaching those of Northern colleges. The societies having them in charge have in later years been gradually withdrawing from the field of primary instruction, and devoting their efforts more eatirely to preachers and teachers and the prepsration of advanced scholars.

Ninety-five per cent. of the graduates of the Hampton Institute devote themselves to teaching. More than one-third of the whole number of pupils in the Methodist schools (1,005) were preparing to teach last year, and it is estimated in the report of the Methodist Freedman's Aid Society that more than one hundred thousand children had been taught by persons trained in its schools.

Theological instruction is given in all of the higher schools, and is the leading object of the schools of most of the denominations which we have not especially named, as well as of some the establishment of which is still under consideration. The Methodist Episcopal Church has three special theological schools; and the American Missionary Association has decided to establish a missionary course in connection with Fisk University, to embrace three years and teach those practical (the common trades) and literary branches the knowledge of which will be most useful to missionaries in African fields. The Freedmen's Aid Society of the Methodist Episcopal Church has opened a medical department in connection with its college at Nashville, Tenn., which was attended during last year (its first year) by thirty-three students.

The Friends' school at Southland, near Helena, Arkansas, begun in 1864 as an orphan asylum, besides a school of about two hundred scholars, partly supported by the state, has a normal department and a college, teaching science, mathematics, German, and Latin, whereof seven students were graduated in 1870, the first year of graduation, and has become the centre of a monthly meeting of colored Friends. The Friends Freedmen's Association supports eighteen schools, with 2,457 pupils, in Virginia and North Carolina, and their Bible and Tract Association actively circulates Bibles First-day school-books, religious papers, etc. The Methodist Freedmen's Aid Society likewise circulates "elevating and instructive pictures," to counteract the efforts of the Roman Catholics to make proselytes by the circulation of their pictures. The Lutherans have lately entered this field. The Synodical Conference has sent out a missionary within the last year, who gives a hopeful report of the prospects of ths work, and the Conference has resolved to carry it on with vigor, and to publish a German and an English periodical, to further it. The General Synod South has resolved to establish a school.

The Baptists have been the most ready of the Southern bodies to respond to the Northern efforts for the elevation of the Freedmen and the most cordial in their response. They have co-operated by giving good words for several years with the American Baptist Home Missionary Society; and ths report of their convention on "Duty to the Colored Race," which was published in THE INDEPENDENT of May 23d, is the clearest, most enlightened, and most definite and practical declaration on the subject that has yet come from the South. The Southern Presbyterian General Assembly has recognized the importance and the promise of the work of colored evangelization, along with its difficulties, and has been assisted by the Reformed Church of America in sustaining a theological and training school at Tuscaloosa, Ala. A fact worthy of notice is that one of its most distinguished ministers and one of the moderators of its General Assembly, the Rev. Dr. Girardeau, was for several years the pastor of a colored church in Charleston, S. C. The Associate Reformed Synod of the South co-operates with the United Presbyterian Church in support of its institution at Knoxville, Tenn. The Methodist Episcopal Church South is more backward than these its fellow-churches. It has good words for its Colored Methodist Episcopal Church, commends its efforts to establish an institution of learning, suggests that contributions to this object will be approved; but does nothing directly, and hesitates to say that the education of the colored people is demanded by Christian duty and enlightened patriotism.

It is difficult to determine the effects of the evangelizing efforts of the Freedmen's societies upon churchmembership. The colored people are apt, when drawn into the Church, to prefer their own organizations, so that the results in this direction are not fairly shown in ths reports. The colored Baptist and the three colored Methodist churches are large, flourishing, and growing bodies, and include already a considerable proportion of the freedmen throughout the South. For the rest, the Methodist Episcopal Church returns 127,326 colored members in the South, the Presbyterian Board 10,257, and ths American Missionary Association 4,048 members. The Protestant Episcopal Church has opened thirty-seven chapels for colored members and the Reformed Episcopal Church has built up several flourishing colored churches in South Carolina.

The colored people are doing their part nobly. The African Methodist Episcopal Church displays praiseworthy energy in its efforts to build up schools and colleges in the North and South; the Colored M. E. Church is soliciting aid to establish a theological school; the Colored Baptists, appreciating the advantages offered them by the American Baptist Home Missionary Society, are seeking to establish institutions of their own, notably in Alabama and Kentucky, and have recently organized a General Association for the support of a book depository and publishing house and for co-operation with the Home Missionary Society.

A great deal has been said about what the Roman Catholic are doing among the freedmen, and the apprehension has often been expressed that they are going to lead the mass of the colored population away from the Protestant churches. The fear has been fed by the unbounded boastings of the Roman Catholics and by some extravagant estimates which have been made of the conversions that have been effected under their preaching. One report fixes the amount spent upon the freedmen at six hundred thousand dollars, and obscurely estimates the number of scholars in the schools at from 150,000 to 500,000, with ten thousand youngmen in the higher schools and seminaries. Nothing approaching a confirmation of these estimates has been brought to our notice. We have carefully examined the Roman Catholic papers with reference to this subject for a year past, and have been able to glean from them only the most barren record of facts and isolated movements. Bishop English, of South Carolina, began operations among the Negroes of his diocese soon after its erection, in 1820, and a school for free colored girls and the religious instruction of liberated slaves were begun there about 1830. Another mission was organized in Hutchinson's Island about 1850. Provision has existed in Maryland for the religious instruction of colored people in Roman Catholic churches from time immemorial. The Jesuits have taught the catechism at Frederick since 1840, and a colored sisterhood has existed in Baltimore since 1829. In Louisiana the Roman Catholic has enjoyed the prestige of being the popular church. No results have been perceived from these and similar isolated labors to extend outside of their immediate sphere of operations.

A formidable enterprise was begun seven years ago for the conversion of the colored population through the agency of an English training school, which was to fill the country with colored priests. This is the scheme concerning which the most nervous apprehension has been felt, and which it has been feared would revolutionize the religious condition of the greater part of the South. The last year's report of the training school is before us. It has had forty-two students, three of whom have come to labor in America and four in India, and returns now thirty-three students and six lay brothers. Of the four missionaries who were sent out in connection with the opening of the institution, three, of whom one has died, have been laboring in Charleston, S. C., for two years, and report for that time 190 baptisms, with ten persons under instruction for baptism, and about one hundred persons admitted to their first communion. This is the only mission opend in South Carolina; and this is the only report that this dreaded propagandist monster has to make of its work. What we have mentioned, with the notice of the reception of fifty colored Catholics at Providence, R. I., comprises all the facts and all the detailed statements bearing upon this subject that we have been able to discover. We believe that, if the Roman Catholice really had facts to prove that they have made the progress they claim to have made, they would not hesitate to publish them conspicuously. As they fail to produce them, we are contented to believe, for the present, that they are doing no more than their fair share of the work, if so much, and receiving no more than their share of the conversions.

AT HOME.

RECEIPTS FOR THE WEEK.

MONDAY.

Breakfast: Boiled Rice—Scalded Milk.. 15)
Dinner; Corned beef and Cabbage..... 10) 35
Supper; Peas boiled in Stock..... 10)

TUESDAY.

Breakfast: Broth and Bread..... 10)
Dinner; Baked Beans..... 10) 32
Supper; Macaroni with Cheese..... 12)

WEDNESDAY.

Breakfast; Toasted Bread—Scalded Milk 13)
Dinner: Stewed Tripe..... 15) 33
Supper: Polenta..... 5)

THURSDAY.

Breakfast; Rice Pnnada..... 12)
Dinner; Salt Pot-au-feu ..... 10) 32
Supper: Lentils stewed in stock..... 10)

FRIDAY.

Breakfast: Broth and Bread..... 10)
Dinner: Mutton and Turnips..... 10) 30
Supper; Barley boiled in Broth..... 10)

SATURDAY.

Breakfast: Mutton Broth and bread. 10)
Dinner; Beef and Potatoes..... 10) 30
Supper: Beans boiled in Broth..... 10)

SUNDAY.

Breakfast: Cocoa and Bread..... 7)
Fried Lentils..... 10)
Dinner: Bean Broth..... 10) 61
Hasiet Stew..... 10)
Suet Roly-poly pudding.. 12)
Supper; Cheese Pudding..... 12)
Total $2 52

This leaves a balance of sixty-two (62) cents for extra bread, milk, and butter.

Baked Beans.—Put one pint of dried beans, (cost six cents,) and qnarter of n pound of salt pork, (cost four cents,) into two quarts of cold water; bring them to a boil, and boil them slowly for about twenty minutes; then put the beans, with a teacupful of the water they were boiled in, into an open jar, season them with salt and pepper to taste, and one tablespoonful of molasses, (cost of seasoning one cent,) lay the pork on the top, and bake two hours, or longer. The dish will cost about ten cents, and is palatable and nutritious. The liquor in which the beans were boiled should be saved, and nse tha next morning as broth, with seasoning and a little fried or toasted bread in it.

Macaroni.—This is a paste made from the purest wheat flour and water; it is generally known as a rather luxurious dish among the wealthy; but it should become one of the chief foods of the people, for it containe more gluten, or the nutritious portion of wheat, than bread. It is one of the most wholesome and economical of foods, and can be varied so na to give a succession of palatable dishes at a very small cost. The imported macaroni can be bought for about fifteen cents a pound; and that quantity when boiled yields nearly four times its bnlk, if it has been manufactured for any length of time. Good macaroni is yellow or brownish in color; white sorts are always poor. It should never be soaked or washed before boiling, or put into cold or lukewarm water; wipe it carefully, break it in, whatever lengths you want it, and put it into plenty of boiling water, to every qnart of which half a teaspoonful of salt is added; you can boil an onion with it if you like the flavor; as soon as it is tender enough to yield easily when pressed between the fingers, drain it in a colander, saving its liquor for the next days' broth, and lay it in cold water until you want to use it. When more macaroni has been boiled than is used it can be kept perfectly good by laying it in fresh water, which must be changed every day. After boiling the macaroni as above, you can use it according to any of the directions. Half a pound of uncooked macaroni will make a large dishful.

Macaroni with Cheese.—Boil half a pound of macaroni, as above, put it into a pudding dish in layers with quarter of a pound of cheese, (cost four cents,) grated and mixed between the layers; season it with pepper and salt to taste; put a very little butter and some bread crumbs over it, and brown it in the oven. It will make just as hearty and strengthening a meal, and will cost about twelve cents.

Stewed Tripe.—Cut in small pieces one pound of tripe, (cost eight cents,) half a quart each of potatoes and onions, (cost of both five cents,) and put them in layers in a pot, seasoning them with one tablespoonful of salt, and one level teaspoonful of pepper; mix quarter of a pound of flour with water, gradually using three pints of water, and pour it over the stew; (the flour and seasoning will cost two cents;) put the pot over the fire and boild it gently for an hour and a half. It costs about fifteen cents, and furnishes a good nutritious meal, the onions and flour making up any lack of nourishment in tripe and potatoes.

Polenta.—Boil one pound of Indian meal, (cost four cents,) for half an hour, in two quarts of pot-liquor or boiling water, salted to taste, with one ounce of fat, stirring it occasionally to prevent burning; then bake it for half an hour in a greased baking dish, and serve it either hot, or, when cold, slice, it and fry it in smoking hot fat. This favorite Italian dish is closely allied to the hasty-pudding of New England, and the mush of the South. It costs five cents.

LETTERS FROM HAMPTON GRADUATES.

ON THE OUTPOSTS — NEARLY WITHOUT SCHOOL-BOOKS — TEACHING BY COLONEL PARKEA'S METHOD—HUNORY FOR SOMETHING TO READ—SUCCESSFUL TEMPERANCE WORK—APPRECIATIVE PARENTS—DROWNED OUT—BREAD CAST UPON THE WATERS.

The value of a rational system of object teaching for little children can never be fully appreciated till the teacher finds himself, like the writer of the following letter, with no school-books and no means of getting them, and thrown entirely npon his own resources for npparatus and methods. Then he learns, not only the value of the system, but of common sense to adapt it to peculiar conditions and emergencies. The suggestions of Colonel Parker, the successful advocate and exemplnr of object teaching in Massachusetts, given last May to the Hnmpton Graduates' Normal Class, have been thns found useful to more than one of their number.

VA., *Nov.* 13, 1878.

Dear Miss H——:

Your letter of the 18th ult., was a pleasant surprise.

f was not aware that any of my classmates were so near me, and was surprised that both P. and B. were here. May they have success! Teaching is not easy work, and those who do not lntend to labor faithfully had better stay away. I had no idea what an immense amount of work a school required, but have been taught it by the best teacher—experience. My school is way up ln —— District, in a very poor, lonesome and dreary place. The nearest post-office is eight miles distant. The district is very poor, and is more than $400 in debt on account of its last year's schools. It contains six schools (three whits and three colored) and every year previous to this they have been open, hnt because of the heavy debt they have incurred only two are open this year—one white and one colored. So here I nm—not another school within ten miles of me—teaching the one that —— has had for two years. I opened October 1st, and have now forty-eight scholars, all small ones, for the older ones cannot come until the fell work is finished (gathering corn, &c.,) and then I shall he overrun. I found them nearly destitute of hooks; they have nothing hut readers and spellers. On inquiring about arithmetic and geography, four had commenced erithmetic and forgotten all about it; one or two had a slight smattering of geography, and none could write. I saw *work* was needed and set about it. There was no nse telling them to get hooks (arithmetics, geographies and copy-hooks,) as they were too poor, and I might stay the whole term out hefors they got them. So I commenced teaching erithmetic from the board, with explanations, and I have to-day, one class that has finished ndditlon and commenced subtraction, two classes still in edition, and two more learning connting, adding, and the valus of numbers. In writing, I am tenching hy Celunel Parker's method, and have half the school making the alphabet. I don't need any arithmetics and don't care whether they have any or not; neither do I wish them to havs any copy-hooks. Geography I have not started, and hardly know how, for the poor little children hurdly know anything except what they see up here, and you may know that is not much; few of them have ever seen a hoat, and it would he almost nseless for me to try to explain about geogra phy without something for them to look et. In their spelling classes, as they hnva no means to find out the definitions of words, I make myself a kind of talking-dictionary as far as I am ahle.

This is a very unhealthy plece—chills and fever prevniling; the land is low and very swampy.

My primary class I am teaching hy Colonel Parker's method. I find it much more easy than the uninteresting and dull repetition of a h c. Still I have a class learning by the old method, those who knew the alphahet or part of it when I commenced.

Accepting your congratulntions and welcome with heart-felt thanks, I remain

Vary sincerely yours, P.

In how many garrets and closets, books and magazines and pnpers nccumulate dust and mold which might light up the "dreariness" of such outposts as these, where lonely workers are struggling single-handed with the forces of ignorance and temptation.

VA., Thanksgiving Day.

Dear Miss H.:—

I have hean intending to write to you for soms tims, hut have heen waiting till my school commenced. I came here to stay two weeks hefsre I could make a start; hut I hegan last Monday with eleven scholars. I like the place vsry well, and the peoplo nlso. I find the inhehitents in moderate living circumstances and kindly disposed, especially toward school teachers. They have had schools here very regular since 1865, hut the scholars are not very much sdvanced for all of that. My highest class is studying Fifth reader, Elementary Arithmetic, Intermediate Geography, and Bullion's first lessons in grammar. I have an elegant school-house which has only heen in uso one year, and it is n vsry short distance from my hoarding place, which I consider a very great advantage over some whose experiences f have heard related at Hampton.

f find, Miss H—— a great difference in teaching and being taught, or, in other words, my position here and at H. In the social point of view, I find it quite lonely; hut from the lahor stand-point, I see no time to lose. The people speak a language or dialect almost as difficult to understand as Greek or Latin, comparntively speaking; and as the human family is prone to do as those around them, I feel seme fear of falling into their habits.

This is a very out-of-the-way place, as I may call it; it is eight miles from any railroad or telegraphic communications, and we have only two mails per week. ft is very difficult to get hold of any reading matter of any consequence here, which adds greatly to the dreariness of the place. McNeil is teaching five miles from me; I see him quite often.

News from Hampton is very acceptable at any time, so f will be glad to hear from you whenever convenient.

Yours, ohediently, &c., D.

The favorable reports from County Superintendents, of the teachers they employ from Hampton, continue to be a very encouraging testimony to the school's work.

VA., *Oct.* 24, 1878.

My dear Miss H——:

I arrived safe at ——'s whnrf on Tuesday, and found the people waiting for me; they have been looking for me for two or three weeks. So one gentlemnn took me to his house, and I am there now. f met with very good luck in coming. I didn't have much trouble. I found the people all anxious to see me. Mr. D. took me up to —— yesterday to he examined hy Mr. W. He was very much pleased when he saw that f was from Hampton, and said that if f had not forgotten my diploma that he would not examine me; hut my examination was not hard; his wife asked almost as many questions as he, hut I managed very well—indeed he said he was perfectly satisfied with my answers to his quastions; he said I answered as if I understood what I was talking about. I don't know how I answered, hut that is what he said. Wharton teaches at Onaucock, hut I did not see him. Mr. W. does not livo in town; he gave me my certificate, and told me to go to one of the trustees and he would tell me the number of my school and give me directions; he gave me my reports and showed me how to make them out. He kept me about three hours.

My hoarding place is about as far from the church as from Virginia Hall to the Camatery. I shall teach in the church until I get my school fixed. I want to open school Monday. The people say they will send the children as soon as they can. I am in a very lonely place to me, but I hopo I may lika. They wnnt me to tosch Sabhath School too. I hopo that I may get along better than I oxpect. The school that Dora hnd last year is vacant. f guess they want a teacher; in fact, they want Dora, if they can get her. I met B. at Cherrystone, and he told me thet thore were two vacant schools in his nsighborhood wishing for teachers, and ho thought that any of the girls or boys might taks either of those; one is Capevillo and I can't think of where he said the other one was, but he said thore were two or three vacant places for teachers. Elva has the one that Jim Calloway taught last winter. I am going to try and do the hest I can. I hope I may get my money. f hope that they may all have success.

I am about two miles from my post-office, but close to my school. I hope to hear from you all at Hampton. I haven't any more to write at present. I hope to hear from you soon. Your sincere frieud, C.

Temperance work is one of the most important branches of the gradunte teachers' lnbor in the South, and they almost invariably add it to their teaching—"by no means in vain," as the writer of the following letter gladly testifies.

VA., *Dec.*, 1878.

Dear Teacher :—

The 4th of last February I organized a school at this place with ninoteen pupils, and taught six months. During that time I enrolled seventy-sevsn. The 18th of last July, I had my examination end pic-nic. The forenoon was spent in examining tha children in spelling, reading, arithmetic and geography. The minister of tha M. E. Church of this place took part in examining the children. Ha seemed to be surprised at the rapid progress they had mada. He said that he had nevar seen childran show such proficiency undar similar circumstances.

I then gave an intermission for dinnsr, and ell had n grand time partaking of the viands so ahundantly provided. Whon all had dined, the school was called to order and the children went through with the exercises they had prepared for the closing. When they were done, Elder Pindell of Danville was introduced, who delivered a short address, and was followed by Mr. McSparan, who spoke very encouragingly to the children, admonishing them on the importance of improving their minds; also to the parents about their duty as citizens. Everything passed off agreeably, and all seemed to have enjoyed what they had seen and heard.

A great many white people were present who seemed to be astonished to see the colored children learning so fast.

The appearance of things here last February was quite discouraging. The colored people were in almost a savage condition. Some of them seemed to be without the least idea of right or wreng, so far as self-respect is concerned.

Soon after I got my school well on the way, I hegan the temperance work, which has by no means been in vain. In these temperance meetings I give all the instruction that I am capable of giving, in trying to bring about a general reformation. Never was I so convinced that some good had been accomplished, as I was the fourth Sunday in November, in our second annual temperance meeting. Every ona alluded to the great change which has taken place since the organization of this society, saying that they believed that it had done more good in this vicinity than any other organization. You may imagino my feelings of gratitude for such encouraging remarks. I felt amply rewarded for all my anxious labors. It seems to me that the people have been aroused to the sense of their situation and many of them are trying to improve their condition.

There are many strong opponents to the temperance movement, hoth white nnd colored; but nearly nll the hest people speak well of it, and try to encourage it all they can. Many who opposed it at first, are now in favor of it. I am persuaded to believe that much more good can be done by working in the same way.

This leaves myself and family well, nnd getting on nicely with our schools. Give my kind regards to all the teachers and students.

Yours most obediently, W.

The kindly feeling toward the Indian students manifested in the following letter is very general, nnd notwithstanding some friction resulting from the temporary, unexpected overcrowding of the boys this year, the two races live and move harmoniously together.

VA., *Dec.* 2, 1878.

Dear Miss H——:

This is the first good opportunity I have had since the arrival of your letter, to answer. I was glnd to hear that the Rev. Mr. Tuman is still with you and improving in health. The resigning of his position will no douht he a great help to him, although we'll miss his eloquent and instructive sermons. I saw through the papers the arrival of the Indians you spoke of in your letter. I hope the school is doing her ssme successful work this term, and everything will work together for good. Please remember me kindly to Nick Pratt; tell him who I am. When I left school he gave me his card and asked me to write.

I will now give you a brief statement of my school, and the thirst for knowledge the people who I am surrounded with seem to evince. I opened school on the 15th of Octoher with eleven pupils, three boys and the halance girls. They kept coming in every week until my numher was made up, which is twenty. Twenty is the required average daily nttendance, but last month my oversge was but eighteen. My percentege was 92.75. My school is now twenty-four large, but I have heen informed it is about forty-five large. Most of the larger pupils work until Christmas. I am very sorry they are late in coming in, for they lose a greet deal of instruction. The children here are very apt, but have not heen taught the small principles of education, as Colonel Parker defines it. I am trying, as neer as possihle, to apply his mode of teaching, and have been quite successful so far. The parents are the most enlightened upon the snhject of edncation I have met with not to have it themselves. They meet me at any time and show great desires to talk about education, end express great regret that they have heen deprived of it. I take great pleasure in talking with them and giving them instructions and light on my suhject I em ahle.

The distress from serious floods has been very great during the past year, and that the poor people are, notwithstanding their losses and discouragements, rising even slowly, shows good stuff in them worth cultivating.

"I am very much pleased with the situation of the town of which I have the pleasure of teaching in this winter; hut one characteristic about it I don't fancy. B——, as you know, is famous for floods. On the 24th of last month was one year since the town was almost flooded, and on the 22d of last month, we had another small flood which came near doing damage. I left my school-house on the account, the water being nhout two feet from the door. The school-house is situated on the hank of a small river, and every time we have a heavy rnin I have to look out. f have been informed that it was half-full of water during the flood of '77. The house I am stopping in is nhout 300 yards from the school-house, on the same river, hut on the left hand side of it; it hnd its first floors nlmost covered during the flood of '77. The people have suffered much here from damage done hy water, hut a good deal of the colored people's land is on the river-side and they lose something every time it comes, hut they have their eyes open and are rising slowly.

The teachers' institute for this county met in Harrisonburg (ahont eight miles from here) on the the 13th, 14th and 15th of Novemher. The numher of teachers present was over 100, of that number six of us were colored. Miss S., Miss L., and myself were the only Hnmpton teachers, and are the only ones in this county. The institute was conducted by Mr. H——, the Superintendent of schools in the county. Everything passed off nicely and therc was no distinction mnde whatever. Different modes of teaching were explained, and a very fine lecture upon the subject hy Dr. Ruffner. Mr. H—— is a very wise man and thinks a great deal of our ways of teaching; he has ways very much like General A., and I have taken a great fancy to him, and hope many more of our teachers may be fortunate enough to get in this county next year, or under one as good as he."

It is natural enough that counsels given in school days should be at the time unheeded or even misunderstood, especially if they suggest any limit to young ambitions; but the fact that, almost without exception, Hampton's 241 graduntes have devoted themselves heartily and persistently to tenching their people, in spite of many obstacles nnd hardships, proves encouragingly that, with the real experience of life, conscience and common-sense come to the rescue, past advice is remembered, nnd the truth perceived that the highest sphere for any mnn or woman is in faithfully serving the pressing need of the hour.

"My love for teaching grows daily. I never thought I could love it so, and I can say with candor, I never feel in place unless I am in the school-room. This is the first time I ever taught school, and think it is the noblest duty I can do for my people, for none hut those who see and hear can tell of the amount of work in the way of teaching is needed in the South. I never looked et it while at Hampton, when I used to hear the General speak of the need of tcachers in the South, as I do now; and I think it is the duty of all our teachers to give the hest instructions we can and give all the time we can to training those under us, and by so doing I helieve our duty toward God and mnn will have heen accomplished. I think those of our teachers who have resigned teaching should, as tha prodigal son, return to it again and never let it go until the required work has heen accomplished.

Please remember me kindly to Generals A. and M., also the Misses M., and all the teachers who know me. Thsnking you kindly for the offer you have made to send me reading matter, I close.

From your ohedient pupil, C.

P. S. You asked me about Anderson. I am sorry to say I don't know where he is. I saw him last August in Staunton, and haven't heard from him hut once since, and don't know where he is or what he is doing."

VA., *Nov.* 22, 1878.

Mr. B., My dear friend:—

I received hoth your letter and my Thanksgiving present. I am very thankful to you for it. Tha Moody and Sankeys came all safe, and now I enjoy singing from thom every morning in my little school.

I think it very good for D. to teach private school until the others open. I suppose she will then take her sama school.

I do not see the SOUTHERN WORKMAN regularly. Tha gentleman I board with used to take it, hut I think his tima has run out now.

Miss M—— wrote me of tha nrrival of the new friends, the Indians. She told me that she and Miss H—— had been husy getting tha girls all right. One of tha Indians wrote to me and said: "The Indian girls hava long hair, and so have you and you look like an Indian."

The weather is very mild here now, and I do not have e fire in my school-room; it is pleasant enough without it. My school has not increased any yet. Tha Sunday-school is improving very much. They attend so much better now than they did. Thero were almost three times as many last as there were my first Sunday there. They take great delight in learning the little verses on the cards you sent. I will have enough to go around three times to those that can read them. As soon as they can repeat all the verses correctly on tha first card I gava thom, I will give out some more. This will make them learn them quick.

Here is a little flower one of the children brought me. You see roses are not ovsr here yet. I have flowers always on my desk.

Your grateful friend, C.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

Progress of our New Recruits.

An Unfamiliar Toilet.

It hardly seems possible that a month's time would make so marked a difference in the appearance of our new Indian boys. The fancy leather breeches and blankets are now things of the past. The change from blankets to clothes had some funny incidents; one boy wore his suspenders hanging to his pantaloons. Another wore his new shirt over his trowsers; of course there was a titter when he entered the dining-room and chapel; he was the observed of all observers, but took his seat in happy unconsciousness of the part he was acting and proud of his new shirt.

Although the Indian of the West rejoices in the possession of long hair, as soon as he comes into contact with Eastern civilization he is very anxious to get rid of it. Most of the boys wanted to have their hair cut after they had been here a few days. One or two clung to the customs of the fathers; with them as with the Chinaman the hair is the connecting link with home; to part with it is a complete surrender to the ways of civilized life, and not until then is there an indication that our manner of living has made an impression on them.

Their Study and Work.

How much there is to teach them. We have not given them books, but use charts and the black-board. It is well said, the best teachers for the Indians are walking black-boards, and that those mysterious things called books ought not to be put in their hands for months to come. They are being drilled in Phonetics, Language and numbers. Object teaching is a great success. They have been assigned to their work; some to the farm, blacksmith shop, carpenter shop, steam engine room, stable and dining-room. The girls work in the laundry and industrial room, and dining room.

First Lessons in Making Beds.

There are many other things to be taught besides book learning and the Industries; take *bed-making* for an example: When they first began to make beds, the sheets were either tucked up under the pillow or laid on the outside of the bed; when asked why they did not use the sheets they said "sheets cold." One boy was found to have seven sheets who did not appear to know the proper use for two. All this had to be corrected; so one night I got the janitor of the cottage to help me take a bedstead, bed and clothing into the large sitting-room; the boys were called in, and seated in a semi-circle; then I began the work of bed-making. As I put blanket after blanket on the the bed the boys grunted and laughed, and so did I; for, if my memory is right, there were not less than seven heavy blankets on the boy's bed. Well, the clothes were neatly tucked up and the pillow put in its place, after the necessary shaking so dear to a good housewife's heart. Then I said "Now boys I will show you how to get into the bed," which I did.

As all the conversation was carried on through an interpreter, I told him to ask them who was willing to try to make the bed.

He had hardly put the question when one of the boys, who did not want his hair cut, came forward for the trial; he began where I did and ended in the same place, so closely had he been observing my movements. No sooner did he finish than there was a stunning applause—He was then asked to show us how to get into the bed, and when his head touched the pillow and the clothing was drawn over him, up went another shout.

Religious Training.

Many of these boys come to us from good Christian influences and have been taught to read and sing in their own language. Every Friday night some of them have a prayer-meeting conducted by the minister of the Episcopal church in Hampton. I cannot tell you how I felt when I first heard them singing. An Indian boy was playing the organ, and in perfect concert they sang the grand hymn "Nearer my God to Thee." My thoughts went to and fro, and when I looked at their beaming faces and knew that they understood the words they were singing, for they sang in their own tongue, I felt that they *were* nearer to Him at that hour.

For the benefit of those who may wish to see a specimen of the Sioux language, the first verse of the hymn "Nearer my God to Thee" is given below.

Mita Wakantanka,
Nikiyedan,
Kakix mayanpi xta,
He taku xni;
Nici waun wacin,
Mita Wakantanka,
Nikiyedan.

On Guard.

It will be interesting to know that the Indians are required to go on guard duty; that is, they patrol the grounds at night, and so, instead of being destroyers, they are protectors of life and property. Thus far everything is hopeful; we are looking on the bright side of the picture, and are trying to develop the good that is in them. There should not be such a question, "Can the Indians be civilized?" All things tend to prove that every people can be. It is fairer to ask what means shall we take for the end. This is a question our National Government is now trying to answer.

J. C. Robbins.

LETTERS FROM THE AGENCIES.

From an Episcopal Missionary:

Yankton Agency, Dak., *Nov. 15th*, 1878.

To Capt. Pratt, Hampton Institute, Va.
My dear Capt. Pratt:

I am so sorry that I was so late in getting to the boat the morning you came to this Agency. Now that you have arrived at your destination, with your charge, I thought I would do myself the pleasure of addressing you a line.

THE KING OF THE CATS. (*See next page.*)

I am exceedingly interested in this your experiment, and I pray God to give you great success in it. I shall watch it with liveliest interest and do what I can through the influence I have over quite a number of the boys to make it a success. Two of them, Joseph Cook and Frank Yellow-bird have already written me, and in almost every line tell me how pleased and happy they are. I shall write to them and others.

There is one thing of which I wish to speak. All who went from this Agency, with two exceptions, are members of our church—Episcopal. Some are communicants of the church. There are two others from up the River, of whom I know, who are also communicants, viz. Henry Fisherman, and Edwin Ashley. There may be others, for I have not heard who went from up above except these. I know the Institute is under the influence of the American Board. But I could wish that influence might not be brought to bear upon them to lead them away from the faith in which they have thus far been nourished, for the sake of our work here. If it could be so, I could wish that if any churchman or churchwoman is among those engaged in teaching, there might be some special interest manifested in them to try to foster their love and interest in their church, and keep them to their moorings.

Another thing. There is often a tendency to change the names of Indian children. As they are already down on the church register and are known by certain names, I could wish they might retain them. I will enclose a list of those from this Agency. Since you were here a good many have manifested disappointment that their children did not get in. I think you might fill an institution from this Agency alone. You have got some good material, I can vouch, and I trust the experiment will be all that could be desired.

With regards to Mrs Pratt and your fellow workers,

Very sincerely yours,
Joseph W. Cook.

In regard to the solicitude expressed in the above letter, we would say that the writer would probably be satisfied with the arrangements already made before he wrote. Last September, when Bishop Whipple very generously gave up his own plans for the five St. Augustine Indians who were to go to his own school in Minnesota, because he believed it best for their interests to remain under the training at Hampton, the school decided to gratify his probable preferences for them as far as possible, by placing them under the special care in church and Bible class of the Episcopal minister of Hampton, Rev. Mr. Gravatt, who has undertaken the charge with great enthsiasm and faithfulness. When the Dakota Indians arrived, those of them who were already members of the Episcopal church were added to this class, simply for the reasons which Mr. Cook puts very clearly in his letter, and which we think commend themselves to common sense—to prepare them the better for usefulness in their church when they return to it, and to avoid bewildering their minds by unnecessary changes of forms which may be misunderstood. Those of the other denominations are so nearly alike that no change is necessary, and the school, as is well-known, is entirely unsectarian, numbering among its workers as among its supporters, members of many different denominations, Episcopalian and others, working harmoniously together with a common motive, for a common end.

WHAT THE WINNEBAGOES ARE DOING.

The very striking reports from the Winnebago Agency in Nebraska induced us to send to the agent, Mr. Howard White of the Society of Friends, for further personal information, and he replies in the following interesting letter.

Winnebago Agency, Neb., 12 *mo. 4th*, 1878.

Editor Southern Workman,
Respected Friend:

I have your favor of 14th ult., with inclosure and accompanying circular. The item taken from the "Atlanta Republican," to which you refer is substantially correct. I forward herewith copies of the Sioux City Journal, referring to the subject in question.

I can fully appreciate the importance of the work undertaken by the Normal and Agricultural Institute, in educating Indian children. And judging from the methods of teaching, to be adopted, as portrayed in your paper, I have no doubt of its success.

We have at this Agency an Industrial Boarding School with an attendance at present of sixty-five Indian boys and girls. Our school building was erected five years ago, at a cost of about $20,000. Although the school has been broken up twice, owing to the want of funds applicable to its support, sufficient success has been attained to demonstrate that the Industrial Boarding School system is the true one to adopt in this work.

Very Respectfully,
Howard White,
U. S. Indian Agent.

FROM ST. PAUL SCHOOL.

Two Indian boys at Hampton have received this letter from a relative. It was written in Sioux and translated by John Robb.

St. Paul School,
Yankton Agency, Da.,
Dec. 9, 1878.

Dear Cousin, Mr. John D. Rohb, "Alcila," and Brother Henry Fisherman:—I am very glad to hear from you both of you, and I will tell you all the news from home. I got a letter from Old-Woman at Cheyenne Agency. He said that the Indians who have not cut their hair, when we left there, now they are cut their hairs, and he thinks not over ten person have not cut their hairs at that Agency. And he said they are living comfortably like a white people. My cousin and brother I hope you are doing, and learning you can, and if you get them, I hope you may make a success, and he like a men. This is one of the opportunity for the Indians, and while you are head of them, trying to be strong good men, of yourselves and not to forget words of God. Always he remember him.

You must write to me some time and I will answer always, and tell you all news from home. You need not mind the Indians. You know that they are men to make a fun of fellows. We will try and better and make them ashamed. And there is thing make my heart sadden, Edward Swift. I do not see his reason why he did not go with you, because Bad Spirits pretty strong and have to be tryiug a little hard to better him. Write soon when you can. When I hear from you, I was very glad to hear, and almost as if I see you both of you, consin and brother. This is I am going to say to you. So I shake hands with both of you. From Stephan Tooale.

OUR INDIAN EXCHANGE.

The *Anpaho*, or Daybreak, a neat little

paper published by the Niobrara Mission, at Yankton Agency, Dakota, contains the following interesting item. If any of our readers are unfamiliar with the Dakota language, they will be assisted by the [illegible] made by John Robb.

purposes this year, but I hope it is large and that you will not only increase agency facilities three-fold, but that you will get a delegation of the best Agency pupils at every suitable manual labor and agricultural institution East, that will undertake them.

In a celebrated museum in Germany, I once saw an amusing family of young lions. Their mother was sick and unable to nurse them, so the royal family had to be brought up on the bottle. They were greedy young creatures, and each had a [illegible] bottle full of milk, four times a day,

which careful experiments are needed. Whatever may have been its effect upon the wire-worms, it was no doubt useful, not indeed as directly nourishing the plants, but in acting as a solvent of plant-food in the ground, which was not before in a form available to the roots of the

TRANSLATION BY JOHN ROBB.

This fall there is one good thing for Dakata Indiaas on Missouri River, from great father, which have been done, which have already picked ont boys and girls from different Agencys, ou Missouri River and take them to East and learned some good things from book. October 30th. Capt. Pratt and his wife, are come down on steam boat, gathered those boys and girls from ages are 8 to 20 years old.

All together were 49. Of them from this Agency, 11. 8 boys and 3 girls. They are got there now. I got letter from of them youag men Joseph T. Cook, and said he is glad, and gat all what they wanted, likes the place, aama of the place is Hampton Institute, Virginia.

The Hampton Sebool, being in earnest on the Indian experiment, and believing that it cannot be fairly carried on without educating the women as well as the men, recently made an offer to the Indian Department to take charge of twenty more girls. This proposal being refused for want of funds, Capt. Pratt has sent to the Department the following letter which we hope may bear fruit

HAMPTON, VA., *Dec.* 23*d*, 1878.

Hon. E. A. Hayt,
Commissioner of Indian Affairs,
Washington, D. C.

Sir:—Referring to the refnsal of the Indian Depsrtment to send twenty more girls here heceuse of no funds for that purpose, I would respectfully request assurance from the Department, that in case I sm sble to interest personal clarity of friends to the Indians, sufficient to cover their expeuses while here for a three years' term, the Department will pay their traveling expenses from the egencice here, allowing me to hring that number, or such part as I am ehle to eecure patrons for, from the Indian Territory tribes already represented here. I em led to request this hy the extent of sympathy I find with the views here held of the importance of equal eduestion of the sexes, and the lack of a proper proportion of girls in this effort. This discrepancy is not the fault of the Department, hut mine, as I bad the authority to hring half girls and could have brought a less numher of hoye from Dakota, and then gone to the Indian Territory and equalized the sexee as the Department intended. I have already some assursnee of patrone for the girls. A lady who is now paying the way of two of the Florida hoys, will pay for two girls. Thie sha has written me she wants to do, without having had sny knowledge of the school's proposition and its refusal. This personal interest in the Individual boy or girl being educated I regard as a most vuluehle aid toward its eueeess. The assursnce from this lady is the origin of this ides and the hasie for thie letter.

I heg leave to state thst I am awarc of the delicacy of this proposition, hut that I feel it to be my own fault that the girls sre not here and shall if sanctioned so operate.

My statement that "I could have hrought thousands," is fully horne out hy numerous letters I have received from the Indian country. Iudividuals, teachers, miesionaries and sgents have all written me asking to send hoys and girls. Several agencice say "You can have all you want." One miesionary says I could now get enough from that Agency aloné to fill sn institution liko Hampton. Noticing in my report that we failed to get the girls, there are plenty offered from Dakota, the Indian Territory, and Nebraska. Even the Six Nstions in Western New York send sn appeal. Their Attorney, Mr. Johnson, asks that they be allowed to send girls enough to make up whst we lack, and will give their best. He saye they are good onee.

I do not know what sum the Indian Department has asked for, for general educationsl purposee this year, hut I hope it is large and that you will aot only increase agency facilities three-fold, but that you will get a delegation of the hest Agency pupils at every suitable manaal labor and agricultural institution East, that will undertake them.

Very tespectfully, your ob't serv't,
R. H. PRATT,
1st Lt. 10th Cnvy.

The followiag are a sample of the letters referred to in the above.

YANKTON AGENEY, DAK., *Dec.* 14*th*, 1878.

Capt. R. H. Pratt,
Hampton, Va.:

My dear Sir: I was very much gratified to learn of the safe arrival of yourself und the Indian hoys and girls under your charge at Hampton Institute. And the letters the latter have sent hack to their friends have heen very cheerful aad encouraging. I could give you now all the young Indians you wanted and more. I wish you would make uuother draft on me. So many are sorry now, and their parents too, that *they* did not go with you. I can furnish you with some girls now, and that you may require, and bright specimens too. Let me know if you want nay more of these, aad how they shall be forwarded.

Letters from these Yankton youths come not infrequently to this Agency and they furnish pleasnnt themes of conversation amoag the Indians. I wish you had a thousand there and that the ides of educating them in this practical way, of making industrious men and women of them so as to he of real service and benefit to their various tribes ou their return had been everywhere adopted loag ago. Indians must learn not only the priaciples and practice of Christianity hut to be industrious and self-supporting. Habits of labor and economy must he drilled into them und become a part of their nature. else all other education will be of little avail. I hope those at the Hampton Institute will be continued there for some years. I should be very glad to hear from you ofteu.

Very truly yours,
JOHN W. DOUGLAS,
U. S. Ind. Ageut.

We learn from Rev. Charles L. Hall, of Fort Berthold, that *ten* boys and *three* girls of that village have just been taken to Hampton, Virginia. Mr. Hall says, "Thank God for Capt. Pratt's success." It had seemed to us that Hampton Institute was both *too far off* and *too far south*, to send our northern Indian children to. But they have gone in a good time of the year to become acclimated. If they enjoy good health through next summer, others may safely he advised to follow.

—*Iapi Oaye.* (*Word Carrier*)

THE KING OF THE OATS.

Yes, the King and Crowu Prince. Don't they look royal?

The lion is often called the King of beasts. Ask your Suuduy School teacher to show you where that text in the Bible is.—"When the lion roars, the beasts of the earth tremble." But perhaps you did not know that he is a eat. I nm afraid that old Tom, hrave rat-catcher as he is, would run from his Majesty, but for all that they belong to the same order of animals. Pussy has indeed many other distinguished cousins; the Tigers, the Leopards, the Jaguars, the Punthers, the Wild Cats, and several others; they all belong to the Cat family, hut the Lion is the head of the tribe, the largest and most terrible.

If his Royal Highness would let you examine his mouth, his teeth nnd his tongue, his paws and his claws, you would see that big as he is, he is a true Cat, and so he is elassed in the books of Natural History. All the eat tribe are light, stealthy and silent of foot, quick of ear and eye, and swift of attack. Watch your old Tom when he watches at a hole, when he springs upon the mouse and plays with it before he kills it, and you will have a small-sized picture of n Lion's pursuit of his prey.

The chief home of his majesty is in the wilds of South Africa, where civilization has not yet driven him out of his kingdom. Here he reigns supreme, but great and strong as he is, man, so much weaker in body, subdues him by his strength of mind and will.

The Lion's cub is just as playful as a young kitten, and just as ready to romp with any one who will play with it. But it is rather rough play, for the baby Lion is as big as a very large house cat and very much heavier, and its big baby claws can give a hard scratch.

In a celebrated museum in Germany, I once saw an amusing family of young lions. Their mother was sick and unable to nurse them, so the royal family had to be brought up on the bottle. They were greedy young creatures, and each had a quart bottle full of milk, four times a day. It was a funny sight to see them rolling about with their bottles between their paws, or scrambling over each other, boxing each other's ears, biting each other's taile, running around after their own, and behaving exactly like Pussy's kittens. But I would not like to have one for a pet, would you?—It might grow up.

On the Farm.

HINTS FOR WORK.

From American Agriculturist.

Live Stock require constant watchfulness. To keep them comfortahle is as important as to feed them well. No animal will thrive and fatten, if unclean and cold, hence uncomfortable and fretful.

Warmth savee feed, helps fattening, and often prevents sickness, if not the total loss of an animal.

To keep the Animals in good condition, or increasing in weight, should he the object of every farmer during the winter season. To permit a loss of weight after the summer's feeding, is to waste the food of both winter and summer. It costs more to get an animal fat than to keep it fat.

Young Animals require particular eare; this is the making of the adult animal. To over feed is as unwise as to stint food. Costiveness is perhaps the most to be guarded against at this season; linseed oil-eake meal is a good and eheap preventive. One pint to one quart daily may be given.

Working Oxen are often more useful thau horses, and of lute have been too much neglected. It should not be forgotten that oxen require more time to feed than horses, and ample opportunity for rumination should be given. During winter, oxen that work upon the road ought to be shod. The eost will be saved in the extra work done, and freedom from injury by slipping.

Young Steers less than a year old, may be broken to the yoke by any patient boy. At first they should be yoked and tied up until they have become used to the yoke, when they may be led sround and taught to drive. This is interesting play-work for a famer's boy in winter.

Plowing of heavy soils may be done to advantage until the ground freezes. It is well to plow under stable manure on such land. Light soils are quite as well if plowed in spring.

Power of a Horse.—The tractive power of au average horse moving two miles nn hour, is equal to 166 pounds. This is steady work. If a horse were fastened to an immovnble post by a chain and a spring balance, and were to make a steady pull, he could exert double the above power, or over 300 pounds, but could not maintain it. If forced to his utmost strength in leaping, he would exhibit a force at least equal to his weight, increased by his velocity. A horse is able by a sudden spring to break a chain that would lift a ton or more suspended in the usual way.

The best Cement.—"Portland Cement" is the strongest, but the dearest. "Ameriman Rosendale Cement" is as good for all ordinary purposes, but it requires more time to set. Any cement will crack if frozen when saturated with water.

Salt on Wheat.—A New Jersey farmer writes, that he has applied salt to his wheat fields; and tho result was a healthier growth, an increase in yield, and comparative freedom from insects. He writes of another who thinks that he eleared a prospective corn-field of wire-worms, by sowing eight bushels of salt per aere, the fall previous to planting. Whether salt ean be applied to the soil in sufficient quantity to destroy insects and not be in too great excess for the healthy growth of the erop is still an undecided point, upon which careful experiments are needed. Whatever may have been its effect upon the wire-worms, it was no doubt useful, not indeed as directly nourishing the plants, but in acting as a solvent of plant-food in the ground, which was not before in a form available to the roots of the plants.

Farming on Shares.—A plot of ground being furnished by one party, the seed and labor by the other, one-half the products to each is considered in many sections as a fair division. Exact justice in such matters, however, can only be reached by a careful estimate of the value of what each one puts into the partnership: the interest of the value of the land on the one side, and the cost of seed and labor on the other; then the products may be fairly divided according to these figures. If it be argued that the land-owner has no guarantee for skill and eare on the part of the tenant, so the latter has no surety for the condition of the land. The halving system is a poor one at best, for what would he fair when land is worth $50 per acre, would be no guide on $10 land. No one rule can be made for general application, except the business rule.

BOYS ON THE FARM

It is a proud day when the average boy gets on his first pair of boots and trudges to school by the side of his older sister. He does not eure any longer to take her hand. The leading strings are cut. But this early ambition to be a man is entirely eclipsed, when he has taken charge of his first pair of steers, and started for the fair. Has he not raised them from their mother's milk up, broken them to the yoke und to the eart, taught them to pull and to back, to haw and to gee, and to obey his word of eommand? They are his workmanship, the evidence of his skill in subduing brute muscle, and making it do his bidding. He is going up to the exhibition to display the fruits of his triumph, and, as he hopes, to wear the laurels of victory. He is no longer a merely spectator upon the fair grounds, hut an exhibitor of stock and au entertainer of spectators. There is unquestionably a difference of native tastes in boys. Some have a natural aptitude to one calling and some to another, hut most men have their callings determined by early circumstances; sometimes hy ineidents so trivial, that they have hardly a place in memory. It is not difficult, generally, for a father, who loves the farm, to determine the calling of his children. If he makes it a business of thrift, and provide comfortably for his family, they will respect the ealing. If he is discouraged and continually shifting his work, or his home, they will not be likely to make tillers of the soil. But if he eonduets the farm upon business principles—makes it n machine for eoining money—and providing home comforts, they will be ready to invest in it. One ean hardly begin too early with his hoys to ineline them to the calling that is to give them bread, and the means of their future usefulness. If the boy is to be a farmer, he must begin to have a personal interest and venture iu farming while he is yet a boy. Filial affection, in a happy home, is n very stroug motive to industry and fidelity, hut it does not shape a hoy's plans for life like an investment of his own brains nnd museles in his daily work. He should have erops and auimals, not only that he ean "eall" his own, hut that *are* his own, to keep, to enjoy, and to sell for his own pleasure and profit. The trusts may be small at first, but they should be absolute, and let him have his own experience of sueeess and failure in managing them. Let him manage poultry, a lamb, a calf, or a eolt, nnd exhibit his own stock at the fairs. We notice with great satisfaction the inereasing ntention paid to boys at the fall fairs. Boys did some of the best work at n recent plowing match at one of our fairs. One, a boy of fourteen, held the plow und drove his own team, and made as good a seed bed as his older competitors. These premiums for boys' work, are in the right direction, and should be carefully studied in making up the lists for next year. Make room for the boys.

PRODUCTION AND CONSUMPTION.

TRANSFORMATION A SYNONYM FOR BOTH: "USELESS EACH WITHOUT THE OTHER"—LIFE NOT A SEE-SAW—RICH NEIGHBORS BETTER THAN

The New Orleans Stock Exchange has passed a set of resolutions declaring that a default by the State on the January coupons of the consolidated debt would be "felt disastrously by every financial corporation and institution of the city." A committee was appointed to co-operate in measures for see-

PRODUCTION AND CONSUMPTION.

TRANSFORMATION A SYNONYM FOR BOTH: "USELESS EACH WITHOUT THE OTHER"—LIFE NOT A SEE-SAW—RICH NEIGHBORS BETTER THAN POOR—MAN NOT A MAKER—LITTLE TO GIVE, LITTLE TO GET—SALES ARE RINGES.

A LESSON IN HUMILITY.

Man, regarded as a physical, intellectual, and moral heing, is the greatest wonder of this world of wouders. Yet with all bis wonderful powers, man never has made, and never will make an atom of mutter: furthermore, he is as powerless to destroy matter as to make it. Humiliating as this may seem, it is nevertheless a sturdy fact. What men vaingloriously call production and consumption (or, in plsiner English, making and destroying) are only two words used to express one idea—viz., transformation or changisg. Man can only change the metter God has made. God is the sole Creator or Maker; man is but one of his creatures, who, at best, can only change what has been created. More social and economic fallacies spring from considering man as a creator or producer, than from any other one cause. Beyond doubt, man is a wonder, but he is none the less a creature, and as incapable of *making* an atom of matter, as e our dog to construct a pbonograph. The object of this peper is to consider man as a transformer, and to point out that he does not occupy an indepesdent point in space, but u point on the circumference of life's great circle, with us many points to the right of him as to the left of him.

FALLACIES AFLOAT.

The trnth, that man cas do no more than transform matter, seems beyond the grasp of most of the pruting politicinns, who are rendering, to n people hungry for economic truths, their unripe ideus concerning what they are pleased to term, producers and consumers. One sect of these would-be philosophers claim, (if we follow their doctrines to the end), that men can have food without labor; and the other, that men can labor without food. One is directly opposed to the other, but both are equally wrosg. There is no such thing on earth as a producer, who does not consume, or s consumer, who does not produce. Any system of goversiment or school of philosophy, which pretends to treat any man or class of men as purely producers or purely consumers, is bound to be a failure. You may cut a mule in two pieces, and have one half with ears, and the other half with a tail, but you will have no mule. Exactly so is eny uttempt to divide society in two classes, producers and consnmers; the division may be made, but society will he destroyed. Every act of consumption is hisged on some act of production; and the hinge is called a ssle, or an exchange.

RAW MATERIALS, ABSOLUTE AND COMPARATIVE.

The Creator of all things made matter, and man to manage it. Matter by itself is a gift from Heaven; so is the force of gravity, power of germination, sunlight, etc. These are the only absolutely raw materials; and as they have been so lavishly bestowed, man will give nothing for them; they are to he had without even asking. It is only when two or more of God's gifts have been combined hy map's energy, that the relation called property springs into being, and other men ure willing to give in exchange for it, what they heppen to possess. It is clear, therefore, that absolutely raw meterials have no vulue, as no man will give anything in exchange for them. To my mind, raw material, in an economic sense, is anything which any man proposes to change as to its form, time or place, although it may he, nay, probahly is, a finished product to some other man. For instahce, cotton is e finished produet to the planter, but raw meteriel to the spinner; while, in turn, his yarn is e finished product to him, but raw material to the weaver, and so on through the endless links of industry. The gentlemen in Congress, who occasionally tinker the Tariff, are continunlly stumbling over the rock of "Raw Materiale!" Almost all of them are in favor of admitting free of duty what they call raw material: if they will do this, absolutely Free Trade will be permitted; for nobody will import anything that cannot be used. The finest silk garment ever turned out of Worth's establishment in Paris is raw meterial to the woman who expocts to wear or sell it.

EVERY MAN A MIDDLEMAN.

Changing either the form, or the place, or the time of matter, is what all mea ars always doing. Tble seatence is only a paraphrace for "transforming." Farmers and millers change the form of grain, growing and grinding it; merchents change its plece, taking it from where it is most abundant, to where it is most in demand; bankere and speculetors change the time of the grain by kesping it from the period of superabundence to that of comparative scarcity. Every one of the many who handls tha grain, from the plowman to the bakar, are middlemen, and the labors of all ere necessary to enable the man who eats the loaf to bnve it. He le no consumer, for previous labor of his has produced something that buys the bread, which something indirectly reaches tha plowman; furthermore, eating the bread is not its consumption, for it reappears in tha form of physical streagth, enabling the eater to put forth fresh exertions. Neither can this farmer be called a producer, for although he "raises" the wheat, all the time he is plowing, reaping and threshing, he is consuming food, clothing, etc., he is no more than a middleman—there having been laborers befors him, and laborers shall come after him. Men is liko the present, a small space between the great past and the great future, but nevertheless a space.

THE GREEN-EYED MONSTER.

Granting that men are ever transforming matter, but never making or destroying it, that men are links in industry's great chain, whose end links are locked together, it follows thet men are prosperous ready, only es their neighbors are prosperous. It stands to reason that no man is better off from having all his neighbors poor. Tha man who has but little to sell, can buy but little; the man who can buy but little, has but little to sell. "Love thy neighbor as thyself" is an economic as well as e moral maxim; for if your neighbor has but little, you can exchange but little with him. Therefore, your property, or capacity to exchange, is increased as his property, or capacity to exchange, is incressed. Ignorance of this truth is commos emong all classes of society, but painfully so among the colored people of this country. Mutual jealousy is one of their weakest social points; how this spirit came about makes no difference, it exists. Instead of rejoicing at the prosperity of any one of their race, they are envious; instead of trying to get up where he is, the tendency is to try to pull him beck where they are. The feeling of "Comrade, touch the elbow," seems foreign to them, and petty jealousy is one of the heaviest chains binding them. Cohesion is as necessary in a people as is a bar of iron, if either is to bear any weight. When mutual dis trust, or repulsion, so to speak, takes the place of mutual attraction, only a rope of sand binds a community together.

FACTS FOR FARMERS.

In the economy of nature, nothing is really lost, although apparently something disappears in every change that matter undergoes. If tea thousand cords of wood were burned to ashes, and the scattered in the sea, there would not be en ounce of matter lost: there would have been a clnnge of form and that is all. The object of transforming any bit of metter is to increase the utility or beauty of some part of it: those transformations, then, are best, in which the least apparent loss is noticeable; but of nothing, nothing comes—so if e portion of matter has once been transformed, another similar portinn of matter must be found, before a similar transformation can be made. If e man weeve ten pounds of yarn into twenty five yards of cloth, he must obtain another ten pounds of yarn before he can weave twenty-five more yards of cloth. This economic law is generally appreciated by menufecturers and merchents, as in their pursuite it is self evident; but farmers seem generelly ignorent of it, for they go on, year after year, taking awey from the soil the many elements thet go "to make a crop," but returaing to the soil only a part of whet they take away. The laws of neture are inflexible, even if formers be unacquainted with them, and sooner or leter these ignorant ones find their lends worn out and themselves bankrupts. This State is full of examples of this fact, and many a man is wearing bis life out, trying to solve the question of how to subtract two from four, and have four as e remainder. If a man cut and split a cord of wood, he cannot expect to feel as fresh and strong at the end of the job as at its beginning; he has exchanged his strength for the pile of split wood, and cannot have a similar amount of strength until he has exchanged for it, food, sleep, etc.

THE RULE OF THREE.

All enstgy is a series of blows; and "to strike" is an active transitive verb. Humen industry is the algebraic sum of human ensrgies, and depends on the consumption by one man of the production of anotber, in order to produce something for a third. To argue that the second of these could be benefitted by the injury of the first or third, is to srgue that e blanket could be lengthened by cutting off either end and sewing it on the otber.

THE EQUATION OF EXCHANGE.

All living men are ever exchanging something for something else; give and take are the two members of life's equation. The final expression of any equation of this sort, its simplest form, so to speak, is "Labor for labor." It matters not in what form, in how many fractions, or parentheses, the labor may be hidden, it is alwaya labor; labor aithar past, or present, or yet to be performed, that is exchanged. This is e rugged homespun truth, that meny do not know, and, which many who do know, keep tucked away in the cobweb corner of their brains, where memory and reflection are forbidden to swaep or dust. If every man could have greven on bis finger-tips that everything he huya la a sala of so much of his labor a truer economy would guide many purchases. If a men can earn a dollar a day, and buys ten drinks of whisky at ten cents a drink, he has worked one day to tickle his palate ten times. If people abont to buy anything would always measure their intended purchase with hours of lebor, intead of dollars and cents, a good deal of folly would be frost-bitten, and Christmas find more people with needful dollars in their pockets. Every dollar has two sides, and is entitled to be looked at twice before it is spent. On one side, count how many hours' labor it hes cost you to get it; on the other, how many hours' of your labor you are about to get for it; strike a balance, and keep or spend the coin, as the balence seems in your fevor or against you.

OWLS OF SOCIETY.

This doctrine of "Labor for labor" is one of those genuine truths cnsined in words that contain no sophistical alloy; it will staud the acid tests of morals, politics, or ethics, and is unharmed. Beautifully true as this doctrine is, it is as hateful to some people as a red rag to a bellowing bull; the believers in "Fiat Money," the upholders of the equal redistribution of property, and people fevered with like "isms," boot at this truth like owls at the moonlight. Nevertheless, even as the moon, in spite of owl hools, has shone in the pest, shines now, and will shine in the future, just so have men in the past, do men in the present, and will men in the future, exchenge "Labor for labor," in spite of the hoots of "isuites" whose "ism" truth won't fit.

T. T. u.

NEWS OF THE MONTH.

FOREIGN.

The Grand Duchess of Hesse-Darmstadt, Princess Alice of England, died at 7:30 o'clock A. M., on Dec. 14, of diphtheria. Queen Victoria is deeply afflicted by the death of the Princess. It is a striking coincidence that the death of the Princess took place on the anniversary of the death of her father, Prince Albert, who died December 14, 1861.

The bark Zingarella, Captain Osgood, arrived in Boston after a passage of thirty-two days from Grece, west coast of Africa. She was compelled to return without loading all her cargo, owing to the prevalence of yellow fever. At Gorce the disease is very malignant. many persons having died, including a large number of soldiers. She lost one of her crew by the fever.

The political aspect of the island of Cuba continues favorable, order reigning everywhere. Captain-General Martinez Campos is in Santiago de Cuba.

DOMESTIC.

The report of the Bureau of Statistics for October shows total exports of all kinds to be $66,530,736, with $40,884,079 of imports making an excess of exports over imports of $25,646,657, against $18,624,324. Excess of exports over imports for the past ten months is $234,653,754, against $97,181,438 in 1877. The exports show a large increase and imports a small decrease.

Monday Nov. 9th, will be remembered as the dark day in Cincinnati. Gas had to be lighted in private houses by 5 o'clock P. M., and by 5 o'clock the street car conductors found it necessary to light their lamps.

Figures compiled at the Treasury Department show that the expenses of the government for the Centennial Exhibition were $8,750,000, or about $10,000 less than the Congressional appropriation.

A Mississippian has invented an ice-boat to be propelled by steam instead of sails, and claims, in a letter which he wrote to the Poughkeepsie ice-yacht people, that he can make 100 miles in an hour.

The immense herds of buffalo which crowded the western plains forty years ago are being depleted so fast that experienced hunters predict their practical extinction within a few years.

Charles W. Angell, the defaulting Secretary of the Pullman Palace Car Company, arrested in Lisbon, Portugal, admits his identity, and will be brought to this country, with the money which he had with him, about $40,000.

Nothing has been heard from the steamship Herman Ludwig, which sailed from this port for Antwerp September 28, with a general cargo. She carried no passengers Mrs. Dart, wife of the captain, and two other persons. She was an iron steamer of 1,505 tons. Still another sad disaster at sea is recorded. The British ship of war Orontes, on her passage from Halifax for Bermuda, lost a man overboard. The boat's crew of thirteen who went to the rescue were all drowned by the capsizing of the boat.

A Louisiana newspaper reports that there are now some fifty cases of leprosy in Lafourche. In that State, all originating from one person, who some twenty years ago, settled on the lower part of Bayou Lafourche. Legislative investigation is asked for.

In consequence of his injuries it became necessary to amputate the leg of Gov. Wade Hampton: his condition is much improved, and his complete recovery confidently looked for. He has been elected U. S. Senator.

The bark Monrovia left New York, Dec. 3d, with thirty-one emigrants for Brewerville, Liberia, Africa.

The death of Bayard Taylor, which occurred in Germany, to which country he was U. S. Minister, on Thursday, 19, will be mourned as a sad event, whereby this country was deprived of one of its noblest men.

Rev. Solomon Cosey of Danville, Va. sailed last month on the steamer Wyoming, Guion Line, for Liverpool, en route to Lagos, West Africa, as a missionary. The colored Baptists of Virginia have pledged his support.

The colored people of Atlanta, Georgia, return $260,000 of taxable property. In the State there is a slight decrease over last year. The figures were in 1877, $5,430,944. In 1878, $5,124,875.

New York, December 17—12:30 P. M.—Gold has just sold at par—the first time it has touched that figure since the suspension of specie-payments in 1862.

The colored Baptists of Kentucky have determined to establish a normal and theological school at Louisville, and an agent has been appointed to raised $25,000 for the purpose.

There is great distress in nearly all the manufacturing districts of England, owing to financial and commercial troubles.

Jack Kehoe, the notorious chief of the Mollie McGuires, was hanged at Pottsville, on Dec. 18th.

Arrangements have been consummated for the establishment of a line of steamships between Philadelphia and Amsterdam.

The New Orleans Stock Exchange has passed a set of resolutions declaring that a default by the State on the January coupons of the consolidated debt would be "felt disastrously by every financial corporation and institution of the city." A committee was appointed to co-operate in measures for seeing that the interest is paid.

Mrs. Catharine Roe, of Washingtonville, N. Y., who brought suit at White Plain against George Eppell, for damages for the sale of ale to her husband, has recovered $200.

At the last election a new Constitution was adopted in Washington Ty. by a vote of 8,452 to 3,231. The Republican candidate for delegate to Congress was elected by 1,301 majority.

On the 18th, a joint resolution appropriating 50,000 for the yellow fever investigation passed both Houses.

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. Armstrong, *Principal;* J. F. B. Marshall, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short end long division

Tuition free to all. Board, etc., ten dollars per month, payeble monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationnry. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the Stats hnt is supported mainly by voluntary contribntions.

Annusl scholarships of seventy dollars, to provide free tuitios, are solicited.

Donetions of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable, &c., &c.

For further information address,
S. C. ARMSTRONG, *Principal,*
Hampton, Virginia.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is uniformly *excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

BY

PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR

BY

W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY

BY

MONTEITH & McNALLY.

A HAUNTED HOUSE.

BY MRS. M. F. ARMSTRONG.

Some years ago, in traveling across one of our Middle States, I came just at sunset, at the close of a long day's journey through a fair and fertile country, to a little town, whose white houses and upward-pointing spires gave promise of comfort and welcome for the night, whose shadows were beginning to fall around me. The road which I was following led me along the shore of an inland lake whose waters shone under the slant sunbeams with the brilliancy of some strange jewel, while the low hills surrounding it were green with all the freshness of early summer.

As I neared the village, I saw that it was built well up on the gently-sloping hillside and had rather more than the usual proportion of pleasant, neatly kept houses with bright little gardens and other evidences of prosperity. Down, close on the lake-shore, at some distance below most of the dwellings, stood a small group of factory buildings, whose smoking chimneys and wide open doors showed me one source, at least, of the prosperity of the little town. The scene was altogether so pleasing, and the prospect of such a stopping-place for the night so attractive, that I quickened my steps and was soon within speaking distance of the knots of work-people who were standing about the factory doors or dropping off in twos or threes along their homeward road.

As they seemed to be all going in the same direction, that is, up the hill, down whose gentle descent ran the main street of the little village, I joined them and walked on for a few moments, silently watching their faces in the expectation of finding some one or two among them whose aspect should encourage me to begin a conversation.

I had not long to wait, for just before me in the dusty path two pleasant-faced young fellows were walking arm-in-arm, and from the snatches of their talk which I overheard, as well as from their faces, I judged that they were not without ideas of their own. So, quickening my pace once more in order to keep beside them, I said:

"Good evening, friends. You've a flourishing little town here, I see. What's doing in your factories now?"

"Oh, trade's pretty lively, sir; it's mostly work in ivory horsehoats, piano-keys and billiard-balls and such like," replied the elder of the two men.

"I suppose, then," I said, smiling, "that these pretty places which I see along the hillside have a foundation of elephant's tusks?"

"Well, not exactly that, sir," replied my new acquaintance, smiling in his turn; "but it's true enough that that's where most of the money comes from round here. It's a good business enough and we're mostly a pretty steady set of folks, both rich and poor."

"Yes; your village speaks for itself," I answered. "I never saw a neater, more orderly looking street than this." Just as I spoke these words, my eye was caught by a house which seemed to contradict my assertion somewhat positively, and I did not try to check the half-surprised exclamation which rose to my lips. My companion's eyes followed mine, and I could see that while he knew quite well what it was that had attracted my attention, he was in no hurry to answer my next question. There was perhaps nothing really uncommon in what I saw, but, taken in connection with its surroundings, it certainly was a little surprising, and almost unconsciously I halted for a moment, as did the young man with whom I had been talking. We had just left behind us the last of the factory buildings and had passed one or two small dwelling houses, but had not yet reached the thickly settled portion of the town, so that for a little distance the road had quite a lonely air.

On our right stood the house which had attracted my attention, and though it was far back from the street, I could see, even in the twilight, that it was large and well built and was surrounded by what had once been a beautiful garden. It was closed, by door and by window, but there was no evidence of any great precautions against those who might desire to enter, and, indeed, entrance looked to be an easy thing enough. The garden was overgrown with weeds and vines, and though an occasional rose-tree raised its hardy head above the tangle at its feet, it was plain that for many a year no careful hand had trained or pruned its thorny branches. In fact, the strange thing about the whole place was the air of total neglect which had at first struck my attention, and in this it was such a contrast to all that I saw of the rest of the village, that I turned at once to the man at my side for an explanation. He hesitated a moment before answering me, and then prefaced his answer with a slow shake of the head which showed me at once that something was amiss.

"Yes; it's easy to see that things ain't as they should be here, sir; but then it's hard to say just what's wrong. There are strange stories told about this old house, but folks from out o' town don't generally believe 'em, so 'tain't often we speak of 'em."

"Well, I can't promise to believe all you tell me," I said, laughing, "but I must acknowledge that you have excited my curiosity and I should like to hear what you know about the house."

"'Tain't much that I know, sir, but you're welcome to hear it all." He hesitated here for a moment, and then went on slowly, "They do say, and I guess most folks round here believe, that the house is haunted."

"Ah?" said I, "do you mean to say that the house has been deserted and neglected in this way because people are afraid to live in it?"

"That's just it, sir. It's as good a house as any in town, and you see for yourself what the garden might be, but you'd have hard work to get anybody round here to take a lease of it."

"That's rather hard on the owner," I said; "who is he, and when was the house built, and what kind of a ghost is it that none of you people are clever enough to lay? Come, tell me the whole story, if you can spare the time. I'd like to get at the bottom of this matter."

"Oh, yes," answered my acquaintance; "I've the evening before me, and anyway it's no long story. You see, the house was built about twenty-five years ago by a gentleman who took great pains to have it just as he wanted it, for he meant to spend his days there. But he hadn't lived there more'n about five years when his only son took sick and died with some kind of a fever, and then his wife caught it and she died too, and that kinder broke him up. So he went off and the house stood empty for a year or two, and then he wrote back to his agents here, and they let it to some folks from out o' town, a real nice family they was, too. But they hadn't lived in it more'n a year when one o' their children died, and after that the mother couldn't bear the house, and they moved away. Then it was let again, and that time there was two deaths in less than six months,—and so it went, sir, everybody that tried to live in the house either got sick and had to leave, or died; and the story got round that them that died stayed there, and the folks that come after see 'em and was scared to death. It's more'n six years since anybody's lived there, and it'd be brave folks or crazy ones that'd go there now."

While my companion was talking, we had walked slowly on and were, by this time, in the heart of the village and near the hotel where I intended to stop. But that which at first had been mere curiosity had now deepened into a strong desire to know something more about what was, at least, a very strange story, and I asked with real interest if no attempt had ever been made to discover a cause for the sickness which had made the house so fatal. "Did nobody ever look to the sewers and the cess-pools and so on?" I inquired.

"Oh yes, sir; they've had workmen there for weeks at a time, but nothing made any difference, the next people that took the house had the same luck; and at last old Mr. Grant (that's the gentleman that built it) said himself that there was a curse on the house, and he wouldn't throw any more money away on it, so there it stands. These new-fangled notions about drainage and all that, is very good, no doubt, but they can't help a case like this," and the young man once more shook his head ominously.

"Well," said I, "I must say good-evening to you now, but I'm going to be in town for a day or two, and I should like to talk this matter over with you. I don't believe in ghosts, in the first place, and then I'm a doctor, and I tell you frankly that I don't believe all these people died without good cause; so if you'll tell me your name, and the name of the unlucky agent who has to take care of this ghost of yours, I think I'll take a look at the house myself. If I should make up my mind to stay in it for a couple of days, suppose you come and stay with me; you're a fine, stout young fellow—between us, I think we should be a match for anything we are likely to find."

"I don't know about that, sir; but my name is Henry Johnson, and I'd certainly like to see you again. Anybody in the hotel can tell you where Mr. Harper, the agent, lives, and he'll let you have the house cheap, I dare say." and with rather a grim smile, my friend left me at the hotel door.

I am a physician and I have certain hobbies, one of which is that a great deal of the sickness, and consequently a great deal of the sorrow, from which we suffer in this world, comes from ignorance of, or, worse still, disobedience to God's laws. And I am willing to put myself to a good deal of inconvenience if I can help people to understand these laws, and to see what is the result of breaking them. Then, too, I think it a great pity that sensible people should allow themselves to be affected by nonsensical superstitions of any kind, and the idea that the whole population, or at least, a majority of the population of such a village as this should believe in the possibility of a house being made uninhabitable by ghosts, gave me a very unpleasant shock. My journey was merely one of pleasure, and I did not see that my vacation could be better spent than in disproving the existence of these same ghosts, if I could, in so doing, strike a blow for common-sense and against superstition. To begin with, I was pretty sure of my ground. I had called upon the old doctor who had lived in the town for years, and had obtained some information in regard to the various deaths which had given the house its bad name, and I believed that a close examination of the premises would enable me to put my finger on the cause.

So on Monday afternoon, I went again to the agent and got the keys of the two main doors, and then walked down to the factory to meet young Johnson, who, I was glad to find, was a married man. Of course I wanted to see his wife before I concluded my bargain; so I went into the little house where they lived—Henry had already told her about my plan—and she welcomed me with a cheery "Good-evening, doctor. Will you sit down and take a cup of tea? We're plain folks, you know, but Henry says you think we can be some help to you, and I'm sure I'd like to know what you think about our 'haunted house,' as they call it."

"Yes," I replied; "I do want your help, but before we make any bargain I want you to understand just what I mean to do; so, if you don't object, I'll sit here for an hour or so and explain my plans while you and Henry eat your supper." So without farther delay the husband and wife sat down to their meal, in which I was glad to see the baby had no share, his sensible mother having given him his bread and milk some time before, so that after a little romp with his father, he was all ready for bed.

"You see," I began "there is no doubt that all these deaths did occur in the house, just as they are said to have done. Dr. James assures me of that, and it is just as certain that there is a direct connection between the house and the deaths, as it is that the house stands there empty at this moment. Now, at the very outset, I want you to understand that I entirely reject the possibility of any ghosts being mixed up with this affair. There isn't anything supernatural about it; whatever the cause may be, you may be sure it is a natural one, and though we may have hard work to find it, it is to be found, and found in just one way, that is, by careful examination and experiment. If I were to tell you that I have already made up my own mind from merely walking about the place and using my eyes, it might shake your faith in me, so I shall make no promises as yet, but will simply tell you my plan.

In the first place, if you, Henry can leave your work at the factory for a couple of days, I want you to spend them in the house with me, taking your meals at home here, as usual. If our examination should turn out as I think it will, I want you two with the baby to move into the house, the rent of which I will pay, and live there for a year, the only condition being that you shall live just as I shall direct. If at the end of that time everything shall have gone well with you, I will advance you the rent for another year, and I don't think that Lizzie will have any trouble in filling all these rooms with respectable lodgers, which will bring you in a nice little income." As I finished my little speech Lizzie's eyes brightened, and I had not long to wait for her answer. "I'm not afraid to trust you, sir, if Henry's willing we'll move in this week." Her more cautious husband put his hand on her shoulder, "Wait a bit, little woman," said he, "suppose everything should'nt turn out well, suppose there should be more in these stories than we think and something—" Here I interrupted him for I was not ready for discussions as to uncertain "somethings."

"We'll put off talking about that for the present," I said; "the first thing to be settled is whether you will go into the house with me for a couple of days—and nights," I added a little mischievously. "O yes," replied Henry, "I can manage that well enough, there's a mate of mine out o' work, he'll take my place at the factory. When do you want me, sir?" "To-morrow morning." I answered, "for I've no time to lose, and if you and Lizzie should back out I must look for some one else, you know, for I'm not going to give up without good reason."

The next morning I was at the door of the haunted house soon after sunrise, and as I stood there alone waiting for Henry, it seemed to me that the neglected building rose up before me, a monument to ignorance and superstition, those terrible twin sisters and as I thought of the victims they had found within this fair garden, I shuddered, remembering that their reign is not yet over, that still they are supreme in many a dark place, slaying day by day their thousands, and maiming and crippling multitudes of whom no man takes account.

But my thoughts were quickly broken in upon by a cheery "good morning," from Henry, and in a moment more we turned the key in the lock of the front door. The wood was swollen with dampness and it was only after some pushing that we succeeded in getting into the hall, which we found ran through the body of the house and opened at the end into a large kitchen with numerous pantries and windows. The latter we raised without much difficulty and soon had plenty of sunlight shining in upon dusty floors and cobweb hung walls. There were two rooms on either side of the hall, there were front stairs, and back stairs, there were plenty of windows everywhere, the ceilings were high, the whole air of the house must have been in the days before it was haunted, cheerful and wholesome. I went through both stories carefully, opening pantry doors and looking into all the corners, more, of course, for Henry's satisfaction than my own. "Well," said I, when we once more found ourselves in the kitchen "so far there is certainly nothing remarkable about the house, and there's nothing left but the cellar. Come, Henry, light your lantern and we'll try that." Henry obeyed and followed me down a pair of steep, dark stairs which led somewhat to my surprise, into a well-lighted and cemented cellar extending under the whole house and thoroughly ventilated by single pane windows, from one or two of which we quickly knocked away the boardings. It was somewhat damp, of course, but for a cellar which had been unused for years it was in unexpectedly good condition, and contained nothing in the way of rubbish beyond a few harmless barrels. I was silent for a moment, and then turning to my companion said very seriously, "Well, Henry, this lays on of *my* ghosts." Henry stared a little and I continued, "I thought I should corner him here, but this place is altogether too clean and airy. My ghosts like dirt and darkness. We must look for them somewhere else." So I turned back up the stairs again, Henry following with a somewhat dubious expression on his face.

The fact that I did not find in the cellar what I had thought might exist there, that is, the evidence of defective drainage, only strengthened my conviction as to the root of all the trouble, and I wasted no more time in looking about me.

On one side of the kitchen was a pump which I found brought water from a well in the garden at some distance from the house, and it was to this well that my suspicions were now all directed. It was evident that

from it the entire supply of drinking water had been obtained, and I only wanted a few more facts to change my suspicions into certainty.

It was now near noon, and I told Henry to go home terrors, I making the only alteration which I considered necessary, that is putting down at the cost of about $12.00, a drive or artesian well in the rear of the garden, entirely out of the way of any drainage from the slope stronger than Lizzie chooses to give you; you can trust her, and I shall trust her too, to see that the money that might go for drink is kept for something better—beefsteak and potatoes, for example." As I said this, I laid my hand on Henry's shoulder, for I knew that he was

from it the entire supply of drinking water had been obtained, and I only wanted a few more feets to change my suspicions into certainty.

It was now near noon, and I told Henry to go home to his dinner, and not to come back till after dark, when he was to bring the tools which I wanted and a couple of blankets for the night.

As for myself, I pumped diligently till the water ran fresh and clear from the well, and then pouring some of it into a bottle which I had brought with me, I went back to the hotel, where with the aid of a little microscope which I always carried with me, I had no difficulty in detecting that the water was, in its present condition, so impure as to be actually a slow poison to any who might drink it. This fact being established it only remained for me to prove that this impurity existed during the years when the various deaths had taken place. If I could do this I felt that I was justified in putting Henry and his family into the house at once, provided I could ensure them a supply of pure water, which I thought could easily be done, and then the rest of my experiment would take care of itself. Now in order to prove that the water from this well had been just as impure ten or fifteen years before as it was at the time of my analysis, I had got to discover the cause of this impurity, and it was just this of which I had from the beginning felt very sure. The whole village was built, as I have said, on a side hill, and the haunted house stood just at the beginning of the rising ground. The well from which came all the water consumed by the occupants of the house had been dug at a good distance from all the outbuildings, etc., but quite near the fence which bounded the property on that side. On the other side of this fence stood a small house, the surroundings of which were not in very good order, and I had found from inquiry, that its condition had been much the same for the previous twenty years. Now it had struck me at first that the well from its position almost at the bottom of the hill might catch the drainage not only from the small house, but also from several other buildings which stood just above it. I thought this could be easily demonstrated but I also thought it quite possible that by a little digging I might find that there was even a more direct cause than this for the poisoned water of the well.

I wanted to do this digging at night partly because I did not want to be watched, but mainly because I thought it would be a good test of Henry's courage. So when he arrived about nine o'clock, I told him what my analysis of the well water had told me, viz., that in its impurity was to be found full cause for the illness and death of any one who should drink it for any length of time. I then carefully explained to him my idea as to the sources of the impurity, and his own common-sense assured him that I was probably right, so that when, between eleven and twelve o'clock I shouldered a spade and started out of the back door to commence my digging, I was glad to find that I had in Henry as steady and clear headed a companion as heart could desire.

We began our work at a little distance above the well but an hour's digging showed me that we were in the wrong place, and in a low voice I told Henry to stop for a moment while I looked about me.

Our digging was no easy work, for the night was dark and hot, and the air so close and heavy as almost to make us feel that some ghostly presence was surrounding us, and forcing us in spite of ourselves to believe that we saw strange shapes, and heard unearthly sounds. The little town was fast asleep, not a whisper or a footfall broke the stillness of the garden, it seemed that not even a leaf rustled, and I think it was something else than fatigue that made Henry's hand tremble as I took the lantern from him. I wanted to jump the fence and walk up for a short distance on the other side, but it was evident that Henry had no idea of being left alone in the darkness, and I can't say that I thought his nervousness at all unusual. However sure I might be of what was before us, I could hardly expect a man to whom the existence of this haunted house had for years been a familiar fact, to give up his belief all at once, and in truth I was not myself altogether free from excitement though in my case the cause was very different. Henry feared a supernatural visitor, I felt, with every nerve in my body, that we were fighting death, and the closer we came to his hiding place the more determined I was that our night's work should end his reign.

So taking the lantern and calling Henry to follow me, me, I walked up along the line of the fence some thirty feet and after a quick examination of the ground said cheerfully to my half unwilling companion "Come on Henry, we'll make another attack here it's too soon to give in you know." In silence we cut away the sod and began our work again and for another hour there were not many words spoken between us. My arms ached with fatigue and I began to think that we were again on the wrong scent when all at once I turned up a spade full of earth which settled the whole matter in a twinkling. By the light of the lantern I could see what my nose had already informed me of, that we had come upon the drainage from a cesspool, and ten minutes more of vigorous digging showed us that this cesspool which had evidently been for years left to take care of itself had leaked directly into the spring which formed the main supply of the well. We had our ghost now at close quarters and no white robed skeleton could be half so terrible to a reasonable man, as was this silent, stealthy, merciless demon of dirt, who, unseen and unsuspected had for so long been doing his awful, irreparable work. I had no need to say much to Henry, he had seen and smelled for himself, and we walked quietly, almost solemnly back to the house, from which, we believed, our night's work had lifted the curse which for years had hung over it. We did not sleep, for dawn was close at hand, and when half an hour later we parted at the garden gate, Henry had definitely accepted the offer I had made him, with all its provisos, and before the week was out, Henry, Lizzie and the baby were established in the house, which for them had now lost all its terrors, I making the only alteration which I considered necessary, that is putting down at the cost of about $12.00, a drive or artesian well in the rear of the garden, entirely out of the way of any drainage from the slope above.

There was really nothing more for me to do except to give them in detail those directions in regard to their manner of life about which I had already spoken to them in a general way, and this I wanted to do at some length. So the evening before my departure from the village in which, instead of one night I had spent ten days, found me sitting in one of the rooms which Lizzie's busy hands had already in a plain way made bright and comfortable. As a matter of fact I had no fear but that the house would now prove to be as wholesome as any in the village, but I wanted my young couple to feel how much depended upon themselves, and I was very much in earnest in desiring that they should make their housekeeping a model for all the young couples about them. They were beginning with great advantages, they had a large airy house, with plenty of space about it, and in good order, and as they had it rent free, they could afford to buy all that they needed in the way of furniture and clothing. I felt that their future was in their own hands, and it was with a strong desire that they should feel it too that I said, "Lizzie, I hope you realize how much depends upon you during the next year"? Lizzie was undressing the baby and she stopped to give him a toss and a half-dozen kisses before she answered, "I've only to look at Baby to know that, sir. You may be sure that I'll do my best to take care of him and Henry." I knew Lizzie meant what she said and I replied, "I don't think think I need be afraid to trust you and Henry, I am sure, in fact, that you will do your best to fulfil your part of our bargain, but I want to-night to go over carefully the terms of the compact and to tell you just what I mean by them. You know I agreed to put this house in good order, and give it to you rent-free for a year, provided you would live during that year just as I direct." The young people assented to this eagerly enough, and Lizzie who was always the first to speak said, "You've only got to tell us, sir, what we are to do, we trust you, as much as you do us." "The foundation of all that I require, Lizzie," I replied, "is that you should be clean, and I am going to tell you just what I mean by cleanliness.

"In the first place, the house must be clean; there must be no decaying vegetables or fruit, no rubbish of any kind kept in the cellar, the air must be kept perfectly fresh and sweet, for you must not forget that it affects the air of all the rest of the house. Then be sure that your sink is clean, don't let the drain get stopped up, and once a day, at least, wipe it out thoroughly clean and dry. It is a good plan occasionally to put a little chloride of lime down the pipe of your sink or wash tub, but in using lime or carbolic acid, or indeed almost any disinfectant you must be very careful on account of their poisonous properties.

Don't let rubbish of any kind collect in the house, keep all your pantries and cupboards clean, don't get into the habit of pushing things away into holes and corners, and be sure that your beds are well aired and that the bedsteads are occasionally wiped off with hot water and soap. The only way to ensure your bed's being properly aired is to shake it up thoroughly when you first get up, turn back the mattress (I take it for granted you are not so unwise as to sleep upon feathers), then open all the windows and leave the room for at least an hour before you make the bed. Empty all the slops every morning and wash out slop pails, etc., with clean water, taking care that any vessel which is used in the room during the night, is kept covered. By-the-by, it is a bad plan to let such vessels stand in a wooden washstand or cupboard, for the wood soon becomes saturated with the smell, which is both disagreable and unwholesome. Don't be afraid of fresh air, by night or day; drafts are not such bad things as they get credit for being, and you ought always to sleep with plenty of air to your room. for the more you accustom yourselves to the air the less likely you will be to take cold. Another safeguard against colds is warm clothing, and I advise you, both in summer and winter to wear woollen underclothes, heavy or light according to the season.

But then, you know, if you don't take care of your skins, putting on flannels won't help you—and if I insist upon your washing yourselves thoroughly every day, or at least three times a week, you must not think that I am making you a great deal of unnecessary trouble. If you want to be well and keep the baby well, you must look out not only for dirt which comes from the outside but also for dirt which comes from the inside, and you must keep the pores of the skin open so that all the waste matter for which they are the proper channel of escape can easily be got rid of. Wash yourselves and the baby often and carefully and change all your underclothing at least once a week, oftener, if you find you can afford it.

"As to your food, I should like to say a good deal, but I can only give you general directions and then trust to your common sense. Eat oatmeal, mush, hominy, rice and all that sort of thing, with all the milk you can get; potatoes, and indeed almost all kinds of vegetables and fruit, boiled, baked, or uncooked, as may be, are excellent, and you ought to get fresh meat once a day, if possible. Eggs, of course, and bacon and ham, but not too much fresh pork; and remember, Lizzie, that you are not to waste time and material in making pies and cake. Plain puddings you can always have; but in cooking food of any kind, you must realize that everything depends on the cook. Don't fry when you can help it,—

'Boil, broil or bake,
For health's and economy's sake.'

Have your meals always at regular times, and don't eat at all times. Take coffee, tea or cocoa with your meals, but don't drink anything between meals—no, Henry, not even an occasional glass of whisky, though about that I shall perhaps have to make a special bargain." Henry looked at me a little uncertainly, and I went on more seriously, "Yes; you'd better not take anything stronger than Lizzie chooses to give you; you can trust her, and I shall trust her too, to see that the money that might go for drink is kept for something better—beefsteak and potatoes, for example." As I said this, I laid my hand on Henry's shoulder, for I knew that he was not entirely safe in this respect, and I wanted my words to have full weight.

"Well," he said, slowly, looking at Lizzie as he spoke, "I'll engage to drop it; it's in the bargain, I s'pose, and besides, I should like to see for myself how a man can get on without any drink."

"That's a wise resolve," I replied, "and your head will be all the clearer for it. Shake hands on it, for I must be off, or I shall miss my train. One word more—remember, both of you, that this experiment is not merely for your good and my satisfaction, but if it succeeds, it is for the good of the whole village. If you prove that you can live in this house and be well and, in every sense, do well, merely by obeying a few simple laws which he who runs may read, why—I think you will be giving a good lesson to the whole village. Once more, good-bye—in a year from to-day I shall come back, and in the meantime, if you want me, send for me"—and with a hearty shake of the hand I left my two friends, and for twelve months turned my back on the whole matter, for I did not mean to interfere any farther in the experiment, and, as the event proved, there was no need for it. Henry and Lizzie were, as I had judged them them to be, an intelligent, energetic young couple, and the two letters which I received from them during the year which followed my visit, were full of good reports.

Time flew, as it always does with busy people, and on the appointed day I found myself at the gate of the haunted house. I had sent no warning of my coming, and I was glad to get my first impressions of the changes before I saw either of my friends. How pretty and neat the garden looked, with the paths clean and the shrubs trimmed; and as Lizzie, with the baby toddling beside her, came down the steps of the porch, I had no need to ask any questions as to their health and happiness.

"Is it all right, Lizzie?" I asked, holding out my hand. The beaming smile on her face answered me better than words, but the words came, too, and fast enough. "Come in, sir, come in and see for yourself; isn't the house pleasant?" The story of the year was on her lips, and I was almost at pleased to hear as she to tell.

"You see, sir," she said, as I followed her into the bright room, "we hadn't been here three months before folks knew all about it; and some of the clever ones, they said, that if we'd laid the ghost with a shovel, they'd no call to be afraid. And everything was so pleasant and convenient that before long some of the overseers came to see if we wouldn't board 'em; so we took the money we'd saved for rent and bought some furniture—and now, sir, every room in the house is full, and last Tuesday, Henry took a hundred dollars to the bank." Here Lizzie fairly broke down, and between laughing and crying was hardly able to speak, though she managed to say, "And I've got the name of being the best housekeeper in town, and it's all because I've done everything just as you've laid out for me."

"And what does Henry say?" I asked.

"I guess he won't be long in speaking for himself, sir; he'll be home in a few minutes. Won't you look about a little, and see how things are?"

It was with real pride that Lizzie led me through her clean kitchen and sink-room, and out of the back door into the garden, where everything showed that Henry had been true to his promise, and that he and Lizzie were fairly started on the right road. They had found, as anybody may find who will try it, that though they were poor and not very wise, they could live clean, orderly, temperate lives, and that, in every sense, such lives "pay." As Lizzie had said, her husband was not long in coming, and when I looked at their happy faces and at the rosy baby, and the cheerful house, I could well believe Lizzie's stories of the effect their experiment was having in the village, especially as it was evident that Lizzie preached as well as practiced. In a word, all I had hoped for was accomplished, and the time of my visit was spent rather in hearing their experience, than in giving any further advice. I renewed my offer to advance them the rent for the next year, but they both refused, feeling that they were quite able to pay it themselves, and when we parted, it was with thorough satisfaction that I promised to visit them again the following year.

So last night I found myself once more within their gates, in the well-kept garden whose brilliant autumn flowers were not brighter than the faces of the little household gathered to greet me. All was well with them still; instead of any ghastly ghosts, another laughing, healthy boy had come to them, and I had found warm and loving welcome. They, had, as before, only to tell me of a year of peace and prosperity—the terrible shadow of disease and death which had so long hung over the house had vanished, and, instead, was the sunshine of a happy home. "And how has this home been made?" I asked myself, as, after I left my two friends, (having drunk their healths in a glass of pure water from what we still called "the new well,") I stood looking back at the house with its windows ablaze in the light of the setting sun. Will not my readers answer, as I did, "It is the work of a husband and wife who have undertaken in earnest to learn and keep the laws of God. They have learned that dirt and filth mean disease, that intemperance in food and drink means ill-health, that impure air and water mean poison, and they have learned that almost any one who chooses can avoid these things."

There are more haunted houses than one in our land, but among them all there is not a ghost which cannot be laid, nor a demon which cannot be driven out by intelligent and patient endeavor. At least, this is what Henry and Lizzie and I said to each other, the last time we met under the roof of our no longer "Haunted House."

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

A BATTLE IN THE CLOUDS.

matched. But he will not let go, and, as lines, and engaged for a time in their manu- improved magic lantern, the peculiar proper-

THE BURNING LAMP.

By a Colored Man, in the Boston Congregationalist.

Say, is your lamp burning, my brother?
I pray you look quickly and see;
For if it were burning, then surely
Some beame would fall bright upon me.

Straight, straight is the road; but I falter,
And oft shall I fall by the way.
Than lift your lamp higher, my brother,
Lest I should make fatal delay

There are many and many around you,
Who follow wherever you go.
If you thought that they walked in the shadow,
Your lamp would hurn brightly, I know.

Upon the dark mountains they stumbla,
They fall on the rocks, and they lie
With their whita, pleading faces turned upward
To the cloude and the pitiful sky.

If once all the lamps that are lighted
Should steadily blaze out in line
Wide o'er the earth and the ocean,
What a girdle of glory would shina!

How afl the dark places would lighten;
How the mist would rise up and away;
How the earth would laugh out in har gladnees,
And hail the millepnial day!

Say, is your lamp burning, my brother?
I pray you look quickly and see;
For if it were burning, then surely
Some beams would fall bright upon me.

A BATTLE IN THE CLOUDS.

As to *the* "Battle in the Clouds," which for fifteen years has crowned Mt. Lookout's lofty head with glory, the Generals are disputing its very existence you know, and the whola subject begins to look so cloudy, that nothing may be left to history of one of the most dramatic stories of the war. So, while admiring tha beautiful and spirited picture for which the Workman is indebted this month to Messrs. Harper Bros., we have thought it best to test its truth to nature in the severest possible way. Is this grand encounter between savage man and savage bird, the artist's bold ideal, or the fine fact itself? Facts, facts—like Mr. Gradgrind, nothing else would satisfy us.

So tha picture was submitted to a committee of inspection, sixty-seven strong—consisting of Cheyennes, Kiowas, Arapahoe, Sioux, Mandans, Arickarees, Gros Ventres, and Choctaw. Among tha number, to be thoroughly impartial, was one Soaring Eagle.

The Ohe, and Ahs, and Ughs, and Dochs—land ess easily transcribed interjections—with the kindling eyes and emiles of recognition, would have satisfied any artist's desire for appreciation.

"Good"—"Have feathers for head." One went through tha scene in the expressive sign language, common to all the tribes, with explanations for the benefit of an ignorant paleface. "Catch Wah-kuh, (the rabbit)—kill—tie him to tree. Then Indian hide—watch—look up—still. By and by comes Nihtz—(the Eagle) —down through sky—comes down, comes down, smells Wahkuh—catches him—then Indian jumps—catch Nihtz—then fight. By and by heap feathers—head—back—so—Good."

"Yes, but is that the way *you* catch cagles —kill eaglcs with sticks?"

"No—shoot. In the night—twelve o'clock, eagles go to slecp, *so*. Then Indian shoot up in trea."

"How can you see to shoot them at twelve o'clock at night."

"Moon heap shine."

"Yes, and the picture is moonshine too, is it? Did you ever know a man to fight an eagle with a stick? Any of your friends fight lika that?"

Little Chief, a Cheyenne, said "Yes, one Arapahoe—I knew—fought eagle, kill him—strike him—like that. Heap strong."

White Wolf, a Dakota, also testified to having heard of one man who had so distinguished himself, but did not know why he did not taka the safe and surer method of shooting.

But the lover of facts may be satisfied. Tha pictura has passed inspection, and received confirmation strong. Ona more point is also settled. The gallant brave is a Sioux, or Dakota, to give him the name he likes tha best.

"How do you know"? wa asked,

"Cheyennes no put beads on leggings—only on moccasins. Sioux—beads like that."

This particular pattern was indeed the proud adornment of more than one of the Dakota youths on their late arrival in Hamptou.

Whatever the motive of the red warrior,—perhaps, as the Hnrpera suggest, he may feel the dark eyes of some dusky charmer upon him and covet distinction above some rival in their favor—ha is making a gallnnt fight, and a splendid picture of athletic grace, as eye and muscle strained to intense action, he fights for lifa and death with the angry hird. It would not ha very safe for him to let go now, his gallantry and his grace are well matched. But he will not let go, and, as Matches prophecies,

"By and by, heap feathers—fine head dress, Good!"

CORRESPONDENCE.

LETTER FROM MRS. HARRIET BEECHER STOWE.

The opinions of the author of Uncle Tom's Cahin, upon any question connected with the freedmen's interests cannot but be received with respect by the people whose cause she has so long and so ably espoused. We are glad therefore to give them the reading of a letter recently received by the Principal of Hampton Institute. While chiefly in reference to sending a student to Hampton, it expresses her ideas upon an important point, the kind of colored preachers needed in the South.

——, *Dec. 13th*, 1878.

Gen'l. Armstrong:

I am desirous of inducing a likely young colored man, son of my head man to get an education that he may become a teacher here.

His father is a local preacher—but, having no education, his preaching is only better than nothing. But if his son could get some education, he might succeed his father and do better. For a long time yet, in the country, the *preacher* must be only an educated farmer, laboring week days and preaching Sundays; this is what I want to prepare —— for. His father has acquired by free labor a thriving farm and young orange grove, and — can carry this on, and preach, exhort and hold prayer meetings. Now, how nearly can an able bodied youth, accustomed to farm work, earn his board. When does your term begin and end, and when would it be most for —'s advantage to join? I suppose he might work his way up to Hampton, on some steamer. What sort of an outfit would he have to bring? I promised his father to get information on all these points, and an early reply would he a favor to him.

I should say —— has had only common school and Sabbath school teaching hitherto, but has been reckoned a good scholar in these.

Hoping to hear, I am,
Truly yours,
H. B. STOWE.

Mrs. Stowe's ideas of the necessary preparation for colored preachers are strikingly in harmony with the policy of training practiced at Hampton, and, since the days when St. Paul wrought as tent-maker while reasoning in the synagogue every Sabbath, the best pioneer preachers have been men who can support themselves as well as preach; whose hands can teach the religion of honest work, while their lips are telling the good news of the gospel.

EMINENT COLORED PEOPLE.

A COLORED INVENTOR.

The following interesting relation has been furnished at our request by the writer of the account of Phillis Wheatley published a few months ago in this paper.

It certainly proves that the inventive faculty was not left out of the colored race.

"ELIAS JASPER was born at Hampton, Va. in 1820. His mother was a slave belonging to Com. Samuel Barrow and was employed as nurse in his family. His grandfather was handsomely rewarded by the U. S. Government for valuable services during the war of 1812. In very early life he was transferred to Walter Herron, Esq., of Norfolk and remained his legal property till his death. In 1854, he took a trip by underground railroad to Toronto, Canada.

Having learned when a slave the trades of mill-wright and carpenter, in which he was very skillful, he found ample employment in Toronto.

Mr. Jasper when a slave in Norfolk was allowed by his owner then James H. Behan, Esq., to conduct a daguerreotype and ambrotype gallery on Holt Street. He has lately seen pictures taken by himself when a slava.

Among the other accomplishments of the ingenious slave, he was expert in the business of tanning and rope-making, and was engineer in charge of the machinery of the extensive rope-walk and tannery of Plume & Co., Norfolk. Privileges incidental to his position, doubtless enabled him to arranga for a journey to Philadelphia and thence to Canada.

In Toronto, Canada, Mr. Jasper was for some time employed in the large furniture establishment of Jukes and Hayes, as engineer. After remaining about ten years in Canada he went to New York, and thence to Hayti in the ship Flight, Capt. Cutt. In Hayti he invented and constructed a machine for making fish-lines, and engaged for a time in their manufacture.

A merchant who had a large quantity of rope, rigging, &c. from wrecks, applied to the maker of fish-lines to enlarge his machinery, and make up his stock into small cordage, which gave constant employment for six months. The merchant's stock of rigging being used up, he began the manufacture of gunpowder on a small scale, which was tested and approved by the government.

President Geffard sent for Mr. Jasper and wished him to take charge of contemplated powder-works in the Island, but learning that he was also an engineer, and wishing to send in haste a Haytien War-steamer the "Vingt deux Decembre," to New York for repairs, requested him to go thither as assistant engineer, contemplating the establishment of powder works on his return.

Being temporarily disabled from the effects of a burn on board the steamer, he stopped in New York for medical attendance for a while, and then returned to Canada, but in a few weeks he went to Buffalo and enlisted in the 25th Regiment of New York Volunteers. After the close of the war he was honorably discharged from service, and after nearly twelve years' absence returned to Norfolk on the upper deck of a steamer, and not as he left it, a "stowaway" between the decks of a sloop.

The sketch of the life and adventures of the run-away slave, given above was taken down from his own version related orally to the writer as also the following list of some of his inventions.

LIST OF SOME OF MR. JASPER'S INVENTIONS:

Reaping and Mowing Machine, patented in Canada under rule of Sir Edmund Head.

A simple but efficient apple-pearer.

A rotary grate for economy of fuel.

An ingenious picture nail, made to lock behind the lath and securely hold heavy looking-glasses and pictures from ordinary lath and plaster walls.

A similar device for ceilings.

A pea-nut sheller.

Rotary door-mat.

Rotary animal trap.

An invisible hinge.

Carriage indicator showing the number of two, or four wheeled vehicles passing over a bridge or turnpike in a given time.

Mr. Jasper has innumerable plans and models of ingenious and useful inventions, which he would be glad to see in use, and would make favorable arrangements with any parties of means to patent them and engage in their manufacture. The writer of this sketch has seen several of them and speaks confidently of their utility. Any persons wishing to correspond with Mr. Jasper, can address him at 30 Queen St., Norfolk, Va.

The extracts below are from the Washington People's Advocate," and the "Norfolk, Va., Landmark."

I have been gratified to learn that the sketch of Phillis Wheatley the talented poetess, published in the Southern Workman, last spring, accomplished the object intended, and can only hope that the outline of the life of the worthy and gifted colored man given above, may in some way, by its publication tend to benefit him and others.

Respectfully, &c.,
A FRIEND.

A MECHANICAL GENIUS.

"Of the men of our race at the South who are possessed of inventive genius, none are more deserving of notice than Mr. Elias Jasper of this city, whose inventive skill has developed more than one creation. Born a slava, of course he is without any particular mental training; but a more industrious and persevering worker is not to be found. Since emancipation, he has contrived many simple and useful things. It would repay one to visit Mr. Jasper's work-shop, in the western part of the city. Here he has modeled his idea of a rotary grate, for the fire-place, designed to take the place of the stationary grate now in use. It is not exactly a self-feeder, but by a little attention, fire can be kept going in it for a long while, and when the fire is low, a ravolution will rekindle it, without filling the room with dust and ashes.

The most ingenious of all his inventions is his revolving foot mat for doors, carriages, vehicles, &c. It is so contrived that by placing the foot upon it a muddy shoe or boot is instantly cleaned, and the dirt carried to a pan below. He has also an invisible hinge, intended to fill the place of the cumbrous hinge now used on pianos, fancy boxes, show cases, desks &c. Among his wonderful inventions is a magic lantern, whose peculiar properties are to exhibit card photographs, life size, on the bare wall of the drawing-room or parlor. The editor of the Norfolk *Landmark* says:

'A communication appeared in the People's Advocate, published at Washington, D. C., of the 33d ult., concerning Elias Jasper, colored, of this city, who is truly a mechanical genius. We have previously spoken of some of his inventions, but will add, that the list comprises, in part, the following: Rotary grate, revolving door mat, invisible hinge and improved magic lantern, the peculiar properties of which are to exhibit card photographs, life size, on the bare wall. The communication concludes as follows:

"Like most inventors, Mr. Jasper is too poor to secure patents for his inventions, consequently he has many of them on hand waiting for an opportunty. Several of his models, however have been sold. Should some philanthropist become interested in Mr. Jasper's genius he may yet figure among our first inventors.'"

SOME MENTAL CHARACTERISTICS OF THE NEGRO,

AND THE DIFFICULTIES THEY PRESENT TO TEACHERS.

Every race has its peculiar mental as well as physical characteristics; and it is pretty well agreed, that in successfully educating the youth of different nationalities, to the same point, different paths must be followed. Precisely the same educational means, best adapted to the phlegmatic German, are ill-suited to the more nervous-sanguine American boy or girl. It seems a fair inference, then, that in educating the Anglo-African, the best results cannot be expected from a rigid adherence to those processes, that have been found best in educating American youth. But, in what shall the processes differ? This question is more easily asked than answered; for the history of the education of the negro only covers a period of about a dozen years, and there are not at hand sufficient observed phenomena to warrant any wide generalizations: moreover, the comparison of means is rendered more difficult by the fact, that there is not complete unanimity of opinion as to the best means of educating the white race.

My own experience with the colored people leads me to think that their lack of mental symmetry is due to the preponderance of their analytic over their synthetic powers. Whether this be organic, or simply an outgrowth of years of slavery, when all their conclusions were drawn for them, I do not pretend to say; nor is it of present importance, for we have to work on their minds as we find them, and not on what they may be years hence. The negro's natural love of disputation, just for disputation's sake, must strike even a most casual observer. More than any other race they like to tear statements to pieces, not so much for the purpose of putting the pieces together in another form later on, as of simply making the pieces. This clearly shows the preponderance of analysis over synthesis. In the analytical criticism of some simple poems, I have often been surprised at the keen questions asked, and at the deft unwindings of hidden meanings; but to get a pithy summary of a page of prose is a rarity indeed. To use a very bold simile: in analysis, their minds move in straight lines; in synthesis, in the arcs of circles. The curved line is the line of beauty, and in this mental peculiarity of the negro, are there not grounds for believing that he is naturally æsthetic? His love of music, particularly of choral singing, and his passion for blending colors, are marked characteristics, and seem to be a subconscious groping on his part toward the truth (to him unknown) that "beauty is multitude in unity." The very lawlessness of his music, and the often grotesqueness of his blending of colors, both point to a love of the beautiful, born not made.

This preponderance of his analytic over his synthetic powers is one of the negro's weakest points; and it should be the object of his educators to strengthen him where he is weak. How to do this, is, theoretically, easy enough; but in practice, many difficulties arise. In the pursuit of every study, there must be considerable analysis, even if for no other purpose than subsequent synthesis; so the choice of studies and the selection of text-books are but minor aids in the solution of these difficulties. The natural working of the negro mind is from effect to cause; his mind must be trained to work from cause to effect. As everything in this world is both cause and effect, this theory is not chimerical.

The object of each and every one of his studies should be constantly kept before him by his teacher: in his language lessons, he should be daily reminded that the object of that study is to enable him to properly convey his thoughts to others; in his geography, that it is of a real earth and of real places he is learning; in his history, that it is only recorded experience, and valuable only as other experience is valuable; in his physics: that the relations of forces and matter are over the objects of his investigations, etc., etc., etc.

The effect of such training, daily repeated at every recitation, would have an important influence on students of any race, and particularly on a race so easily influenced by steady pressure as is the negro. After a time, from sheer force of habit if nothing else, he will begin to ask himself, what will be the result of this and that, as well as the reason of that and this. The proper use of "hence," "therefore," etc., etc., will be added to his vocabulary, and his increased reasoning powers make him more valuable to himself, his neighbors, and the State.

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Many whose subscriptions have expired have continued to receive the "Workman" in order that they might see it in its new form. All such will be at once notified and their paper will be stopped unless they shall renew their subscriptions. It is hoped that all will continue them. Attention is invited to the articles on *Incidents of Indian Life at Hampton*, contributed monthly by Mr. James C. Robbins, a graduate of the Hampton Institute, who is the Indians' principal teacher.

Letters of Hampton Graduates will be published as usual. Those who wish to see what we believe is *the* hopeful side of the negro question will be interested in the monthly broadside of letters from those who are in the field, working for their people. Being employed by the State authorities as teachers, and in constant contact with their people as their educators, their point of view is a just one.

Their general tone is one of interest in their work, of confidence in their employers, and of faith in those for whom they are laboring.

With the new year has been introduced into the Hampton School a feature which will, it is believed, largely increase its advantages as an institution for the training of teachers, putting it indeed in this respect on a par with the best normal schools of the country. The system of primary teaching which has been so successfully introduced by Col. F. N. Parker into some of the Massachusetts public schools, has so rapidly gained favor among intelligent teachers and has, moreover, been found to be so especially fitted to meet the requirements of primary schools in the South, that there can be no question as to the value of its addition to the Hampton course. The Butler school, a large colored primary school situated in the grounds of the Institute, has been put into the hands of Miss Bullard, one of Col. Parker's thoroughly trained graduates, who will here apply all the essentials of his system, giving constant opportunity for observation and experiments to the Senior class at the Normal School.

Object teaching, the use of the blackboard instead of books, the frequent use of pictures, the various and numerous ways by which an earnest teacher can lead little children into the kingdom of knowledge, will be fully illustrated in the newly opened school, one of whose special advantages will be that those in charge of it fully understand the difficulties which the Hampton graduates and in fact all primary teachers in the South, have to contend with. The necessity for the closest economy, and the impossibility in many cases of securing any educational appliances except such as can be made by the teacher's own hands, the poverty of the pupils, the miserable school houses, and more than all the frequent isolation of the teachers, often so complete as to cut them off from all means of improvement, are carefully considered in the training which they here receive. They will be taught how to make their schoolrooms comfortable and attractive, how to interest their scholars, how to make or obtain for themselves many things which they need which are not provided by the state, and in doing this it will never be forgotten that there is no money to do it with, that the work must be done by thoughtful heads and willing hands.

Those who know most of the system and the manner of its introduction at Hampton are most confident of its success, and the great interest shown in it by the graduates and seniors of the Institute, proves that they understand and appreciate the value of the opportunity offered them. With the advantages now open to them, they will have only themselves to blame if they are not in the future well trained for their work as teachers.

In our present number we offer our readers a tract on Woman's Work in Sanitary Reform, which is one of those issued by the English "Ladies' Sanitary Association" and republished with their consent by the Hampton Tract Committee. Though it was written for English people, there is not a sentence in it which does not apply with equal force to Americans; and surely our need in this respect is as great as theirs. It cannot too often be repeated that it is only by wide-spread and careful education in sanitary matters that any real reform can be accomplished, and no legislation or official action, however wise and far-seeing, can take the place of individual effort. In cleansing a people from physical sin, the first step, that upon which all others rest, is to teach them what physical sin is, what its punishment is, and how to avoid it; and this undoubtedly is the step which costs.

It is even yet a hard thing for us to face the fact that "sanitary science, must be taught in the family, in the infant school, in the academy; taught in the workshop, in the factory, in the church; taught in the university, in the forum, in the legislative halls; taught in the city, taught in the country, taught everywhere."* But this is what must be done until "boys or girls ten years old, shall feel as much disgraced by ignorance of the principal organs of their bodies and their functions, as by ignorance of the difference between an island and a lake, or a mountain and a valley"* No matter what the cost of this may be, that will be a wise and thrifty nation which shall thus protect its sons and daughters; for, be it remembered, it is not only in human lives that we pay the price of our ignorance of these things, but in that which is of more value than life itself, in the purity and strength which alone can make us truly the sons and daughters of an all-pure and omnipotent Creator.

*Extract from an address delivered before the American Medical Association, June 4th, 1878, by T. G. Richardson, M. D. Of New Orleans—President of the Association.

The system of education adopted for the Indians now in the Hampton school is based upon the belief that they can be made self-helpful and in the best sense, independent. To this end, while they are supplied through the officials of the school with everything which is necessary to their comfort, they are taught that the type of manhood and womanhood at which they are aiming, requires that they take from the charity of others, be they friends or strangers, nothing which they can honestly provide for themselves. It is easy to see that nothing could be worse for these people than to permit them to look to the generosity to which they owe their opportunity for education, as a permanent means of support, or even to feel that it is at any time to take the form of gifts of money, clothing or small luxuries, put directly into their own hands. It is not too much to say that such indiscriminate charity, if permitted to reach the Indians here, will effectually neutralize what is for them one of the most favorable features of the Hampton system, and those from whom such charity comes ought to realize that, as under the circumstances it is impossible for them to know the facts in regard to individual Indians, they are, in making presents of any kind without the approval of the school officers, taking upon themselves a very serious responsibility.

There is ample opportunity in the school for the Indians as well as the colored students, to earn in a legitimate way, all the pocket money which it is for their good to have, and not only should the charity of their white benefactors be carefully limited, but the practice which is growing up among their friends of their own race, of sending through the different agencies, articles to be sold here, should be entirely discouraged. The Indian students here need to learn as soon as possible, that it is for them to help their friends rather than for their friends to help them, that being distinctly one of the objects of their education. It is difficult for those in this country who are brought as teachers into personal relations with the Indians, to steer between the Scylla and Charybdis of intense and prejudiced dislike on the one hand, and an over warm and sentimental sympathy on the other, and it is only sound common-sense which can overcome this difficulty. To make honorable men and women of these savages, requires from the outset that they should be taught to feel the responsibility of their own lives, and the present experiment can only be made a fair one by the co-operation of all those who are so generously supplying the means to carry it on, with the officers of the school, who most earnestly desire that there shall be as little indiscriminate giving as possible.

We clip the following from the "Tribune" of Jan. 15th.

It is well to mention that Representative Goode's bill to "educate the people" by dividing the net proceeds of the sales of the public lands among the several states for educational purposes is made a special order in the House for the 23d inst. This bill provides that the whole net proceeds of sales shall be annually divided among the States, Territories and District of Columbia, according to the population over ten years of age unable to read and write. After five years one-half only of the net proceeds is to be divided among the States and the remainder is to be reserved as an educational fund, the interest of which is to be divided on the same basis. After ten years the apportionment is to be based on the number of persons between five and twenty-one years of age, without regard to illiteracy, and only the interest of the accumulating fund is to be used. Other provisions relate to the preservation of the funds from waste and misappropriation, etc. The scheme is a magnificent one, and has been advocated by some leading members of both Houses for several years; but within a year or two there has been a growing suspicion that the cause of public education in this country needs some other things more than it does more money, and a spirit of inquiry has been evoked respecting the kind of education the country is getting for the millions it now spends every year on public schools.

Mr. Goode is of Norfolk, Va., and is alive to the true interests of the colored people. Like many other ex-slaveholders he is working to provide the freedmen the best possible means of protection and self-support, though he doesn't get their votes. His course is in contrast with that of the representatives of colored votes of the South who, during the past ten years, have made no notable efforts for the improvement of their constituents—and seem to have no genuine interest in it.

They should have given Congress no peace till something was done for the illiteracy of the South.

From the very interesting Annual Reports of the Public Institutions and Boards of officers of this State, for 1878, we glean the following.

Hon. Wm. H. Ruffner, Supt. Public Instruction states that school operations were conducted on a larger scale and more efficiently than could have been expected, considering the alienation of school funds (some $250,000.00) to other purposes. The result was a loss of one hundred and twenty-seven schools, and a decrease of 2,730 pupils.

In 1877, the total outlay for the public school system was $1,050,346.57
In 1878, it was 961,894.97

Whits pupils in 1878,	280,849
Colored " " "	202,852
Total	483,701
Average of months taught, 5.33	
White Schools in 1878	3,390
Colored " " "	1,146
Total	4,545
Number of schools needed for an average of 15 pupils,	850
Whole cost of public education per month per pupil in average attendance,	1.41
Number of white teachers,	3,030
" " Colored "	673
Total	4,603

Dr. Ruffner remarks,

"It will be observed that whilst among the whites there was a loss of 43 schools, there is a gain of 541 pupils, which shows the increasing spirit of education among the white people. The blacks lost eighty-four schools and 3,271 pupils, a loss in ordinary proportion to the loss of schools. Hence we have 3,000 children remanded into semi-barbarism, who are soon to take their place as voters and as component parts of the social organization—a costly economy, and one of the earlier bitter fruits of that spoliation of the schools which will give us a heavy crop this year."

He reports that the school work of the year has been more systematic, orderly and economical than usual.

Owing to expected future division of school funds (for general state expenses) Dr. Ruffner anticipates that 100,000 children who were at school last year will this year be excluded from the schools. The energy of the school officers and of the people may to some extent remedy this. The $250,000.00 alienated school money, above mentioned, leaves nearly that amount due to teachers on salary account. Many Hampton graduates are in great need because of unpaid earnings.

Dr. Ruffner's Report is very thorough. It is replete with powerful facts, arguments and appeals for the education of the children of the State, of all classes. We intend to publish extracts from it hereafter

---

The total public debt of Virginia is, by the Report of the Second Auditor $35,947,075.21, with over six millions of dollars due as interest. This debt is a dark cloud over the State, and is taxing its mental and material resources to the utmost. Many are in despair about it. Increased taxes cannot be endured and prosperity is at a stand still. Repudiation is seen and declared to be suicidal. The Legislature is wrestling with this problem.

From October 1st, 1877 to October 1st, 1878, two hundred and fifty colored, and seventy-two white men had been received at the State Penitentiary. Five-twelfths of the population of Virginia is colored. It costs 8 4-10 cents per day to feed an average of 639 convicts; or, including all expenses 25 74-100 cents per day. Deducting earnings the cost apiece was 17 14-100 cents per day. The year's deficit was $40,019.38.

There is a shoe factory, a wheelwright and blacksmith's shop, a weaving and tin factory, a carpenters shop and barrel factory connected with the Penitentiary.

Outside employment of convicts is by law confined to work on the James River and Kanawha Canal.

The Report of the Fish Commission states that the value of the oyster product is ten millions of dollars annually, while that of the wheat crop of the State is but seven millions annually. A tax of five cents per bushel would, it is claimed, yield a revenue of $500,000.00 yearly.

The oyster crop requires no investment of capital while the wheat crop is based for its production on a capital of over $11,000,000.00.

"The grand river systems of the State and magnificent expanse of tidal waters, afford an area of food production which, properly cultivated, may be made to yield vast additions to our food resources."

One million, one hundred and twenty thousand young shad have, through operations on the Albemarle, been placed in Virginia waters after transportation of one hundred and fifty miles. Ninety thousand California salmon were turned loose in the James River.

There are now 300,000 salmon fry in the Lexington hatching house. Nearly all the principal streams have been stocked with black bass.

The principal State charities are its two Insane Asylums at Williamsburg and at Stanton for whites, and one for

it female. I hope men who by the mighty often vary in degree; as, for instance, one of one man preventing another from working

colored people at Richmond, and the Asylum for the deaf, dumb and blind at Staunton all fully reported upon and apparently well managed.

THE Report of the State Commissioner for Agriculture will be noticed in our next issue.

WE call attention to the following letter from Capt. Hugh S. Thompson, Superintendent of Education of South Carolina, which has already been published:

OFFICE STATE SUPERINTENDENT OF EDUCATION, COLUMBIA, *Dec.* 8, 1878.

DEAR GENERAL:—I send you the following information at the request of Colonel Lipscomb, who informs me that you desire it:—

	White.	*Colored.*
Average yearly school attendance under republican administration for seven years	57,429	46,481
Average yearly school attendance under democratic administration for two years.	50,281	69,036

The public school system was under republican rule for eight years, but no returns of attendance were made for the first year.

The amendment to the constitution which was ratified December 20, 1877, by a democratic Legislature, provides that the school fund shall be raised by an annual tax of two mills on the dollar on all the taxable property in the several counties of the State. The proceeds of the poll tax are also devoted exclusively to the support of the public schools. The proceeds of this tax, and hence the amount of the school fund, have been largely increased under democratic rule. The amendment to the constitution further provides that "the school tax shall be distributed among the several school districts of the counties in proportion to the respective number of pupils attending the public schools." No returns are made to my office by which I can tell the amounts devoted to the education of each race, but the foregoing statement will show that the negroes receive more of the school fund than the whites. It is, of course, well known to you that many of the negroes do not even pay the poll tax, and that therefore they contribute nothing to the school fund of which their race receives the greater portion. The colored schools are more efficient now than they have ever been, but the chief obstacle in the way of all the schools is found in the fact that the republicans entailed upon the present administration a debt of nearly $185,000. This amount is due to teachers, and we are paying it off each year. Very truly,

HUGH S. THOMPSON.

General M. C. BUTLER, Washington.

Captain Thompson was at Hampton during the three days' session of the Educational Association of Virginia last July. We were satisfied then that South Carolina, like Virginia, has at the head of her school system "the right man in the right place," and that the educational welfare of the freedmen of both States suffers only from a lack of resources.

THE *Gazette* of Lexington, Va., recently printed the following. The introduction is by a widely known and respected representative of the State, whose large-hearted welcome of every good effort for the welfare of the colored race illustrates the disposition, which, for the past twelve years, we have always found in the educated and respectable people of Virginia.

Colonel Allan's address was delivered at this Institution last summer. The Association was composed of the most scholarly men of the State, with representatives from others. The same place of meeting was chosen for the next session in July, 1878.

"HAMPTON INSTITUTE.

"Will you be good enough to republish the following extract from Colonel Allan's Address before the Educational Association of Virginia.

"I think that Hampton Institute and its officers have well earned the just and yet generous encomium bestowed upon them by a speaker who would not be inclined to be over partial to Northern measures or Northern men.

"Fortunate in the State, especially fortunate is the freedman, in the possession of such an Institution as we have seen here to-day. The generosity of distant friends, guided by a noble and intelligent enthusiasm, laid the foundation of this great school at a time when the prostrate and discouraged Commonwealth was helpless. She has properly and wisely come to its aid since. This Hampton Institute is the most important movement toward the educational advancement of the freedmen that has been made in Virginia, and so far as I know, in the South. I hereby congratulate the gentlemen to whose energy, enthusiasm, skill and devotion this great school is due. Its influence is salutary and already far-reaching. From this institution will go out many teachers; still more will it furnish, I hope, men who by the mighty power of the example of honest, sincere, earnest lives will do much to enlighten and elevate their race."

WAGES.

WIDE USE OF THE WORD—NO NEED TO BE ASHAMED OF IT—TINKLING SILVER TO SOME EARS, DISCORDANT BRASS TO OTHERS—SEEMING AND BEING—"KEEP AND CLOTHING—A WORD ABOUT UNIONS.

SALARY; A PINCH OF SALT.

Some squeamish people affect to think the word "wages" a trifle vulgar, and if themselves in receipt of wages, refer to them as "salaries." In this, thin-skinned daintiness overleaps itself, for the English language contains no more poverty stricken noun than salary: it really means enough to buy one's salt; and was used to express the pitiful sum given a Roman soldier with which to buy that cheap necessity. Wages is a good honest Saxon word, and means *anything exchanged for labor*. Like a good many other simple words, the word wages conveys different ideas to different people, because they do not fully understand it.

ANYTHING EXCHANGED FOR LABOR.

In this definition there are two technical terms. An exchange is the mutual giving and taking of two things by two persons; and labor is human exertion put forth in order to obtain something in exchange for itself. Using this definition of wages, it is manifest that in all free, civilized countries, every man is either a wage taker, a wage giver, or sometimes both. Wages are given for men's exertions alone; interest is paid for capital, and hire for the use of machines and beasts. Difference of individual preferences and self-interest underlie all wage giving and taking, as they do all other exchanges. There is no more sentimentality about wages than there is about oxsleds. A man gives wages because he prefers the services of the wage-taker to what he gives, otherwise he would not give it; so, too, the wage-taker prefers what he gets for his services, to keeping them for himself, else he would not exchange them. There is no obligation on either side; in a free country A is no more compelled to pay B wages, than B is compelled to render service to A. No clear understanding of wages can be had, unless the idea of exchange be kept constantly in view; that is, that wages and services are offsets of one another. Looked at in this light, the question of wages becomes simplified; and the principle which governs them applies to all cases, whether the things exchanged be great or small. If a man agree with a boy to give him a dollar a month in exchange for the boy's services as bootblack, or if a railroad agree to give a man $25,000 a year to conduct its affairs, tha same principle is involved.

BOOKS BALANCED.

People who forget the idea of exchange are apt to have a confused idea that the account between wage-taker and wage-giver is not settled by the performance of services and the payment of the stipulated wages; they seem to think, that in some way, they know not how, there is some obligation outstanding on one side or the other. This confusion is needless and arises from an ignorence of what wages are. If a man go to a baker, and exchange five cents for a loaf of bread, nobody thinks there is any account open between them in the transaction: neither is there between two men, one of whom has rendered the other a certain service, and been paid a certain amount for it; both illustrations are examples of exchanges, and the law of exchange governs both.

NOTHING FOR NOTHING.

Large wages are the offsets of large services; small services are offset by small wages. The rate of a man's wages depends mainly on three things: the kind of services he can render, the manner in which he can render them, and the place where he renders them. If the services a man can render are of a kind that many men in the same place can render as well as he, the rate of wages will be low. If, however, his services be of a kind that few can render, or if he can render them in an exceptionally good manner, then his wages will be high, provided there be a demand for them. The kind of services a man renders and the manner in which he renders them, depend to a great extent on himself; but there is something beyond himself to be considered, and that is, how much other people want his services. The demand for any kind of service has as much to do with fixing the value of the service as the supply. The most skilful butcher that ever lived could not obtain high wages from Hindoos, who eat no meat; nor could the most expert waiter of Delmonico, get high wages from a band of Comanches.

Wages, then, have their market price, the same as corn, cotton, or other commodities. Articles of merchandise of the same kind often vary in degree; as, for instance, one piece of silk is more valuable than another: degree in merchandise is called "grade;" degree in labor is called skill. Man alone can possess skill; for skill is the dual power of perceiving and performing, which man alone possesses. Machines can perform, but cannot perceive; beasts may perceive, but cannot perform. Man's powers of both perception and performance are increased by practice or education; but neither practice nor education can give value to a service, for which there is no demand.

HIGH WAGES.

To obtain high wages, a man must be able and willing to do something which everybody else cannot, or is not willing to do, and yet which somebody wants done, and who is willing and able to pay for having had done. These conditions give a man a general opportunity; but his particular opportunity will only come from his ability to do the particular thing as well, or better, than any other man, who is willing to do the same thing.

"KEEP AND CLOTHING."

Whether wages be really high or low, or whether they seem high or low, are two very different things, although many people never look beyond what seems. Man's prime necessities are food, clothing and shelter; and a glimmer of the truth is contained in the popular expression of a "man's working for his 'keep' and clothing" Every man who labors, labors for his "keep and clothing" *and something more*. Wages are really high or low, if this "something more" be much or little. The real highness of a man's wages is what they will buy over and above his necessities. If a man earn 50 cents a day, and his necessities cost him 40 cents, he is really receiving higher wages than if he were paid $5.00 a day and his necessities cost $4.00. In one case, he can capitalize about twenty per cent. of his labor; in the other, only about two per cent. Men are too prone to look at the *name* of their wages, instead of at the wages themselves. A man who is paid a dollar a minute, and whose "keep and clothing" cost $61.00 per hour, is on the highroad to bankruptcy. This is only another way of proving what has been before proved in these papers, viz., that the best dollar for the laboring man is the dollar that will buy most in most places.

FARMERS AND PLANTERS.

As there can be no value to any exertion, except it can be exchanged for something, and as the chance to exchange varies with tha skill with which it can be performed, it follows that being able to supply wants which are ever present, is the best ability for the majority of men to possess. This is a fact as much as a theory; for one-half the world's inhabitants are devoted to cultivating the soil, thus providing for two of life's prime necessities, food and clothing.

SOMETHING FOR SOMETHING.

In savage societies wages are unknown, every man does everything for himself; but so soon as a race emerges from barbarism to civilization, the relation of property springs into being. Then some men, becoming possessed of property, or capital, find that they have more raw materials than they can work upon themselves, and seek the assistance of other men. Naturally, these other men will not give their assistance without compensation, and this compensation is called "wages." It makes no difference if we approach wages from the standpoint of the wage-giver or the wage-taker, the result is the same; viz., something for something. A does not give B wages, except for the purpose of increasing or saving something that he (A) has; and B does not give A his services from any love of A or A's property, but because he wants what A will give for his services more than he wants his own time and powers.

THE RIGHT OF UNIONS—THEIR BLESSINGS AND BURDENS.

It should be not be forgotten that wage-givers have as much right to combine as wage-takers; and as they are fewer in numbers, are more wieldy bodies. Both unions, however, are subjects of Demand and Supply. If the keepers of summer hotels, for instance, should combine, thinking it for their interest, and resolve not to pay their waiters more than $10.00 a month, and the waiters should combine and resolve not to work for less than $20.00, both would be exercising an undoubted right.

Which side would win, would depend to a great extent on which could hold out the longer. While both held out, no wages would be earned, nor services rendered. The great disadvantage, under which such wage-takers labor in times of "strikes," is that their unions are not large enough; that is, that there are plenty of men, who do not belong to the unions, who may be employed by the union of hotel keepers. Again, very few wage-takers have saved enough to afford many weeks' "keep and clothing," without daily labor. Mention has already been made of the crime of one man preventing another from working if he see fit. Such acts are the complete development of the spirit of slavery. If a working men's union say to A, who has a sick family, "You shall not sell your labor to B, because he will not buy our labor at our price," and force A to obey, A is just as much enslaved as if B should seize him and force him to toil for nothing. Involuntary servitude, except as a punishment for crime, is theoretically dead in this country and England; but in the last few years, many a workman in both countries has found his Trades Union to be as tyranical a master as "ever worked a gang."

AN ECONOMIC DIVISION OF SOCIETY.

Wages are paid for labor only; so soon as a man combines his labor with some form of matter, and offers the product for sale, he is a manufacturer, a farmer, a merchant, or something beyond a wage-taker. Economists have long sought for some general terms by which to divide society,—and, perhaps, no better term can be found than wages. To divide society into wage givers and takers is to make a sharp line of division, and is more accurate than "consumers and producers," "employers and employed," "masters and servants," capitalists and non-capitalists, etc. T. T. B.

ALCOHOL vs. HAWAIIANS.

WE hold with others that the experiment of a Christian civilization for a heathen people, has been more completely tested in the Sandwich Islands than in any other part of the world in any period. This effort commenced in 1820, and still continues.

There is a singular and most instructive parallelism between the nature and temperament of the Hawaiian and of the negro, and the work for the former is full of lessons for those who have to do with the latter. The Hawaiian and the negro politician have alike trifled with or wasted their privileges.

It is remarkable, however, that a Legislature ruled numerically by natives should have made the selling of liquor to their own race a penal offense, leaving the whites to drink *ad libitum*. This is due, however, to the good sense of their Kings, and to the influence of the wiser whites, whose lead the native legislators never wholly abandoned.

We quote from the "Commercial Advertiser" of Honolulu, one article which will illustrate the similarity of the Hawaiian and Negro questions, especially in the matter of intoxicating drinks.

We should add, however, that the most recent facts show a decided tendency to a reduced rate of decrease in population which gives hope of a turn in the tide, and finally, after fearful sacrifice, of a permanent Hawaiian nation.

"When aboriginal or savage races come in contact with civilization, there are vices as well as virtues presented to them which are new, and the dangers or advantages of which they cannot at once be taught to know or comprehend. They very quickly, for want of this comprehension, acquire and practice the vices, for these are more in consonance with their previous habits; while the virtues, affording no present sensual gratification, are not practiced, although they may be admired in a desultory way. Self-restraint is no part of their ethics. It is a virtue strange to them, because its advantages are not clearly apparent. Free indulgence in all their appetites is something present and tangible, and having but dim perceptions of danger to warn them of the peril, they give loose rein to all their desires. Disease and death quickly follow, and the rapid blotting out of whole nations and tribes is a process going on in every part of the world. It is to be seen among the Indians of America, Hottentots of Africa, Maoris of New Zealand, the natives of New Holland, and throughout the Isles of the broad Pacific. In Tasmania, or Van Dieman's Land, the work is already finished, not an individual of the aborigines is left! Alcohol has been the principal agent in this deadly work.

For these direful results, our civilization, because it is superior, and because it furnishes the means of vicious indulgence and sows the seeds of disease, is responsible; and we, the representatives of that civilization, can in no way divest ourselves of that responsibility. We must, as it is our duty, do all we can to restrain the desolating tide by warning the people of their danger. The aboriginal inhabitants of these Islands, once so numerous, have dwindled away to a handful; their struggle for a higher civilization has decimated them. Legislation has been invoked to save them from extinction; the fruits of the faithful and disinterested missionary labors of

nearly sixty years are seen in schools and churches, a constitutional government, and codes of laws, and the necessary machinery, executive and judicial, for their due administration; but all these are seemingly of no avail, they themselves practice petty frauds and laugh at dishonorable actions, and even boast of them as something clever, their children will follow their example rather than their precepts. In your intercourse with them, you

atue, rendering it comfortable in any weather. The temperature in this region is, on the average, about twenty degrees higher in the winter months than that of

months. That this vast number should have been disposed of at any price is an extraordinary fact. It proves that the market is practically unlimited, if the price is low

nearly sixty years are seen in schools and churches, a constitutional government, and codes of laws, and the necessary machinery, executive and judicial, for their due administration; but all these are seemingly of no avail, to stay the downward course of the nation, and a few short years will witness their final extinction, if the tide is not speedily turned. Now, what is the duty of the exponents of that civilization which has, apparently, wrought such devastation? To search out the causes, so far as we can, and then suggest the proper remedy. In the first place, we may say that a general disregard of the laws of health is prevalent among the natives; they need enlightenment upon this point. A few brief medical essays upon the subject adapted to the native mind, would cover the ground. Proper parental and home-training of the young should be brought to the attention of parents, and their responsibility in the matter duly enforced. But one great evil, which has long had a foothold among our people, and which has always led to another of even greater magnitude—licentiousness—is the use of intoxicating drinks. Of the destructive effects of this habit upon the natives every one is aware, and consequently the sale to them of alcoholic drinks has been forbidden by law from the days of Kamehameha III. A wise public policy justified what seemed to be a restriction upon the constitutional privilege or right of the individual, and the large majority of native members of the different legislatures has always resisted all efforts for its repeal. They saw it was better to deny their people a constitutional right than to allow them its exercise, for its attendant excesses and consequent evils would be beyond control. In this they acted wisely, as we believe all will concede. But is the law, as it now stands, effective? No one can claim that it is. We all know that a native Hawaiian CAN get liquor if he has the money to pay for it. He cannot get it directly from the licensed retailer or jobber, for they are restrained by heavy penalties, and the risk is too great. But there is a class of people among us who will furnish it to him for the sake of the profit, and who are too sharp in their illicit traffic to allow themselves to be caught. We allude more particularly now to the lower class of Chinese shopkeepers; men ready to make a profit, even unlawfully, without scruple. We hear of one of these storekeepers in a country village who, if a native buys a dollar's worth of goods, gives him a drink; if five dollars' worth, he gives a bottle of gin. In this city, one Sunday, very recently, a foreigner met a jobber in spirits and desired to buy a bottle of gin. The jobber replied that he would not sell a single bottle on a week day—much less on Sunday. The man then called a native, gave him the money, and in a few minutes the latter returned with a bottle of gin, which he said he bought from a Chinaman."

We take the liberty of extracting a few words from a private letter just received from a gentleman of culture and ability who is doing a good educational work in California.

Society here is a seething pot. The ferment will increase until the Chinese go. Their corrupt filthy Asiatic life needs to be washed back to the shores of China for good and all. When they have gone the pot will still boil, but though there is danger there is not death in it. The radical element is so strong that human thought and action will for a time sweep away from the old safe moorings: but I think I see a sufficient conservative force in the combined influence of culture and Christianity, as already fixed here, to ensure final safety. The life is intensly vigorous: it hasn't a sign of decay; when rightly directed it will be a great power.

WHEELER & WILSON SEWING MACHINES.

The Normal School has received, through Rev. T. K. Fessenden of the Board of Trustees, a donation from the Wheeler & Wilson Man'f'g Co. of two of their new No 8 Sewing Machines. The machines of this Company have a world-wide reputation, justly earned,—and their generous gift to the school will furnish increased facilities for the instruction and employment of the girls in the Industrial Department of the school, and will, it is hoped, lead to a greater demand for these machines when those who are here trained to their use return to their homes.

Those in the North who desire to shorten or alleviate their long and severe winters may be glad to know that a portion of the Hygeia Hotel at Fort Monroe has been fitted up with steam heating apparatus, rendering it comfortable in any weather. The temperature in this region is, on the average, about twenty degrees higher in the winter months than that of the New England States. In February, as the sun gets higher, there are usually many beautiful days; March is, as everywhere, uncertain. There is here a genuine spring season, raw and chilly days mingling with those that are soft and sweet, enticing one into the open air and delighting by their balmy freshness.

The Hygeia extends for hundreds of feet along the shores of Hampton Roads, and commands one of the finest views on the Atlantic Coast. It is reached by the Bay Line Steamers from Baltimore, which run daily. Travelers can leave New York City at 4 o'clock, P. M., and arrive at Fort Monroe, via Baltimore, at 9 o'clock the next morning. The Bay Steamers, "Florida" and "Carolina," are very finely appointed and managed.

As the weather becomes milder the ocean route from New York to Norfolk, (and thence fifteen miles by steamer to Fort Monroe,) on the large and comfortable boats of the "Old Dominion Steamship Company," is a quiet and delightful way of reaching this point. The ships leave New York tri-weekly, Tuesdays, Thursdays and Saturdays, at 3 o'clock P. M. Fare from New York by either route, ten dollars.

Fort Monroe is a convenient and attractive stopping place for those who are traveling North or South. Here is the largest fort in the United States, and with its Artillery School, band, drill, parades and target practise, it is always interesting. The Hampton Institute is two and a-half miles distant.

TO THE HAMPTON GRADUATES.

My dear friends:—

Although, among the treasures of wisdom which have come down to us from past ages, we find much pure gold in the form of proverbs and maxims, we find, also, mingled with it, some counterfeits that pass for current coin, but which, upon being tested, prove to be worthless. One of the most mischievous of these proverbs is, "The world owes us a living." What world? Of whom is our world composed? Is it not made up of our friends and neighbors? We are a part of their world, and if the saying is true for us, it is equally true for *them*. If they owe us a living, we owe them a living. If we mean that industry, economy, and perseverance in the use of whatever ability we may possess, will in due time procure us a subsistence, our assertion is true; but, if we suppose that it is our neighbors' business to support us, or even to assist us, when we are indolent, improvident and wasteful, or when we work carelessly and by fits and starts, we are mistaken. It should be our desire to give value for value, to earn rather than to receive gratuitously. When, from illness or accident, our neighbors (I use this word as it is used in the parable of the Good Samaritan) are unable to provide for their wants, it is not only a duty, but a privilege to assist them through the time of trial; and, when we ourselves are disabled from a similar cause, we should be willing to accept their aid with gratitude. Yet, it is certainly more agreeable, as well as more blessed, to give than to receive.

Most of you, I believe, are engaged in teaching; and it affords me sincere pleasure to know that, through many difficulties, you are steadily pursuing the path upon which you have entered, working to teach the ignorant, strengthen the weak, stimulate the indolent, reform the vicious, and encourage the faint-hearted whose efforts after a better life need your sympathy. But your labor with your pupils is, I fear, often thwarted by the home influence which is exerted upon them unconsciously, yet constantly and powerfully. Can you not induce their parents to come to your school-room now and then in the evening or at any convenient time, and then converse with them kindly on the subject of home-training? Offer them some attraction, such as a magic lantern exhibition; or, if that is not within your reach, some entertaining reading; and, after the exhibition is ended, talk to them, and without claiming great superiority, try to interest them in that education of their children which is the most important—the education of the *heart*. Show them how necessary this is to their happiness in this world as well as in the next, and even to their progress and success in temporal things. Make them understand that they must themselves *be* what they desire their children to become. Counsel is unavailing, unless it is accompanied by example. Children not only copy what they see, but they imbibe the moral atmosphere around them. Their parents may condemn deception, but if they themselves practice petty frauds and laugh at dishonorable actions, and even boast of them as something clever, their children will follow their example rather than their precepts. In your intercourse with them, you will probably notice other subjects to which it would be advisable to call their attention; many persons who feel a real interest in their children's welfare, and others who are influenced by parental pride or ambition, may never have thought of the importance of home-training, but suppose that the teacher is to accomplish everything included in the word "education."

I hope the New Year will be more prosperous financially than the Old has been, and the remuneration for your work larger and more promptly paid. The highest reward, that of a good conscience, is in your own power, and that this may be yours is the earnest desire of

Your sincere friend, M. A. L.

On the Farm.

HINTS FOR WORK.

From the American Agriculturist.

Keep a Diary or Daily Record.—This is a useful and interesting work, and the time spent will be well repaid, in its value for future reference.

Insurance.—See that a sufficient insurance is placed on the farm buildings and contents. The is a duty every man owes to himself, his family, and to his creditors if he has any.

Take Care of the Ashes.—Many fires occur through careless disposal of ashes. The ash house should be at a safe distance from any other buildings. A safe way is, to keep the ashes in an iron can or holder, until cool, and then throw them into the box or receptacle provided for them. Wood ashes are too valuable to waste, and coal ashes make an excellent absorbent in the earth-closet, and are very good for making hard foot paths.

The Small Stock should be looked to, fed and watered. The same hours as nearly as possible, should be observed each day for these matters. Animals are exacting as regards time, and are uneasy under irregularity. After the small stock are cared for, horses and cows should be watered, and the latter turned into the yard.

In Stormy Weather the stock are better under cover than exposed to the wintry blasts. It is a mistake to suppose that exposure makes them hardy: on the contrary they are weakened by it.

Fodder Racks.—The wasteful practice of throwing hay and fodder upon the ground to be fought over and trampled upon, is far too frequent. A cheap fodder-ing rack, covered and protected from the weather should be provided in every yard.

Protection for Stock should be provided even in the Southern States, where the winters are relatively mild. Dry snow is not so chilling as a cold rain; damp winds, even some degrees above the freezing point, often prove disastrous. A shed open to the south however rough, will answer as a shelter.

Milking Cows should be kept dry and clean in the stalls, and extra feed be given to dairy cows that fall off in their milk. A few quarts of ground oats, linseed-oil cake-meal, or bran, stirred in the water in the drinking-troughs, will increase the milk-flow.

Pens and Yards.—If plentiful litter is provided, the pens and yards need not necessarily be cleaned out often; but enough litter should be used to keep a dry bed and to prevent much heat in the manure. If there is any smell apparent a light dusting of ground plaster will remove it.

A Barrel of Plaster should be kept in a handy place in every stable and manure cellar. Where this is used constantly, there will be freedom from the usual strong odor of stables and fermenting manure, and a saving of valuable material which would otherwise escape.

A Curry-comb or Card and Brush freely used, will help to keep the cows, calves, and other cattle, as well as horses, in good health and comfort. If there is doubt about this, a short trial will convince any one that the practice is a profitable one.

Swine.—Pork is lower than for many years past. There have been about 10,000,000 pigs marketed within twelve months. That this vast number should have been disposed of at any price is an extraordinary fact. It proves that the market is practically unlimited, if the price is low enough. The aim must be to produce pork as cheaply as possible. The way to do this, is to keep only the best, and have pigs heavy enough for pork, without wintering over. A pig of the best breeds may be made to weigh 300 lbs. within a year. Only such pigs will pay at present, and poor stock won't pay at all.

A clear Head and good judgment are needed for success in business. Just now farmers need to be more thoughtful and careful than ever before. If times are bad, it is the greater reason why we should be liberal in getting all possible helps to make them better. A good agricultural journal may be worth hundreds of dollars every year to any farmer, if he will only study it carefully. Few journals are prepared with more thoughtful care than the *Amer. Agr'ist.* Its editors and writers are chiefly practical cultivators, and know what other cultivators need, and share their troubles and their successes. At the beginning of a new year it will be worth considering if the advice and information received during twelve months is not worth many times the price paid for it.

A Close Attention to Details.—Many will say it is "puttering business," and that they can not "bother with small matters." But a boy who goes into a store does not think half yards, ounces, and pints are details that he can not "bother" with. If one can, from a bed a few feet square, sell tomato or cabbage plants for more than he can get for a whole acre of corn—and thus is no improbable case—details at once assume an importance. We do not expect any one to throw aside a system that he is familiar with and take up one about which he knows almost nothing. But it seems to us that,

At the Beginning of the Year, when plans are being made, and each one naturally looks about to see where he may improve upon his methods and increase his income, it will be well, in the light of such hints as are here given, to see if some change for the better may not be made in the crops, with a more satisfactory return for the labor. The great point is to make a beginning; a start being once made in the direction of improvement, the change from old methods to new need go on only so rapidly as the new seem to be desirable and safe.

COW-PEAS FOR HORSES.

BY A FARMER.

We had two patches of cow-peas. The season was peculiar. They made less haulm than usual, and much fruit. They were sown broadcast to plow in as green manure, but I wanted to try the experiment of making "pea-vine hay," which we read about in Southern papers. So a few square rods were mown and cured. The shrinkage was enormous, yet the yield of hay probably equalled two and a half tons to the acre, on very poor gravelly land. Both horses and cows eat it well. One of the patches was plowed in and rye sown; the other was on land which became so hard during the drought, that we could not well plow it, and when the seed began to ripen, we let it go, and after a while turned the colts upon it. There was perhaps an acre in the piece, and the leaves had nearly all fallen off before they found out that the peas were good to eat. They have had all they wanted and grass besides for three weeks, and are as fat as pigs. I have never seen young things grow so before. With a little painstaking, early ripening kinds might be introduced which would give us a crop every year. I would like to experiment with different sorts with reference to early ripening and to abundance of haulm for green manure. Both qualities would hardly be found superior in the same variety. That which I used this year, was the "clay" pea.

The use of this word "pea," which is universal where the plant is well known, is likely to mislead those not familiar with it, for it is more like a bean, and like beans, is sensitive to spring frosts and cold. If sown too early, it will rot in the ground, or "live at a poor dying rate," until hot weather comes, and not do well then.

LETTERS FROM HAMPTON GRADUATES.

A TWENTY-TWO MILE WALK FOR A SCHOOL — ADVISED TO TARRY AT JERICHO. POOR CROPS, HARD TIMES. WORK NEEDED — PROF. PARKER'S METHOD, AGAIN. SUNDAY SCHOOL WORK. SUPPORTING HIMSELF WITH ONE ARM. CONDITION OF PEOPLE IN GEORGIA AND SOUTH CAROLINA. THE GRADUATES' BEST WEAPON. THE VA. EDUCATIONAL JOURNAL WELCOMED. AN UNDERGRADUATE'S WORK IN TEACHING AND FOR TEMPERANCE.

THE appeal for papers to read in one of our graduate-teacher's letters has been very kindly responded to by Mr. M. F. Reading, and other friends in Montclair, N. J., to whom we return our sincere thanks—to which the recipients will no doubt add their own.

The following very graphic description of one remote settlement shows the nature of much of the work to be done in the South, and the cheerful determination which Hampton graduates very generally bring to it.

VA., *Nov.* 16, 1878.

Dear Teacher :—

I thought that as I had changed my vacation, it would become me to inform you. I had said that I would not teach, and accordingly had settled myself for the winter. But four days prior to my going to the work which I had engaged, I received a letter from one of the teachers, offering me a school in Princess Ann County. The Superintendent of the said county having written for two teachers (male.) J. B. and myself were selected. They asked me, if I could not come, to send McKinny; but I could not find him, so I made up my mind to come myself, which I am in no way sorry for now, although at first I was sorry I left New York. Things did look "blue." I left on Saturday's steamer, Oct. 5th; arrived in Norfolk, Sunday. The following Monday I went to see the Superintendent, who lives about twenty-two miles out of town. Luckily, I fell in with some cattle-drovers who had come in town with cattle, and got a ride on horseback within two miles of the place. Then it was 4 o'clock, P. M. I went to the house, but he was not there, and I was told by his wife that he would not be home before the following Friday. Then I had to "foot it" twenty-two miles back, through a strange woods and country, in the night, for it was after 5 o'clock before I got away from the house. I got lost almost before I entered the woods; when I found that I was lost, I made up my mind to keep at it all night and perhaps I'd come to some house; but never a house did I see, and after walking ten miles I found myself in the main road, and about 10:30 I was in Norfolk, and never was so footsore and tired in all my life. Depend on it, I did not visit Princess Ann again. B. had to return also.

I heard afterward that the Superintendent of Norfolk Co. wanted three teachers; so I told B. and he brought with him Hodges, at the appointed time, to the Court-house in Portsmouth. We were too late to be examined; there were eight or ten white teachers being examined at the time. I spoke to the Superintendent, and he said that if I would come to his house, which is about eighteen miles from town, he would assure me a school, but that the pay would only be $20 per month. He told B. that he was too small, and that there were but two schools that he knew of. So B. went again to Hampton. I visited his house and he seemed satisfied as to my ability, for he did not examine me, nor did he H. He wanted another teacher, but said that B. was too small. I told him that he was a graduate of my class, and would have graduated before but for his size. He then said that he preferred Hampton graduates, for he thought them better fitted for the work, and, on my recommendation, told me to write for him, which I did and he went out with me. I advised him to cultivate hair on his face; he said he would. He got his school and is now doing well. I have the one that Maria Mallette had, and H. has Clark's. He is doing well; I see him often. I've seen B. seldom.

I opened my school the 25th of Oct. with four pupils; now I have forty-two, with a prospect of over seventy after Xmas. I have some very smart children, several who could enter the Middle class at Hampton; their trouble is in explaining their work, and therefore they say I'm hard on them when I do them as Miss M. nused to do me. I have plenty of reading matter, and am not entirely ignorant of the daily news. Mr. B. sends me papers and many other things for my little ones. I study very hard in the afternoon. I sit here with my arithmetic or algebra and fight manfully for hours, but invariably come out "hors du combat." I often wish that I might spend a term under Miss M., totally devoted to mathematics.

The school board of this section wish success to the colored people. In short, I find them all very polite, at least, to me. The majority of the colored people are *very, very* poor; few of them own the land they live on, and almost all have large families to support. Many did own the land, but were never able to pay for it, so they had to lose it. The most of them work in the swamps and at ditching, their wages being forty-five cents per day and board, or rations, which consist of five lbs. of bacon and a peck of meal a week, or sixty-five cents a day and board themselves. Those who attend to other men's farms do it on shares. If the tenant furnishes team, he is to have two-thirds of the crop, and the landlord the other third. If the landlord furnishes the team, he is to have half. This year they say that the crop is very poor, on account of the drought. They only made about about a barrel and a half to an acre where they make about four if the year is favorable.

The children are poorly clad, many of them. I have been enabled to fit many to come to school through Mr. B.'s kindness, and have many who cannot get books, but I've been able to remedy that through Mr. B.'s and Miss H.'s kindness in sending charts, &c. I teach by Professor Parker's method, and have a class of six (average ages about six years) who can read one of the charts beautifully and know every letter in the alphabet; and when they began, did not know one letter from the other. And that little class has encouraged me wonderfully, for I see that I am of some use to the country, and by exertion may do much good, which, by God's aid, I intend to do.

I have also a very encouraging Sabbath School—get on splendidly, and I am really proud that I can do so much at my first attempt. Of course I am conceited enough to think that I can do much more than I really can; but I am certainly going to do as much as I can—or try, at least—for there is lots of work needed here. One used to civilized life will be astonished to teach school in the country any ways from town. I don't mean to term the people uncivilized, but I compare the times that are now, in the Nineteenth Century, and what used to be. So *many* free schools and *so much* ignorance, it is simply shocking. I visited a prayer-meeting not long since in a Methodist church. I could not (I am ashamed to say) restrain myself from laughing. As a teacher, I had to leave the house. I only wished that I had been an artist; I could have shown the civilized people what I never dreamed of. The most heathenish actions I ever saw. I only pitied them. I would like to describe it, but I have not room, and as I've written quite a long letter, I must stop. Good-bye.

Hoping to hear from you at your leisure,
I am respectfully your pupil. P.

The young man whose determination and efforts to be a "self-supporting Hampton graduate" are naively described in the following letter, has but one arm, having lost the other in the war. He is an example to many who have both arms to struggle with circumstances.

MD., *Dec.* 9, 1878.

Dear Teacher :—

I am receiving your paper again. It affords me a great deal of pleasure to read it to my school, and also to see education progressing, and to see your efforts progressing in the cause of civilization. May the good Lord bless you with long life, and General Marshall and the teachers also!

My school is about nine and a-half miles from Salisbury where my family live, and I walk it every Friday evening and Monday morning; and I have never been later than 8:30 o'clock getting to my school, and if you wish to test this matter, you may write to my trustees concerning it, and they will tell you the same. I have about thirty pupils on roll; average attendance, twenty. My first quarter will be up this Thursday, which will give me a little spending money for Christmas, which you know is very pleasant to have at such times. My school is progressing finely and I shall hold examination on the last Friday before Christmas, and extend an invitation to the parents of the pupils.

General, I have killed my fall pork. I raised two small pigs eight months old, and one weighed 334 lbs. and the other weighed 297 lbs.; you can see by this I intend to be a self supporting Hampton student if possible, and I am trying to save money enough to build myself a nice house on one of my front lots. I have $200 of it now in cash, and am working hard to procure the balance. I have also a small stock of goods worth about $150 which I attended to last summer. You can judge from this that I am not lazy.

The commissioners of Wicomico Co. are building quite a nice court-house, which will soon be completed and add a great deal to the town. There are several other facts I would wish to say something of, but time is short.

Yours respectfully, J.

The evident carefulness and intelligence of observation in the writer of the following letter make his statements interesting, and his work among his people valuable. The statement that 1,400 out of 1,500 convicts in two Southern States are colored, and the vast majority of the commitments are for petty larceny, is merely to say that the ignorant class at the South is, in that proportion, the colored race, and that it has come out of slavery with the old rags of slavish habits clinging to it. But it is a statement which should be carefully considered by every one—especially by every one of that race—who has a desire to work for it. To lift a whole race up to a higher average of moral nature, is a different thing from lifting individuals above its general level,—yet this is the work before such as are themselves so lifted, and they must bring to it all the patience, all the strength, all the wisdom, all the faith, they can by every means acquire.

N. C., *Dec.* 21, 1878.

Dear Teacher :—

Having recently received "The Educational Journal of Virginia," and knowing you must be the sender, I take this opportunity of thanking you. I read it carefully and find it an excellent guide, as well as containing a great deal of useful information.

I am now teaching the free school in this place and have enrolled fifty-one pupils, with an average of thirty-six and one-half. My school is doing well; so far I have nothing to complain of. My salary is promptly paid at the end of every two months. The school here is under the supervision of both the county and the Friends' Freedmen's Association of Philadelphia—so between the two we get pretty well paid. After Christmas I am to have an assistant, as the school increases about fifty per cent. after that date. We have two other schools in the place besides mine—one taught by the Presbyterians and called the Colored Graded School; the other is "Bennett Seminary," which has been recently erected. It is a fine building; has a good corp of teachers, and the terms are very easy, so that any one who will half try may go there. The branches taught are similar to those of Hampton.

When I look at the wonderful changes time has wrought in the last few years, and all for the good of our down-trodden race, I feel that God has surely reached out his hand and helped us, and that we have not been sufficiently grateful, for with all the advantages held out to the colored youth of both sexes, there is such a small number who ever aspire to anything higher than to be hotel waiters and barbers.

Since I left Hampton I have been all through the States of Georgia and South Carolina, and the ignorance and crime I saw among the great mass of colored people forcibly reminded me that the work of Hampton and her sister institutes has only just begun, for ignorance begets crime, and we of this state have our full share of its curse. We have, in this state alone, 1,500 convicts, whose terms of imprisonment range from two years to life sentences. Of this number 1,400 are colored, the remainder, white. And another notable fact is that nearly all of them are strong, healthy young men, a vast number of them perfectly ignorant. The crime is mostly stealing, the stolen object hardly ever being worth over two dollars in value, and frequently as low as five or ten cents. The authorities here are building all their railroads with convict labor. If these few facts do not speak volumes in favor of education and good morals, then education is a failure.

I do not think the graduates of Hampton fully realize the responsibilities which they will be obliged to assume, until they have left its walls forever.

The best weapon after graduation is a good moral Christian character. With this the graduates of Hampton will ever be strong in the fight. I am glad to hear that Ackrel White has gone as a missionary to Africa, and earnestly that hope he will be the cause of much that is good. We cannot all go to Africa, but we have many heathen near home who demand our labor, and if we do what is duty, we should at least feel satisfied.

I attended a teachers' institute last Saturday, and was kindly treated by those present. I may add, another young man and myself were the only colored teachers present.

Hoping you will give my kind regards to Gen. and Mrs. Marshall,

I am, very truly, C.

P. S. Find enclosed twenty-five cents, for which send me the Southern Workman six months. C.

Colonel Parker's lectures on object teaching at Hampton last spring, have proved suggestive and helpful to many of the graduate teachers, who eagerly seize upon all the helps they can get for the arduous work before them.

N. C., *Dec.* 13, 1878.

Dear Teacher :—

I have been wanting to write you for some time, but have not met with an opportunity of doing so before. I have been teaching school ever since the 8th of October. I opened school with only five pitiful looking children the first day; the second, three more, and so on until I reached the number twenty-five, and there I am standing yet. This is the first time I have ever taught in this district. It is some what an out-of-the-way place for teaching, though it was the best I could do at the time, as it was the only house I could get and it is a very poor one. When I opened school, the people promised to fix it within two weeks; but I have been here better than two months, and they have done very little toward it; yet I guess I shall finish here with the house just as it is. I set in here for four months at $25.00 per month. I have been quite successful with some of Colonel Parker's methods of teaching. I find that the children learn a great deal faster since I have been using them. I like his way very much and expect to continue it. My same old school is vacant; the people and committee are wanting me there now, but say that they are willing to wait until I close here rather than have some person else; so I have another school in view when this closes in February.

I met an old white man one morning this week who asked me if I would read a paper for him. Of course my answer was, "Yes sir." He adds, "If I wasn't so old and you would give me learning, I would give you a mighty pretty piece of land." This is a very ignorant neighborhood where I am teaching, and the most of them are poor white people. They think I know everything. I have quite a rough road to my school; as I've two miles and a-half to walk, it is quite disagreeable when the weather is bad.

I suppose my time for the Workman was up in October, though I received one for November. I have not received my money yet and wont until my school closes. I will settle my account at Hampton when I draw some. I received my old friend, the "Educational Journal of Virginia" again last week. I know not who sent it, but I was very thankful to receive it. I would be very glad to get one of your Plantation Song Books, for my own use, to remind me more of the old choir at Hampton. As it is time for my school to take in, I shall have to close, with much love for all the teachers.

Hoping to have a letter from you very soon,
Your grateful pupil. M.

The Educational Journal of Virginia, now sent to the Hampton graduate teachers, is doing good work, and is received with real gratitude and appreciation by these young workers who have so few of the outside aids which more favored teachers think essential to success. It is fortunate for them that it, is one of the very best educational journals published in any part of the country—always wide-awake, vigorous and suggestive.

VA., *January* 1, 1879.

Dear General :—

It becomes my duty to acknowledge the receipt of the Educational Journal of Virginia; and to whom this acknowledgement is due I am unable to tell, unless it be to the Principal of the Hampton Institute. If it is to him, I rejoice in saying that I welcome it as a monthly visitant, with an open heart and outstretched hand. I welcome it, especially, on account of its items of interest which bear directly on my work. I like it because I think that it suits the teachers of Virginia. Its monthly hints seldom fail to *lubricate* the machinery of the school-room. I may say that what the compass is to the mariner, the Journal is to the teacher.

I am getting on pretty well, I believe, with my school. Times are good, because we can get plenty to eat and wear; though money is scarce and wages low. I think that I should be perfectly well satisfied, if I could get hold of such books as I really *need*. If you know of anybody who wants to give the *needy* a lift in this direction, I shall be more than happy to receive an *introduction* to such a person.

We have had quite a pleasant Christmas.
I am very respectfully yours, T.

THE work done by Hampton students as teachers would be perhaps doubled by taking into account that of the undergraduates, very many of whom teach during the summer, or through a year sometimes, the following letter is from one of these who has done well in a lower class, and is expected to return.

——, VA., *Oct.* 12*th*, 1878.

Dear Teacher:

I am sorry to inform you that I'll not be able to come to come to Hampton this fall, for my health has been so bad that I have not been able to raise the means to to come.

I am now teaching school. I commenced last Monday. I have twenty-five scholars, and they are still coming. I expect to have about forty or fifty. My time will be out the first of March, and then I'll try to come back to Hampton again.

I will be very glad for any advice on the subject of teaching school or anything else.

If you can send me a newspaper once in a while, I'll be very glad of it. Remember me to the teachers and all of my class-mates, and tell them I am engaged in a good work. The Superintendent of County Schools thinks that I passed a very good Examination. The maximum grade was ten, and I stood 8. 4-6.

Please excuse this short letter. As soon as I get a little more experienced in teaching I will write an interesting letter. I have been trying to get a Teachers' Manual, but I cannot find one. I am sorry that I have not finished my education, for I find a plenty here to do. I have a Good Templars' Lodge here in my school of which I am the Sec. and Dept.; it has saved many a drink of whiskey, and I think it will be the making of many a man.

It is very cold here now, for we have a large snow on the ground. I am glad to hear that the Indians are getting along so well.

I remain your obedient scholar,
B.

RECORD OF INDIAN PROGRESS.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

following are the conditions: have a severe cold within, apply a terrible cold from without, and you will have no cold at all.

RECORD OF INDIAN PROGRESS.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

THE ENGINEER AND BED-STEAD MAKING; THE CARPENTERS AND PRINTERS; AN INDIAN IN TEARS; A CURE FOR A COLD; A FIGHT IN THE SCHOOL-ROOM—INDIAN SENTIMENTS.

AT WORK.

When we hear talk about Indian work, almost the first thought suggested is making bows and arrows, and fancy baskets and head work; we seldom think of them as engaged in any mechanical art or in agricultural work. On second thought, we remember that the women do a little gardening in the way of "making corn," while the "braves" are either hunting, fighting, or sleeping. We are therefore surprised to see how cheerfully the Indian girls and boys are doing the work assigned them.

THE ENGINEER.

E-cor-rupt-ta-hn, who works in the engineer department, shows all the interest needed to make a good mechanic. A bone-mill which had been taken apart was nearly put together by him, and without assistance; the Engineer says that had the boy had time he could have put the whole mill together. He is a good observer and remembers all that he has learned, and in steam fitting can pick out all ordinary fittings; it was thought best that he should work in this department every day for about six weeks; now he works two days a week and goes to school the rest of his time.

MAKING BEDSTEADS.

It is an amusing sight to see E-cor-rupt-ta-ha at work with a Cuban: the Indian cannot talk English at all, while the Cuban can speak but little. They are making iron bedsteads, and an observer who did not understand the situation would say, each misunderstands the other, they cannot agree as to the best way to make them and are now coming to blows. It does look as though they will, for they appear to get more excited; they work a little, then stop and gesture wildly, in the meanwhile each using his vernacular language so fluently that we wonder who will strike the first blow. This scene has been repeated so often that it has a sameness about it, and indeed it has become a question of time, with us, by whom and when the first blow will be struck. As the day is wearing away we leave them; they continue to talk to each other by the sign language, working together in perfect harmony, making good iron bedsteads.

THE FIRST TABLE.

The boys at the carpenter's bench are doing as well as can be expected. One of them, Joseph Cook, seeing a carpenter making a table, watched him until the work was finished; then taking his tools he began to make a table for himself; he made a miniature one which was perfect in its parts, even to the mortises and tenons. If any of the boys form a plan in their heads they are allowed to shape it in wood; thus are their powers developed and trained by these solid expressions of their thoughts. No work of this kind is ever interrupted, for fear of destroying the ideal, as discouragement too often results from broken ideals.

A GOOD PIE.

The two boys in the Printing-office are doing well. One had worked at this trade before they came here; one understands the case, and the other sets type fairly. I was not aware that the art of pastry cooking as well as printing is taught in these offices, yet the printer tells me that "one of the Indians made a long primer pie," as I do not like stiff expressions, I think that his words would have sounded better this way—made a first-rate pie. I do wish that I had been there; I always had a weakness for pies, and I am afraid it is hereditary.

ABORIGINAL TEARS.

It has been said there is nothing that can make Indians cry except the tooth-ache; an observation of the Indians at Hampton is proving to us that there must be many exceptions to this statement. At the barn some days ago, an Indian was seen shedding bitter tears over a heap of ground beef-bones. I do not say that the tears were not appropriate, but it looks as though sympathy as well as the tooth-ache can draw tears from the Indian eye.

A CURE FOR A COLD.

What peculiar remedies Indians apply in a case of sickness! An Indian doctor has great power over the masses; yet he is unable to check the great mortality among his own people, or save their babes from an untimely death. I asked an Indian what he would do if he had a severe cold. "Me swim," was the reply. "Not in this cold weather?" I said. "Yes; me sick, me swim, me well; break ice; good swim." According to one class of treatment, I don't know but what there is some philosophy in his answer. For any one who may wish to try the remedy, the following are the conditions: have a severe cold within, apply a terrible cold from without, and you will have no cold at all.

AN EXCITING HOUR IN THE SCHOOL-ROOM.

There was nothing in the atmosphere that indicated the coming storm; the classes went on as usual, and not a dissatisfied expression had escaped from the lips of the Indians; the teacher seemed to have perfect control over them; but in an instant there was a change. It was as sudden as a tropical storm. The boys began to kick and strike terribly; the teacher's voice, drowned for a moment by their wild commotion, was heard exclaiming, "Don't you *strike*, I say; take your *seats*; every *one* of you sit down." It was hard for them to obey these commands; they were not satisfied; they did not want to stop the fight until they had killed the enemy; every boy stood trembling and excited; one by one they took their seats,—and the poor little mouse, saved by the kind interposition of the teacher, made its escape unharmed.

STUDY-HOUR—INDIAN SENTIMENTS.

A study-hour is kept with the Sioux three nights a week. One night the teacher asked the boys to tell something in English that they like. The following were noted at the time:

"I like to eat supper."
"I like to go to school."
"I like all boys."
"I like to work."
"I like my teacher."
"I like to be a blacksmith."

QUEEN VICTORIA.

(See page 20)

The spirit of obedience has characterized them thus far; they appear to appreciate the benevolent plan which has brought them here, and are trying to make the best use of their opportunities.

My account has been about the boys, with whom my work lies; I will speak of the work of the girls in the next number.

J. C. ROBBINS.

The following letter from Howling Wolf, one of the returned Florida prisoners, will be read with interest by those watching the results of that effort.

Mrs. Zalinski was for a time one of the volunteer teachers for the Indians in old Fort Marion.

DARLINGTON, INDIAN TERRITORY, *Dec.* 21, 1878.

L. E. L. ZALINSKI,
Fort Marion, St. Augustine, Fla.,

Dear Sir:

I want to write and tell you that all the talk you and your wife and I used to have together, when I was a prisoner at St. Augustine, is all remembered—that not one word of it has been lost, and that I have been trying and am now trying to lead the good life I found away East. The good road I learned there I have traveled myself and have done my best since I came here to induce all the Cheyennes to take hold of and love, and I have been able to get a large number of young men to go to work in earnest and also to throw away the old way of dressing and put on the white man's clothes. Whenever the Cheyeanes listened to me and took up the road, my heart was very glad. All the clothes that were sent to my wife were received and are carefully kept. My little girl I have put in the agency school, as I want her to know all about books when she grows up.

Rest assured that all the advice you gave me is carefully remembered and that not one word is lost. Give my love to all the ladies and officers whom I knew at St. Augustine, and tell them I have not forgotten any of the many good things they did for me. My lodge is poor, and I do not feel good to be still living in one of the old kind of houses. When the Agent gives me help to build a wooden house, I shall feel glad. I am very poor, as the Northern Cheyennes stole every one of my horses when they left this place last September. When I get some more ponies I shall feel better. I should be glad to hear from you to learn if all my friends have forgotten me or not. All my friends Arapahoes and Cheyennes are friendly and want to learn to be like white men, but often say my white friends East have forgotten all about me.

Please answer this soon. I feel glad to-day to be able to send you a letter and to let you know all about me.

Your friend,
HOWLING WOLF.

From one of the missionaries at work among the Crow Creek Dakota Sioux, we have an interesting letter in relation to the youth now at Hampton Institute from that agency, a part of which is here published. In connection with that part relating to the sending of money to Indian pupils here we invite attention to the article on that subject in another column.

FORT THOMPSON, DA., *Jan.* 5, 1879.

My dear Captain Pratt:—

I need not tell you how much plesure your letter gave both myself and the Dakotas whose children are with you. I cannot remember how many times I have reread it for Cecil to interpret to them. We learn also, by letters from the boys, that they are all happy. This is not a little surprising, as I had supposed that some of them would be homesick. Woji came to me yesterday, telling me that he had received letters from his nephews, saying in his usual sweet gentlemanly way that they were both very happy, except one little thing, and would I be so kind as to write and tell you that the boys said they did not get writing paper enough, and wrote him for money to buy it. I told him I feared it was not writing paper that they wanted to buy with the money. I was quite sure if they asked for it they would all be supplied with a reasonable amount. They are often writing their friends for money, which of course is quite absurd, and I have advised them not to send it them. They all advised them not to send it them. They all express great satisfaction that they were strong enough to part with them, and seem hopefully happy in the sacrifice.

The following is an extract from a letter to Captain Pratt, in reply to inquiries from him as to how the late Florida prisoners (Kiowas and Comanches) who returned to the Fort Sill Agency were doing. It is somewhat in contrast with reports from the Cheyenne Agency, but as it presents a truthful picture of results, it is due to those interested that all the facts should be known. Failures will serve to strengthen a future management. It may have been mistaken kindness to send back upon their tribes, at so early a day, the very worst of the Florida prisoners.

FORT SILL, I. T., *Dec.* 15, 1878.

Dear Captain:—

Yours received a few days ago and was very glad to hear from you. I had concluded that I had been forgotten, but am well pleased that I was wrong. I heard of you while on your mission among the Sioux, and was glad when I read of your success. You have undoubtedly achieved a great victory. I wished several times that I were with you. You could not have done better.

I regret to say that most all the Florida boys have gone back to he Indians.

Lone Wolf is dead, which is a great blessing. He would have caused trouble in the spring. All the rest of the old men are confirmed Indians. White Horse is the same big lazy Indian that he was in Augustine; he has forgotten how to put his civilized clothing on any more; he is very low. Aw-lih has conducted himself better than any. I have not seen him with blanket or Kiowa dress since his return. I believe he is trying to do right. Maw-ko-pch comes in very seldom, but he always looks neat and respectable when he does come. Wo-han held up quite a long while, and even went to school with the children here, but he could not hold out; he got into a scrape which rather disgraced him; he left school, and now wanders around almost worthless; he wears his uniform, but also a blanket and al-string. Too-sape or Paddy is at work at the agency and deserves great credit. An-ko-et works whenever he can get it, and still clings to his Augustine teachings. The rest are gone. I have worked with them at my house and fed them, but all to no purpose. You can now see who are the deserving ones.

None of the Floridians are on the Police Force—they said the pay was too small. I talked for the Captaincy for Aw-lih, and had the promise of it; but some Comanche influence was brought to bear, and a Comanche was chosen Captain.

TSAIT-KOPE-TA, one of the Fla. Indian boys, now at Tarrytown, N. Y., under the care of Dr. and Mrs. Caruthers, on being informed by Capt. Pratt, that many of the returned Kiowas had gone back to the blanket, writes as follows:

TARRYTOWN, *Jan.* 5*th*, 1879.

Dear Capt. Pratt:

I got your letter, and am much obliged for it. I understand and think about what you say of the Indians. Long ago you ask me if I think they keep white man's clothes after they go home, and I say no, not all, and now it is so I knew before, but what can I do? I can't stop them they not boys but men, old men don't give up old way. White Horse promise great things but he no sure and I feel sorry. He tell me he throw away all had and keep the straight way, but he don't keep. Never mind Capt. Pratt, don't feel bad, you know these too old and we can't help it, but the young mens you now got will listen to you and grow better.

I feel much about this but don't want make too long letter. I write soon to Aw-lih or Ono-et if I know they get letter. I don't get answer. I wrote Mr. Fox and send money and letter long ago to my mother and no answer and again Dr. write twice and ask Mr. Fox tell me but he send no word and I dont know if my mother ever get money.

Capt. Pratt, perhaps you tell me how they sure get letters then I will write. Dr. Saville came here New Years day and I saw and shake hands with him.

It has been very cold much snow. I hear north more cold and snow very deep.

I hope you are well. I wish you happy new year. ——— sends love.

Your faithful friend,
PAUL CARUTHERS.

THE tribe of Oldtown Indians, in Maine, is said to have lost, under the influences of education, almost all traces of its native character. A letter written by one of the Indian girls of Oldtown to a family in Belfast, is reported to have been conspicuously good, both in composition and scholarship.

We gladly give place for the following letter written in reply to an invitation to visit Hampton Institute, to witness what is being done for Indian youth. The writer, Hon. W. P. Ross, is a nephew and adopted son of the celebrated chief of the Cherokees, John Ross, has himself filled that office, and has several times been sent by his nation to Washington, to look after its interests, during Congressional sessions. Being himself an educated man, graduate of an eastern college, but identifying himself fully with the interests of his nation and race, his opinion should carry with it more weight than can possibly attach to those of men, who, while they have perhaps never seen an Indian, say that the race cannot be civilized.

WASHINGTON, D. C., *Jan.* 1*st*, 1870.

Dear Captain:

Your esteemed favor of the 30th ulto. was received yesterday. Please convey to Gen'l. Armstrong, my thanks for his kind invitation to visit the Hampton Institute and witness the efforts made to educate Indian youths of both sexes. It would give me real pleasure to accept the invitation at once, but my duties are such that I cannot leave here at present. I hope, however to be able to do so before returning home. I feel an abiding interest in every effort to save and elevate any portion of the Indian race, and wish all engaged in the good work great success. My experience teaches me that Indians can be improved and civilized; and I believe that your system of instruction is the proper one for the youth of every race, combining as it does the education of the intellect with that of the hands and of the heart. Whatever may be the difficulties and discouragements of the hour, persistence in the course you have indicated as pursued at your Institution, must, in the end, accomplish results of the most beneficial character. That such may be the experience of the Principal and his associates in training the Indian youth who are members of the Hampton Institute is the sincere desire of

Yours very Respectfully,
WM. P. ROSS.

The Lava Beds and the Modocs will not soon be forgotten in this country.

The subjoined is a letter from one of the few surviving Indians of that little band, to the editor of the *Council Fire*, who, with the lamented General Canby, was one of the commissioners to treat with the Modocs, but whose life was saved by a miracle of Providence. The letter gives evidence of progress worthy of the most thoughtful attention:

QUAKER AGENCY, Nov. 27 of 1878.

TO COL. MEACHAM:

Dear Friend.—I will tell you how we get long. We got plenty hart worke siece we come to this Land. We get long well, But sometimes we get feel bad Because we have chills; that one thing we feel bad. Sometimes we never don't feel bad bout anythings. We got split 20,000 rails, we build 10 log house, and corn crip 0. We think we do right all tha same way white mens. Our fellers tend three hundred and 08 acres land and have 75 acres hay. Well this is all I got say bout this: I want you to let great father Washington know Bout that our people are Dying we have to maid coffin for ourself. I call the beaf hides just like our own self have them hides. The great father ort to help us make them coffins. We dont want to do like we used to do, Because we have now home avory thing new.

That tha reason tha great Father ort to help us same as other trichs, we would do like educait peoples. Now all my folks is wall. They dont quarrel at each other; they ain't gona took whiskey noua of them and myself don't. I think all folks be glad wa get long right. I got long with avery thing Agent says to us hout work. One thing no trouble, some time don't we have we eat rite. Some time oat wa up all three days for a week, then we ain't gone an feel lazy. I feel like work avary day and stand it like a mana, all Modocs do same way. That tha reason I like found out whan wa get mora beaf. May be we find out all Right. Wa haven't got much any thing yet. If we had gone feel lazy we dont hodor anybody huisness.

Our timber is very split hard. Wa bain't saw mill got no place. We like build good house. Wo want great father send us lumber to built stable an house. You can help us very aesly. We two dozen mens, no more. I mind business my own. I try to let tho God help me, all, every thing. I say like a citiseu cause I love tha God myself. I like find out right thing. I believe God looks at us avory thiug. I satisfied.

I think God Ho made us to think to you write this letter this evening.

Five years I study bout these things and naver tell you now until this time how I feel. You know Great Spirit ho willing we coma this place. I say nothing long time. I want sea what the white man's got then I talk. We hain't got unff teems. I feal sorry for that. I want great father help us get teams with to work. Wa don't talk loud, we sny eny thing easy, that why we don't get more teams. Wa don't take nothing he don't give us. All we want is some teams and and lumber, and coffins, an plenty to eat little while, then we work and get them things. All the Modoc mens say this. You hean good friend, you help us.

STEAM BOAT FRANK.

"Six years ago the name of Steam Boat Frank was first heard of in connection with that of Captain Jack. He survived the Modoc war and immediately began learning the alphabet, declaring, "I will be a white man before I die." We give his first letter, fashioned and written by the same hand that gave death to his enemies six years ago. We have taken special interest in the Modocs since 1869, and we have better means of knowing the character of these people than any other of their race; better reasons for enmity toward them than any man ever had against any tribe, and yet we must say in candor, that "the Modocs," most despised of all Indians, possess more than ordinary manhood. The few survivors have won the confidence of all who know them, and in a few years will be able to take care of themselves.

They need, 1st, a *bona fide* title to the lands which have been given them in lieu of their blood covered home in Oregon. We trust this matter will not be neglected.

2d. They ought to be allowed the control of the cattle bought for them three years ago. They will take pride in growing herds, and no white man can cheat them under fair protection.

3d. They ought to have a few more good horses and wagons, and then the Modoc question will be settled and the problem solved.

Council Fire.

The largest sum expended in this country for each enrolled scholar is to be credited to the Cherokees of Indian Territory. Each pupil in their schools is educated at an annual cost of $35.70. The smallest sum per capital —89 cents—is paid by Alabama.

PROSPEROUS INDIANS.—Father Wilbur, for many years a Methodist missionary among the Indians, and for the past ten or twelve years agent for the Indians at the Yakuma Agency in Oregon, gives an interesting account of the Indians under his charge in a letter to the Indian Bureau at Washington, dated October 9th, in which he says these Indians, now numbering 3,040, were taken from the war-path in 1856 and gathered on a reservation in 1870. They were then poor. Now they have, as near as can be estimated:

4,000 head of cattle	$ 60,000
17,000 horses	255,000
10,000 acres of land, fenced	30,000
0,000 acres of land, fenced and cultivated	48,000
50 wagons	3,000
100 sets of harness	1,500
42,000 bushels of grain, raised this year	21,000
500 tons hay	2,000
300,000 feet lumber	6,000
100,000 shingles	500
8 houses	2,400
1 large barn	2,000
Boarding house	1,000
300 cords wood	000
Making total of	$433,300

Being $600 per family, or $119 for each man, woman and child at the agency.

THE INDIANS NOT DYING OUT.

FROM THE N. Y. HERALD.

The Iroquois, it is established, now numbers 13,068 souls as against 11,050 in 1763. The Sioux confederacy have quadrupled their numbers in one hundred and forty years and doubled them in twenty-nine years. Colonel Mallery concludes, after a thorough investigation, that there were not more than half a million of Indians north of Mexico on this continent when Columbus discovered America, and he shows that there are now three hundred thousand, without counting half-breeds. But what is of more moment to us, who have the charge of the remaining Indian people within our borders, and to whom it must be a matter of conscience to see that they are decently treated, actual count shows that in the last four years, in a population of one hundred thousand Indians, belonging to nearly one hundred tribes, there has been an actual though slow increase, the excess of births over deaths varying from six-tenths of one per cent to 2.32 per cent. This is the important fact developed by Colonel Mallery's valuable investigation. The Indians are not dying out; and our Indian policy concerns, therefore, not a race which will presently disappear, but a people who are permanently a part of us and for whose care and future we must have not a temporary and perfunctory policy but one which shall last, and whose chief object should be to redeem them as quickly as possible from their savage state and incorporate them into the general body of the people, making them amenable to the same laws as other residents and throwing upon them, as quickly as is reasonable, the burdens of life, from which the agency plan now too greatly relieves them.

INDIAN PHILOSOPHY.

When the new Indian boys from Dakota, were donning their civilized garb, and voluntarily having their long hair taken off, one of the Sioux boys named Mok-pe-a-mah (Walking Cloud) declined to have his hair cut, because the coat that had been made for him was a little tighter than his blanket. When questioned about his school life, he said, "I did not come here to study books, I came to learn to be a blacksmith. A man cannot be two things." He was allowed to try his own theory, but after a few weeks he came round, wanted his hair cut and to come into school, where he is now a bright and eager student.

DIED.—At Hampton Institute, Jan. 21st, of acute pneumonia, with symptoms of meningitis at the last, George Sharphorn,—(Indian name Koo-cook-te-a-wan, *Shooting Bear*) of the Arickaree tribe, from Fort Berthold Agency, Dakota Territory, aged 20 years.

This first break in the circle of new Indian students occurring so soon after their introduction to their new home, has cast a cloud over the band, and over the whole school, in which deep sympathy has been felt for the young man in his sickness, and now for his mourning associates far from home and friends. Coming as he did from the extreme latitude of northern Dakota, it does not seem possible to attribute his illness to the change of climate, though the winter has been a severe one and colds have been prevalent here as elsewhere. His friends may feel assured that from beginning to end, everything that friendly sympathy and duty could suggest has been done for him both in medical attendance and nursing. He seemed indeed to be improving, and was hoped to be nearly out of danger though very weak, when a sudden change for the worse occurred, brain symptoms appeared and, becoming unconscious, he died within twenty-four hours.

He was buried on Wednesday afternoon, from Bethesda chapel, which was filled by the school and its officers and teachers. Rev. Mr. Herrick, Post Chaplain at Fortress Monroe, Rev. Mr. Latourette, Post Chaplain at Fort Union, New Mexico, and Rev. Mr. Gravatt, of St. John's Episcopal church in Hampton, whose interest in and labors for the Indian students have been noticed before in this paper, were also present. The services were conducted by Rev. Mr. Denison, Chaplain of the Normal School, and were touchingly beautiful and appropriate; the passages of Scripture selected, being Gen. xii: 1-4, the call of Abraham to leave his country and kindred and father's house, and Heb. ii: 8-10, 13-16; the beautiful lessons drawn by St. Paul from his faith. The application was most evident and touching to the simple faith and desire for better things, for a higher life, which had led this young man and his associates to leave home behind them and journey into a far country, to learn at great sacrifice the white man's road, the white man's civilization, the white man's God. And there one hope who did not join in the hope and the belief that he who had thus died in faith, not having received the promises but having seen them afar off, distant and dim perhaps, but yet a light toward which he pressed, is now learning more rapidly in a better school, from the Great Teacher and Father of all. The poor father in his desolated home, trying so hard to walk in the upward road himself, henceforth without the comfort of his only son for whose good he has sacrificed much, was remembered with prayer that he may be upheld by faith in the love of God and the belief that though his son may not return, he shall go to him in his heavenly home.

Then the coffin, draped in the American flag, was borne to its resting-place in the little school burying ground, under the soft afternoon sunshine, and by the friendly hands of the St. Augustine Indian students. The school band preceded it, and it was followed by George's mourning friends from Dakota, with Captain and Mrs. Pratt, and after them, the officers and teachers, the students and other friends. A prayer was offered at the grave, a few sprigs of bright holly were dropped into it with the hope that he who died under these Christmas and New Year emblems may enjoy their full significance, the last bugle call to rest after the heat and burden of the day was sounded over the quiet bed, and with sad but hopeful hearts we left it till the trumpet shall sound and the dead shall awake, and they that have died in faith shall receive the fullness of the promises.

To his mourning father and friends we send our sympathy. They will be glad to learn that George's record during his short life at Hampton has been that of a faithful worker, and a very bright and interested student, and that he will be remembered with sincere friendship and regret.

THE MOURNING QUEEN.

The plain, motherly face of the Queen of England is looked upon now with reverent sympathy and tenderness by every loyal Englishman, and by thousands not her subjects; with reverence for her virtues as a woman and a mother as well as sovereign, and with sympathy in the new sorrow which has fallen upon her and the English nation, and the little Duchy of Hesse Darmstadt, in the death of its Grand Duchess, the universally beloved Princess Alice.

"So good, so kind, so clever," her brother, the Prince of Wales simply and affectionately describes the Princess in his letter to the House of Lords. And what is noblest in her, and makes her most admired and lamented, is not her title of Grand Duchess, nor her loftier position as a Royal Princess of England, but that she was a good, self-sacrificing, loving daughter and wife and mother. When her father the good Prince Albert was dying, seventeen years ago, she made herself a place at once in the hearts of the nation, by her filial devotion to him, and at last her own life was sacrificed to her mother-love for her little ones. Several of them being attacked by diphtheria in its worst form, she could not be kept from their bedside, and her death is said to have been caused by a kiss which she could not refuse to one of them whose little heart was breaking over the death of his baby sister.

It is noticed as a curious coincidence that her father the Prince Consort, and she, died on the same day of the month, seventeen years apart. There are other coincidences too, more accountable, and also more significant, which the mourning court and nation, and all who hear of their loss, would do well to consider even in their grief. It is remarkable that in these seventeen years, the Prince Consort, Princess Alice and her child, should have died, and that the Prince of Wales the heir to the throne of Great Britain, *his* eldest son the next heir, Prince Leopold, and three others of Princess Alice's children, should have been brought to death's door by diseases generally known to be *Preventable diseases*, resulting from imperfect drainage or similar uncleanness of surroundings; diseases against which health laws are made, and tenement house occupants are warned.

Surely, the lesson is loud that God's laws of health are for rich and poor, prince and peasant alike, and the man that doeth them, he shall live by them.

The following pleasant words are from a friend—in every sense of the word—and will please our other friends:

PHILADELPHIA, *Dec.* 9, 1878.

GENERAL ARMSTRONG,

Dear Friend:—

Among the various interests which Hampton embraces, allow me to express my increasing appreciation of your paper. Many of the late articles, particularly those on Health, Money, and Agricultural subjects, seem to me to be too valuable to be limited to your present list of subscribers, and would be more extensively useful if they could be circulated in our Western States, particularly in our smaller towns and among our pioneer settlers where there is so often an entire dearth of reading matter. In looking over the numerous papers and magazines on our table, to forward to some who had none, I did not find any that seemed better adapted to them than the "Southern Workman," and the thanks that have been returned since, show how gladly they are received.

With kindest regards,

B. C.

CHANGE OF BASE.

On New Year's morning, the Home Savings Bank removed from its old location on Atlantic St., to the new building on the corner of Main St. and Roanoke Avenue which had been especially fitted up for the accommodation of this Bank. The Bank is now in its fifth year, and is doing a large and prosperous business, as the new and neatly appointed quarters which are daily thronged with customers give evidance. Cashier Percy informs us that he now has nearly 1,200 accounts upon his ledger, showing a balance due depositors of over $50,000. Many of the accounts are small, representing the weekly savings of laboring people, and upon these savings accounts interest at six per cent. is allowad from day of deposit. Besides these, however, the Bank has attracted to its counter the accounts of some 200 business men who find the Home Savings Bank a prompt and reliable institution.

This Bank is the only Bank in Eastern Virginia which keeps its doors open on Saturday nights, to accommodate the working people, from 6 to 8 o'clock.

The Home Savings Bank is also head-quarters for European Exchange, selling Sight Drafts on all the countries of Europe and tha East.

We wish the institution success in its new location, and advise our readers to begin tha new year by starting a savings account in the Home Savings Bank.

The new Grand Vizier of Turkey is a Circassian by birth, and was in his youth a slave.

SNOW, SNOW, BEAUTIFUL SNOW!

SNOW, SNOW, BEAUTIFUL SNOW!

HOW IT WAS BLOWN, AND HOW IT WAS THROWN AT HAMPTON—STRANGE SIGHTS THAT JACK FROST SAW—TOMTOMS AND WARWHOOPS—ROHOE ET NOIR—SNOWBALLS AND CORNBREAD.

The late "polar wave" no doubt saw many peculiar sights, as it rolled from the Icebergs to the Gulf; but none perhaps more peculiar than one on the grounds of the Hampton Institute. This sight was of a snowball fight, betwecn our colored and Indian students. A snowball fight between school-boys is not of itself a remarkable sight; but when it occurs in the "sunny South," between aboriginal sons of America and immigrant sons of Africa, there arises a condition of affairs that the adjective "peculiar" fits nicely.

Even though somebody quote the trite saying that "there is mischief still for idle hands to do," candor compels the statement that the contest took place on the afternoon of one of the Christmas holidays. The exact cause of it, as of many other notable engagements, is not definitely known; but that a grand snowball fight did occur, is an historical fact.

The battle field was an open plain between Academic Hall and the boys' dormitories; the nature of the ground was such as to afford no shelter to either side, although the left of the Indian position was protected by a pond, containing about four feet of water, and covered with a thin costing of ice. Through the middle of the plain ran a broad road, for the possession of which both sides strove earnestly; its immense strategic importance was plain to even a non-military observer for on one end of the road was Academic Hall, and on the other, the "Middler's Cottage," in both of which, big fires were burning—and the day was bitterly cold.

At the beginning of the fight, the Indians were scattered over the eastern half of the plain, while the colored students were massed on the western side. About fifty Indians and as many colored boys were engaged; and so far as could be judged from the number of orders simultaneously given, there were about half a hundred officers on each side. "The colored troops fought nobly," but were unable to rout their opponents. The Indians fought in their usual way, and with great bravery; but were apparently astonished at the novel tactics of their enemies. Some of the colored students, who had been studying Ancient History, seemed to try to arrange themselves after the manner of a Macedonian phalanx; but as both spears and shields were wanting, the attempt was not a signal success and was soon abandoned. An Indian critic, after the battle, characterized the formation as "heap no good." The colored troops firmly believing that "in union there was strength," always advanced in close order; while the Indians avoided the front of the enemy, but kept attacking him sharply and repeatedly on the flanks. Their frontier education was also noticeable in their economy of ammunition: and in several charges the colored boys had to fall back to make new snowballs, while the Indians had several rounds tucked under their left arms. Snow was not over abundant, and Indian ingenuity (?) displayed itself in the substitution of half-frozen mud. So far as accuracy of aim and length of range was concerned, there was but little to choose between the two combatants; for, if the colored boys had never lassoed horses on the plains, nor hurled the warlike spear, they had played base ball, and toughened their muscles by the use of the peaceful hoe. The rule on both sides seemed to be, "Wherever you see a head, hit it," thus following the Irishman's recipe for fun making at Donnybrook. This fact suggests an ethnological question, whether roving wild Irishman, "in the brave old days of yore," did not settle portions of both Africa and America.

During the whole contest, and above the din of battle, was heard the genuine war-whoop; and a frightful song it is, even without the scalping knife accompaniment. Not to be outdone in din making, the colored boys procured a drummer and a drum; but as the former was not skilled in martial music, and had continually to dodge the missiles of the foe, the effect was not particularly inspiring; indeed, there was a melancholy uncertainty about the drum-beats that reminded one of the "tom tom" described by Jungle travelers.

To detail all the individual acts of heroism would fill a volume; but mention must be made of one. A desperate charge made by the Indians had been gallantly repulsed, and they were falling back in great disorder, when a small Indian with one snowball left, turned and faced the foe; his example inspired his brethren, and the retreat became orderly; while slowly retiring, eying the enemy defiantly, he stepped backwards into the pond, through the ice, and down to the bottom. Nothing daunted; he scrambled out with a slush-ball in each hand, and in the heat of battle sought a counteragent to the chill of the pond water.

After the battle had waged long enough to give both sides plenty of exercise, and to develop a good deal of mutual respect, the Instructor in Military Tactics ordered a retreat, and both sides withdrew, with many wonderful tales to tell, but no serious wounds to dress. Two hours after, all the combatants were sociably seated in the same supper room, making a joint attack on cornbread and molasses.

Again be it said, that nowhere else south of the late Mason and Dixon's line, did Jack Frost see a good-natured snowball fight, between black men, who had recently been slaves, on one side, and red men, who had still more recently been savages, on the other, both of whom were trying to learn what was good of the white man's ways.

T. T. B.

"IT WOULD HURT ME THE MOST."

"Would you like to buy some berries?" said a bright, cheerful voice at the back-door.

"How many have you?"

"Two quarts."

"Are you sure there are so many?"

"Yes, ma,am."

The lady hesitated. It really looked to her like quite a small measure.

"I wouldn't cheat, ma,am," said the same clear voice; "it would hurt me the most if I did. But you can measure them."

They were all right; and the lady bought them, the little girl going on her way in the glad possession of her hardly-earned money, and in the possession of a truth that it would be well for us all to learn,—that, when in any way we cheat or rob others, we injure ourselves the most.

"I can't see why," said little black-eyed Frank at my side.

"Because, my boy, by cheating others, we only deprive them of some of their earthly treasure, which, at the longest, they can keep but a little time; but as for ourselves, we injure our soule, which are to live for ever."

PROVE IT BY MOTHER.

While driving along the street one day last winter in my sleigh, a little boy six or seven years old asked me the usual question, "Please, may I ride?"

I answered him, "Yes, if you are a good boy."

He climbed into the sleigh; and when I again asked, "Are you a good boy?" he looked up pleasantly, and said, "Yes, sir."

"Can you prove it?"

"Yes, sir."

"By whom?"

"Why, my ma," said he promptly.

I thought to myself, Here is a lesson for boys and girls. When a child feels and knows that mother not only loves, but has confidence in him or her, and can prove their obedience, truthfulness, and honesty by mother, they are pretty safe. That boy will be a joy to his mother while she lives. She can trust him out of her sight, feeling that he will not run into evil. I do not think he will go to the saloon, the theater, or the gambling-house. Children who have praying mothers, and mothers who have children they can trust, are blessed indeed.

Boys and girls, can you "prove by mother" that you are good? Try to deserve the confidence of your parents, and every one else. —*Children's Friend.*

DENTISTRY.

Dr. T. H. Parramore has permanently settled in Hampton, and is prepared to perform all operations on the teeth, and inert artificial sets. Rooms, over H. L. Schmelz & Co.'s store, on Main street.

A GOOD INCOME FOR SOME ENERGETIC LADY OR GENTLEMAN.

The Ohio Scale Works, of Cincinnati, have just completed and are now introducing to the public, under the title of the UNIVERSAL FAMILY SCALE, an article that has always been needed in every household; and, in a communication addressed to the publishers of this paper, the proprietors ask us to refer them to some reliable party who will represent them in introducing it to the people of this county. It is very seldom that a new article steps so suddenly into universal favor. Housekeepers are loud in praise, for it possesses the merit of being always ready; there are no weights to hunt up and adjust, is always reliable—will not get out of order—and is an ornament to the kitchen. The description is simply a base surmounted by a hollow column, in which works a spiral spring so scientifically gauged and adjusted as to weigh anything up to twelve pounds with perfect accuracy. On the top of the column is the platform on which the articles to be weighed are placed. By the mere turning of a screw the tare of the dish, plate, or whatever you may use in weighing, is taken out and the net weight given. Housekeepers at once see its value in weighing sugar or fruit, in making preserves or jellies, or in testing the butcher's or grocer's weight, and the thousand and one cases that occur where something that should be weighed accurately is necessary. The Scales are handsomely painted and bronzed, and are sold at about one-third the price charged for the inferior scales of the same capacity. It seems to us that nearly every family in this country would want one, and it is certainly a rare opportunity for some smart and energetic party to pick up quite a nice little income during the next few months. The Company has agents in no more favorable location who are making $5.00 to $6.00 per day, and there are certainly several in the vicinity who can do as well. We recommend such to addressed the Ohio Scale Works, Elm and Geo ge Streets, O., and all information, etc., will he cheerfully given them by mentioning our paper.

NEWS OF THE MONTH.

FOREIGN.

Switzerland and France are suffering from heavy falls of snow. Railroad travel has been, to a large extent, suspended in those and other countries of Europe.

Notwithstanding the unusual severity of the weather the yellow fever is still prevalent in some of the West Indies.

Juan Moncasi, who attempted to assassinate the King of Spain last October, has been condemned to death by the Supreme court Justice.

A dispatch from Corea in North Brazil reports that the deaths in the capital from small-pox number 600 daily. The suffering is appalling.

London, January 13.—The Governments of Germany, Great Britain, France, United States, Belgium, Spain, and Portugal are said to have agreed to the rules drafted at Berlin to prevent collisions at sea.

There has been another heavy failure of a bank in England, the Cornish Bank, with liabilities of over £1,000,000. The number of business failures in the year 1878 was over 15,000.

Great distress continues to prevail in many parts of England, and extensive measures of relief are undertaken. Extensive strikes are also threatened.

The Tartar revolt has been suppressed by Russia.

The Republicans in France have had a complete victory in the elections to the Senate.

The Paris correspondent of the *London Times* says: "A full pardon has been granted to twenty-four communist exiles in New Caledonia for their services against the insurgents in that colony."

The Railway strikes in England have generally proved a failure.

Lord Beaconsfield has had a serious attack of gout, from which he has recovered.

There is no diminution of the financial and social distress prevailing in England, and the outlook is exceedingly gloomy.

The British steamer Bayard, from New Orleans, December 4th, for Rouen, France, foundered at sea December 10th, and all on board were lost, except two of the crew.

The British steamer Lishope, from Boston for Liverpool, which arrived at Queenstown Jan. 9th, lost her boats and a number of cattle on her passage.

The British bark Bay Star, Captain Sawyer, from New Orleans, November 28th, for Liverpool, put into Crookhaven, having lost two men overboard.

The King of Holland was married to Princess Emma of Waldeck-Pyrmont, Jan. 7th.

A telegram from Paris, published in London on the 10th, states that the new French Atlantic Cable Company has been constituted. The capital is 52,000,000 francs, and the number of shares, 84,000. The Company proposes to lay two cables, one from Brest to Cape Cod, and the other from Land's End to Nova Scotia—both by the way of St. Pierre.

The plague at Astrakhan is assuming serious proportions. Fugitives have carried the contagion to three adjacent villages. The infected disirict has been surrounded by troops. Communication with Moscow has been stopped. General anxiety prevails throughout Russia.

DOMESTIC.

The suit brought by the heirs of Stephen A. Douglass against the Government, to receive damages for certain cotton captured in Mississippi during the war, has been decided in favor of the claimants.

The statue of Charles Sumner was unveiled in Boston on Friday, Dec. 27th.

Col. John S. Mosby has started for San Francisco, whence he will sail to assume his duties as American Consul at Hong Kong.

The report of commercial failures in New York City for the year 1878 amounted to 917, with liabilities amounting to nearly $64,000,000; assets, $19,000,000.

The returns to the State of Virginia from the Moffet liquor register system for the first year were $382,563.

The New Orleans Howard Association, in their annual report, acknowledge the receipt of $383,449, and the expenditure of $380,185. They relieved 21,344 patients, of which 5,102 were colored.

A severe shock of earthquake was felt in Florida on the night of Jan. 12th.

The report from the Agricultural Department at Washington, for December, shows that the corn season closed with a marked improvement in the condition of the crop. The aggregate of the crop for 1878 is larger than that of 1877 by some 30,000,000 bushels.

The oat crop exceeds that of last year, it being the largest crop ever raised in the country.

The hay crop is twenty per cent. greater than last year.

The tobacco crop not quite so good as last year.

The cold snap has not damaged the Florida orange crop.

Three States dedicate new State Capitol buildings this year—Connecticut, Michigan, and New York.

An annual statement of the precious metals produced in the States and Territories west of the Missouri river, including British Columbia, and the receipts in San Francisco from the west coast of Mexico during 1878, shows the aggregate products as follows: Gold, $38,856,231; silver, $38,749,391; lead, $5,452,000—the total being less by $17,267,132 than for 1877.

The Chicago Post-office, a building which cost $300,000, was destroyed by fire on Saturday, January 4th. All mail matter was saved in fire-proof vaults.

The colored drivers and school children of Augusta, Ga., propose to organize a Society for the Prevention of Cruelty to Animals, in memory of Miss Louise King, whose death has been so deeply mourned in that community. She had been active in organizing societies and securing legislation for the prevention of cruelty to animals.

The total coinage at the Philadelphia United States Mint for the year just closed was as follows: 28,754,389 pieces, valued at $25,236,378 50. Of this amount there were double eagles, 543,645; eagles, 73,800; half eagles, 131,740; three dollars, 82,334; quarter eagles, 486,260; dollars (gold), 8,030; dollars (silver), 10,000,550; trade dollars, 900; half dollars, 1,878,400; quarter dollars, 2,236,800; twenty-cent pieces, 600; dimes, 1,678,800; five-cent pieces, 2,350; three-cent pieces, 2,350; cents, 5,799,850.

The public debt statement for the month of December, 1878, is as follows:

Debt, less cash in the Treasury, Jan. 1, 1879	$2,028,648,111 09
Debt, less cash in the Treasury, Dec. 1, 1878	2,027,414,325 79
Increase of debt during the month	$1,233,785 30
Decrease of debt since June 30, 1878	$7,138,720 73

Navigation is closed on the Chesapeake Bay and most of the rivers of Virginia, except for iron vessels, on account of the ice.

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: A knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable, &c., &c.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS

N. McNEILL invites attention of the public generally to his large and carefully selected stock of Boots and Shoes of the

Best City-made Work,

which I will sell at and below cost. All other goods in my store will be sold lower than ever. In consideration of the times. Please give me a call and see for yourselves. Ladies' and gentlemen's work made to order, and repairing neatly done.

N. M'NEILL, HAMPTON, VA.

DEVLIN & Co.,

LEADING

CLOTHING

HOUSE.

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always

THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

HAMPTON TRACTS
FOR THE PEOPLE,

SANITARY SERIES.

No. I, The Health Laws of Moses.
No. II, Preventable Diseases.
No. III, Duty of Teachers.
No. IV, Who Found Jamie?
No. V, A Haunted House.
No. VI, Woman's Work in Sanitary Reform.

No. VI may be obtained at 5 cents a copy, or $4 a hundred, on application to Hampton Tract Editing Committee, Hampton Institute, Va.

THE tracts which are published as supplements to the SOUTHERN WORKMAN are necessarily somewhat abridged. They are however published at the same time complete in pamphlet form; and can be obtained simultaneously with their appearance in the paper, from the Editing Committee, Hampton, Virginia, or from G. P. Putnam's Sons, 182 5th Ave., New York.

WOMAN'S WORK
IN
SANITARY REFORM.

"I conclude that all our endowments for social good, whatever their especial purpose or denomination—educational, *sanitary*, charitable, penal—will prosper and fulfil their objects in so far as we carry out the principle of combining in due proportion the masculine and the feminine element, and will fail or become perverted into some form of evil in so far as we neglect or ignore it.
Mrs. Jameson.

Woman's systematic co-operation is essential to the success of Sanitary Reform. Our legislators may frame wise Acts of Parliament, enforcing sanitary regulations; but some of the greatest causes of disease and death lie quite beyond legislative interference, and can only be removed by woman's agency. "The Health of Towns Act" may ensure good drainage and water-supply, pure air, and other important external sanitary requisites; but till every woman frames a Health of *Homes* Act, and becomes a domestic "officer of health," none can ensure that the pure air shall ever be breathed, the good water ever be sufficiently used, or other Sanitary conditions ever be fulfilled in-doors.

In general terms, sufficiently explicit for the present purpose, the great field of sanitary labor may be considered as divided into two parts:—the amelioration of injurious external circumstances, and the reform of injurious habits and customs. Of these parts, the former may be considered as belonging principally to man—the latter, principally to woman. It is for man's comprehensive mind to devise schemes for draining and cleansing our towns, for improving dwellings, and for placing the necessaries of life within the reach of all; and it is for his strong hand to execute these schemes. It is for him to discover the laws of health, and to teach and apply them in his special sphere. It is for woman, in her functions of mother, housewife, and teacher, to effect those urgently-needed changes in infant management, domestic economy, education, and the general habits of her own sex, without which humanity could never even approximate to bodily perfection, though all injurious external circumstances were changed. It is for her to teach and apply the laws of health in her own sphere, where man cannot act.

After studying sanitary science, and applying it personally, woman will be prepared to commence her work for the physical elevation of others. This, like all her ministrations, should begin in her own home. That sphere, narrow though it seems, presents scope for an amount of sanitary labor which could not be fully indicated in many volumes. Only a very few of the most common domestic violations of sanitary law can here be mentioned.

Prominently among them, may be placed the use of unsuitable and badly-cooked food. In choosing our food and mode of cookery, we regard palate and length of purse; but through our ignorance, the choice is generally more or less in violation of the laws of health, and we pay the penalty in a host of digestive disorders. Whatever grand schemes of public sanitary reform may be carried on in a nation, the mass of the people can never attain to a high physical condition till the housewives study the science of health, and bring it to bear upon the choice and preparation of food. Though there is not always need for the mistress of a household herself to prepare the meals, she should certainly have knowledge which would enable her always to order such food and methods of cookery as are suited to the season, and to the particular constitution, occupation, and state of health of each member of her family. This subject is really a most important one; for not only physical, but mental and moral health, are to a great extent dependent on so material a thing as dinner.

In the nursery, woman's ignorant violations of the laws of health are still more frequent and mischievous. The present high rate of infant mortality among us and other civilized communities, is something unparalleled in all creation. From every hundred of our little ones, thirty are cut down,

"An unripe harvest for the scythe of Death,"

before five summers' suns have shone upon them, and great part of the remainder grow up weak and sickly. No other creature perishes and suffers thus. We do not find the eaglet dead in its aerie, or the young wolf moaning with pain in its lair; among all the inferior animals, health and long life are the rule; while with the offspring of civilized humanity, the capital of creation's pillar, they are the exception. It is true that there are many great causes of infant mortality and disease over which most women have little control. In large towns, thousands of infants fade away, like blighted flowers, for want of pure air, light, and sunshine; others come into the world with the seal of death already on their brow through hereditary influences; and others suffer or die for want of the necessary food and care which poor mothers working at a distance from home cannot give. But in very many instances the principal causes are maternal ignorance and mismanagement; on all sides "Rachel sits weeping for her children," whom she has herself unwittingly slain. It is worthy of special remark, that, although the rate of infant mortality is very much higher than that of adults, infants are entirely exempt from many of the fatal influences to which adults are subject. Intemperance, overwork, anxiety, "accidents by flood and field," and other things which destroy thousands of adult lives, do not affect infants. Surely they would live and thrive if well managed. With regard to maternal duties, we are generally far too wise in our own conceit; it is a rare thing to find a mother who, however ignorant, does not believe that she knows all about the management of her children. Womanly instinct, it is sometimes argued, teach all a mother needs to know. When it can be proved that there are superfluities in God's creation, and that woman's reasoning faculties are among the number, we may talk of the sufficiency of instinct—not before.

The first thing which needs to be done in connection with a reform in the management of infants and children is to obtain intelligent, well-trained monthly nurses and nursery maids.

A monthly nurse, whose work is to tend a mother and child during the most trying and critical period of physical life, ought certainly to be an educated, sensible woman, able intelligently to co-operate with the medical attendant, instead of mistaking one-third of his directions and wilfully disobeying another, as the ignorance and prejudice of the present class of nurses so often lead them to do. "Serious and important," writes Dr, Bull, "are the duties which devolve upon the monthly nurse; and well would it be for English women, if all who undertake this office came from a better educated class of society than they too often do. Ignorance and coarseness of manners are unbearable in a nurse: it is dangerous for the medical man to leave such a person to carry out his measures, while she is certainly anything but a fit companion for the patient, who nevertheless has almost no other for two or three weeks." We must help ourselves and each other in this matter. Thousands of intelligent women who have their bread to earn, and know not where to earn it, might greatly benefit both society and themselves by going through a course of training which would qualify them for the office of nurse. They need not think such a position beneath them, for no employment is really degrading which affords scope for the exercise of the highest faculties of the employed; and it is quite certain that the efficient discharge of the duties of a nurse would do this far more than many of the so-called "genteel" occupations now followed by thousands of women. The heroines of the Crimean war have already ennobled the office of nurse to sick men; we wait now for others to do the same for that of nurse to our own sex in the most critical period of physical life.

The want of trained nursery maids is equally urgent. Children must now be confided to ignorant, untrained girls, who injure them hourly, in body, mind, and heart; and there seems little prospect of obtaining a better class. We have little right either to complain of servants, for they are generally far less to be blamed for being unfit for their duties, than to be pitied as victims of the wrong system of education which has left them so. What is needed in all our schools for girls of the working-classes is, a systematic preparation for their future work, by giving them practical instruction in domestic duties, including the physical management of infants and children. To impart this instruction is at present very difficult, for the teachers in such schools are generally single women who know little of domestic or sanitary matters. Moreover, the pupils would need to practice the operations of washing, dressing, feeding, etc., upon infants. Various plans of meeting these difficulties have been proposed. The one most easily practicable, appears to me to be that suggested by the "Ladies' Sanitary Association." This Association proposes to establish training institutions wherein a few orphan infants might be reared, and practical instruction in their management, and other branches of sanitary knowledge, be given by a competent female teacher.

After the home-work, should come efforts for the improvement of health among our poor neighbors. The prevention of the present fearfully high rate of mortality among their children, is an object specially demanding attention. "It has been shown in the sanitary report," says Mr. Chadwick, "that in the same districts where one-fourth of the children of the gentry have died, more than one-half of the children of the poor have died; and this excess of death among the poorer classes was traceable to preventable causes." Of these, maternal ignorance and mismanagement are, as has been before stated, among the most fatal. Few but those who have been much among the poor, know how fearfully mismanaged their little ones are—how the infant shares his mother's dram and all her food, from red herring to cucumber—how he takes medicine sufficient to treat the whole community—and how, finally, an incautiously large dose of laudanum wraps him in the sleep that knows no waking.*

Ignorance of the laws of health is not only one of the greatest causes of the low physical condition of the children in poor families, but also of that of the adult members. "The physical elevation of our poor neighbors cannot be effected till they themselves understand all the conditions, material as well as moral and spiritual, upon which it depends, and learn to co-operate intelligently in all our efforts on their behalf. Though a very large number of the sore physical evils that afflict them are undoubtedly the natural results of their low moral and spiritual condition, and consequent wilful wrong-doing, probably most charitable workers attribute too much to this score. Nothing is more certain than that many physical evils befall men irrespectively of their moral and spiritual condition or deserts. Those 'eighteen upon whom the tower in Siloam fell and slew them,' were not sinners above all men that dwelt in Jerusalem; neither are all the thousands of our poor neighbors who suffer or die from preventable disease greater sinners than we who keep alive and well. If a man is ignorant of the laws of health, or any other physical laws, and consequently violates them, he will suffer the penalty, whatever his moral and spiritual condition. If he throws himself off 'a pinnacle of the temple,' in ignorant contempt of the law of gravitation, its action will not be suspended, neither will the angels come to bear him up, but he will fall and be dashed to pieces, whatever the devil may suggest to the contrary. When a man is brought under the action of those supernatural laws which govern the process of spiritual regeneration, he receives no charter of exemption from the action of those natural laws which govern his physical frame. His constitution, with regard to the great material forces of nature, remains the same; fire still warms, and cold still chills, him. His lungs still need fresh air; his skin, pure water; and his stomach, well-selected food; and if he, through ignorance, fails to supply these requisites, and thus violates the laws of health, he will suffer the physical injury which the violation entails, just as though he were the veriest reprobate. There may be 'exceptions,' but the present Divine 'rule' is not to suspend the action of natural laws, but rather to bring the believer's life into harmony with them. Neither is want of the necessaries of life so great a cause of disease among the poor as most charitable workers believe. We rely quite too much on our schemes for relief, very good though they are in their place. In thousands of instances, it is not want which causes disease, but ignorant abuse and other needless violations of sanitary laws." It is certain, therefore, that the diffusion of sanitary knowledge is an essential part of a complete scheme for the physical elevation of the poor.

Those of us who are district visitors and tract distributors, have excellent opportunities for imparting this knowledge. We should be all the more successful even in the directly spiritual part of our work, if we showed our poor friends how to remove those sore physical evils which cramp and fetter mind and soul, and so often prevent all thought or care for moral and spiritual elevation. Those who possess an ordinary amount of tact will in many cases find it easy to impart sanitary knowledge during their visitations, without being obtrusive, or violating any of those laws of courtesy which should be held sacred alike in intercourse with peasant and peeress. In those cottages where there is a young family, the visitor will find it a good plan to commence operations by noticing the children, the wonderful baby—"the finest baby the doctor ever saw"—especially, and then it will in many cases be easy to say a hundred useful things about their physical management, fresh air, wholesome food and cookery, cleanliness, etc. All appearance of fault-finding and dictation should be most carefully avoided, or little good will be done; better words of advice to all who visit their poor sisters can hardly be found than those of the Rev. Charles Kingsley:—

"Visit whom, when, and where you will; but let your visits be those of woman to woman. Consider to whom you go—to poor souls whose life, compared with yours, is one long *mal-aise* of body, and soul, and spirit,—and do as you would be done by; instead of reproaching and fault-finding, encourage. In God's name, encourage. They scramble through life's rocks, hogs, and thornbrakes, clumsily enough, and have many a fall, poor things! But why, in the name of a God of love and justice, is the lady, rolling along the smooth turnpike-road in her comfortable carriage, to the calling out all day long to the poor soul who drags on beside her, over hedge and ditch, moss and moor, barefooted and weary-hearted, with half-a-dozen children at her back, 'You ought not to have fallen here; and it was very cowardly to lie down there; and it was your duty, as a mother, to have helped that child through the puddle; while, as for sleeping under that hush, it is most imprudent and inadmissible?' Why not encourage her, praise her, cheer her on her weary way by loving words, and keep your reproofs for yourself? * * * * Bear in mind, (for without this all visiting of the poor will be utterly void and useless,) that you must regulate your conduct to them and in their houses, even to the most minute particulars, by the very same rules which apply to persons of your own class. Never let any woman say of you, (thought fatal to all confidence, all influence,) 'Yes, it is all very kind; but she does not behave to me as she would to one of her own quality.' Piety, earnestness, affectionateness, eloquence,—all may be nullified and stultified by simply keeping a poor woman standing in her own cottage while you sit, or entering her house, even at her own request, while she is at meals. She may decline to sit; she may beg you to come in: all the more reason for refusing utterly to obey her, because it shows that that very inward gulf between you and her still exists in her mind which it is the object of your visit to bridge over. If you know her to be in trouble, touch on that trouble as you would with a lady; *woman's heart is alike in all ranks.* * * * * We should not like any one—no, not an angel from heaven—to come into our houses, without knocking at the door, and say, 'I hear you are very ill off; I will lend you a hundred pounds. I think you are very careless of money. I will take your accounts into my own hands;' and still less again, 'Your son is a very bad, profligate, disgraceful fellow, not fit to be mentioned; I intend to take him into my hands, and reform him myself.' Neither do the poor like such uncremonious mercy, such untender ten-

derness, benevolence at horse play, mistaking kicks for caresses."

Much good may be done by the distribution of simple,

erly performed by one ignorant of the laws of life and health.

A very absurd opinion is sometimes expressed that this study injures the delicacy and purity of the mind,

schools for the poor while the teachers are so ignorant of the laws of health as they now generally are. The first step must be to convince them of the need of such a reform, and to induce them earnestly to co-operate in ef-

derness, benevolence at horse play, mistaking kicks for caresses."

Much good may be done by the distribution of simple, intresting tracts containing expositions of the laws of health." "There seems, indeed no reason why sanitary tract distribution should not be quite as efficient in the work of physical elevation as religious tracts have been in that of spiritual improvement. It is true that both kinds of publications must of neccssity fail to benefit the very people who need instruction most. The poorest and most degraded of the people, espcoinly the women, can only read very indifferently, if at all; and therefore the tracts which we give them—however good, suitable, and well received—must in many cases remain unread, or he read so imperfectly as to convey little information. But there is a very large class of the more intelligent and respectable poor among whom tracts are one of the very best means of imparting sanitary knowledge. Mor, in the first place. it is in many cases extremely difficult to impart such instruction orally without giving offence. It is a remarkable fact that the same poor woman who will not show the least resentment when told the most humiliating spiritual truths about herself, will often be offended even by a slight hint that she does not know how to manage her baby or cook her husband's dinner. The spiritual truths are of such general application that she too often accepts them with just about the same feeling, alas! as that evinced in Topsy's cheerful speech—'Yes, we's all sinners; *white folks is too*.' But the sanitary truths are of far more personal application, and often wound the poor woman's housewifely pride to the quick, and fall on tha very 'stony ground' of bitter resentment. But sensible little sanitary tracts, when stitched in the sama covers with the ordinary religious ones, and quietly circulated in the usual way, will rarely give offence." Thosa tracts relating to the health of mothers and infants, may also he very advantageously placed in the boxes of linen which are lent to the poor hy maternal societies. Thosa district visitors who have not maternal or domestic experience, will find that the best way in which they can impart to their poor neighbors that important part of sanitary knowledge which relates to maternal and domestic mansgement is, to give away, or, hetter still, read such tracts to them. For though a young, unmarried woman may from study he able to impart most valuable information upon the mansgement of infants and children, and upon household matters. she will not find that her words—true and wise though they may he—have much weight with her poor neighbors who are mothers and heads of households. "What can she know?" will he a question always presenting itself to their minds. But if she reads from a tract which she assure her hearers was prepared by mothers of families, she may hope to he listened to witb attention and docility. On her own authority she must venture to teach only about clothing, fresh air, ahlution, and other matters involving no maternal or housewifely areana.

Another way in which women can impart sanitary knowledge to their poorer sisters is, hy delivering lectures to them. It would require no great genius, or very laborious course of study, to enahle a womnn thus to teach well and interestingly—in some respects far better than a male lecturer, for there are many important suhjects upon which she could speak more fully and freely tban conventional rules permit him to do. She, moreover, could explain the laws of health with relation to domestic economy, infantile mansgement, women's dress, etc., far hetter than the most accomplished male physiologist, though his general scientific knowledge might he very much greater.

Women engaged in writing for the press may do much towards the diffusion of a knowledge of the laws of health, not only among tbe poor, but among all classes. The numerous works of fiction, magazine articles, and tracts written by women could easily he made a medium for tha diffusion of this kind of information. The Rev. Charles Kingsley, Miss Sedgwick, and a few others have already shown to some extent, how much may be thus done even in the former class of writings. Now, let more of our female writers make imaginative literature a vehicle of popular sanitary instruction—tell us why preventable disease and death for ever sit scattering our hopes and joys, and holding a grim carnival among our loved ones—why youth is grown prematurely old in Mammon's mill—why the churchyard is so full of little graves—why the young mother's chair stands empty in the ingle nook. Let us have a sanitary "Jana Eyre," "Adam Bede," and "John Halifax." Leaving the writings of female physicians out of tha question, women without regular medical or scientific education have already made valuable contributions to sanitary literature. Miss Nightingale's "Notes on Nursing," Miss Martineau's sanitary papers in "Once a Week," Miss Catherina Beecher's "Letters to the People," Mrs. Charles Bray's "Physiology," and Mrs. Barwell's "Infant Treatment," may be cited by way of illustration. This matter concerns not only woman of the higher grades of literary talent, but also of the lower—those who never achieve anything more than an occasional letter or article in some third-rate newspaper or magazine; all may do something to dispel the gross ignorance of sanitary laws which prevails.

Women engaged in the work of education, can do much to elevate the physical condition of society by instructing their pupils in the elements of human anatomy, physiology, and hygiene. No other branch of secular knowledge is of such universal, every-day utility and importance as these. The mental, moral, and physical welfare of every human being ara dependent upon obedience to the sanitary laws; certainly then all should have that knowledge without which obedience is impossible. To girls this knowledge is especially necessary, for upon them will devolve in after life the management of households, tbe training of infants and children, and tbe care of the sick, none of which duties can he properly performed by one ignorant of the laws of life and health.

A very absurd opinion is sometimes expressed that this study injures the delicncy and purity of the mind. This idea is so utterly false and revoltiug, that it would not be worthy even of mention, did it not unfortunately exist in the minds of many conscieutious educators, and prevent them from imparting knowledge of the highest importance. To say tbst sny can be injured by studying those divine laws through which we "live, and move, and have our being," is nothing less than to reproach the Great Lawgiver. For we must study them, or suffer the heavy penalties resulting from ignoranee and consequent violation of them. Here, our ignorance leads to hitter physical suffering; if our knowledge were to cause moral injury, we should indeed he most unfortunately constituted, and should have good reason reproachfully to ask, "Why hast Thou made me thus?"

Women also have it in their power to put an end to the undue exercise of the mental faculties, and the neglect of physical training which are so general in girls' schools, and which so seriously undermine the health of the pupils. To secure healthy, harmonious physical development, some more systematic and thorough method of exercise is needed than walks or daneing lessons, which, though beneficial so far as their influence extends, bring into action a part only of the muscular system. Calisthenics and light gymnastics should be introdueed into all schools, for their beneficial results are already well-estnblished. Swimming is another excellent exercise, the importance of which cannot be too strongly urged upon the attention of every eduentor; its elnims as a means of self preservntion, independently of its value as a means of health and enjoyment, are sufficient to prova that it ought to form part of the education of all. Dancing should not be confined, as it now generally is in girls' schools, to the formal lessons given once or twice during the week, but pupils should be encouraged to dance as a recrention in the playgronnd when the weather permits. In winter evenings too, when tha day's work is done,, a merry school-room dance is a very healthful and exhilarating affair, at once destructive to chilblains and "the blues." Every encouragement should also be given to the practice of those outdoor and indoor gaues which bring the muscles into vigorous exercise.

In many schools it is found very difficult to induce tha elder pupils to take any interest in the means of physicnl development. Usually when a school-girl attains the magnificent age of thirteen or fourteen, she leaves active games to "the childreo." If she is a pretty, vain girl, she straightway turns her attention to the mysterics of honnets, mantles, and crinoline; if she is an ambitious, clever one, she begins "cramming" for examinations, and waxes great in crayon heads; if she is thoughtful and conscientious, she devotes herself to an unmerciful course of study, under the idea of "improving her advantages;" whatever she is, she votes exercise a bors and a hindrance, and takes as little as she can. This state of things is a necessary result of the plan of education usually adopted; girls are rarely taught the value of physical development and strength; they are stimulated by prizes and every possible inducement to cultivnte the mind, while the claims of the body are tacitly understood to he of far less importance. But let every girl he constantly and thoroughly impressed with the fact, that the highest perfection and happiness of which her nature is susceptible can be attained only through tha simultaneous, harmonious development of all her faculties; let the belle of the school know that health heightens benuty; let the ambitious studious girl he told of tha dependence of mentnl upon bodily vigor; let the conscientious one he convinced that to develop her whole heing, is a duty she owes to her Creator, to society and to herself. Let prizes be offered, not only to those who excel in languages, music, and drawing but also to those who dance best, and exeeute gymnastics and other exercises with most grace, ease, and precision. Tben we should soon see girls taking delight in the means of physicnl devclopment. In some schools for boys, prizes are offered for proficieucy in various activa out-door games. This plan should he adopted with girls also: the physical frame of both sexes is governed hy the same general laws, both alike requira vigorous muscular exercise, both should alike be encouraged to take it. A priza for the hoys who throw the hammer the furthest, and fence the most skilfully; a prize for the girls who run the fastest, and skip the best. The idea of any similarity in the training of the two sexes gives instant alarm to some persons, who having no faith in the indestructibility of the eternal distinctions nature has established, fear that if girls are allowed to develop their physical, or other faculties, as fully as hoys, they will become hoy-like. But, on the contrary, the more fully and freely a girl is allowed to develop her whole heing, the more distinctly marked will her feminine characteristics hecome. They are deeply rooted in her nnturs; there is no need to cripple her for fear of destroying them. It is most painful to know, however, that to thousands of the inmates of our ladies' schools, vigorous ont-door exercise is impossihle through want of playgrounds. Thers are many hundreds of schools to which no space whatever for out-door exercise is attached—in other words, hundreds of schools where the pupils ara compelled to violate one of the primary conditions of health.

In many schools for girls of the poorer classes, also, the health of the pupils is much injured through hodily inaction and other preventable causes. A visitor fulfils her task of inspection but very imperfectly if she confines her attantion to the mental and moral condition of the children: she should look upon the school not only as a nursery for minds and souls, but also for bodies, and should see that it is favorable to the harmonious, healthy development of all. "Educata! educate!" is the watchword of tbe day; bnt after all, education is a very questionable hoon to poor girls, when it undermines tha bodily health upon which they will be dependent for their hread.

It is next to impossible to effect a sanitary reform in schools for the poor while the teschers are so ignorant of the laws of health as they now generally are. The first step must be to convince them of the need of such a reform, and to induce them earnestly to co-operate in effecting it. They should be kindly encouraged to qualify themselves to teach physiology and hygiene, and every facility should be afforded them for the study of those sciences. In many cases, some herevolent medical gentlemen—the name of such is Legion—will be found willing to give a course of lectures in the elements of physiology and hygiene to a class of governesses and pupil teachers.

In many schools a visitor will find ventilation mucb neglected. This is not ths place to detail all the evils resulting from this one cause; suffice it to say, that a constant supply of pure air is one of the primary conditions of health, and wbere it is not fulfilled in the schools we provide for the children of the poor, we do them a grievous wrong. A lady who visits an ill-ventilnted school cannot, it is true, put ventilators in the walls with her own hands, but she can lay the matter before the school managers, and in most cases will succeed in getting it attended to.

The visitor should observe whether the children are comfortably seated. It is common to find little children perched on a high form, with their feet hanging in mid-air. several inches from the floor; others will he found tightly packed together, herring fashion, in various uncomfortable postures. These and other physical discomforts are often the great cause of the children's irritability and so-called "naughtiness," which are generally attributed to something very different. Of course, little physical discomforts never, never make us adult philosophers at all irritable or unamiable; hut poor little school children have not attained to our exalted equanimity; if, therefore, we wish to make them "good," we must first make them comfortable. The school forms should all be suited to the height of the children, so that their feet can rest comfortably on the floor, and all over-crowding must be prevented. All the forms should he provided with hacks, as to sit without a support for the spine is to most children very injurious.

The visitor will do well to observe the posture of the children when standing to read, sitting to sew, write, &c. They are often required to stand to recite, &c., with their feet closed and their hands crossed on the chest; a very small base is thus afforded to the hody, and the posture is therefore difficult and injurious to maintain; moreover, crossing the hands on the chest prevents free breathing. The best method of standing is with the feet several inches apart, so as to afford a firm base for the body; the arms should hang freely by the sides. It is not judicious to keep the children standing, even in a good posture, more than a quarter of an hour.

The visitor will do well also to notice by what patterns the articles of clothing made in the school are cut.

Very bad patterns are generally used; and schools should, therefore, be provided with model sets made in accordance with laws of health.

The visitor should ascertain how much time is allotted to out-door exercises in the playground. Half an hour, both in the morning and the afternoon, should be thus spent when the weather is suitable; and when it is not, the children should march, or perform other gymnastic exercises in the school-room for the same length of time.

Many other ways of promoting the physical well-being of the children will present themselves to the mind of a visitor who is thoroughly and intelligently interested in the subject.

Those of us who tench in Sunday schools may do much by earnestly and frequently inculcating the duty of using all means to preserve and improve health, as a command of God. We should oftener explain the breadth of the command, "Thou shalt not kill;" show that it relates not only to instantaneous suicids and murder, by knife, halter, or poison, but also to suicide by inches, through unhealthy habits, and to slow murder, hy forcing those dependent upon us to violate the divinely-instituted laws of health. If we taught all this, we should save many from the common sin of self-destruction—many from walking the earth with tha hrand of Cain upon them.

There are many other parts of woman's sanitary work which cannot even be mentioned, much less explained, in this small space.

Besides their own direct sanitary work, women may do much indirectly, through their influence over men. The best and most useful men in sanitary and all other labours are, other things being equal, invariably those whose wives, mothers, daughters, and sisters, aid and encourage them in their good work. Men engaged in public sanitary labours have almost invariably to encounter most depressing opposition and difficulty in the prosecution of them; and, for want of woman's sympathy, have often also to endure discouragement hy their own firesides. This must not he; for, from the leading member of parliament, endeavoring to introduce legislative sanitary measures, and the rich landowner, anxious to improve his cottage property, to the obscure author, and the poor medical man, spending their leisure in diffusing sanitary knowledge, all need woman's intelligent appreciation, encouragement and sympathy; and it is part of her divine mission to hestow them largely.

The sum of the whole matter is then, that we, as wives, mothers, heads of households, educators, and supporters of benevolent enterprise, are to a great extent responsible for the sore physical evils around us. Till we work for their removnl with all our power, ramoved they can never be. Nohle, disinterested men, are devoting time, talent, and money, to the promotion of Sanitary Reform, but their efforts alone will not suffice. Men drain and cleanse our towns, and build improved dwellings, but in them wa practise a thousand violations of health's laws—men labor and legislate to supply the necessaries of life to all, but we misuse them—men discover the truths of sanitary science, but wo are too ignorant to apply them—so, after all, the, work of physical elevation goes on hut slowly. May we soon learn to do our part in it!

S. R. P.

*Such a series, of which this is tract No. 8, is now being issued by the Hampton Tract Editing Committee, Hampton, Va.

A REMINISCENCE OF '78,

DEDICATED TO ALL ITS BOYS BY A FORMER

"GUIDE, PHILOSOPHER AND FRIEND."

THE following effusion, though not perhaps intended for publication, is too good to be kept from those to whom it is dedicated. We are sure that they, as well as others, will enjoy the "reminiscence."

"O study hour, O study hour,
Around me throw thy subtle power,
And hear me back to that bright spot
That while I live, ne'er 'll he forgot.

"I see it now, that quiet hall
With *snowy* blackboards on the wall,
The *cushioned* seats, the dazzling throne
On which I sat, alone—alone.

The hell emits its silver note,
The timid Senior doffs his coat;
Hushed is each murmuring voice, none speak;—
Save here and there a quiet shriek—

All sit in silence dread, appalled—
And whisper while the roll is called.
Then silently, with sturdy will,
Each plants his foot on Wisdom's hill,

And strives his hard won ground to keep,
Take one step more—or go to sleep.
Sweet, happy hour, thou'lt come no more!
(Alas! that this should rhyme with *lore*.)

And gentle partners of my joys,
Those merry, laughing, thoughtful boys,
Dear C— — whom I loved so well,
And B— —, with thy magic 'spell,'

And all your comrades, and the girls
With pencils gleaming through their curls,
We ne'er may meet again, I trow,——
Do re mi fa sol la si do."

CORRESPONDENCE.

No. 20, CAZENOVE ROAD, STAMFORD HILL,
LONDON, *Dec.* 6, 1878.

To General Armstrong, Va., —and to all other Workmen everywhere: Gentlemen:—

I wrote you a few days ago in relation to the educational and agricultural work which I hope to be able to carry out for the interior of Africa, through "Christian Liberia, the open door."

Let me now tell you a little of Liberia in England. I arrived in London on the 15th of last month—just three weeks to-day.

Next morning at 11 o'clock, I met Dr. Blyden (now Liberia's Minister to the Court of St. James) and we have been more or less together since. His acquaintance is large, and his official position gives him easy access to a great many interesting persons and places. On Saturday last, November 30th, I accompanied him to Westminster Abbey, to see Livingstone's grave. I had made up my mind that that should be the first object of general interest which I should visit in England. By a curious coincidence, that day happened to be St. Andrew's day, and the annual Lecture on Missions was to be delivered by Principal Tullock in the Abbey. Dr. Blyden introduced me through the Deanery—by means of which we got seats in the chancel only a few feet from the lecturer.

Before the lecture, the familiar Missionary Hymn was sung by the great choir and congregation,—

"From Greenland's icy mountains."

I have no words to tell you of my feelings as I heard that ever beautiful and suggestive hymn sung in that ancient sanctuary. The lecturer then went to the desk and read a most impressive and instructive lesson. Among the closing words were these: "The highest Christianity is the Christianity of Christ." He presented Christ as the Alpha and Omega of all missionary teaching.

Dr. Tullock is a Scotchman, and as he lectured he looked down upon the grave of the more illustrious Scotchman, reverence for whose memory had drawn me to the Abbey—David Livingstone, whose remains lie in the Nave of the Abbey, between the front door and the chancel. After the service I waited until the congregation had dispersed, when I went and stood over Livingstone's grave, on which I read these words,—"All I can add in my loneliness is, may Heaven's rich blessing come down on every one, American, English or Turk, who will help to heal the open sore of the world." And then I remembered these lines:—

"Open the Abby doors and bear him in
To sleep with king and statesman, chief and sage.
The missionary, come of weaver kin,
But great by work that brooks no longer wage.

"He needs no epitaph to guard a name
Which man shall prize while worthy work is known.
He lived and died for good—be THAT his fame;
Let marble crumble: *this* is LIVING-STONE."

Truly did I then and there feel new inspiration for the work to which I have dedicated my life. "He being dead yet speaketh." He spoke to me in the precious silence of that great temple, in a language which no human tongue could utter, and touched my soul in depths which no human eloquence could reach—and I renewed my affirmation never to be off guard in my work for Christian Liberia the open door to heathen Africa.

An extra session of Parliament has been called by the Queen on account of the unfortunate war in Afghanistan. It was opened yesterday.

In company with Dr. Blyden, the Liberian Minister, I obtained a seat in the house of Lords immediately over the throne, from which I enjoyed a splendid view of the gorgeous hall and the distinguished assembly. I attended with the Liberian Minister as a sort of Acting Secretary, and was delighted to see the cordial manner in which he was received by the Lord Chamberlain to whom, on presenting his card, he was at once admitted.

We took our seats in the gallery exactly at half-past one. At two, the House began to fill with Peers and Peeresses—the latter in brilliant dresses. Very few of the leading Peers were present. I could see that many eyes were turned to the location where we sat—wondering, no doubt, who we were, or rather who the black personage was.

Major General Sir Henry Havelock, son of the distinguished General of that name, took a seat by the side of Dr. Blyden, and kindly pointed out the distinguished characters, and several interesting objects in the House. He said he is a member of the House of Commons, but was allowed to sit where we were on account of a temporary lameness which prevented him from joining "in the rush" with the other members to the bar of the House of Commons to hear the Queen's speech. The General gave us his card and was far more communicative on first acquaintance than the generality of Englishmen whom I have met. Dr. Blyden says that the higher classes who are *sure of their rank* and position do not seem to feel the necessity of maintaining the dignified reserve which others less favored do.

The ceremonies in the House of Lords on this occasion were very simple. Lord Cairnes, the Lord Chancellor, took his seat on the wool-sack, and on each side of him sat two other Peers; the five constituting the Commission appointed to deliver the Queen's speech, which was read by the Lord Chancellor. The House then separated.

We then walked through the long corridors across the building to the House of Commons, where two policemen on guard attempted to keep us out of the lobby, because we had no tickets, and the House, they said, "did not meet until four;" but Dr. Blyden produced his card and the doors flew open at once. Having about an hour to spare, we went to the Refreshment Rooms to dine. After which, the Speaker of the House having taken his seat, Dr. Blyden took his position in the Diplomatic Gallery among the Foreign Ambassadors, and I had one assigned me in the Speakers' Gallery, a privilege not usually accorded to strangers, for which I thanked Liberia and her Negro representative. I will not detain you by describing the proceedings in the House, &c., &c. Mr. Gladstone was present. He looks much older than I had expected, but I felt it a great pleasure to see him, though he did not speak while I was in the House.

In all I have seen in England, nothing has pleased me more than the manner in which Liberia is represented and received here. Though a small and youthful State, her Minister is received with as much courtesy and respect as Mr. Welsh, the American Minister.

While sitting in the House of Lords, Dr. Blyden showed me a letter which he had just received from Southampton, inviting him to be the guest of the Mayor, and to attend a banquet there. I have noticed that if Dr. Blyden is pleased at anything in his experience here, it is the fact, as he often says, that "it is honor conferred not upon him, but upon Liberia and the Negro race, and that the intelligence of it carried through the papers to the Negro youth in the schools in America, and in his own country, will stimulate them to renewed efforts."

What Negro in America, however great his culture, will ever reach such a position? I challenge successful contradiction when I say that Liberia is the only road to such honor for the black man in America. For my part, I must confess that if Dr. Blyden were not a pure and undoubted Negro, I should not feel near so much interest in the representative of Liberia here, for the taunt would still be possible—"Show us your pure Negro who can gain such a position." If Mr. Parton who has lately written in the *North American Review* on the "Antipathy to the Negro," and expresses "his inability to name one Negro of pure blood who has taken the first, second, the third, or the tenth rank in business, politics, art, literature, scholarship, science, or philanthropy," really wishes for information on the subject, I would like to introduce him to Dr. Blyden, Liberia's Minister Plenipotentiary, &c., &c. Dr. Blyden can communicate with him not only in first-class English, but in Latin and Greek, Hebrew and Arabic.

On account of his great scholarship, Dr. Blyden has been elected lately an honorary member of the Athencum, one of the most exclusive Clubs in all England.

Has Mr. Parton read Dr. Blyden's articles in Frazer's Magizine, and in the Methodist Quarterly Review, which have attracted the favorable and respectful criticisms of the Saturday Review and other periodicals here? One of these articles was reproduced in our own country by Littel's Living Age; and another by the Methodist Saturday Review. I should like to ask Mr. Parton what encouragement has the Negro in Christian lands ever had to take any rank at all in anything. And how can they ever be stimulated to rise when such wet blankets are constantly thrown over and around them, even by such professed friends as Mr. Parton? If we cannot help a race now struggling to rise, we certainly should not prevent it. Let the Negro have the school-house in his own country and land of freedom for a period half as long as the white man has had it, and then let us hear the opinions of our skeptical Partons.

The fact that any has risen to any rank at all, under such pressure from friends or foes, is to me a wonder, and makes me more determined to labor to put within their reach every possible facility for intellectual culture, and industrial development and growth, which the white man has had. We have been ready enough in the cruel past to avail ourselves of his labor, will we now help to lift him up?

Ever yours at command,
ENWARD S. MORRIS.

EDEN IN MINIATURE.

GREETINGS BETWEEN HAMPTON AND PITCAIRN'S ISLAND.

Two or three months ago, the Captain of a merchant vessel on a cruise round the world brought to Hampton Institute the account of a very interesting incident of his voyage, his touching at the lonely rock in the far Pacific, known as Pitcairn's Island.

A letter resulting from his account is given elsewhere. Before another year, the SOUTHERN WORKMAN will reach the Islanders, and meanwhile its readers on this side of the world will be interested in the strange and fascinating story of that speck of Paradise, as it seems to be, the one spot of earth where evil seems to have least power.

Since Captain —— brought its latest news to Hampton, public attention in England and America has been called to it by Admiral de Horsey's report to the British Admiralty of a visit he has recently made there.

This is its history: In 1787, the British merchant ship Bounty was sent to the Pacific to collect young bread-fruit trees in the then newly discovered island of Tahiti, and transport them to the British plantations in the West Indies. The voyages of Captain Cook and other explorers had excited the adventurous spirits of England, and a fine set of young officers from the best families, some of them noblemen's sons, and of good picked seamen were easily found to join the expedition. Unfortunately, the command of it was given to a man, Lieutenant Bligh, who, though a skilful navigator, was totally unfit to have the control of men; selfish, passionate, brutal to the last extreme to the young officers and sailors, who, by the existing laws of the British Navy, were completely at his mercy.

The natural hardships of an eighteen month's voyage were bravely borne, but the floggings, insults and oppression of all kinds added to these at last became intolerable, and one night, the first mate himself, driven to madness, seized the ship, and aided by others turned the Lieutenant adrift in the launch with a few who stood by him, some provisions and a compass. He eventually found his way back to England more safely than he deserved.

The Bounty returned to Tahiti, and left such as wished to wait for a chance to get home, while Fletcher Christian, the chief mutineer, with eight of his comrades, one an officer like himself, the rest common seamen, sailed away to seek the loneliest spot they could find out of the reach of British law. They took with them Tahitian wives, and nine Tahitian men with their wives and children.

After several weeks' search, Pitcairn's lonely island rose before them.

What safer asylum could be found for "a man without a country?" A mere rock not five miles in circumference, lofty precipices bounding it on every side, giving no safe anchorage for vessels and out of their usual track. As a late visitor calls it, "A speck in the vast, lonely Pacific, where even now, notwithstanding the thousands of vessels trading on it, we have only seen one ship at sea tho' our track measures 4,500 miles."

The mutineers were safe from pursuit, but they carried with them enemies from whom they could not escape, the restless passions of their own unhappy breasts. Fletcher Christian, the chief mutineer, now bitterly repented his false step, and tried to do what he could for the companions he had led into it. But though he seems to have always commanded their respect, he could not always control them. Nine years from the time they landed at Pitcairn, only two of all the men remained alive. Two of the seamen had died from intoxication, having found a way to distil liquor from a native plant; the rest, Tahitian and white men, including Christian himself, had fallen in a conflict and massacre resulting from a cruel wrong done to a Tahitian by one of the white seamen.

Fortunately, the two survivors who found themselves left in charge of the helpless women and children were among the best of the set; Edward Young, an officer, and Alexander Smith, a seaman. The awful experiences they had been through struck them with remorse and penitence. From the ends of the earth they cried unto the Lord, and found that though they had fled to the uttermost parts of the sea, they had not fled from God's presence, but His hand was leading them in a way they knew not. In the hours of their solitude, they resolved to face about, and devote the rest of their lives to undoing the evil their sin and misfortunes had wrought. They hunted up the old Bible and prayer-book which poor Christian had studied in his last days, and gathered the women and children about them to tell them their new purposes and teach them to pray to God.

How well they succeeded is learned from the reports of the first discoverers of their colony, and of every visitor since then.

Nine years after the new order of things began, the island was discovered accidentally by an American ship, in 1808. Great was the astonishment to find it inhabited by English speaking people, and still greater to learn who they were, but greatest of all to see what they were—a community of Christians, living in peace and love, and looking up with greatest affection and reverence to an aged man, Alexander Smith, the last survivor of the mutineers of the Bounty. On his part, the exile eagerly asked for news from home. At that time the colony numbered thirty-five persons. It was rediscovered, again by accident, by an English frigate, a few years afterward. Meanwhile, Alexander Smith, fearing to be taken back to England for trial as a mutineer, had changed his name to John Adams. But when he learned he would be safe, he frankly gave a history of the mutiny.

The reports of these, and all succeeding visitors agree concerning these islanders and their home. "Its lofty mountains tower up from the sea to a height of 1,008 feet, hiding the beauty of the interior, the forests of palm, and lovely valleys rich with tropical fruits and flowers. Truly it is a garden of Eden, and not only in natural loveliness, but in the characters of its inhabitants. Evil and crime seem unknown among them." "They are strict observers of Sunday, and very industrious. Drunkenness, bad language and similar vices are absolutely unknown; rough sailors have declared that the virtues of the islanders so impressed them that they felt tempted to throw money to the dogs and stay and become good with the Pitcairn islanders." Two men, "of excellent character and education," were at different times adopted by the islanders, and are represented in their descendants. The colony outgrew their small island, and in 1856 were all removed—with their own consent—to Norfolk Island, by the English. This island, five weeks' sail from Pitcairn, toward Australia, is four times as large as Pitcairn, and is fertile and well watered. But some were homesick, and in the course of a few years sixteen families returned to Pitcairn on trading vessels; so that there are now two colonies, each preserving the character of the first. Admiral de Horsey says: "They have only three laws in their code—against murder, theft and immorality—and neither of these has ever been broken."

Some people are puzzled by this remarkable history, saying, If such a virtuous community can be the descendants of criminals and savages, what becomes of the theories of heredity? It is very noticeable, however, that of the five original mutineers represented in these descendants, three were Christian, Young and Adams (Smith), the very best of the set. Christian and Young had come from some of the best families in England, and Adams had been a man of respectability and force of character. Of the other two, McKoy was a Scotchman. He and Quintal were the two who died from drunkenness. Less is known of their antecedents, but they were picked seamen. God's laws of inheritance, as found in nature and the Bible, are not limited to the second generation, but extend to the third and fourth—and his mercy to thousands. Neither is a man's nature to be judged from one desperate act under great provocation. From all we know of the men, Fletcher Christian's nature would be a better inheritance than Lieutenant Bligh's.

Many fears have been expressed that as the colonies increase, in size their very innocence and ignorance of evil will expose them to temptation and to demoralization. This does seem a danger, but for eighty years it has been averted by Him of whom Job's friend said, "He shall save the humble person, He shall deliver the island of the innocents."

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

WE invite attention to the two pages of scholarship and of students letters in this number. The former are selected from over two hundred that are yearly written to those who maintain scholarships at the Hampton Institute, or help it in other ways, as an expression of thanks and of appreciation hy their beneficiaries. The latter are from the usual monthly receipt of letters from graduates who are making themselves useful in various parts of the country chiefly as teachers.

These letters help answer the questions, "Does it pay to educate negroes?" and to show the benefactors of Hampton some of the fruits as well as the need of their generosity.

The work already done for the colored race is but as a drop in the bucket. Freedom is a barren gift without the light in which to use it.

The negro is in the dark. His hope is not in Congress, but in ideas. To diffuse ideas among the ex-slaves is vital to them and to the country.

To give vitality to the common school system established hy the Southern States, the education of the better class of colored youth as teachers is the special field for Northern aid.

We doubt if any gifts go more directly to the national welfare than those that help prepare the teachers in whose hands so much lies the future of the negro race.

THE co-education of Negroes and Indians at the Hampton Institute will he watched with interest. How, in the long run, will 250 of the former get along with 67 of the latter?

Both are peculiar. Neither have the faculty or the inclination to put themselves in the other's place. Ignorant people are apt to be narrow and jealous, and on the alert for grievances. Disinterestedness is not innate; it is the product of Christian civilization.

It is only as true and simple Christian teaching shall reach their hearts that the two races can live together in unbroken harmony.

No lesson can be better for both than that of learning mutual respect and goodwill.

Life is, for the student, self-centred; it is all for himself; and, too often, continues to he so as long as he lives. We hope that by prudence and tact in their education the races represented at the Hampton Institute, who have, so far, mingled most pleasantly, rather as a result of good nature than of principle will attain a higher and common ground of genuine interest in each other's welfare, and go into their respective fields broader and better men for their intercourse at school.

The entire population of the State of South Carolina, according to the United States States Census of 1870, was:

Colnred, 415,814; white, 289,667; Indians, 124; Chinese, 1; total, 705,606.

According to the State Census of 1875, there were:

Colored, 574,391; white, 350,754; total, 925,145. Increase, 219,539, or over 31 per cent.

The colored population in five years increased by 158,577.

If the ex-slaves of this State, in their wide-spread poverty, ignorance and degradation, increased in five years by over thirty per cent., it may safely be assumed that the colored population of the United States is not dying out. Their condition in South Carolina cannot be considered as peculiarly favorahle for increase; it probahly represents their average conditions of living throughout the land.

The census of 1870 has never, we helieve, been regarded as an underestimate, and often accused of being exaggerated for political reasons. About that of 1875 we can give no opinion.

The census of 1880 will he waited for with great interest. It will decide whether the colored people are to be an increasing factor in our population.

We hope it will record their personal and landed possessions.

We are confident that the amount of property held by them would be a surprise to their best friends.

IN AN article in the "Congregationalist" on "Harvard Scholarships," we find this paragraph:

"The beneficiaries of the college, like their richer companions, must pay tuition, room-rent, and board—expenses which the largest scholarship will not nearly cover. They must, therefore, practice strict economy, and are not likely to form wrong ideas as to the value of money."

Hampton scholarships are given on a similar plan. Student's tuition, seventy dollars per year, is given to all, none of them being ahle to provide this amount; hut board, clothing, hooks, and all personal expenses, amounting to over a hundred dollars for the yearly session of eight and n-half months, are charged to students.

Over half of their expenses are paid in labor. Their earnings last year, on the farm, in shops, and in a variety of services, amounted to nearly $15,000.

The experience at Hampton by way of manual lahor is as educating and improving as anything in the course of study. By this system a foundation of business habits, economy and industry is laid, and school work is a genuine preparation for the work of life.

The gross earnings of our students from July 1, 1878, to January 1, 1879, were $8,357.62, of which $2,073.95 were earned by girls, and $6,283.67, by hoys.

We would be glad to know if there is any school for whites in the United States where there is so much willing and so arduous effort for education, or a company of poor youth, in like conditions, who do more for themselves and receive relatively less by way of charity. The number of girls in proportion to the number of hoys, being as 1 to 3.6. Total 240.

IN a recent letter suggested hy his late Southern tour, Generl Sherman refers in high terms to Northern Georgia; indeed, the whole region between that section nnd Lynchhurg, Va., is, he claims, admirably suited and most tempting to immigrants, and urges that agents be appointed who shall attempt to draw upon the stream of population which flows westward to less favorahle places.

The General notes the change of feeling, the decay of prejudice, the kind welcome from those whose property was destroyed by his army in 1864–5, and gives some wholesome advice about giving up the use of the word "carpet-bagger."

Politically, that species is about extinct, and the term is often used now in a way to breed mischief; as an epithet to fling at any Northern man who may be under displensure.

Lack of good schools and congenial church and social privileges are the offset against the advantages of soil and climate of the South.

Not until the favored regions referred to are more enlightened, not until the educated class is divided on political questions, and not until there is a spirit of free discussion and of toleration of all shades of opinion, will a desirahle class of emigrants seek Southern homes.

OUR DISTRESS.

There are twenty million acres of unoccupied land in Tennessee, and there are twenty thousnnd starving men in New York. These hroad, silent acres, loaded nnd lapped with plant food, lie waiting the coming of man. They seem to rise up, like the elements personified in the old mythology, stretching out their hands to the destitute army of hungry men, women and children, in earnest entreaty; "Come to us, nnd plant and sow and reap the splendid fruits of the earth. We hold in our hnnds, for you, comfort, pleasure and riches, hut they are dead till the hand of man touches them into life-giving fruit." And the great army of hnngry men, women and children, in attic and hasement, from under miserahle rags which cover wasted bodies stretch out their gaunt arms and cry aloud: "Give us air, and hread, meat and comfort, for we are in sore distress."

The vast slopes of the Alleghanies, running through the Southern States, covering many varieties of soil and climate, and decked in the wonderful heauty of forest and river, still lie waiting the coming of men who will toil, and huild, and he contented. Is there, then, no hridge of vast span whose one extremity may lie in the filthy tenement house, and whose other extremity may rest in sweet fields, and pastures green?

That men should suffer at nll from physical want, at this early period of the national growth, is simply astounding. There might he a cry of distress from the peasants of Belgium, packed and seething with its dense population, or even from England, with thirty millions crowding its limited area. That there should he want of comfort or of food in this immense domain, where the people live at the gates of an utterly indeserihable wealth of resource, is not only amazing, hut ridiculous. If the present population of forty millions do not thrive and prosper, what shall we predlict of the two hundred millions who are quickly coming after it? Divide the lands of France among the people, and each one takes three and a-half acres. Divide the land in America, and each one takes fifty acres. France has been hlasted with revolutions, cast into confusion hy frequent wars, distracted hy changes in dynasties, and half a million of her ablebodied men annually dragged from tillage and kept in wasteful garrisons. Yet she is prosperous and her products are enormous.

It is time tht a distressed North and a distressed South should get at the truth. We seem to be like cattle standing knee-deep in clover without power to eat it; like the ancient mariner in the midst of ocean, "water everywhere, hut not a drop to drink." It is hardly disputed that the first and permanent source of wealth is from the soil. We are in full possession nnd enjoyment of a domain, which, after we who are now living are through with it, must and will support with ease a population seventeen times as large as that now living. We have the first chance, the best advantage. After we have chosen, and lived and exhausted, these millions come after us, to take and do the best they can. With such rare opportunity, a state of poverty, or a condition anything less than the most wide-spread comfort, is only ridiculous. The European farmer contends with vested rights. Above him is an aristocracy; about him, armies which bleed him with taxation. Traditions and ignorance fetter him. He tills land of the average value of $200 per acre. The American starts without impediments of any kind, with cheap land, and protected by institutions which are of his own creation. Why should he ever suffer? Since the beginning of civilization to the present time, there has not been, in all the opportunities offered by the passing centuries, such chances for well heing, as now come to the Americans. We may be a free, we certainly are not, a happy people.

We are free from pestilence. Famine has not strength enough to cover the vast spaces of latitude and longitude. All the conditions of life are superb. And yet, if, to-day, the miseries everywhere moaning were gathered into one great voice, they would oppress the world with the bitterness of their wail. Tramps are everywhere; private charity is taxed beyond its power to aid; starving workmen stand at the doors of silent and harred up factories; women on scant food are nnrsing shriveled up babies; hankruptcy lurks behind damask curtains, and those who love pleasure are dancing with the sheriff hehind the door. All this in a Republic richer in resources than any empire since the time of Cæsar. Are we then fools? What are the gigantic errors which have hurt us so hadly in the beginning of our national career? The South was broken hy a terrihle war, and the North confused hy the stnpendous hlunder of financial inflation, with its train of innumerahle woes. There are, hesides, inferior causes of trouhle. The New England farmer does not farm as thriftily as the Belgian. The Western farmer robs the soil of its richness without compensation. The Southern planter finds himself on land hadly exhausted. Men have dealt freely, prodigally with land, as the early California adventurers dealt with gold. A despotism which would compel men to till small parcels thoroughly, would quickly increase the average production. An unnatural hunger for wealth has driven the farmer hoys to the cities. Over the harn-yard gate is written, "a fortune or the poor-house." Even Christianity is brought down, like the curreney, to a metallic hasis. Success in life is made dependent "upon huying for a rise," and not upon a better production of grain. The sciences of chemistry and mechanics as applied to agriculture are hardly known, though in the knowledge and application of them is the real secret of wealth. Where there is one copy of agricultural chemistry in the farmers' homes, there are five hundred copies of the "Ledger." The farmer boy holds the plow, hut his ears are open for the distant music of the trade centres. The marvellous and beautiful resources of the earth revealed by Liehig are not seen.

No douht all these errors will be corrected in the end. But commercial and economic hlunders are remedied only by sacrifice, by misery and ruin. The gutters of the great cities are full of broken-down men, for whom there might have been a life of comfort, and advantnge, and honor, had they gone to the earth for meat and drink. In 1790, one-thirtieth of the population was in cities. In 1870, one-sixth, and in 1878 one-fifth had left the country for city life.

As food ranges in price, so range the prices of other things, in the long run. Cheap food makes cheap clothing, cheap shoes, cheap music, cheap rent, cheap tools. The farmer holds the key of the position, if he will, for he cannot be starved. At his door are ments and vegetahles at first cost. Rail, and mail, and wire, bring him the news at the very moment the statesman gets it. There are no longer centres of intelligence. The rancheman of Lnramie, or Salt Lake City, and the hanker in New York, read the same items on the same morning. The merchant of the great city remembers his youth, and dreams, as he wearily sleeps, of the old homestead, and the hills, and the sunlight. The good things of life are quite evenly distrihuted if men choose to take them. It is only when there is a proper adjustment of population in town and country, that great and common prosperity comes.

.W. N. A.

THE Board of experts authorized by Congress to investigate the yellow fever epidemic of 1878, have recently submitted their report to the joint Congressional Committee. While the facts which they have collected are of very great value, they themselves declare that they have hardly done more thnn make a beginning, the urgent demand for public health legislation during the present sessinn of Congress being the excuse for the haste with which the report has been prepared. In view of this, the Board strongly and nnanimously recommends a systematic study of the nntural history of yellow fever, and that two or three skilled experts be charged with the completion of the late investigation, at least two of these experts (accompanied by an experienced microscopist,) being authorized to proceed to the West Indies, there to make a more thorough study of the yellow fever than has yet been undertaken.

In a startling collection of statistics, the Board sums up the cost to the United States of this disease in its epidemic form, and, while very careful to make no overstatements, declares positively that the facts which they have obtained justify them in recommending the adoption by the country at large of the completest possible system of quarantine, especially in the case of ships of all kinds, which, owing to the impossibility of ventilating or disinfecting their cargoes, are most dangerous carriers of both yellow fever and cholera. The poisone producing both these diseases are now known to be easily destroyed by exposure to fresh air; but it is not known how long their power lasts when shut up in close rooms, in compartments of vessels, or in the folds of clothing or goods.

Cleanliness in every direction, the Board reports as essential to health, and strongly presses the necessity of attending to the local sanitary condition of houses and towns, not only when epidemics are dreaded, but *at all times*. No drugs are known which can be relied on as preventions; fresh air, cleanliness, and good physical habits, being the only safeguards. The Board, with one exception, agree in believing that yellow fever germs are killed by cold, and that therefore they cannot anywhere in the United States, live through the winter, except when the weather is exceptionally mild, or they remain hidden away from the cold in sheltered places. They are, it is held, imported anew every season from some constantly infected South American or West Indian port, and one of the most interesting facts established by the recent examination, is that every epidemic of yellow fever which has occurred in the United States has followed directly upon the increase of the disease in countries to the south of us, with which we were at the time in commercial communication.

So far as it is at present fair to sum up the results attained by the Board, we should say that they have established several very important facts, viz: 1st, that yellow fever is not what is known as a malarial disease; that is, it is not the offspring of any such marsh miasm as gives rise to periodic fevers; 2d, that, while the existence of the specific poison of the disease has never been microscopically demonstrated, yet it is safe to assume that it is subject to laws already known, and can, in all probability, be controlled by a thorough system of quarantine; 3d, that the dissemination among the people at large of accurate information in regard to sanitary matters is of the highest importance, for, in this respect, there seems to be no doubt that knowledge is life.

We cannot but feel, in view of what Congress, through the appointment of this Board of experts, has already accomplished, that there is now open to us a grand national work, a work in which every citizen, man or woman, may have a share; for, as the report states, we can pay back to Europe all the debt which we owe to its superior sanitary science, if we can but establish the truth in regard to yellow fever and its allied diseases. M. F. A.

THE CHINESE IN CALIFORNIA.

RECENT legislation intended to put an end practically to Chinese immigration in violation of treaty and of common justice, is the expression of popular feeling in California. Many good men there believe that the Chinese are a curse to be removed as speedily as possible. Yet around them are able champions, and, better yet, there are facts which speak powerfully in their favor. See extract below. The American nation is sadly wanting in a proper sense of obligation to its weaker races.

The cause of raising the ex-slave to self-respect and manhood is "played out;" only here and there has it active supporters. Most of our educated people seem to believe that there is "no good Indian but a dead one," and, in spite of some general interest, there is no vigorous public sentiment in favor of Indians. The Chinaman finds America ready to take any advantage of his cheap labor, but without scruples as to his rights, and contemptuous rather than pitiful of his heathenish ways. Nobility obliges; the lack of true nobility is the real difficulty.

Prosperity is not progress. Christian civilization is a matter of spirit rather than of outward display; unless it carries out the truth that it is better to give than to receive, our civilization is not what it pretends to be.

From the Philadelphia Ledger.

The writer lived for five years in California, and had very considerable dealing with Chinese, and never lost a cent by crediting them, which he could not say of other nationalities. In the beginning of California's history as a State, there was a mining tax, imposed by law, to be collected from all foreigners, but only, as a rule, enforced against the Chinese. In those days they were, in many cases, harshly dealt with, very often by other foreigners. Mining claims were "salted," and sold to them for more than they were worth, and then, in many cases, they would be driven off, and not allowed to work them. So that all through they have been the subjects of attack and abuse by unscrupulous men, who, in many cases, are too lazy to work themselves and unwilling to allow those peaceable people to enjoy the fruits of their toil.

Official statements show that the annual revenue to the State is over $15,000,000 from the Chinese now in California. Chinese importers at the port of San Francisco have paid $1,800,000 duties, and a yearly rent for storage of $1,000,000. A former Surveyor General of the State expressed the opinion that the Chinese had increased the value of the property of California $200,000,000. Are these not evidences of their industry and enterprise? The writer never met a Chinaman that could not read and write in his own language. True, there is a great population in China, and fears are, therefore, entertained of an immense immigration; and they are heathen; but then they are no worse morally than many others who land on our shores without hindrance. Why not welcome them, so that our churches may do some missionary work at home among the heathen, as well as send missionaries to other lands to do the same work. In San Francisco, there are successful efforts being made in this direction.

The commerce and trade between this country and China is now great, and should rather be cultivated than hindered by legislation, for it is capable of vast development. Politicians make a great mistake if they think to gain prestige and power by legislation that is entirely at war with the genius of our government; and the masses of the people who love liberty and its spread should so express themselves.

A FORTY-NINER.

ELECTRIC LIGHT.

There is already much speculation about the electric light, and its use in the place of gas. For some years great improvements have been made in constructing the apparatus for producing this light, and new inventions are of daily occurrence. It is used in more than forty large factories in France, but so far, it has not been adapted to household use. The Frenchmen are undoubtedly the most skilful electricians, at the present time, owing to the thorough education received in the polytechnic schools. Mr. Edison, about whom so much has been said, is not a scientific, that is, an educated electrician. He has taken out more than one hundred and fifty patents, but not more than two or three of any great value. He is hardly more than a brilliant experimenter, who has become famous through the kindly aid of newspaper reporters. He has not made any success, so far, in producing a desirable light. He has made people believe that he is a very wonderful man, but he has not produced any wonderful discovery of practical use. The production of electricity is now a simple matter. Formerly it was produced by means of expensive chemical agents; now it is obtained by simply converting mechanical power into electricity. This is done by making an iron ring revolve in a horse-shoe magnet. The electricity comes in great quantity, but the problem is to convey it away, and distribute it in a uniform manner. The difficulty is mechanical only, and it will be removed before long.

POLYSYLLABICISM;
or,
BIG WORDS FOR LITTLE IDEAS.

If an individual should remark to an infant that the conversation of its avuncular relative consisted of a series of polysyllables, he would only be telling a child that its uncle used long words. Lack of drainage causes a good many kinds of bodily sickness, and lack of education causes a good many kinds of intellectual diseases, and polysyllabicism may be counted among the latter. When we hear a man always rolling out long words, no matter on what subject he may be speaking, it is fair to say that his education is either lopsided, or that it has been almost wholly neglected.

If a man use a fifteen inch gun to kill a sand-fly, he is not counted a very wise being; nor a small boy well dressed, if he wear a sugar barrel for a hat. Yet broad as these examples of physical unfitness seem, they are narrow compared with the big fat words sometimes used to express lean little ideas. Real delight seems taken by some people in monthing long words, which they appear to regard as the Chinese do finger-nails—the longer, the more high toned, or aristocratic.

A good speaker judiciously mingles long and short words in his conversation, as an expert mixes oil and vinegar in a salad dressing. One of the chief causes of the difference between the conversation of an educated and an uneducated person is, that the first knows that language is both the vehicle and vesture of thought, while the other only knows the last half of this truth, and is blissfully ignorant of the fact that the first use of words is to convey ideas.

English is a mixed language, having many words of many meanings, and there is no need of sending our ideas masquerading in foreign dresses, while there are so many glove-fitting, simple, Saxon words ready to do our bidding, and make others know what we ourselves think.

If time be money, it is the part of a spendthrift to use long words where short ones will do as well. If a man only wanted to say to a friend that he had walked in a graveyard, he would waste no little time in "remarking" that he had promenaded within sepulcher environing walls. There is a good deal of sound in this last sentence, its word clothing is the gaudy garb of Southern Europe; but the naked fact it covers is no larger than that covered by the first.

It is astonishing how few people have a real faith (that is, a faith that proves itself by works) that the object of language is the communication of ideas. So long as the power of speech is used as a means of communicating ideas, man is higher than a brute; when it ceases to be such a means, there is no difference between a man's talk and the bray of an ass or the croak of a frog. If two men try to converse, neither understanding the language of the other, the words of each are simply sounds to the other, and as senseless as the vocal efforts of the animals just mentioned. If two men can speak the same language, and one of them uses words that the other cannot understand, it makes no difference, so far as communicating ideas goes, whether the words be Roman, Sanskrit, or English polysyllables; in any case, it is impolite to ask people to listen to sounds which to them are senseless.

Polysyllabicism, as a disease, is confined to no particular locality, but can be found almost anywhere where the English language is spoken. It rages with particular violence, however, among the colored people of the South; and the fact can be explained by the small chances they have had to get an education, and their natural love for music. The sonority of many-syllabled words gratifies that love of the beautiful, which finds pleasure in music, just as the rhythm of the dance, or the swell of a chorus. As they advance in education, the absurdity of using merely 'sound' words becomes clearer; but it takes a good deal of education to straighten a natural bend. There is a story told of an old miser, who gave his son the following advice as a rule for life: "Get money, my son; honestly, if you can; but get money." It occasionally seems as if some of the colored people slightly changed this advice, and made it a rule of language in some such form as this: "Use big words; if they mean anything, all right; but use big words anyway." For the last hundred years, every writing who has tried to caricature the negro, has drawn him as rolling out jaw-breaking words, meaning nothing or next to nothing. The fun in these caricatures consists in putting a heavy Ulster overcoat of words on a little baby of an idea.

There is a notion among certain classes that their dignity is heightened by using long words. The utter folly of this notion can easily be shown. If these long words properly used be spoken to people who understand them, such people are not at all astonished, and think no more of a man who speaks of "an equine dormitory," than of one who says "stall." If, however, these long words be misused, then the people who understand how they should be used, either ridicule or pity the party who misuses them. So much, then, for using long words to people who understand them. To use them to people who do not understand them is impolite, to say the least; and you might as well whistle at a man as to use language he does not understand. The best writers and speakers of whom the English language boasts, have had the greatest command of short words. Take the Lord's Prayer, there is no finer example of Saxon English; yet it is almost wholly made up of short words. It contains no word of more than three syllables and but few of them. How pithy is every clause in it, yet how within the understanding of everyone! Put it in long words, as follows: Our Paternal Ancestor, inhabitant of celestial regions, sanctified be thy Appellation, etc. How many Sunday-school scholars would recognize this as the prayer learned at their mother's knee? Yet this is only a mild case of "polysyllabicism."

To obtain anything from others by means of false pretences is a crime; and any man who tries to get the name of being very learned, from ignorant people, by using words that neither he nor they understand, is a criminal in the eye of the moral law, if not in the eye of the law of the State. No man is guilty of such a mean kind of false pretences, unless blotted with the same ridiculous pride that leads a peacock to try to sing. Such a being is both fool and knave. An old fable tells of a donkey, who found a lion's skin and put it on. All the other beasts, thinking him a lion, feared him, until his long ears stuck out. Then they jeered at him, and ridiculed him as a silly little ass. Numerous donkeys so disguised, two-legged and long-worded, are still to be found; they pass for intellectual lions, until the flop of misused long words betrays their kind. I remember when I was a small boy, that there was an Irish cook in my father's family who had impressed me as being a very intelligent woman, until one day she spoke of yeast-cakes as "discumbustibles," and from that day even a child's eyes could recognize the ears through the hide.

If a man has anything to say, he always uses simple words, that the persons addressed can understand. The reason for this is obvious—he has an idea to *communicate*. But when he has no ideas to communicate, and his self-conceit craves the hearing of his own voice, then long words begin to dribble. If a man, afflicted with polysyllabicism, really wanted a drink of milk, he would ask for a drink of milk; but if he simply wanted to hear his own voice, he would request the tender of a potion of lacteal fluid. No sane man attempts to convey an idea that he has with a word he does not understand, any more than a prudent banker will discount without inquiry a stranger's note of hand.

Long words have their places in our language; but they should be used in their places: the great cables of a man-of-war would be out of place on an oyster pungie: so are scientific and technical terms out of place in speaking of every-day, common-place matters.

Language is a mighty force, and requires careful skill in using: skill can only come from education. Because a man can handle a bow and arrow, it does not follow he can use a repeating rifle; if he try the rifle, before being taught its use, there is danger about, not only for bystanders, but himself.

Man alone can freely communicate his thoughts; and when we find one who does not know that speech was given him for this purpose, we can afford to pity him as having slid out of manhood into beasthood, and regard his misused polysyllables as the cackling of a gander, or the gobbling of a strutting turkey-cock. T. T. B.

A VERY large box of Hawaiian and South Sea Island curiosities, which arrived at Hampton Institute some months ago, after its long voyage around the Horn, has been unpacked after the delay necessary to make a place for its contents in the school museum.

The collection is exceedingly beautiful and valuable. Exquisite corals of many colors and forms; huge bowls from the Hawaiian reef; large, delicate branches—white and pink and red and yellow, from the Southern Islands; and the curious poison coral of the Sandwich Islands—the creature inhabiting its black cells, secreting a venom which makes it dangerous to step upon their sharp edges. Rare and beautiful shells, curious specimens of lava from the volcano of Kilauea, and a large "silver-sword" plant from the sides of the mountain of Haleakala; make up the natural curiosities.

Besides these, there are many of native Hawaiian art. A war spear—twenty feet long, (cut in two for packing) armed with sharks' teeth, stone pestles for pounding the taro root into the favorite national dish of *poi*, and calabashes for holding it, necklaces of bone and human hair, which have been worn by chiefs. From the Southern Islands, a grass dress and feather head-dress, wristlets of human hair in curls, curious necklaces made of closely strung rings of tortoise shell and ivory, braided mats, and a model eight feet long of a war canoe, with its crew, its sides adorned with scalps, and its prow with idols.

These and other specimens make up a very rich collection—a valuable aid in the education of the students, in extending their knowledge of and delight in the wonders of the world, and exceedingly interesting to all. The curiosities were obtained with the assistance, and in great part by the generosity, of good friends in Hawaii, and warm thanks are returned to them by the school and its officers.

SCHOLARSHIP LETTERS.

FROM AN INDIAN STUDENT—FROM A CUBAN STUDENT—"MISTAKING HIS EDUCATION"—TEACHING AT TURKEY COCK.
A YOUNG WOMAN'S EXPERIENCE.

Dear Friend:—

I remite to you my scholarship letter. Excuse me by this letter if you pleasa. I am stranger and I do not understand English language very well; but I think next year I shall know little more than now and then I shall our mail to you other better letter. I wish ished, I went to North Carolina and taught school two months. I got along very wall with the people and think I did some good. I had to walk about six miles. I got $20.00 n months and paid $8.00 board. I commencad this school in August, 1875.

Our Superintendent had promised me a for tham, expecting to get it back the next month as they promised; but it ended in a promise. After I had closed the Turkey-cock school I felt real sad. The little children did not want to have me leave. They gave me a pic-nic although it was in March; I enjoyed it, and we all parted warm friends.

SCHOLARSHIP LETTERS.

FROM AN INDIAN STUDENT—FROM A CUBAN STUDENT—"MISTERING HIS ENUCATION"—TEACHING AT TURKEY COCK. A YOUNG WOMAN'S EXPERIENCE.

WE give below, as we did last year, a few of the "scholarship letters" written by stndents to the friends of the school whose contributions make its tuition free to the pupil, his only expenses being for board and personal matters.

The first scholarship letter a stndent writes, is expected to give some accont of his life and efforts to gain an education. Subsequent ones, as they may be sent to the same person, are usually on a different snbject, a vacation experience, or sometimes personal observation or opinions in regard to the condition and prospects of the people. No fine writing is encouraged or often attempted. The object is only to obtain simple and natural expressions of the stndents personality and experience, which shall show his friends how their gifts are applied. As such, we believe they will be of interest to many. They are copied without correction.

THE first letter is from an Indian boy, about 18 years old—interpreter for the Dakotas. He speaks English very well, and has entered the Junior class. He works two days a week in the Printing-office, and set up the Agricultural columns of this number and the last. He had worked at type setting a little before coming here.

Dear Friend:—

I am one of the Indian hoys who have come on here to go to school. We started from home on Sunday of October last year, and it took us four days from Yankton to come here; hut we did not come here by a straight road; there is no railroad runaing here, and we went aronad hy the Baltimore and Ohio R. R., and at Baltimore we got on a steamer (her name is "Carolina") and got hers next Thursday morning, aad took our breakfast at Normal School. After we arrived, I did not go to school for two or three weeks, on account of tha hoys. I am the only one of the party who can talk English well—hut I won't say very good, because I cannot talk so good as to call it very good. I interpret for them. Some of them can understand a little, and now they are all going to school. Soms of them are very much pleased to go to school, and some of them were anxious to learn to work, such blacksmith, carpenter, &c. My brother Charlie is here with me, and he is most contented fellow of whol of them. I don't think he ever thinks ahout home. I will work in Printing-office after a while. I could have worked, hut an officer who has charge of us he said I can go to school every day at first. This school is under kiad of Military authorities and it is a very nice place.

It is located on sea-shora aad we can see nearly a hundred ships every day, aad about two miles from Fort Moaroe.

There are forty of us hoys come from Dakota Tarritory and nine girls. Some two or three different trihes of Indians are already here when we come. There arc nearly three hnndred of people attending this school, and shont ten or dozen good teachers. The head man of this school is fiac man; his name is Gen. S. C. Armstrong. I don't think there is any had person in the department as far as I know. I have had five teachers and they are all very kind, and my studies are not very hard. I don't think they are hard, hut I have been in class only a short time; somehow or other they keep me busy nearly all tha time.

The places where I nsed to go to school are Shellsburg, Benton Co., Iowa, and Lima, Allen Co., Ohio. I went first to Shellsburg. I spent those two placcs in winter time, and I had soma fine skating sometimes with the school-hoys; they gathercd as many as possihle and we went skating on nice hright moonlight nights. Now I cannot do it here because tha climate is not cold enough, and salt water, and I do not think I shall see any ice this winter. I think that this place must he beautiful in the springtime, all the fruits growing then.

Oh, I came near forgetting one thing that I was going to tell you—there is heing put np a nice brick hlock on purpose for the Indian hoys, but not quite finished. We expect to go in next month, and it is built right in the peach orchard; it is fine a place for the boys.

Respectfnlly yours, R.

THE next letter is by a Cuban student. Last year, his letter had to be written for him. This is the first letter he has ever written in his life, as he was not taught to write in Spanish. He is a very worthy young man.

Dear Friend:—

I remite to you my scholarship letter. Excuse me hy this letter if you please. I am stranger and I do not nnderstand English language very well; hnt I think next year I shall know little more than now and then I shall can rwit to you other better letter. I wish give to you exact relation of some part of my life for some part last year, and some this year.

Oct. 2, 1877, I come from New York to Norfolk, Virginia, in 26 hours of way. I took the Hampton Va. hoat front the Fort Monroe from here. I am just arrived when I saw the Cuhan C——, he was very glad, and I too. After I was Virginia Hall and saw the teachers. After a moment I was down-stears in the dinner room ther had shout 300 yoag men and yong lady, after 20 minutes I was in friend C——'s room. I lived there five days.

Oct. 5 I went in the Preparstory class, and I was in its 13 days. Miss M. passed me to Junior class. Dec. 16 I was sick and I was good assistance. Dec. 22 I was from here to New York. I arrived thera in 26 hours of way. Dec. 23 I was in Brooklyn, and I stopped in Mr. Salavarria house. Dec. 24 I was in the morniag from New York, and saw Mr. Rev. I. Palma tha sama day, hy the evining I was in the Cuhans Societ. I spoken somathing hout this Institution.

I came hack to New York the 8 days May. I was at worck to Cigars Magnufactory. Oct. 27 I saw the Geaersl Armstroag in the Cuhan Episcopal Church. Nov. 26 the Cuban Mr. Jimenez and I come from here. Our way was nicely, hut we lost the rest of our money. We took the Fort boat to 7 o'clock in the morniag. Nov. 28 we come here 23 minutes for 9 o'clock. We were a good time that day. Nov. 29 the Captain Romeyas give us a room in the Chapel; there it is very cold becous we have not fire, hut we are very happy in this school. I aske our father that is in heaven to give us good head, good send, and never we shall caaaot forget our teacher, our protectors, and we shall continus to loving them with purity of heart for ever.

Very respectfully, C.

FEW reminiscences of the war, are now found in the scholarship letters, and they will of course become still fewer. The following letter contains some of the last to be expected.

Dear Friend:—

I was horn a slave on the 20th of December, 1857. My parents were slaves before the war and helonged to differeat masters. I helonged to the one my mother did. He was uamarried, aad not so cruel, compared with others. He went in the army, and my mother and father moved in his house aad attended to his property pretty well. When he came out he promised to pay them, hut, instead, he treated us worse than others. After we took in new ground he would he spt to rent to it to others. Father becamc tired of that, so he hought him a piece of land and hastily put up a house and moved. We suffered for awhile, trying to get money to pay for it.

Just after tha war my father was anxious that we should learn (I mean my three hrothers, sister and I); he hought us primers, and as he knew his alphabet, he taught us some of them. Sunday-schools were soon established aad I went. There was a preacher in our neighborhood that had a daughter in the North; he sent for her her to teach day school. This was about 1866. She taught about four moaths and I went most of the time. I had to walk about six miles. After school stopped at home, my father sent me to Deep Creek (a village about sixteen miles from where I lived) to school. It was a missionary school and taught by teachers from the North. In 1868 the free school commenced. Mr. William Brydson (an old geatleman from Jamaica) taught us. He was a good teacher, acknowledged to he so hy educated whites. They called him *Mr.*, and other colored men by their nama or uncls, and I suppose it was his education they were Mistering. I went to him when I could until January, 1874. I went nearly through decimal fractions and was studying grammar, geography, reading and writing. I left in the highest class. Duriag my school lifa here I hecame healthy, and father, who was very needy, would have stopped me from school; hut tha teacher told him I was learning so fast I could teach and pay bim hy and hy. I stayed with my grandfather awhila, but left to board at a place whera I could, hy doing errands afternoons and Saturdays, pay my board.

In 1874, I wanted to go to a trade, and through the influence of Lieutenant ——, then Collector of Customs at Norfolk, I got an appointment as an apprentica to tha ship-carpenters' trade in tha Portsmouth Navy Yard. I was allowed sixty-eight cents a day; but suspansions were so frequent that I hecame nnahla to pay my hoard. I fonnd I would soon he in debt; so I took my discharge. I got along very well with the managers. I left in the spring of 1875 and went home to work.

I intended to put my education to some uss. After the principal work on the farm was finished, I went to North Carolina and taught school two moaths. I got aloug very well with the people and think I did some good. I had to walk about six miles. I got $20.00 a months and paid $8.00 hoard. I commeaced this school in August, 1875.

Our Superintendent had promised me a school, for he donhtless knew of my chances and progress at school. I applied to him and got a school in Octoher of the same year. I stayed at home most of the time and had to walk about five miles morning and night. I taught three terms, and taught them how to read, write and cipher very well. They wanted me to teach this year, hut I told them I did not thiak I would. I had taught side hy side with Hampton graduates and found out how far I was hehind. I longed to come to Hampton, so father cosented to let me have part of my money for teaching last term. I worked on the farm this summer, and when Septemher came I found I could not get my money on account of Virginia's treasury heing nnahle to pay its teachers. I have not been paid yet, hut father managed to get a little for me to come with. I saw hy the catalogue that I ought to hring a recommendation. I knew the Superintendent lived in our neighborhood; I had been a scholar in his school and a teacher under him; so I went to him for one. He gave me one of which I shall be forever proud. I intend to try and conduct myself in a manner that becomes it.

My Sunday-school was near home and I had to bid it good-hye. I had loag heen a teacher in it, loved it, and labored hard to improve it. I delivered my farewell address, but felt so sorry at hearing the superintendent and others express their regret at my leaving.

I arrived at Hampton on the 25th of September. By my having studied and improved myself since my school days, I maaaged to enter the Middle class. My grammar is had, hut I have a good grammar teacher, and, with the corrections of the hoys, I hope it to he soon very much improved. The school allows as to work out half; had it not heen for that I would not have heen ahle to come.

I was converted in the summer of 1877 and joiaed the Baptist church. I attend the Friday eveniag prayer-meetings that we have regularly. I want to he a hetter Christian.

I belong to a dehating society and speak quits often. We middlers have a clah for the improvement of our manners, and we appoint critics who watch and report our condact to the clab—I am a critic at present. I want to grasp every opportunity for improvement and gather honey from each passing hour. I think a great deal of our school, its teachers and all the good people of this country who are hy their money assistiag my race to rise. I am proud of the opportunity of coming to school, while my poor brothers and sisters are destitute of it. I love to teach and think that I will he a teacher, or rather anything that will henefit my race. When I think ahout my race heing destitute of education, hoth morally aad intellectually, and unequal to others, I feel more determined to learn to help solve the problem that the colored man is a man, nothing more and nothing less. I hope I can coma to school next term and then I want to assist my hrother and sister here. I hope our Principal may live loag, for I think it would he hard to find his equal.

I hope to hear from you, together with your kind advice. Your friend, S.

THE writer of the following letter is an excellent carpenter, and it wns with a missionary spirit that he gave it up for a year to teach, making up the deficiency of his pay by his trade after his school closed.

Dear Friend:—

I left Hampton the 8th of Octoher, 1878, and arrivad at —— County, Va., the 3d of November. The same day I arrived I was examined, and my examination was satisfactory. On Sunday I opened a Sunday-school, which seemed to please all. Monday, I opened day-school with eighteen papils, and taught one week, when the officer ordered me aight miles from ——, to a place called Turkey-cock. I still held my Sunday-school at ——, which gave me a long walk every Sunday of sixteen miles. But I did not mind that if I could do any good. When I first opened, every one seemed eager for it, hut when the weather became cold, some gave way to negligence, and others, for lack of suitable clothing, would not come. I had any quantity of papers sent to me from all parts of the North, and I bought forty papers every month myself. I gave every child a paper every Sunday and I never asked them for a cent, for the people were all so awful poor. Not one had ever heard of Sankey and Moody's Hymns; so I bought 140 hooks, 130 Testaments, and twenty Bibles. A few I sold; the most I gave away.

I went to Turkey-cock and began a day-school there. I had a nica lot of children and I did nicely. Tha children all seemed to love me. I felt sorry, for many of them were too poor to send their children to a free school. Ahout ona half of tham had not a book, so I took the little money I had and bought hooks for them, expecting to get it hack the next month as they promised; hut it endes in a promise. After I had closed the Turkey-cock school I felt real sad. The little children did not want to have me leave. They gave me a pic-nic although it was in March; I enjoyed it, and we all parted warm friends.

I came hack to —— and opeaed there the 19th of March with seventy-five pupils on the roll. I did well for the first three months, but the other two I saw the hardest times I have ever seen in my life. They found out that I was from the North, and they think that is a paradise and everything comes without any trouhle whatever. I will write yon a few facts to show how ignorant they are. There are a great many families waiting for the Yankees to come from the North and give them eight acres of land and a mule. All believe in conjuration. The only conjuring I saw in reality was poisoning. They would not plant an evergreen in the yard for any price, because, they say, if tha tree dies, one of the family will die also. One night a man had the night-mare; when he got np in the morning he went to see an old woman about ninety years old, and cursed her—calling her a witch and telling her he had a mind to kill her. Whila I was teaching I did all I conld to break up superstition.

I have got along through the Junior and Middle classes successfully, and am now in the Senior class, and I feel sincerely grateful to the Northern friends for their interest in the education of our destitute race.

I have tha honor of being,
Yours sincerely, S.

THE last letter we have room for, is from a young woman of the Senior class who entered Hampton this year. She has already had long experience in teaching—some of which is interestingly given in her letter, and expects to devote her life to that work.

Dear Friend:—

I am informed that the amount yon kindly donated to this school has been applied to the payment of my tuition for the present session, and in writing this letter I make hut a slight acknowledgement of the henefit derived from your gift.

I have been here only since last September, My home is in Ohio, where I lived till I was eighteea; am now twenty-four. My father died when I was quite small, and my mother, thus left with a family of eight children to support, was unahle to give us so thorough an education as she desired us to have; still I received such a one as is to he obtained in the common schools of Ohio. When barely sixteen, I taught my first school, aad, with the exception of an occasional month or two in vacation, have taught ever since. At eighteen, I followed a sister, who was among the first to go for that purpose, south, to teach the freedmen, where I remained till the latter part of last June, when I returned home.

After going south, I first taught in Mississippi and Arkansas, hut afterward went to Memphis, Tenn., and taught school four years. Here the school year is nine months, and in the summer vacations I always took a school in the country (in Mississippi or Arkansas,) so that from the time I left Ohio till my return I was almost constantly engaged in teaching.

While I was in Memphis, my sister, who was in Mississippi, died, and the followiag fall (during the Hayes' Campaign) my hrother was murdered by Ku Klux near ——, Miss.

At the close of the Memphis school this year, being almost worn out with teaching, I concluded to return to Ohio and rest during the summer. I came, expectiag to go hack in Septemher, hut owing to the presence of yellow fever, the schools did not open at that time as nsual. When I learned this would he the case, not wishing to spend the fall in idleness, I wrote and offered my services as nurse amoag the colored people in M——. In reply to this, the Relief Committee hade me remain where I was, as hy coming there I would only add another to the victims of the fever. This was in August. Soon after, I received a letter from the Superintendant of the Memphis schools, in which he very highly recommended this school, and advised me (as the fever in M. threw me out of present employment) to improve the time hy coming here a year to school. With the letter he also sent a catalogue and other papers giving accounts of the school, which I read, and, after consulting my friends, concluded to come. I came, entered the Senior class, and hope to graduato in June.

I had long since given up the hope which I entertained when I first left school to teach, of returning again; hut now that I am here, the old desire to take a college course has come hack to ms, and I propose, after leaving here, to enter a school of higher grade, and by teaching part of the time, hope to get probably two years longer in school. Then I shall settle down to what I expect to maka tha remainder of my life's work—teaching.

Yours truly, O.

LETTERS FROM HAMPTON GRADUATES.

AN UNDER-GRADUATE'S REPORT—GLEANINGS.

tute as the H. N. A. I. My hoarding place is three hundred yards from the school-house; my board is furniahed hy tha patrons, free of preciated. I can only say that in payment of such dahts, I will anclose you if you will answer affirmatively, my next County warrant, not being ahla to receiva any cash for tham next fall; all that I send will be fit for the Junior class, I hope. Some kind friend sent me the *Educational Journal*; I am very much obliged to tha sender. I read it with care

LETTERS FROM HAMPTON GRADUATES.

AN UNDER-GRADUATE'S REPORT—GLEANING AFTER THE REAPERS—SCHOLARS FORTY YEARS OLD—TEACHING BY CHART—SOME YOUNG WOMEN'S WORK. UNSECTARIAN EFFORTS.

AN undergraduate who has been staying out this yenr to help pay his own way through school, gives the following graphic account of his work.

——, VA., *Jan.*, 1879.

General S. C. Armstrong, Principal:

DEAR SIR:

Havlog received a paper from Hampton which gnvs nn account of some of the graduates thnt nre out teachlng; nnd seeming to be so successful in the work, it encoursped me to write to let you hear from me. Being n Prep, as they call thn Preparatories, I nm not qualified to write you a very interesting letter, but feel that I can reap my thousands, while the graduntes reap their tens of thousands.

Last term was my first term at Hampton. I arrived on the fourth of Dec. '78. I llked the school nnd tried to be n faithful student. After school closed, I returned home. During vacatloe, my health was bad, so thnt I was not able to earn means to return to school. I than repaired to the country, and while there, I found the peopls very badly in nsed of a teacher. They had a teacher some years ngo, but he left becanse he could get more for teaching elsowhers. And what was to be done? The garden thnt had been tilled for sovon yenrs, was now left desolate and overgrown with thorns and thistles; the roses thnt so beautifully adorned it, were choked nnd withered nwny. The young minds that were so eagerly bent for learning, had now relnpsed into idolsnce and intemperance. The fathers and mothers cried "Help us for our children ars going to destruction, we wnnt n tencher, and must havs one. The state says we cannot help you, for we nre in debt and cannot help ourselves."

So you see the condition the poor people are in here. Could a Hnmpton student turn his back on these poor people? No, I say not, for love to his race would not suffer him to do so.

After witnessing the sad condition that this peopls were in, I felt sorry for them; but did not think that I could do them any good, for I felt myself incapable of teaching. It was my desire to do something for the upliftlng of my race, but I thonght that I could help them in the future, I did not think the time had yet come, so when the time presented itself to me, I refused. But after persuasion I resolved to try.

I then went to the county seat, for examination. The Supt. is a very nice man, every body hare speaks wsll of him, I also prssented him a recommendation from the Supt. of Public schools in ——, Va. After finding out from the recomendation that I was from Hampton, he said that he would be very glad to give me a school, but did not know whether he could or no, for he thought the schools were all supplied with teachers, for tbey had closed one-hnlf of the schools because they had not money to pay the teachors, but come back in a day or two and he would see. So I went back and was sxmmined. He said that I passed n very good examination. The mnximum grade was ten and I stood 8, 4-6. The next week I opensd school. I opened with nine scholars first day, next day fourteen, next twenty-two, and so on up to thirty-six, and the school is still increasing. The first thing I had to do was to get the children to be sociable to each other, for they thought they had come to school to fight and quarrel. The next tronble was to get books, for thsir parents were poor and could not get books, so I had to teach them from the black-board, and uso whatever books I could get. I have been teaching here three months, and have a very nice school. I am not bothered now with the children fighting, they seem to have forgotten all of their bad habits and are trying to learn. My first class is in common fractions, and is also studying geography, grammar and other studies.

Every Friday evening I teach them to sing, and other exercises. I have a nice lot of little singers. Nearly every Friday evening the patrons and strangers come to hear the children sing. During the holidays, I gave an exhibition, and everything passed nicely. Mr. D. B. Peyton of Chicago, one of the Sunday School Superintendents, was present and delivered a few words of encouragement to the scholars, and the I. O. G. T. of which we have a lodge. I taught night school up to Christmas. This was for the mothors and fathors. They would send their children in the day, and come at night themselves. Some of my scholars were about forty years of age; they all seemed to learn very fast. They say they wish I could stay here with them for they are anxious to learn, and want their children to learn. When I left Hampton, they say they wish they were able to send their children.

I am also engaged in the temperance work. I have n temperance lodge in my school-house, and it is doing a great deal of good. Men that used to spend forty, fifty, and sixty dollars a year for whiskey have joinad us, and say that they do without it, and have no desire for it.

I have not seen my of the Hampton teachers since I left school. But few people here know nnything of there being such an Institute as the H. N. A. I. My boarding place is three hundred yards from tha school-house; my board is furnished by the patrons, free of charge; my post-office is three miles distant. I have not had any difficulty whatever with either white or colored.

I was very glad to receive the papers you sent, for they are the only papers I havs to read. I am teaching on promises and have no money to get a paper with. My time will be up in March, after which I expect to return to Hnmpton.

I remain yours, B.

THE following letter is from a young women who graduated several years ago and has ever since been doing a good work for her people and making progress herself.

——, VA., *Jan.* 23, 1879.

Gen. S. C. Armstrong—

Dear Friend:

I receivsd your postal n short while ago concerning the SOUTHERN WORKMAN, and will be glad to take it as stated on the card. Please find enclosed twenty-five cents for the same, to begin with the Jan. number which I have nlready received. I feel that I can never do without this "Workmnn," and do not intend to as long as it is within my reach. I have received both it'nnd the Educational Journal regulnrly since I have been teaching, for which plense accept my heartfelt thanks. Perhaps you would like to know something of my work. I nm still engaged, in teaching, though not a public school. Almost nll the public schools in this county—my own included—have been suspended until next Oct.; on account of the scarcity of public school funds and the indebtedness to teachers for the past yenr. But I opened a private school the 14th of last October, and have succeeded very well so fnr. My school is not very large, but is very interesting. I have seventeen scholars nt present that pay me one dollar per month. A good many more are expected when the weather gets better. The most of my patrons pay very well indeed. There are a few negligent ones, but the Lord has so blessed me since I have graduated in giving me employment, and health nnd strength to do it with, that if I do not get every dollar for my work I shnll not consider it a loss, for I am satisfied that I am doing some good. I have two scholars that could enter the Middle class, and several that could enter the Junior class at Hnmpton, were thoir parents ahle to send them. The majority of the colored people in this section have become so discouraged about having no schools for their children when they are paying taxes regularly, thnt their minds are directed toward buying land and building homes for themselves more than toward the education of their children. But I often tell them in the church and Sunday school where I meet them, that while it is important for them to buy land and own houses, I do not think it meet for them to give ull of their time and attention to that alone, and let their children grow up in ignorance, because they do not receive the ready benefit of their money yaid for taxes. Both are important, and each should be attended to.

Dear General—I often think of the good advice and instruction given by you to our class in the evening lectures. There nre certain remarks I can never forget, for I have learned hy experience thsir trus meaning. I can fully agree with some of my fellow-teachers about finding friends in our field of labor, and they are not all mnong our own color. I nm glad to see that it is elsewhere as here. All through these past three yenrs of teaching, I have found firm friends among our white citizens as well as colorod. And not myself alone, but all colored people here who endeavor to elevate and do respect themselves. Self-respect commands respect.

I think I can say of n truth that the feeling of prsjudice is slowly but surely dying out. A great deal more depends now upon how the colored race conduct themselves in their relations with one another and the whites, than upon any thing olse, as regards their progress and prosperity.

I am glad to hear through the "Southern Workman" such encouraging news concerning our Indian friends at Hampton. I hope their being there may prove a blessing both to them and those by whom they nre surrounded. I have a great curiosity to see them in their studies, &c., and hope to do so perhaps next spring. With love for nll the teachers and friends, I remain,

Yours sincerely, S.

THE great eagernesa with which the graduate teachers ask for suggestiona nnd advice in their work, is great encouragement to those who are trying to prepare them for it.

It is believed that the demonstration of Col. Parker's method of object teaching which one of his trained teachers is now giving to the teachers of the Butler school and to the present Senior class, will prove of very great value to them.

——, VA., *Jan. 11th*, 1879.

Dear General:

Your extreme kindness in waiting so patiently on me for my balance is very much appreciated. I can only say that in payment of such debts, I will enclose you if you will answer affirmatively, my next County warrant, not being able to receive any cash for them unless I have them discounted at a very large percentage. As you said in your bill, teachers' County warrants will be received on full value in settlement of debt.

I am pleasantly situated, Gsneral, and I must confess I like to teach very wsll indeed; better than I ever expected. My school is a nice one indeed, having been previously conducted by a competent young man now at Hampton at school. The children are fond of teachers and like to attend school. Some are quite advnnced too. I find my greatest difficulty in persuading them to give up drinking. They drink fearfully, mon and womon, and still retain their places in the churches. They are fond of school teachers though. I wish you would see if you have any old temperance tracts left from last year, please send me them. My peopls here need much lifting up in this respect, and in the Sundny School. Our only hope of rescuing this, my race, I see after coming among them, is by getting after the young minds and planting within them in time, the sseds of morality, temperance and other virtues. The old folks are too far gone, and past nll hopes. I have looksd, and studied, and asked the opinion of the wiser men and they say the old folks are too conceited to be improved much.

You don't know how much my pupils enjoy the chart; I find it of invaluable service, and shall never stop teaching "Col. Parker's system." It is undoubtedly better than the singsong method of say a, b, c, and asking, What letter is that? I only wish *all* teachers had them. I am sure the children would learn five times as fast. I have now on roll fifty-six pupils and some of them are bouncers too, but still they are behaving nicely and I am doing (I think) a good work. Those papers, I have given out in the Sundny School. They like them very much and come regularly.

My scholars, I. e. some, are quite advnnced. I love them all alike, and so far have not fallen into that common error of favoring "favorites." My love for teaching I must confess, though re-Incrnntly, increases with every days labor. I always had before beginning, a horror of teaching, but it is gone and now I stand a lover of n work I once dreaded.

I Love to Miss C., tell her I find her suggestion for geography teaching, good. I find this my hardest branch to teach with ease. I always hated geography while in school, and never liked it since. I hope Col. Parker will find a way to teach it. Have you any back numbers of the "Southern Workman," containing any of Prof. Allen's lectures on teaching? If so please send me one.

Yours truly B.

THE following letter is from a young woman who is faithfully trying to "hold up a light" in one of the dnrk plnces whose existence under the noonday beams of thia enlightened age and nation, it is hard to imagine.

——, *Dec. 26th*, 1878.

Dear friend:

I know you ure thinking that I have entirely forgotten you. Well, this proves thnt I have not. I have often thought of you dear Miss H., and desired to write you, but have been very busy in school and really could not find time to write to my friends.

I opened Sundny School on the 15th, for the little folks, who had never been inside of a Sunday School room. There is only one Sunday School in this place, and that is three or four miles from my boarding place I have pupils in my school who have never been in Sunday School, almost as old as I am. They didn't even know who made them, and who made the world. I tell you it is surprising to find such a thing in a civilized country. The people nre delighted with this idea. I have carried it on now for ten Sundays. I have found great use for the papers Miss L. sent me, the children are so well-pleased with them. Miss H., if you can find any papers or cards that you can let me have for my S. S., I will be so much obliged to you. The children enjoy reading them. They find good topics for them. I have on roll now twenty pupils. The people have been very busy on their farms, but they are about through now, and will commence going to school next week. I open school every morning with reading a chapter and prayer. I have the children repeat the Lord' Prayer after me. I have a large class studying English grammar, this is our most advnced class. They are now in reduction of fractions.

I close school about 4 o'clock every day, except Friday, then I close earlier so as to have about an hour for singing. I am trying to teach my pupils how to sing the Sankey and Moody hymns; they are learning very fast. I have a great many grown people to visit my singing school.

All the people seem to think a great deal of me; they are doing all they cnn to keep me here two or three years. I am doing all I can for this people, and they know it. I am trying to get two or three boys ready for next fall; all that I send will be fit for the Junior class, I hope. Some kind friend sent me the *Educational Journal*; I am very much obliged to the sender. I read it with eara and interest. I am glad to have something to read. I read to the family I stop with; they enjoy my reading, and seem to take in new ideas.

Ella Freeman is teaching only n few miles from me. I have not seen her yet. I am about six miles from D—— ——, and L—— H——. I received my money for my first month in full, and the month will soon be out again. I opened on the 6th of November. Remember me with love to all the teachers. Give my love to Mrs. D.

P. S. The gentleman I am boarding with is a Baptist minister. He takes the "Southern Workman." I was reading one the other day, and a very interesting letter in it which advises the young teachers to visit the parents of the pupils. I have not done this yet, but I am going to commence next week.

There are two bad habits the peopls follow up here, and that is chewing tobacco and drinking whiskey. I often talk to them about it, but they say "money is all they want," yet they are always complaining about being so poor, and not able to get an education. I tell them the way to get it, is to stop paying so much money for trifles.

I am going to commence taking the "Southern Workmsn next month. I hope you will write to me soon.

Yours with love, M.

THAT the unsectnrian character of the Normal school has an effect upon its graduates, making them more willing and able to work for good wherever they may happen to be thrown, untrammelled by narrow and ignorant prejudices, is a result intended and welcomed, and is pleasantly exemplified in the following letter.

——, *Dec.*, 1878.

My dear Miss H.:

As it is very rainy to-day, and I cannot go to Sunday School, I thought I would spend a few moments in writing to you. I have both Baptist and Methodist children in school, so I thought it would be nice to divide my Sabbath between the two churches. I teach in the forenoon in the Baptist, and in the afternoon the Methodist. But before entering the Baptist Sunday school I thought it best to see the minister of that church One Wednesday afternoon I sent, for him: while conversing with him I found out that he had been a former student of Hampton. We were strangers when we first met, but old acquaintances before we parted. He gladly accepted my services, and said the teachers before had not seemed to take any interest in their school at all. I told him I was willing to help them in any way I could. We bade good bye, I promising him to be there this next Sabbath. I went and found a great many happy little faces there, most of them wers children that came to school to me through the week; we had a nice time. The minister introduced me and me to the school—all seemed happy to receive us. The Methodists seem to claim nll the teachers, so I considered myself a member any way, and went without any trouble. I have a hundred and seven children now, I hardly know where to put them; we have *still* the promise of a *full* school Christmas, where to put them, we are at a stand. L. and I get along nicely with our schools; both teach in the same room. The church is quite large where we teach and we have but one stove, so you see it makes it a little unpleasant sometimes, but otherwise it is quite nice. It is so much nicer to be teaching here than it was last winter where I was; although I did enjoy it last winter, if it was in fear. Mr. B. sent me a nice bundle a few weeks ago for the children; in it I found a nice chart. You do not know what a great help it was for my school. The children are learning to read nicely from it. I gave the things out one Friday afternoon; if you could have been here, to see the many happy little faces. Of course there were n great many that did not get anything. I got a nice lot of Sunday School papers which help in my Sunday School nicely. Fridays, I take Miss L.'s plan, have them to read papers and select pieces for the children to read. Every one seems to like it.

R. C. teaches only seven miles north of me. I see him every week. It always seems pleasant to me to see any one from H——. I have been teaching two months, so you see it only leaves three months for this wonderful piece of work to be done in. The children have begun to ask us if we are not going to teach next winter. I have not said yes, although the Supt. has told us we shall have it the next year "for nine months."

I hope you will write to me soon. I am very anxious to hear from you. Love to M. and L., I can almost hear the bells ringing at H——, for Sunday School.

I am yours truly, S.

RECORD OF HUMAN PROGRESS

their needles making dresses for themselves; that boy or girl, or gazing upon those beau-

thirty-three, the last three weeks, is the num-

RECORD OF INDIAN PROGRESS.

Donations, large or small, will be most welcome, and are needed to supply our Indian students with tools and implements of various kinds. Of the sixty-six Indians, only six have trunks, and each should have one. Suitable trunks can be obtained at three dollars apiece.

The pro rata cost of furnishing one room for the Indian students is two hundred dollars. Many are now unprovided for.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

It is wonderful how much interest we take in passing events when we feel that we shall be called upon to describe them to others; but the incidents of every day life must be woven together to make a talk to the people or an article for the newspaper.

It is well known that Hampton Roads is a safe harbor for sailors when a storm is coming on. When the gale in its fury drives the vessels over the ocean, scores of others are safely anchored in the Roads where they ride until the storm is over and the sun sets with a clear promise for the coming day; at night the countless lights dancing upon the water suggest the idea of a floating city. It is a fine sight to see the vessels with all sails set slowly moving towards the ocean; to me they look like monstrous birds hovering over the water, but the Indians think differently about it; it gives them a very happy impression, they clap their hands and shout for joy.

"HEAP WIGWAM."

"See! See!" they say to me. I look in the direction they point. "See! See!" they repeat, "heap Indian lodges; one—two—three"—"Do you mean wigwams?" I ask. "Yes, Indian houses,—they good houses, me want to talk to the Indians." I tell them that what they see are not lodges but boats on the water; but I ask, if these were lodges and Indians in them, how could you expect the people to hear you as you are so far away? "Me take looking glass, and throw light on their faces; they see me and I talk to them by hand." This is a very *handy* and reliable way of communicating, as it never gets out of order—the mirror is much used by the Indians when they want to give signals; it will bring the sun's rays to a focus and throw the light a distance of six or seven miles; at a shorter distance it is used to attract the attention of the person with whom they wish to talk; the conversation is carried on with the hands by means of signs similar to those employed by the deaf and dumb.

WHAT THE GIRLS ARE DOING.

Somehow woman's rights appear to be generally made second to man's. I do not pretend to say that this order dates from the creation, but we know how it was with the primitive pair in the garden of Eden. In writing about the Indians, the girls have unhappily been made second again, as I knew more about the boys; but they are not second in order in intellect; in written exercises they are not excelled by any of the boys, yet it is difficult to get them to recite verbally, which is probably the result of home training, for the Indian women are expected to be silent in the presence of the lords of creation.

Soon after the arrival of the Indian party, one of the girls began to show a most unamiable disposition; she was very obstinate and exerted a bad influence over the other girls; everything that tended to improve she opposed; her work and studies were neglected. Now she is developing a lovely disposition and habits of neatness; takes great pride in keeping her room clean, and likes to work better than the other girls.

Every two weeks the girls ask the matron for buckets that they may scrub their rooms. The tendency is to be neat; at present however a strict supervision is needed lest they fall back to their old ways of living, for in certain conditions of life good habits may be easily lost, but it is exceedingly hard to get rid of the bad ones.

The girls are working in the laundry, industrial-room, and dining-room: they are easily fatigued and have not the vigorous constitution of the colored girls. When doing laundry work they cannot work all day at the tub or with the iron, so their work has to be changed.

THE GIRLS' STUDY HOUR.

The girls study at night in Virginia Hall. I was fortunate enough to receive an invitation to visit their study hour. It was a very pleasant sight that met my eyes; they had gathered for their evening work and were very busy when I entered; two were sitting at a table playing checkers, while another girl equally interested in the game sat near the players steadily watching as the play went on. At another table, two girls were very busy with their needles making dresses for themselves: at the same table sat a bright-eyed little girl who was arranging in proper order small blocks of wood on each of which was a part of a multiplication table; another was spelling words from a primer; the teacher sat near by ready to assist and direct them when they needed help. All appeared happy; amusement and instruction are well united and serve to relieve the dull routine of every day life. The effort of the girls shows them to be sincere and eager in their desire to improve themselves. I asked their teacher what kind of government she exercises over them, Autocratic, Aristocratic, or Democratic. The teacher has not recently taken charge of the girls, so the kind of government has not been decided upon. It appears to me that the form of our national government is as well adapted to the school-room as to the States. With us, the school-room should lay the foundation of honorable citizenship. It should be the effort of the teacher to make every child feel that he is a ruler, that he governs the school-room. It pays to trust children; when a child feels that instead of being watched, he is to watch the conduct of others, then he learns his first lesson in self control.

WHAT WE NEED TO REALIZE.

In dealing with the Indian, history has proved that what we need to realize more than anything else is that he is a *man*. When

A NORTHERN WIFE. (*See next page.*)

we are ready to treat him no more as a brute but as a brother, then our Western frontier will no longer need to be guarded by armed men, for the just and equitable laws of a common country will protect the pale face and the red man. I do not believe that a people can be found who will not observe the rights of others when its own rights are observed and protected. Individual sins are not race sins: if they were, then the Anglo Saxon and all other races are as much doomed to-day as though the curse had already been pronounced against them.

From letters received by Capt. Pratt during the month we select passages of encouragement and general interest in our Indian work as follows.

An Indian Agent writes from Dakota, January 13th:

Agency, D. T., *Jan.* 13, 1879.

Capt. R. H. Pratt,
Ag. Institute, Hampton, Va.

My dear Captain:

Your long and friendly letter was full of good news and very cheerful. It has gone the rounds in company with the "Workman" and given great pleasure. The pictures came the mail after, and many an Indian eye has gladdened when recognizing that boy or girl, or gazing upon those beautiful grounds and fine buildings. The large photographs you did not mark; so we cannot tell which this or that structure is as we would much like to know. I am building a new office building in which will be a Council room. On its walls I intend shall hang in frames the pictures of Hampton Institute and grounds, and other pictures and maps of every kind are desired for this purpose. I shall make an appeal to the Indian Department as well as to friends in New York.

Hampton Institute has a hold on this tribe which will increase and widen with years.

Very sincerely yours,

D.

A Missionary, from Dakota, writes,

"Children are writing home that they have a great house to live in and are much pleased on the whole.

Much success to you all."

And in a later letter, he says:

Agency, D. T., *Jan.* 14, 1879.

Capt. R. H. Pratt — My dear friend:

I write a line just to tell you how much gratified I am at the success of this effort to educate Indian youth, not only at your success in obtaining the pupils, but that everything has been got into working order with so little mishap or dissatisfaction —scholars, parents, chiefs, friends every one pleased so far as I know. I believe the Lord has prospered and I trust he will bless it as an efficient factor in the salvation of the Indian race.

With many kind wishes,

Yours truly,

W.

From a long letter from Miss Myra Calhoun a Missionary teacher at Ft. Berthold, Dakota, we extract some account of the educational effort there. This work is under the care of the A. B. C. F. M. and in charge of Rev. C. L. Hall who has promised us some account of it at an early day.

Fort Berthold, D. T., *Jan.* 11, 1879.

Capt. R. H. Pratt,—Dear friend:

Our schools are all quite full. Miss Briggs and I have morning school at the same time; Miss B. afternoon school for advanced pupils, and Mr. Hall night school for young men Gros Ventree and Mandans. Our weekly meal (a dinner is given every week as a reward for punctual attendance) is becoming no light task, as it has been for several weeks past. Twenty-nine, forty-two thirty-three, the last three weeks, is the number who came every day each week. I am kept very busy afternoons, cutting out clothes for Indians from annuity goods, helping some to sew them, and now much of the kitchen work falls on me while Miss B. has her afternoon session. At night I go over with Mr. Hall to help at singing, and then employ myself in behalf of the Indians, usually, until eight o'clock.

My scholars (boys) have been clothed in suits from annuity goods, and seem quite proud of them. It is pleasant to see them look so neat. The young men have received nothing, but have taken great pleasure in presenting themselves at night school *in full suits* "putting on airs." They have secured them from the old men who do not care to wear them. They take delight in wearing them, that they would not, had the clothes been issued *to them.*

Another letter from the old Chief Minimic, dated 24th of Jan'y shows the very interesting fact that he and his young men are cutting wood and working towards civilization. To those acquainted with and interested in these struggling men, the letter will have a significance, and we publish it entire.

Darlington, Indian Territory, *January* 24, 1879.

My dear friend, Capt. Pratt:

I was glad to get your letter. I right with the Agent, and trying to do all the good can for my people. All that you have told me I am holding close to my heart. I give none of it away. Since I returned some of my people have gone after buffalo, but I did not go. Those who went are now returning poor; found nothing but small game. I have a large party of my young men chopping wood for the Agent at the rate of $1.25 for each "pile" (1 cord). I got to thinking about you in the wood camp, and concluded to walk in to the Agent's house and remain with him last night to talk and to write to you. The Agent is now writing for me. My wife came in with me. When I was with you, I always listened to your advice. I found you never deceived me, and I shall always remember you as one of my best friends. I have thought very often about going back to see you as my people are poor, and don't know how to live clean like the whites. Tell "Coho," and "White Man" to write me soon for I am anxious to hear from them. Everything that the Hampton boys write to me, I hold fast, and take their good advice, and press it upon others. The Agent is using strong efforts to get all the young men at work so they will not be poor. I go around from lodge to lodge and hear the Indians talk, about it and I knew they all are anxious to do as he wishes them,—except a few Northern Cheyennes, who are not ready to do right. All the young men of my party are ready to hear my advice, and sixty of them in my camp, dressed like whites and have hair cut, and there are several other parties doing the same. The coat given me by the Agent, that was sent from my lady friend is very nice, and I was glad to get it. The "Dull-knife" Sioux Cheyennes were here one year, but would not listen to good talk, were anxious to do bad, and talk bad and then ran away, and have had much trouble. I feel sorry for their women and children. We don't want them here, but you must not feel bad about them, for they would not listen to good talk but made a bad "road" and have to suffer. I would like to see all my old friends at St. Augustine (he here speaks of a lady whom he calls "Lucy") and visit them at their houses. I like to hear from you.

Your friend,

"Minimic."

Witness, John D. Miles,
Indian Agent.

The following speech was composed, and delivered by Tsait-kope-ta, (Bear Mountain) one of the Florida prisoners, at a meeting in the parlor of the young men's Christian Association building, New York, on the 24th of January. As the opinions of an Indian who has experienced the extremes of both savage and civilized life, and who knows his people it is worth something.

My Friends: I hope you will excuse me, if I do not good make you understand, for I cannot much speak English.

I think it is like this about Indians. You know wild animals run away from men, because they think they want to hurt them, and when you catch them, they try to hurt you, but if you are kind and give them enough to eat, they get tame, and no more afraid of you.

Just the same Indians—they afraid they run from white man, and when he find them they fight, because they think he enemy, and can't trust him.

Indians got souls—some people don't think

so, but it *sure*. They feel like other men, | was no attempt to educate girls, which made | broken loose and drifted away from them. It | wheelbarrow can be taken on to the top of
the matter worse than it might have been. I | could not get back to them, and they were | the manure heap. The saving of time in

so, but it *sure*. They feel like other men, only don't want deceive him, don't cheat him, don't break promises, and very soon no more enemy and trust you.

Some Indians got good hearts, just the sama as men everywhere, some good, some bad, some kind, some unkind.

I think you much excuse Indian. You know which good way. *You* know about God. *You* got churches *You* got schools and books. You got *everything*.

Indians only know about fight and other bad things. They can't know good if nobody teach them good. White men there West teach much bad.

Indian Territory got much Whitemen's and Indian's blood upon it. That is *bad* ground with men's blood on it, but may be some people think not enough there yet. God don't think so. He wants peace.

Some good people Far West, but I think this way more good people. Here the people near the Atlantic Ocean, like the middle of the river, clear and clean, but there more like anything bad that comes into the shore.

This I can't understand. The people all over this country choose one man for President. Perhaps he want good for Indian's peace, but others don't want his way. Some ona way think and talk, some other way and he can't do what he want.

Why can't he do what he know is good and right, if he the greatest man in our country? Oh, I know all good people want this fighting to stop. I want Indians all feel good to white men, and white men to Indians.

I know God want so. I know all Indians glad to have *peace*.

The Rev. Mr. Gravatt, Rector of St. John's Episcopal Church in Hampton kindly permits us to publish a private letter from a Christian teacher in Dakota Territory.

Mr. Gravatt gives religious instruction three times a week to our Indian students who at their homes attended the Episcopal church or were communicants.

Rev. Mr. Cook's remarks about the education of Indian girls, are timely. We feel deeply the importance of securing a number of them to educate.

Yankton Agency, Dak., *Jan.* 23, 1879.

Rev. J. J. Gravatt, Hampton, Va.

Rev. and dear brother:

Yours of 2d inst., came duly to hand. It gave me great pleasure to know that you are so deeply interested in the Indian youth there. I have received a great many letters from them in which they always speak of you and your efforts for their good with a great deal of love and interest. Recently Frank Yellow-bird wrote me asking me for a Bible, Psalm Book and Hymn Book, in the Dakota language, as he was desirous to read and study them, since he understands the English so imperfectly that from English books he can at present get no good. At the same time, he says he is exceedingly anxious to learn the English and studies hard. I have sent him a New Testament, but the others I have not as yet. Frank is a good boy, and has very good abilities. I pray that his present earnestness about these things may continue, and that God may lead him to some good work among his people. Edwin Ashley wrote me that he and others have been admitted to the sacred communion—for which I am glad. I think a great deal of my name-sake. He is a good example of a well-developed Indian—physically—and he has always been so gentle, and good, and kind that I have high hopes of his future usefulness. I should like very much to visit Hampton to see them and you, and confer with you and others as to their welfare, but I fear it is not in store for me in the near future. I stick very closely to my work generally, and hence seldom leave it. I think it would do you good and heighten your interest to make us a visit, which I shall be glad if you will do. I am exceedingly interested in this experiment, and I think the right course has been taken to make it a success. I only regret that there is not an equal number of girls there. For the future of the boys, that is very important. If the future wives and mothers of the people are rescued from heathenism and barbarism, the true civilization of the people is secured. Otherwise, it will be a failure, or, at least, a partial success. Such an experiment as this was tried by the Government many years ago in Kentucky; but it lacked the moral and religious element which this one has, and was to a large extent a failure, and necessarily so. The youth, without religious principle to guide them, returned to their people to find themselves like fish ont of water, surrounded by darkness and heathenism, and finally tired of maintaining an isolated position with no sympathizers among their people, and looked down upon by the surrounding whites, they threw themselves into their old life and became worse than the generality of their people. Then too, there was no attempt to educate girls, which made the matter worse than it might have been. I shall be glad to hear from you at any time, and, if I can be of any use to you in this noble undertaking, please command me. Our work here goes on quietly, and I hope successfully. Our Sunday morning congregations are crowded, and singing and responses are very inspiriting.

Please give my sincerest love to tha Indian boys and girls. So far as I know, their relatives are all in good health.

Sincerely your friend,

Joseph W. Cook.

The following statement was recently handed to us by an old and tried friend of the Indian race, and is well worthy of publication.

Comparative condition and progress of the Central Superintendency—about 16,000—as shown by their schools, pupils, and productions, between the years 1868, 1875 and 1878, and which illustrates the effect of the peace policy, which commenced in 1869.

	1868	1875	1878
Number of Schools	4	15	15
" " Pupils	105	886	*973
Acres of land cultivated by Indians	3,220	14,499	18,495
Corn raised, number of bushels	31,700	320,500	440,540
Wheat " " "	833	28,032	†
Potatoes " " "	1,773	17,102	15,200
Hay raised, Tons	750	4,996	5,850
Horses, ponies and mules owned by Indians	17,924	25,921	220,844
Cattle raised	640	9,540	‡12,699
Hogs "	1,074	12,266	18,021
Houses owned and occupied by Indians	none reported.	1,042	1,356

* If the school accommodation had been sufficient the number of pupils would have been much greater in 1868.

† Mostly lost by rain, and not reported.

‡ During the last three years named there were probably about 15,000 horses stolen from the Indians by professional horse thieves who made regular excursions through the Indian Territory selling in Texas the horses stolen in their journey southward, and in Kansas those stolen in the journey northward.

The above was taken from official reports.

Benjamin Tatham.

January 25th, 1879.

A NORTHERN WIFE.

From rather far north, to be sure, and not much like a trim Yankee housewife is Mrs. Hans Christian in her arctic home, which, I am afraid, smells more of seal-oil and whale-blubber than of soapsuds and whitewash. But a wife's and mother's heart beats under her queer fur wrappings, and she has passed through some wonderful adventures with her admiring husband, who has written them all in a book.

Everyone who has read Dr. Kane's Travels in the Arctic Regions remembers tho Doctor's brave little Eskimo guide, Hans Christian. The Eskimos are the native Indians who are at home in that desolate frozen country, and, no doubt, think it the best land the sun shines upon, though for nearly six months at a time, all through the winter, it does not shine at all. For two of these terrible Arctic winters, Dr. Kane's ship was frozen fast in the ice, but he made many expeditions in his sleds, drawn by the sturdy Eskimo dogs, and in these dangerous journeys Hans was very useful.

In after years he was employed by other travelers, and had many adventures. His book describing them was written in his own Eskimo language, but has been translated. It begins thus: "To relate how the northern part of the big country came to be explored, I write this, I, Hans Hendrik."

It was while he traveled with Dr. Kane that he resolved to marry, though for a time he seemed to have some trouble to get a wife; for, "Afterwards," he says, "I got a sweetheart whom I resolved never to part with, but to keep as my wife in the country of the Christians. Since then she has been baptized and partaken of tha Lord's Supper." His resolution was carried out bravely, and his little wife, Merkut, went with him on most of his travels thereafter.

The most wonderful of all his adventures was shared by both his wife and their baby. In 1872, he was asked to join an American exploring party under Captain Hall, in the good ship Polaris. Of course Merkut and the three children must go along. They had a good journey and got much nearer the North Pole than the last party had, when troubles began. Captain Hall sickened and died. They left him in his lonely, frozen grave and started southward, but were overtaken by the winter storms and darkness. They had to tie the ship fast to an iceberg and spend tha winter there. It was a longer winter than usual and the ica held them fast till the next August. About thet time, a new baby was born to Hans Christian; Charles Polaris Hendrik they called him, after the good ship, which drifted on southward for two months, and then seemed so disabled—strained and leaking—that tha women and children, and some of the men, with plenty of provisions, were put off on to the ice. Still, they meant to stay together, and were greatly distressed one dark night, to find that tha Polaris had broken loose and drifted away from them. It could not get back to them, and they were left alone—ten white men, the two Eskimo guides, Joe and Hans, with their wives and five children, one of them a baby two months old. Fortunately, Captain Tyson and the seal hunters and bear hunters were with them.

The ice they were on was not part of the main land, but a large floating cake, on which they sometimes drifted, sometimes rested, as it was caught and frozen in; floating about thus in Baffin's Bay, strange as it may seem, for six months—all the winter and spring—till at last they were picked up by the Tigress off the coast of Labrador, 1,500 miles from where they started. The Tigress took them to Newfonndland, and you may be sure the edventurers were taken good care of, especially the little Polar baby, snch a traveler as he was. One would think that voyage would have satisfied Hans himself, but he tried it once more with an English expedition, this time, however, without his family, and feeling very homesick for them.—"Often falling a-weeping; remembering my wife and little children, especially that little son of mine who is so much attached to me." He reached his Greenland home in safety, after having gone with the expedition nearer the North Pole than any travelers had been before, and no doubt Mrs. Hans hopes that he will be contented now to stay at home.

THE PITCAIRN ISLANDERS.

Lick House, San Francisco, Nov. 9, 1878.

Gen'l Armstrong, Hampton, Va.—

My dear Sir: The book you sent for the good people on Pitcairn's Island has been received and will be forwarded by ship "Harvey Mills," which is here and loading for Liverpool. I take great interest in these Islanders as they are truly good people, and I know they will prize your book. I opened the package and found the book very interesting. I am a Virginian, but have not visited my native State since I first went to sea in 1847. I have as the sailors say, "knocked off going to sea and am contented living ashore," as I have done for the past five years, though for eighteen years, I have been in command, and for the last five years of my going to sea I was in command of steamships. There are about fifty of the original Pitcairn Islanders now living on Norfolk Island. They propagated so fast they found Pitcairn Island too small (being not four miles square) to support them all; so the English government took some to Norfolk Island, and I occasionally send them some things. Would send them one of your books if you have another to spare.

Thanking you for your thoughtfulness,

I am, respectfully, &c.,

H. G. Williams.

On the Farm.

HINTS FOR WORK.

From the American Agriculturist.

Liberal Feeding is true economy. The aim should be to induce animals of all kinds to eat all they have a good appetite for and digest, by changing food and also changing the methode of preparing it.

Oil-cakes.—Cotton seed and linseed oil-cakes are too much neglected as food for stock. When these are mixed with equal parts of corn, the food is perfectly adapted to the sustenance of animale, because there is a proper proportion of flesh and fat forming substance; food that is deficient in either of these elements is neither healthful nor profitable.

Bran is a valuable food, and it is a fact that in feeding a ton of bran we can get back a large part of its cost in the extra value of the manure made.

The value of the manure should be a serious consideration in feeding. By using concentrated foods of the kinds above referred to, we are actually laying in a supply of the most valuable artificial fertilizers at the lowest possible cost. It is, in fact, making two profits from the same outlay; one in the shape of a useful food, and one in the extra quality of the manure; and the latter is frequently one of the most important points to consider in feeding.

The best way of managing manure depends upon circumstances. It may be drawn to the fields and heaped in a pile, or spread at once upon the land, or piled in the yarde. But the worst management is to scatter it around in the barn-yard and permit it to be frozen or trampled into the mud.

To wheel manure easily, a few planks should be provided on which a loaded wheelbarrow can be taken on to the top of the manure heap. The saving of time in one winter will not unfrequently, more than pay for the planks several times over.

In the Southern States, no time should be lost in gathering all the manure possible and making composts ready for planting, which begine this month.

Oats.—The earlier spring oats are sown the better, after the soil will admit. If not wanted for the grain, this crop will make valuable fodder.

Clover may be seeded immediately after oats, and brushed in; a good dressing of artificial fertilizer will greatly help the clover and prevent drying out when the foster crop is removed. The clover ought then to be stout enough to cover the ground well.

Orchard grass is one of the most valuable grasses for the south. It will thrive well in open woods and shaded fields, and for pasture in the warm months there is nothing better. When sown with red clover, both are ready to cut for hay together.

Potatoes may be planted this month on fall plowed ground and covered deeply. If frosts are feared after the sprouts appear, they may be covered by hoeing, or a shallow furrow thrown over them.

Preparations for corn and cotton should be made at once. When abundance of manure is not to be had, some artificial fertilizers should be procured.

Large crops on small areas.—It ought to be the effort of every farmer to grow as much as possible upon the least ground. This is economy of labor, of seed and of time. To this end the plowing, harrowing and fertilization of the soil should be thoroughly well done, and the best seed used.

Grass Lands.—In the South there should be more attention given to permanent meadows, as well as green fodder crops. There are thousands of localities well adapted for irrigation, and water meadows may be made cheaply where the ground admits of embanking and flooding. With abundant grass, plenty of stock can be kept, plenty of manure, made and then large crops of fodder, grain, and cotton will be secured. Grass occupies a prominent place as the basis of agricultural wealth.

Seed should be selected or procured at once. By and by, there will be too much hurry to do this as well as it ought to be done. Nothing but the best should be used, and it will pay to pick out weed seeds or imperfect grains by hand, if it can not be done better otherwise. Every time this is done, the work will be lighter and the quality improved.

Find Work for the Hired Men.—A man must live the year around, whether he is working or not. If he is idle during the winter, he must earn enough in the summer to sustain himself when he is idle. It is just as cheap therefore, to hire men for the whole year and to find work for them during the winter, as for eight or nine months. An intelligent farmer can easily keep his men at profitable winter work.

Live Stock should be kept comfortable and clean. Examine calves and yearlings for lice. These pests will be found along the hack and on the neck. Rubbing the skin with crude petroleum will destroy the vermin. Kerosene oil should not be used unless it is diluted with an equal bulk of lard or sweet oil, as it will inflame the skin and cause sores and wounds. Look back at the past months for particular directions, which need not be repeated.

Poultry.—If the hens are kept warm, and are fed well with warm feed once a day, and provided with clean nests, eggs will soon be plentiful. Hens that have been laying may became broody and may be set, if a glazed coop is provided and placed in a sunny spot before a window in a warm poultry house. One early chicken thus raised will be worth in market during summer as much as two or three later ones.

Avoid Exposure of the animals to cold when they are warm. If a horse is brought in, warm and wet with sweat, rub him dry before putting on a blanket. He will then keep warm; otherwise he will become chilled by the damp blanket and take cold.

Early Lambs and Calves are to be provided with warm pens and kept dry and clean during February.

THE OCEAN COTTAGE SUNDAY SCHOOL.

Hampton, Va., *Jan. 7th*, 1879.

Dear friend:

To fulfill my promise I will now give you a brief outline of the history of the Ocean

which was largely attended. We now divided the school into five classes, having for teachers Bro. Morse, Bro. Whitehurst, Bro. Robinson, Mrs. Rowe and myself; but the classes were much too large, so with Gen. Armstrong's approval, three of the graduates of

school and Sunday School purposes.

I have allowed the work which has been developed by the increase of the Ocean Cottage Sunday School to recommend *itself* to the generosity of people, and am happy to say

THE OCEAN COTTAGE SUNDAY SCHOOL.

HAMPTON, VA., *Jan. 7th*, 1879.

Dear friend:

To fulfill my promise I will now give you a brief outline of the history of the Ocean Cottage Sunday School.

It began on the first Sunday in July, 1877, in a rather singular manner. I brought my family from Connecticut to Hampton the latter part of June, 1877, and we finished moving into Mr. A——'s house on the other side of the Creek, which we called the "Ocean Cottage," on Saturday afternoon. Sunday morning was very warm, the church about two and a-half miles distant by the highway, and a mile by water, so we concluded not to attend service till the following Sunday. The morning hours passed heavily, and I was looking forward to a long afternoon when my attention was called to three children who were playing on the beech in front of the house. I walked leisurely out to where they were, so as not to frighten them away and began talking to them—finally asking them to come in, which they did. We sang, with melodeon accompaniment, several of the Sankey and Moody hymns to them, which seemed to please them very much, and when they were ready to go home, we gave them some Sunday School papers. We asked them if there were any more children in the neighborhood, and received the answer from a little boy, "Yes, sir, there's right smart of 'em." So I told them to coma the next Sunday morning at half-past nine, bringing as many of their little companions as were willing to come, and we would have a little Sunday School.

The next Sunday morning I was very much surprised to see *seventeen* children, ranging in age from four to fourteen, flis into the piazza, and thought I had got myself into trouble, for all at once the amount of responsibility I was taking upon myself dawned upon me, but concluding that there was nothing like trying I began the work, which was not only easy, but quite interesting and pleasent.

The lesson which I taught them first was "The old, old Story," of the birth, life, works, love, death and resurrection of Jesus; how much He was willing to suffer and do for us that we might have salvation; how little Ile asked in return; and I asked them if they would not love a human friend who would give his life for theirs? if they would not feel that the devotion of their whole existence was small for such a display of heroic love? and how they could refuse their love, obedience and submission to His will who was willing to suffer and die for them? The session lasted one hour and a-half—e general talk—during which the little ones paid strict attention. Tho melodeon had been brought out on the piazza, and after playing and singing to them "Jesus paid it all," we united in the Lord's Prayer, and they went homc—promising before leaving to coma again the next Sunday morning.

In August, 1877, we lost two of our members by death, Willie Tolliferro and Mary Braxton, aged respectively twelve and six years.

The school rapidly increased from seventeen to forty-five, some of the older ones coming in occasionally, and that was the number when we moved into the Printer's Cottage, on the Normal school farm in Novemher. I feared then that the school would have to be given up for the winter at least, for want of a room; hut thet cloud was quickly dispelled—for upon telling Brother Cherles Smith of its needs, he, without hesitetion, gave us the use of his largest and best room with a good fire in it for our school, and it is to his generosity that the school owed its existence all last winter. He used to coma in now and then, but he is now our Treasurer, and is regular in ettendance—also his wife, son, and adopted daughter.

Just before Christmas, 1877, the 1st Congregational Sunday School of Litchfield, Ct., of which I have been a member ever since I was four years old, sent me three hundred and fifty Sunday School books, to be distributed as I saw fit. One hundred volumes were given to the Ocean Cottage Sunday School; one hundred and twenty were given to Hampton graduates; the remainder, with the exception of ten given as prizes and thirty which I still have, were given to Sunday schools in Hampton. They heva also sent me papers for the school, from time to time, also their penny collection for the quarter ending Dec. 29th, 1878, amounting to $21, to be used at discretion as opportunity may offer. The 1st Cong'l church, of Litchfield, Ct., of which we are members, sent me, through tha Bible Society, twenty-five 75-ct. Bibles, which were used on our Christmas tree, Dec. 31st.

In the spring, 1878, our school numbered seventy-five, which made it too large for our accommodations, so we decided to erect an arbor, which we immediately did. It was not elegant in appearance, being about forty feet long by twenty feet broad, covered with bushes, and capable of seating about one hundred persons; but the Spirit of God was evidently there, for we gained a goodly number of members for our school, and we held an afternoon service in it every other Sunday, which was largely attended. We now divided the school into five classes, having for teachers Bro. Morse, Bro. Whitehurst, Bro. Robinson, Mrs. Rowe and myself; but the classes were much too large, so with Gen. Armstrong's approval, three of tha graduates of '78, Miss Clementine Lumpkin, Charles Jones, and Jacob Brown, used to go over with us and teach every Sabbeth morning.

In May we had a picnic which was much liked by all who attended it. On the same day, fears which had been entertained for abont a week were confirmed, in finding the body of one of our scholers, Alex. Hatton, a young men who was drowned while attempting to cross Hampton Roads in the terrific gale which occurred last spring.

We had another picnic on the 4th of July last, in which the students that remained at the Institute for the summer joined, and the day was very pleasantly passed.

Brother Herbert, a licensed Baptist preacher, who lived in the neighborhood, and who was decidedly opposed to tha school for more than a year, because of offense given him hy some of the people who sent children to it, was finally "fully persuaded" to come and join us, and is now one of tha most useful members we havs.

In this connection, I will mention tha afternoon meeting which we held every other Sahbath. Half an hour was occupied by myself—talking on such topics as "Looking unto Jesus," "Christ the way," and "The Holy Spirit;" Bro. Morse, another licensed Baptist preacher occupying the remainder of the time. When we first proqosed the meeting the people were quite enthusiastic for it, but they were hardly ever on time.

Many of the people did not like Bro. H., because they thought he felt above them, and had said that they would never sit and hear him preach. After he had joined our school, on gaining his consent, I gave notice that we would have Bro. H. preach for us on the following Sunday afternoon. Several of the older men told me that we would probably have no meeting, as the people would not come to hear *him* preach. One hrother told me that he had always considered me in the right, but he tbought I was making a mistep this time. At two o'clock, the hour appointed for our meeting, no one was there; at half-past two we were no better off; so I came to the conclusion that they must be waked up. I walked from house to house (it was intensely hot that day,) asking at the door, "Are you coming to our meeting this afternoon?"—receiving an affirmative reply at every house, and at half-past three we began our service with singing, and with e congregation of about ona hundred. He took for his text, "Behold I lay in Zion a chief corner stone, elect, precious, and he that believeth on him shall not be confounded." The discourse was quite interesting throughout, but one passage in particular seemed to me very remarkable; it was: "I do not know so much about the golden and silver slippers that our people are so apt to think they shall hava when they get to heaven, but I do know that I shall be like Christ, and that will be enough for me." After that he preached very acceptahly to us several times, and had good audiences.

In July, the angel of Death again visited our school and took from us a very sweet little girl of five years—Lulu Thomas. She said a few days before she died, "I am going to Sundey School when Mr. Rowe comes, whether it is Sunday, Monday or Wednesday." But on Wednesday evening a greater than Mr. Rowe came, and summoned her away to join that upper Sunday School which is ever hymning its praises around the throne of God.

Our school is testing again this winter the generosity of Bro. Smith, and ha certainly bears the test wall, for every Sahbath morning we find the room in perfect order with a good fire in it. We sincerely hope and trust that God will fully repay him for the kind interest he has taken in this work, as we never can.

Brother Samuel Sterrotte of the Normal School has given us his services for the past five or six weeks, and we hope he will continue till he graduates. He may rest assured that his efforts are thoroughly appreciated.

Last summer, Mr. A—— asked me to see what the people over there would be willing to do towards the support of a teacher provided a school-house be arected. Several meetings were called and $45 were pledged for that purpose. My illness of two months put an end to the matter for a time, but on Thanksgiving Day I visited the people, and succeeded in raising the amount pledged to $86.75. Gen. Armstrong then promised to give $1 for every $4 that they would give, which added to the amount already pledged would give a total of $108.43½, which would support a teacher about fiva months. Mr. A—— is considering the metter of erecting a school-house and will probably do so whenever he can fix upon the best location.

Mr. Cock has given us a beautiful site, to huild a church or a school house on, and it is intendad, as soon as funds can be raised therefor, to erect a building thereon for school and Sunday School purposes.

I have allowed the work which has been developed by the increase of the Ocean Cottage Sunday School to recommend *itself* to the generosity of people, and am heppy to say that every donation which it has received has been a free-will offering. Tha generosity of the ladies of Hampton Institute in giving us so much for our Christmas tree, (which was the first many of the older ones had seen) and the courtesy extended to the school in helping to distribute the presents; of Gen. Armstrong in giving us the use of the White Chapel in Virginia Hall, for our tree; of Mr. Hamilton in leading the singing; of the First Cong'l church and Sunday School of Litchfield, Ct., in sending us twenty-five reference Bibles, and $21 in money; and tha kind words of encouragement spoken by Rev. Mr. Denison and Gen. Marshall, will ever be held in grateful remembrance. I am also much indebted to some unknown friend for sending me the "Sunday School Times," which is very interesting and instructive.

There is no rose without its thorn, and this work has certainly not been carried on without various discouragements; but it has prospered with the loving favor of God, beyond all expectation—the school now numbering one hundred and ten enrolled, ranging in ago from four to seventy-five, with an average attendance in summer of seventy-five, and in winter of about forty-five. The lessons, with the exception of the Ten Commandments, have been taken from the New Testament, until this winter. We have now commenced the Old Testament—taking the leading features—having the school commit and recite the whole chapter; after which I give such illustrations and explanations as I may be able—a general talk—as the room is not large enough for us to divida into classes.

It will he my endeavor in the future as it has been in the past, with the favor of God and the aid of generous friends, so far as is practicable to see that the children's bodies are clothed with warm clothing, their minds with education, and their inner life with the righteousness of Christ.

Yours sincerely,

GEORGE C ROWE.

JUST going to press, we have briefly to record a visit to Hampton Institute, from Gen. H. H. Milroy and Maj. Beujaoin M. Thomas, sent by the Indian Department in Washington to inspect the Indian work of the school. They were accompanied by Col. A. B. Meacham of Washington, editor of the "Council Fire," a paper published in the interest of the Indians. Gen. Milroy, after passing through the Mexican and Civil wars, and making a name as Maj. Gen. of Volunteers in the campaigns in the west, was appointed Superintendent of the Indians of Washington Territory and, since that office was abolished, has been agent of the tribes in that territory, along the Puget Sound, laboring with great earnestness for their elevation, and intending to give the rest of his life to the work. Major Thomas is working as faithfully for the Pueblo Indians in New Mexico. Col. Meacham is well known by his enthusiastic championship of the red men, to whom he bears no grudge for their rather rough handling of him in the terrible massacre of Gen. Canby's forces a few years ago.

The gentlemen examined the various departments of the school, inspecting the Indians in their rooms, classes, work, &c.—and expressed very great satisfaction with their condition and prospects under the methods pursued for their training. They also met the whole school in its assembly room, and addressed the students, making eloquent appeals to the colored students to repay the efforts made for them by opening their own hearts and extending their helping hands now to another race. Col. Meacham gave a thrilling account of his own escape from death through the intervention of an Indian woman, who like another Pocahontas risked her life to save him when "Scar-faced Charley's" foot was on his neck and his fingers in his scalp. He forcibly remarked that if he could forgive Indians and believe in them, any one can, and that he does, because he sees so clearly that their evil is the the result of their wrongs, and that like that poor Indian woman, they are capeble of generous and noble deeds if they only are given a chance. The addresses were all listened to with deep interest, and how well their appeals are responded to on the part of the colored students may be seen in the fact that two days after, some of the Indians asking if they might have more opportunities for talking English, on the request being laid before the colored students, more than twenty young men volunteered to take each an Indian room-mate to help him on in the language. It is believed that tha mutual exchange of good will, and enlargement of the heart to take in other interests than their own will be one of the best results to both races, of tbe new enterprise at Hampton.

THE President of the U. S. fish Commission last week placed in the Pemigewasset River 1,000,000 young salmon, making a total of 2,000,000. The United States Fish Commissioners all over New England report great success in efforts in hatching thus far.

NEWS OF THE MONTH.

FOREIGN.

ENGLAND has concluded the purchase of Cyprus.

ADVICES from Samoa report that civil war is imminent.

THE Russo-Turkish Treaty was signed on Saturday, February 8th.

HEAVY failures and labor strikes continue to take place in England.

LORD Augustus Loftus has been appointed Governor-General of New South Wales.

Seven of the Glasgow Bank Directors have been convicted and sentenced to imprisonment.

THE Swiss village of Meyringen has been almost totally destroyed by fire. It has been a great resort of tourists.

The Plague is still advancing and the most strenuous efforts to arrest it, even to the burning of infected villages, are proposed.

The Marquis of Hartington was installed Lord Rector of Edinburgh University on the 31st. i His inaugural speech was an exhortation to adhere to liberal principles.

The crisis of France has been safely passed. President McMahon has resigned; M. Grevy has been elected his successor, and M. Gambetta President of the Chamber of Deputies.

A despatch from Brussels states that HENRY M. STANLEY, the explorer, was present at the recent meeting of the Conference on the Civilization of Africa, held in that city, and said that he would lead the Belgian Exploring Expedition, which is soon to start for Africa.

A despatch from Vienna states that a treaty has been concluded between Germany and Austria-Hungary, by which the latter reconnces the right, secured by article five of the treaty of Prague, of calling upon Prussia to permit the voters of North Schleswig to decide by plebiscite whether that province shall be restored to Denmark.

A despatch from Cape Town, South Africa, January 27th, says: "On the 21st inst. a British column, of 500 men, a portion of the Twenty-fourth Regiment, a battery of artillery, and 600 native auxiliaries, was utterly annihilated, near the Tugela River, by 20,000 Zulus, who captured a valuable convoy of 102 wagons, 1,000 oxen, 2 cannon, 400 shot and shell, 1,000 rifles, 250,000 rounds of ammunition, 60,000 pounds' weight of provisions, and the colors of the Twenty-fourth Regiment. Among the killed on the British side are two majors, four captains, twelve lieutenants, and the quartermaster of the Twenty-fourth Regiment; two captains of the Royal Artillery, a colonel, captain, four lieutenants, and surgeon-major of engineers, besides twenty-one other British officers commanding the native levies. It is estimated that 5,000 Zulus were killed and wounded in the battle. Reinforcements have been sent from England.

POLITICAL.

A BILL has passed Congress authorizing the taking of the census for 1880.

THE hill to restrict Chinese immigration was passed by the Senate by a vote of 39 to 37.

THE hill admitting women to practise in the U. S. Supreme Court, was passed in the Senate on Friday last, by a vote of 40 yeas to 20 nays.

A BILL to pay arrearages in Pensions has passed Congress. The bill makes good the claims of pensioners from date of discharge instead of time of application for pension, as heretofore.

THE following senators have been elected; Indiana, Hon. D. Voorhees; Wisconsin, Hon. Matt. H. Carpenter; Michigan, Hon. Zach. Chandler; Illinois, Hon. J. A. Logan; Missouri, Messrs. Shields and Vest; Connecticut, Orville H. Platt; New York, Hon. R. Conkling; Pennsylvania, Hon. O. Cameron; N. Carolina, Hon. Z. B. Vance; Maryland, ex-Gov. Groome; Florida, W. Call; Louisiana, Mr. Jones.

WASHINGTON, February 11.—The river and harbor bill, which was concluded by the Committee on Commerce to-day, contains the following among its appropriations: James river, $60,000. Appomattox river, $10,000; Rappahannock river, $10,000; Norfolk harbor, $50,000; North Landing river, $25,000; Cape Fear river, $5,000, and a large number of other appropriations ranging from $5,000 to $100,000 for the improvement of Southern rivers and harbors. The total amount appropriated by the hill is $5,786,000.

DOMESTIC.

ROBERT Carter of Boston, a gentleman of large journalistic and literary experience, is dead.

THE cattle disease appears to be spreading both in this country and in England, notwithstanding vigorous efforts are made to arrest its progress.

A MOVEMENT has been started by representative colored men for a convention to consider their condition, wants, &c., and a call has been prepared for the convention to meet at Nashville, May 5th.

A TORNADO struck the town of Lockport, Texas, on Sunday evening, Jan. 26, demolishing forty houses, including churches, the Court House and Masonic Hall. A child was killed, and several persons were badly hurt.

ON the 24th of January Mr. Andrew Wallace rode his horse across the ice bridge which had formed just below the falls at Niagara. Not satisfied with this, he ascended to the summit of the ice mountain at the base of the American Fall.

PAUL Boyton, the swimmer, is at Pittsburgh waiting for the flow of heavy ice in the Ohio to become reduced, so as to make a voyage down that stream and the Mississippi in his rubber suit to the Gulf of Mexico. It is thought he will be able to start soon.

IT is stated that although the physical condition of Gov. Hampton of South Carolina continues favorable, it is probable that another amputation of the leg-bone will be necessary, as the flesh has receded and the wound cannot heal over in its present condition.

ON Thursday, Feb'y 20, a fire broke out in the works of the Barbour Flax Spinning Company in Spruce St., Paterson, N. J., and quickly spread to the mill-wright shop of the Rogers Locomotive Works. It was a large five-story brick building, and had lately been filled with fine new machinery. The building that was destroyed cost $60,000. The machinery cost $150,000. The total loss for Mr. Rogers is estimated at about $250,000.

IT is stated that Newfoundland will get $975,000 of the Halifax fisheries award money and Canada $4,387,500, the remaining $437,500 being retained by England till the expense accounts are settled. Prince Edward Island will demand $1,000,000, and possibly half of the Dominion's share, on the ground that it was shown at Halifax that the island fisheries were more valuable than those of any other province, or all of them combined.

ONE State at least gives a good account of its finances. Governor St. John, in his message to the Kansas Legislature, shows the, receipts of last year to have exceeded the expenditures by $314,000. The bonded debt is hut $1,182,000, and of this the State holds $468,000 in the Sinking and School funds. The value of school property is $4,327,000 and the permanent school fund amounts to nearly $1,450,000. These details indicate a prosperity that is on the right basis, not the basis of an enormous debt.

All Former Years Outdone.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST Prize over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines. These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,833	Singer Machines
1871	181,260	" "
1873	219,758	" "
1873	232,444	" "
1874	211,079	" "
1875	249,832	" "
1876	262,416	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

TRACT NUMBER SEVEN.

THE Tract (No. 7) which should have

EMIGRATION TO LIBERIA.

set free, and the young and earnest and able among them are rising to a plane of Christian manhood and womanhood, the wonders and resources

TRACT NUMBER SEVEN.

THE Tract (No. 7) which should have appeared in our present number, has been prepared for the Hampton Tract Committee by a well-known physician, but owing to an unavoidable delay it did not reach the printer in time for publication this month, and in its place we offer our readers Gen. Armstrong's speech before the Colonization Society, trusting that it will enable them to forgive the break in the series of tracts which the committee sincerely regret, but could not prevent. To all interested in the question of Liberian emmigration, or indeed in the question of the future of the colored race in the United States, we recommend a careful reading of Gen. Armstrong's speech, as his opportunities for observation in these directions have given him unusual advantages. M. F. A.

A FIELD FOR WORK.

COLPORTAGE AMONG THE COLORED PEOPLE.

Any suggestion from Col. Preston of Lexington, Va. is worthy of attention. We print below an extract which he sent, with valuable practical suggestions.

Moderate aid from the North would be needed in this enterprise. The mass of the colored people do not receive any benefit from the Tract Societies and Sunday School agencies which do so much for the whites.

Bad literature, obscene books and nasty pictures will soon find their way among the ex-slaves as they become educated. Efforts for the spread of interesting and pure writings is most timely.

"One of the characteristics of the race since emancipation is their eagerness to acquire the art of reading, and the rapid success in this particular. It is equally true that they are fond of using their new acquisition. This makes an open, and an inviting field for the distribution of suitable books among them. Nor would they be backward in buying.—In proportion to their means they are very ready to spend money. Perhaps a skilful colporteur with a supply of cheap, suitable books and scripture pictures, would support himself more readily than most of the colporteurs among the whites. The distribution of the Bible would be a part of the work. The colporteur ought to be a minister, colored of course, energetic, prudent, and devoted to his work. If of good ministerial talents, he might by preaching be of great service in setting forth the importance of intelligence in religion, sobriety in worship and Christian morality in life. S. L. C."

LEXINGTON, VA., *Jan.* 14, 1879.

Gen. Armstrong—Dear Sir:

I do not know whether you read the Central Presbyterian, or if you do, whether you noticed the enclosed article (on colportage) which I take the liberty of sending to you. In it, I have offered a suggestion which seems to me of much practical importance. The benefits to be derived from it, I shall not enlarge upon to you. But if you approve of the plan, I should like to engage your practiced skill, energy and experience in setting it into operation.

1. The necessary means. I think that with a very small outlay at the start it would support itself.

2. The man or men to act as colporteurs. I should think that, if anywhere, they could be supplied from the Hampton Graduates.

3. The books. Surely they could be had, if not as donations, upon very reasonable terms, from the various religious publishing houses. The list at first need not be much diversified. For books I would head the list with an abridged and illustrated copy of Pilgrim's Progress, and for tracts the Hampton Sanitary Series; the "Haunted House" which is most admirable, and would be acceptable and useful in a circulation much wider than among the colored people only. Authentic, interesting and profitable biographies could be had without difficulty, and scripture pictures and ornamented cards abound and would be highly attractive, and in my judgment useful. But all this detail you understand much better than I do.

4. Where to begin. In Virginia. And it seems to me in the Valley of Virginia, where the colored people are much in advance of the race in general.

Now briefly, and abruptly, cannot you, or some of your co-workers undertake this enterprise, and make it successful if success is in it?

Were I competent (perhaps at any rate if I were younger) I would not seek to devolve the labor upon another. You may, however, rely upon my best co-operation.

Yours,
J. T. L. PRESTON.

EMIGRATION TO LIBERIA.

A PAPER READ BEFORE THE

American Colonization Society in Washington D. C.,

Tuesday, January 21st. 1879.

BY

S. C. ARMSTRONG.

What is the sentiment of the colored people of this country, the South especially, in respect to making the United States their home, and in respect to emigration to Liberia?

A few evenings ago, I asked of the over two hundred young colored men and women who have come from thoughout the land, principally from the South, to the Hampton school for an education, what they thought of going to Liberia. A dozen hands went quickly up. I inquired of each one the ground of his idea. A variety of reasons was given that, I believe, fairly illustrates the status of the negro mind on the Liberia question.

One young man had, in the spirit of Christian discipleship, consecrated himself to the work of preaching the gospel in that land; several felt that in this country the negro never will be, as they expressed it, "free;" that the black man is and will be far from being free to all that is open to the white men, and that only in a land of their own can they be on even terms with all, and find the freedom which they seek.

The students had heard of coffee culture in Liberia and of other inducements to go; but, on the other hand, some were awaiting letters from friends who had gone over promising to write how they got on, but had never been heard from; some had heard of great havoc among emigrants, and there was a general sense of insecurity and uncertainty as to that country.

One fair-skinned, bright girl had an uncle who had organized sixteen churches in Liberia and was full of hope and enthusiasm. She meant to go as a missionary; other young women had the same idea; the great majority had no thought of emigration, and many had decided notions against the Republic.

As a whole, the students of Hampton expect to remain in this country, their idea being expressed by one who said "The colored man is better off here than anywhere else in the world."

Our students have, more than once, been addressed by prominent Southern men who have said to them, in effect: "Many of you are Virginians; we must work together to build up this Commonwealth. We believe in this work of education; you shall have your share of the school money and we will protect you in your rights."

This is the tone of progressive men at the South, and their strength is indicated by the fact that, at least in Virginia, no Democratic candidate dares venture, in his canvas for election to office, to denounce the public school system.

The intelligent colored men and women who are honestly working for the real welfare of their people in the Southern States, are, so far as I know about them, winning the respect, good-will and moral support of the people of all classes, and in spite of many discouragements, are generally cheerful and contented. Even the average freedman does not care to change his home. Yet, in some quarters, there are grievous complaints of hard times, poor pay and bad treatment, which create a desire for a place where living may be easier.

It would be strange if among the four millions of Anglo-Africans there were not men of honest purpose, and good capacity, anxious to try a country of their own. The missionary idea is gaining strength every year. The little company of graduates from negro schools in America, one of them from Hampton, who are doing excellent work at the Mendi Mission, under the American Missionary Association, near to Liberia, is proof that the peculiar field of the enlightened freedmen of this country is not forgotten.

The American Board of Foreign Missions in Boston is looking to the South for men to enter the grand field opened up by Stanley whenever the means shall be in hand; and I do not think it will seek in vain.

Twelve years ago an earnest but unsuccessful effort was made by that Board to secure colored missionaries for Africa; yet there were many scores of educated negroes in the Northern States.

We are likely, I believe, to find in the South the finest products of Anglo-African civilization, a better, simpler, more straight-forward development. Thence, not exclusively of course, will go across the sea the men who will best illustrate to the world the capabilities of their race. White men will get a large part of the money that is to be made from African trade, but I have faith that colored men will do their full share in the work of regeneration waiting to be done there, the need of which is the most piteous "Macedonian Cry" that ever was sent over to Christendom.

Africa—Liberia as one of its open doors—is the field for an Anglo-African crusade. No other region is for a moment to be thought of compared with this. Just as, in the Providence of God, his people are set free, and the young and earnest and able among them are rising to a plane of Christian manhood and womanhood, the wonders and resources of the Dark Continent are unfolded. Who doubts the final triumph of right over wrong in the carrying back there of the very Christ to build up whose Kingdom the slave-hunters were unconscious agents.

But there must be men and women of pure devotion and lives, of clear, wise heads, and endowed with common sense. The requisition for common sense will be the hardest to fill.

Among our colored people there is a discontented class; on edge with things here; much occupied with its grievances, and, those of this class who are plucky and adventurous, are disposed to try the Colored Republic.

As things are here, the finer the cultivation of a colored man, the keener his sufferings—especially in the North, where his mental and moral wants are so lavishly supplied, but his social cravings neglected, and his tinted skin is a *taboo* from congenial association. I think I am right in stating that their advanced culture in America tends to skepticism. The old religious nature is, to an educated negro, withered by the pains that comes from finding that that which God made, his complexion, is as a sign set against him; a mark of degradation.

Yet among the colored people themselves there is a prejudice of color, here unobserved, because overpowered by that of the whites which lumps together under its ban the purest black and the clearest white (provided a few drops of negro blood can be traced to the latter,) and by making common cause between them forces them into one social body. Remove this pressure from the outside and those of pure and mixed blood become mutually jealous; the latter assuming a superiority by reason of the white or "Norman" blood in their veins, and the pure being proud of their purity. This is illustrated in Jamaica where the whites, colored and blacks are completely severed socially. A trustee of Liberia College told me that this question had given some trouble in the appointments at that institution, and it appears in Liberian politics. Going over there is not entire escape from prejudice of color.

There was evinced, in my conversation with the students at Hampton, much curiosity about Liberia. They represent a class of negroes who take a very matter-of-fact view of that country; they wish to "better themselves," and in their pinching poverty, and in the money famine of the South, turn eagerly to brighter prospects.

Wise, just treatment of the colored laborer in the South is far from universal. I never saw or heard of a successful Southern farmer who did not believe in negro labor as "the best in the world;" yet one of the leading agricultural journals says, "We are cursed with negro labor."

The "darkey" is a convenient scapegoat for those who went to blame somebody if ends don't meet. Good, kind management and wise directing heads are indispensable to success with colored workmen, and that they don't always get; the latter depend very much for the value of their labor upon favorable outward conditions, the frequent absence of which is to be expected in their circumstances.

Liberia, as giving to the enterprising but discontented or ill-treated negro laborer scope and challenge for all his powers, is a most important factor in reconstruction. It is simple justice, very inadequate, but so far as it goes is a recognition of his claim to try the land he was torn from.

Thirty years ago, statesmen like Clay and Calhoun talked of the nation's debt to the negro, and this inspired the Colonization scheme, which commanded a strong support from the South. After slapping the abolitionists in the face with their talk of right and wrong, a later generation freed the slave as a war measure, enfranchised him, used his vote as political capital, and, after squandering it, have left the burden of his education and improvement to the old slave-holders. The account has not yet been squared. It is as true to-day as it was thirty years ago that there is debt to the race brought here by violence and wrong, and a part of that debt is a fair chance in the land of their fathers.

A difficulty in the Liberian question is the negroes' self-distrust. The race has sadly, perhaps inevitably, adopted the white man's idea of itself. It has, as a whole, no enthusiasm, no idea or sentiment.

It lacks organizing power, guiding instincts. It has no genius for throwing and keeping uppermost its best and ablest men; it has plenty of feeling, but no flow of it, no tendency to any clear and general end or purpose. Such tendency is developed slowly, by long experience, by endless struggle with difficulty ending in victory, and that the citizens of Liberia have just commenced. The ex-slave is not easily allured to a country ruled by his own people. I have an impression that the Liberians are lacking, like the race here, in *esprit de corps*, in patriotic sentiment and in strong administration.

There should be accorded to the freedmen the widest opportunity to make for themselves homes on African shores if they choose to try it. I rejoice in the existence of the Colonization Society, believing in its work, the founding of an African Republic. I believe in it as a beginning not as an end; a hopeful beginning; a good showing for thirty

years of effort. It is not a power; hut is it not a germ of power? Generations alone can answer this. To disparage it by contrast is to reproach the negro for being unfortunate. It were better to hlame the Almighty directly for his doings in permitting suffering, injustice and misfortune to exist.

Give the negro a chance. Yon don't despise the tottering steps of a little child: time and hard knocks only can bring strength. Let the black man's slender self-respect stiffen by struggle, and his race pride gain by race effort. In the United States it is a curse to be black; the highly educated negro is like a man without a country. Help him to make one for himself.

The African race has been pushed suddenly from the depths of bondage to the highest liherty; it bas skipped centuries in the line of development. On its unaccustomed height it is confused; it is in its own way; easily victimized by bad men, and troubles are inevitable.

Genuine progress is slow, and is the result not so much of struggle, as of successful struggle. The thing must not only be attempted, hut it must be done, and there should be a century in which to do it.

When a Northern man recently asked me "Have the colored people improved in morals in the past ten years," I asked him, "Has Now England improved in morals in the past ten years?" Every stage of civilization has its peculiar difficulties and nations forge slowly ahead.

Progress is a moral rather than a material thing. All that is good in civilization is "The sum of the sacrifices of those who have gone before us."

The African question, at bottom, is whether there will be enough men and women of that race who shall unselfishly and wisely devote themselves to its welfare. Whatever shall he fine in their future will rest on this foundation of sacrifice.

Has Liberia the men, or can she get them from here? With them her future is assured, and she will move Africa.

Ten such men would save her.

The Colonization Society claims much for its success so far. Considering that it has planted exotic ideas where men have for ages been fixed in the lowest conditions, the Republic may he considered a wonder. Compare it with the early stages of our own country's growth and there is nothing to discourage.

We know too little about her. The roll of pamphlets sent me to read contains no exhaustive statement of facts, hut general expressions of praise. I never felt really informed abont Liberia till I read the letters of Mr. Williams, correspondent of the *Charleston News and Courier*, whose mingled criticism and commendation made the Republic appear like any new terrestrial region, full of advantages and of disadvantages. For the first time I fonnd what an intelligent man would say against it. There is need of a fair, forcible account of that country, with maps and pictures, that shall be to the colored man what a chart is to a sailor—a guide to success and a guard against disaster.

How about colored communities in the United States?

A colony composed of the 450 manumitted slaves of John Randolph was, in 1846, placed in Miami County, Ohio. "They suffered much at "first from prejudice, yet soon found kind friends. While producing "nothing remarkable, the old have died off and the new generation has "made considerable advancement. They, however, owe more to exter- "nal influences than to inherent qualities." This statement I gleaned from an apparently reliable letter to the *New York Tribune*.

There are negro communities of which I have no definite knowledge, notably one or two in Canada; hut all, I believe, were established by an influence from without. Certainly, in America, the negroes show no tendency in themselves to segregate.

They drift to the cities in throngs, where their mortality increases and their self-respect, as a class, seems to diminish.

In a simple, industrious, country life, the freedmen gain in numbers and in average prosperity and worth.

Against this background of life in America, stands the Colony of Liberia, attempting achievements whose success its record here makes doubtful.

Let us wait and see the negro on his own ground, on his own resources, blundering away, hut slowly learning from his blunders—as we all do—getting experience and digesting it. Let the negro race maintain a respectable republic, and it will furnish the best possible answer to the charge so often made, "The negro has done nothing."

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal.* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable, &c., &c.

PALM SUNDAY IN JERUSALEM.

AN EASTER ALLEGORY.

In my garden, fair to see,

THE GABOON MISSION.

Mr. A. H. Tolman who taught at the Hampton Institute last year, sends the

Just think of that! The present belief of the negroes copied from the natives of Africa! Almost every word that the Doctor used in telling about witchcraft described conjure-doctor-

Jews, though they were under the immediate government of God—in Egypt—Josh. xxiv: 15; Ezek. xx: 8. At Sinai, Numb. xxv. In Canaan, Judges x: 6; under Solomon, Jero-

AN EASTER ALLEGORY.

In my gardan, fair to see,
I hava watched a mystery;
Watched, and counted wonders three.

First, a thing of lowly birth.
Creeping, clinging to the eerth;
What is such creation worth?

Shrouded next from feet to head,
E'en that low-born life has fled;
Why such care to keep the dead?

Wonder chief! Before mine eyes
Bursts the ehroud, and from it rise
Glorions wings that seek the skies!

As they float beyond my ken,
Somewhere breathee a whieper then—
"Man who dies shall live agein.

"Is thy life of narrow range,
Full of toil and trouhle etrange?
Patiently abide thy change.

"He whom most thou lovest lies
Shrouded from thy longing eyes?
Ona dey thou shalt see him rise.

"Feed thy soul on truth that so,
Still its angel wings ehell grow,
Hidden tho' they be below.

"So all changes sent to thee
Resurrection robes ehall be,
Life and immortality!"

n. w. l.

PALM SUNDAY IN JERUSALEM.

Our first page picture, for which we are indebted to Messre. Harper Bros., represents a curioue scene in the celebration of Palm Sunday at the Church of the Holy Sepulchre in Jerusalem.

The edifice stands upon Moont Celvery, and is distinguished for its eize and massiveness. It forms altogether a block 160 feet long and 100 wida, and includes what are called the Church nf the Sepulchre, the Chapel of the Crucifixion, seven emall chapels, a monastery, and cloisters. Tha Catholics have one convent on the-mountain. The Greeke have twelve here and one at Zion Gate. The Copts, Syrians, and Abyssinians have also each a small conbe vent. During Easter-tide an immense number of pilgrims meet, and the variety and opposition of some of the tedets that compose their creeds often lead to serious dieturhances of the peace. Many of the services that are held would be very impressive if the effect were not frequently marred by such demonstrations. An eye-witness of the ceremoniee carried on at tha Holy Sepulchre during Ecaster of last year describes tha scene as follows:

"At six the next morning the eound of the clanging of belle awakened ns, and we dressed to go to the great Latin mass, for it was their Easter-Sunday and the Greek Palm-Sunday. We make our way to the top of the Holy Sepulchre, and entering a little door juet helow the dome, find ourselves in a narrow gallery, from whera we look over the Chapel of the Holy Sepulchra and on the scene below. The Holy Sepulchra where the body of the Meek and Lowly was supposed to be laid ie gaudy with pictures, artificial flowers, silver and gold lamps, gilt candelabra, and burning tspers. Surging round its walls is a crowd as motley as in the scene of a pantomine—Copts, Abyssinians, Assyriana, Greeke, Latins, and Moelem guards. It is necessary that a strong guard be placed in the huilding to keep the members of the various Churches from quarreliog with each other instead of worshiping at the Sepulchre. Presently a jingle of hells, a beating of gongs, and strains of an organ ascend with the fatty smoke of a thoneand tapers from the jostling crowd helow, then from the Latin Chapel a procession of bishope and prieste in gorgeous array, with banners of cloth of gold, slowly wend their way through the crowd, chanting and praying in a steam of incenee. Before this service is quite finished, the Greeks, Armenians, and Copts begin to hold thair respective services, and try each to drown the others' voices as they go through their devotions. During the following week the Greeke have the church to themselves, and they hava far the greater gathering of pilgrime at their Easter ceremonies. On Thursday the Patriarch and twelve bishops enact Christ and His Apostles, Washing of the Feet at the Last Supper, tha Agony in the Garden. A platform is erected in the court-yard of the Church of tha Holy Sepulchre, decorated with the emblems of the Church. A huge branch from the olive-tree in the Garden of Getheemane under which Christ prayed is need in the ceremony, and after the service is over, the crowd scramhle for its branchee."—*Harpers Weekly.*

THE wealthiest colored man in St. Lonie is Mr. J. P. Thomas, the proprietor of the Lindell Hotel harber's shop and hath-rooms. Mr. Thomas, as a harher, by industry had accumulated $30,000; by marriage he cams into possession of ahout half a million more.

THE GABOON MISSION.

MR. A. H. TOLMAN who taught at the Hampton Institute last year, sends the following interesting account of things in Africa.

TROY, N. Y. *Jan.*, 1879.

TO THE STUDENTS OF THE H. N. & A. INST:

My dear Scholars:

Though you have not all been *my* echolars and some of you do not know me, I am eure you will be interested in what I am going to tell you.

Dr. Albert Bushnell, for the past thirty-five years at tho head of the Gaboon Mission in Western Africa, is now in this country and *may* visit Hampton; but as his health may not permit this, Gen. Armstrong wishes me to giva you some account of an address which ha delivered here on the avening of Dec. 15. A month has gone by since then, and I have forgotten much that was said.

First, you had better take a good map of Africa and find the equator. On the weet coast, just north of the equator and almost touching it, you will see the mouth of the Gaboon River, where Dr. Bushnell is located. Five degreee north of the equator you will see the mouth of the Niger and five degrees south of it the Congo, two of the three great rivers of Africa. It ie down the last that Stanley sailed, as you know, from its source way over in South-eastern Africa.

I think that missionaries were first sent to Southern Africa, to the region of the Cape of Good Hope; and that the Western stations were established later. Most of the important points on the western coast have now at least one missiouary. Missionary influonce does not extond many miles into tho interior, except in the case of the older missions, and then not over 150 or 200 miles. If I remember Dr. Bushnell's statement, he estimatee that there are about 45,000 church membere in Southern Africa and 35,000 in Western Africa. He said little about the etations in Eastern Africa, but there are a number of them.

Two miesionaries started for the Congo from England as soon as word arrived of Stanley's reaching the sea, and I believe the next steamer carried three more. Dr. Bushnell, while coming to this country, mot a steamer containing soveral more Englieh missionaries, who were intending to push on up the Congo. Missionaries from Gaboon are pushing up a river near the equator that Stanley thinks to be an overflow of tha Congo. If thie be true, their forces will in time be joined to those already starting to go "through the dark continent" by way of that stream.

Dr. Buehnell eeemed very much afraid that his audience would not understand that the tribes among which he labors are naturally very intelligent. Ho spoke of the native African as having a real nobility of carriage, and as having good mental faculties. Mrs. Buehnell has charge of the day schools aud is very enthusiastic over her scholars. One difficulty, indeed, is, that her advanced pupils are so bright that they are hired by morehants to act as their agents. Their piety le often not strong enough to cause them to choose missionary service rather than money. Some of the natives will reckon on their fingers about as fast as the traders can on paper, and by the time a trader has finished offering them different amounts of perhaps a hundred separate articlee in exchange for their ivory, &c., they are ready to tell him whether hie offer ie a fair one.

Dr Bushnell has encountered nearly twonty different tribes, each with its own language. The Gaboon missionaries have translated parts of the Bible into ten languages, but only into one of these, the whole of it. Dr. Bushnell ie now euperintending the printing of some of their translations. In reference to the language into which they have translated the whole Bible, Dr. Buehnell made some statements that astonished me very much. The language has a good number of very expressive words, and ie complete in all its parts, having a full construction of the verb, &c. I may not have given the above statement exactly as he made it, but am sure I do not misrepresent him. He certainly did say that American and European scholars find it almost impoesible to believe that such a language can be the language of a harbarone people, it is so philosophically formed. Many of the missionaries at Gaboon think that the Bible reads *"more graphically"* in this language than in English. I should like to ask Dr. Bushnell if they were able to translate the epistles of Paul with a good degree of exactneee. He only told ue one word in the language—nahgo, a house, eenahgo, houses. The prefix ee is the plural prefix. The method of forming the plural in all the languagee with which I am acquainted, ie by some change at the last end of the word, but this mothod has the advantaga that you know that the word will be plural even before you know what particular word will be used.

The Africane of this locality, at least, believe in a good God, who is supreme, but they think that he does not trouble himself about this world; and they pray to avil spirits who they think have power to harm them and of whom they stand in great dread. They also have a firm belief in witchcraft, which Dr. Bushnell described at some length. I need not describe it to you, *for it is the same belief in every important respect as that which the negroes at the South have in conjuring and Conjure Doctors.*

Just think of that! The present belief of the negroee copied from the natives of Africa! Almost every word that the Doctor used in telling about witcheraft described conjure-doctoring just as perfectly as it did African witchcraft. You will see that nothing in their religion givee them any hope for the next world, and they understand that perfectly themselves. The word, *death*, is forbidden on all occasions. It ie considered a great offense to refer to death in any way, and the dead are mourned for as being forever gone from eight and knowledge. Dr. Bushnell told an affecting story of a fierce warrior's conversion. He watched a dying missionary closely, all through hie last hours, to see if he would shrink from death. The misciouary died triumphant, and the bloody savage, overpowered by the sight of a man *"willing to die,"* coon came to the cross. The feeling among the natives with reference to all mention of death, was a great hindrance to the missionaries in preaching, at first. They "through fear of death, are all their lifetime subject unto bondage."

A great trade with the outside world has sprung up at Gaboon, especially a great trado in kerosene oil and soap. The gospel of moral light and purity naturally causes a desire for physical light and purity.

I can only say a word about the work in other parts of Africa. The church of England has a flourishing mission upon the Niger River, and the Bishop over it is a native. He has a fine steamboat, lately given, to use for missionary purpesee. All of the important missions now send out native missionaries.

The native African ie passionately fond of music and oratory; and these things move the world. On the other hand hie judgment is poor, ha is apt to stick by those of his own race whether right or wrong, he ie intensely vain and conceited, he ie very euperstitious. Stealing and lying, I regard more as due to the conditions in which the race have been placed.

Some day some of the gifted members of this race will, I trust, do great things for God and the world.

Your friend,
ALBERT H. TOLMAN.

A SOUTHERNER'S GOOD WORK.

ONE of Virginia's leading educators, of wide reputation, sende us the following article with a personal memorandum, from which we extract—

"I have eatablished a colored Bible class that meets every Thursday night. My subject ie the Ten Commandments. I depend mainly on quections and answers. If the enterprise succeede, I have thought of preparing a little book of Lectures for the colored people on the commandments. Some portions, I write out at present and I would like to see how they look in print."

We are glad to put the lecture into print, and to express in this connection our conviction that the men of the South have in their hands the future of the freedmen, and that their active participation in efforts for the improvement of the colored people is the only true settlement of the Southern question.

WORSHIPING OOD BY MEANS OF IMAOES.

The fundamental fact upon which all true worship rests, ie "God is a Spirit;" and the all-comprehenelve direction for the mode of acceptable worship is that He ie to be worshiped as a Spirit. But such feeble creatures as we are, cannot understand what spirit ie. We all have a epirit within us, but who can make plain to another what he himself is clearly conscious of? When we die, the spirit leaves the body, but of a disembodied epirit, we can have no notion. How much less can we fully apprehend God, who is an infinite spirit, and the Father of all spirits! How then can we worship Him? We are all inclined to maka a picture of Him, by the help of which we may worship Him. But this is what God most explicitly forhide ue to do.

The reason why he forbide this, wa may partly eee. Wa are to worship God and none other, and are to worship Him as a Spirit. Now, if wa attempt to make an image of God, it will be like ourselves. We ehall picture Him with tha *body* and *limbs* of a man. Soon, then, we shall ceasa to consider Him a spirit everywhere present. Then we shall imagine that he has the *mind* of a man, and preeently we ehall not really helieve that He knows everything and searches ths heart, and so we ehall satisfy ouselves with a worship of form, honoring Him with our lips while our hearts are far from Him. Finally, as we ourselves are sinners we shall not realize that God is infinitely holy, but shall persuade ourselves that He does not take account of *small* sins. Thus wa will by degrees, and very soon, come to consider God altogether like ourselves, and wa shall be worshiping a haing who is not the only and true God.

This was the case, we know, with the Jews, though they were under the immediate government of God—in Egypt—Jos. xxiv: 15; Ezek. xx: 8. At Sinei, Numb. xxv. In Canaan, Judgee x: 6; under Solomon, Jaroboam, Ahab, Ahaz, Manasseh, and at different times down to tha return from the captivity in Babylon—other nations worshiped none but false Gods: the sun, moon and stars, demons, departed spirits of great men, rivers, grovee, beasts, birds, fishes and creeping things. Nor was this the case only among ignorant uncivilized people. The Greeks and Romans, who in many things were among tha most enlightened people the world ever saw, had, it ie eaid, thirty thousand gods, whose images they worshiped. These gods they represented ee marrying, feasting, drinking, gambling, quarrelling, lying, stealing and committing adultery with one enother and with mortals. Idolatry of the grossest sert is practiced in Africa and Asia and many islands of the sea, at this present time.

Take notice how man, in his einfulness, perverts egeinst God, the very things which He has so ordered that they should draw ue to the worship of Him alone. The Heavene declare the glory of God, and men give to sun, moon and etere the glory due to Him alone. The seasons come round to teach ue that He ie the giver of every good and perfect gift, and men worship the gift, inetead of the Giver. When we look upon the mountains and velleys, the springs thet break forth from the hille in pure, cool water, the rivers that roll down to keep the sea full, and the sea itself thet goes around all the earth to keep it pure and fresh, we hear all Nature crying out to us like the voice of John the Baptist testifying to the mightier Jesus. She says, God is over all, worship Him! And yet men who count themselves wiser than other men, are saying that nature is God, and are worshiping nature.

Men who count themselvee very wise, are often very much like men thet we know to be fools.

A missionary in Africa found the people of a certain village etirring the ground with crooked eticks when they were about to plant. He made a simple plough and showed to an assembled crowd how much better it was to break up the ground. They were greatly delighted, and shouted aloud their approval.

The missionary left their village thinking with pleasure of the good he had done to them by teaching them to plough. In a few weeks he returned, and what did he see? The people were still etirring the ground with eticks after the old fashion. They had taken the plough, painted it red, set it up in the middle of the field, *and were worshiping it!*

Men suffer themselves to be drawn from the worship of God, by the thing which He himself has made—how much less can they be trusted to worship Him by anything their own hands have made!

And yet, God has Himself provided an image whereby we may worship Him. Will some of the readers of the "Southern Workman" tell us about this image?

S. L. C.

Friend Isaac T. Hopper, saw a passing teamster one day stop in front of his house and begin to heat his overloaded horse. Friend Hopper stepped out and said, "Friend, didst thou ever hear that some folks believe that when we die, if we haven't behaved ourselves in this world we shall have to come back here again in the shape of dogs and horses?"

The man etared, as if a little donbtful of the speaker's sanity, and then slowly answered, "No, I never heard anybody preach ench a doctrine."

"But I assure thee," replied Friend Hopper, "there are a great many people in the world who do believe it; and I am thinking if thou ehould'st have to come back in the form of a horse, thou would'st be glad to have a kinder master than thou art."

The man smiled, took the hint good-naturedly, and walked away gently leading his tired horse by the bridle. Perhaps, in after times if tempted to beat his horse, he remembered the pleasant old Quaker, and imagined how he should feel if *he* were a horse.—*Our Dumb Animals.*

IMPROVING OPPORTUNITIES.—A remarkable convict in the Rhode Island State Prison is David Peters, a colored man, who in 1869 received a fifteen years' sentence for assault. He was ignorant, but when allowed the use of the prison library he eoon made astonishing advances in learning. He mastered arithmatic, algabra and geometry, took a course in logic and rhetoric, and then turned hie attention to languages. He acquired a fair knowledge of French, German, Latin and Greek, and then took up jnrisprudence. He is now reading law, and for a change studies Hebrew. He delivered at a Thanksgiving celebration in the prison, a year or two ago, an oration, which was pronounced a remarkable production.

Southern Workman,

The laws that in ante-bellum days made it a crime to teach him, were no more disgraceful to the nation than the absence of

A vast and radical revolution has come. The old habit of deep and fervid intereet in State affairs still, however, remains.

soil, the wealth of the South would be, today, increased hy several hundred millions. It is not the fault of the press. The blame

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

THE American Missionary Association of New York has taken the lead in wise and wide-spread efforts in behalf of the Anglo-African race.

It has, since 1860, expended over three millions of dollars in opening schools and in founding institutions for the freedmen. It is the outgrowth of, and is principally maintained by, the sentiment once known as "Abolition"; but now that word is dropped, and whatever meaning it may have is with reference to the weakness or vices of the negro race, towards which it is still "abolition" to the utmost.

Instead of the bitter hostility of ten ten years ago, its leading institutions are officially recognized in several Southern States as worthy of public aid, and have secured general respect.

This Association has for years been struggling with a heavy debt which at last has been lifted—the last "lift" being a gift of ten thousand dollars from an unexpected source. It is now ready for more and better work. When many reconstruction measures shall have been forgotten, the quiet efforts of this Association, in cabin homes and log schoolhouses as well as in more pretentious places, will come to the surface in peaceful moral forces, in colored men of clear heads, of honest purpose and wholesome influence.

We congratulate this Association upon its freedom from debt. The Hampton Institute is its oldest child, having, in 1870, left the parental Society, to take care of itself. Other institutions may in time follow. The American Missionary Association has done a work for the country that gives it a special claim upon all good and patriotic people. It works not for a sect, but for a Christian civilization.

THE education of the negro, politically, has been rapid; intellectually and morally, it has advanced at a snail's pace. The one has been, mainly, an appeal to his fears for selfish purposes; the other has been aimed at his mind and conscience, without personal ends.

Naturally, the men engaged in both have had little sympathy with each other. The former have professed sincere devotion to the freedmen and demanded their votes in the name of great services and principles; the latter have asked nothing, and gradually have come to feel that not the least of the colored man's misfortunes has been his political leadership.

What a satire was the career of these leaders, on the new and better civilization that was to come out of the old. The places that once knew them, now know them no more, and, through whatever injustice this may have come about, it has been impossible for the Northern men engaged in educating the negro to believe his improvement has been thereby checked.

His prosperity depends upon his own efforts, with favoring outward conditions; but mainly on himself.

Freedom means freedom to starve as well as to thrive. The most thorough enforcement of the Constitutional Amendments means neither bread nor books, nor the least change or help for the personal weakness and blindness in which the negro was thrust into citizenship.

The laws that in ante-bellum days made it a crime to teach him, were no more disgraceful to the nation than the absence of legislation for his instruction when his own good and that of the country demanded it.

The three and a-half millions of dollars given for his education through the Freedman's Bureau, in no way excuse Congress from the charge of making his vote and not his condition their real interest in him.

Self-interest seems to have been the only inspiration of the party in power. Negro rights meant prolonged rule. The mind or soul of the black man was as a cypher in his guardianship. The "ward of the nation" must look to himself or to his old master for escape from his ignorance and for help to manhood.

Not a notable effort was made in the history of reconstruction, by a representative of the negro vote, to get material aid for colored schools. Not a bill could be passed providing help, that would not bring immediate returns to the politician. Even the bacon that was issued to the starving in the South just after the war was at times used for electioneering purposes.

Fifteen years ago, nearly a million of ignorant voters were suddenly created. What has been done to fit them to vote?

Reconstruction is by progress, not by force. Force, and not progress, has been relied on, and has failed. Means of progress are the need of the hour. Southern illiteracy is still a frightful fact.

The colored vote is reappearing as a political force, now that its old rallying points are gone. It is finding new ones, around which it is gathering with greater power for good or evil than ever before. But it will be more and more a matter of merchandise. The blacks are well disposed, but weak and blind; and can't help themselves. Fears and bugbears have been freely used by their leaders to influence them: the real duties and responsibilities of the voter have never been taught them, and the mass of them are still to be victimized in various ways. But fear as a motive, will give place to temptation. Passion and appetite, rather than timidity, will be worked upon. Where rifles have been seen, rum and money will flow at the polls. Where men have been driven away from the ballot box, they will be marched to it to deposit their purchased votes.

Anywhere in this country, this would be so, with such ignorant masses. It can be helped only by going to the root of the matter. But our national legislators seem to have had no patience with, or interest in, the slow, far-reaching methods of settling the fate of the negro. They exalted the voter—they ignored the man. Their own moral standards were fatally in the way of genuine reconstruction measures. Their work is done; the seeds of a selfish, short-sighted policy are bearing fruit.

The great work of the Constitutional Amendments cannot of itself secure the political salvation of the negro. It is like a bridge thrown half way across a chasm. Only the manhood of the blacks can bridge the other half.

"TOO MUCH POLITICS."

The South suffers badly from an overdose of politics. Before the war, the outlet for intellectual force was in statecraft, chiefly. Children grew up in an atmosphere of political talk. Young men looked forward to official life, and the old men rejoiced in the honors and victories of debate. Patient, secluded scientific research was hardly known. Pure scholarship took second rank. Technical education was neglected in a section where manufacturing was not carried on. Owing to the peculiar tenor of labor, agricultural improvements were not generally made. Every man was a skilful politician, just as every Englishman is a good rider.

In the National Congress the result was apparent. A body of keen, well trained debaters from the South usually overmatched the men of the North, in tact, quickness and general parliamentary knowledge. But the social organization which developed this tendency and power toward political affairs is now broken up. A vast and radical revolution has come. The old habit of deep and fervid interest in State affairs still, however, remains. "So long as the Government keeps soldiers here we are crushed," said an intelligent North Carolina farmer in 1866, as he sat on his doorstep in the noontide of a beautiful day in June. "Granted that the Government has no business to keep troops here, does it prevent you from putting in any crop you please, and taking the results of it?" asked a friend. "No," said the farmer; "but we are not free, we are crushed!" Thereupon he mounted his horse and rode into town, and spent the better part of the day "discussing the situation." If the time spent in the discussion had been devoted to his land, he would have been better off by nearly an acre of corn. The sailor asks, What is life without a quid of tobacco? The Yankee asks, What is life without a trade? The Southerner asks, What is life without politics?

There is no doubt that the political situation has been extremely confused and even critical, and each man was called upon to think and act intelligently, but still, it may be frankly asked, whether or no the men of the South have not devoted too much time to these political subjects, not so much from an abiding sense of their real importance, as from the old and well settled habit of discussion. And these men may well ask themselves whether it is not due to themselves and their families to withhold, from public matters, more of their time and attention. We have heard more than one successful Southern man say, "After the war I quit politics altogether, and now I am all right."

The great business of the South to-day is construction, the building up of industries and developing the resources of soil and mineral. Southern men say that these Southern States are far behind any of the civilized States of the world, in developed physical resources. Events educate men, though slowly. It is clear that the coming generations, drawn out of the old ruts, will spend their forces in exploring and bringing out these elements of wealth, and, before many years, will swing to the other extreme and neglect political matters altogether. We speak now of, and for, the present generation. It would be well if it could strike a "golden mean" and take out of politics more of its thought and energies, without impairing in any way its duty to the State. Men are what they make themselves. Even under despotisms they thrive and accumulate. From the surrender at Appomattox till now, no man can say, on his conscience, that he has been prevented, by any cause, excepting only the abolition of slavery, from reaping the benefit of his own sagacious, intelligent industry. Successful men prove it.

The literature of the South is mainly political. The newspapers are devoted almost exclusively to public affairs, and they are conducted with excellent, and in many cases, rare talent. They supply a demand. That demand is for political debate. The *News and Courier* of Charleston, S. C., lately discontinued its agricultural department, and frankly stated that the planters took no interest in it. Though the very life of the South depends on intelligent agriculture, the lethargy of the people on that subject is so profound that the press finds it is for its own interest to exclude even agricultural items, and crowd its columns with political news. It might be supposed that the supreme object of the distressed farmer would be light on the subject he dealt with, and out of which came his only support; and that there would be almost a wild craving for all literature bearing on the subject. It might be supposed that he would cry out, "Take away those political items which do me no good; never speak to me about the ballot. Give me, broken down as I am in fortune and almost in spirit, with these wasted acres on my hands, give me light and knowledge from everywhere that may teach me how to better my surroundings."

It is safe to say, that if, during the last twelve years, the time spent by able-bodied Southern men in political discussion, over and above that legitimately taken up by duty toward the State, had been devoted to an intelligent study and working of the soil, the wealth of the South would be, to-day, increased by several hundred millions. It is not the fault of the press. The blame lies with the reader only, and as he reforms his tastes and varies his wants the press will quickly and abundantly supply them. Every farmer knows by heart the literature of the "cypher despatches." How many farmers know by heart the details of those wonderful experiments by Laws and Prout in England which have made agriculture a money-making business? Reform will come. We only hope that it comes speedily, so that the present generation may take some advantage from it.

EDUCATION IN SOUTH CAROLINA.

"The Ninth Annual Report of the Superintendent of Education of South Carolina," is an interesting and encouraging one, to all interested in the cause of education at the South.

The School Boards now appear to be composed of some of the best citizens of the state. This is a gratifying proof of the substantial support that the system is receiving, and a guarantee that the School Laws will be wisely and faithfully administered.

The attendance during the past year, was 116,239; of whom 62,121 were colored, and 54,118 were white, an increase of 13,843 over the returns of the previous year. This was the largest number since the organization of the present system, with the exception of 1876; when, owing to certain conditions no longer existing, the number was reported to be larger.

To avoid the risk of incurring debts which it would be impossible to meet, it was deemed wise not to open the schools until the ratification of the Constitutional Amendment changing the manner of raising the School Fund. There is no doubt that the attendance, in many of the counties, was diminished by this delay.

Ten counties were officially visited by Captain Hugh S. Thompson, the present Superintendent, during the past year, and in most of them, addreses were delivered before intelligent and appreciative audiences; much interest was exhibited by the teachers, and in five counties they held conventions which were attended not only by teachers but by citizens interested in the cause; and many gratifying results were attained.

All examinations throughout the State are conducted in writing, thus ensuring uniformity. It has not yet been thought advisable to raise the standard beyond a fair average.

The School Fund has been better managed than ever before, and in many counties there will be a balance to its credit. This is the first year, since the organization of the Public School system, in which there has not been a heavy deficit. The receipts for the year were $316,197,10, and the disbursements $319,030,22; the apparent deficit is explained by the fact that some of the counties have made no Report since before the last instalment of of taxes had been collected: if full reports had been received from all the counties the receipts would more than balance the expenditures.

Among the obstacles to the rapid progress of education are mentioned the inefficiency of the County School Commissioners. It is to be hoped that a more enlighted public opinion will demand higher qualification in candidates for these important positions: an inefficent or unfaithful officer while keeping within the letter of the law may yet violate its spirit. It is hardly too much to say that, as is the commissioner, so will the schools be.

The indifference on this subject does not seem to be greater than that existing in other states with a similar population, and the prejudice against the system is daily growing less.

The lack of Normal Schools is severely felt, and their establishment is recommended.

Ten Scholarships in the Hampton Normal and Agricultural Institute at Hampton, Va., have been placed at the disposal of Captain Thompson, by Dr. Sears, agent of the Peabody Fund.

The colored population of the State, is put down at 415,814, and the white at 286,677. The scholastic population, during

the year was 228,128, of which 144,315, were colored, and 83,813 white. The number of free Public Schools

the year was 228,128, of which 144,315, were colored, and 83.813 white. The number of free Public Schools

in 1876–7 was 2,483
in 1877–8 " 2,922

showing an increased of 439 during the past year. The whole number of teachers employed, was 3,117, of whom 1,026 were colored, and 2,091 white. The average number of months these schools were in session, was $3\frac{80}{100}$; the longest period being, in one county, 6 months, and the shortest, in another, 1 month.

Capt. Thompson is a man of unusual intelligence and force of character, and is the man for his place.

He has a genuine active interest in the welfare of the colored people, and their educational interests could not be in better hands.

Before us is a copy of a speech by the Hon. John Goode of Norfolk, Va., delivered in the House of Representatives on the 23d of January last, advocating a bill providing that the proceeds of the sales of public lands shall be devoted to the education of the people; for the first ten years upon the basis of illiteracy, thereafter upon the basis of population

The argument is brief, statistical and very forcible. The bill is well considered, its leading features having been brought forward repeatedly but always in vain.

Mr Goode asks, "Was it right for the Government to enfranchise them, (the colored people) make them citizens and voters, without some adequate provision to qualify them for the proper discharge of the responsible duties incident to the new station to which they were suddenly elevated?

"Can the Government bestow civil and political rights upon these 'wards of the nation,' and at the same time avoid the solemn obligation to provide for their mental and moral improvement?"

Mr. Goode is an ex-slave holder. He has interested himself in the educational welfare of the colored people in his district. We wish him success in his championship of the most important interests of the freedmen.

CHINESE EMIGRATION.

It is our duty, as it is the duty of every newspaper published in the land, to put on record the facts concerning a most astounding violation of public trust. The Congress of the United States, representing in law, and supposed to represent in fact, the people of this country, recently passed a bill, for the partial, if not total exclusion of Chinese emigrants from the Pacific coast. It was not a case of sudden emergency, nor of overruling necessity. Neither pestilence or plague were brought by these people. Least of all were they a swarm of paupers swooping down on our Western boundary. On the contrary, a multitude of most industrious men, with cunning hands and economic habits, came face to face with the Anglo-Saxon merchants, and excelled them in their own arts.

"Cheap production" is the pillar of fire by night, and the cloud by day, upon which every manufacturer, every operator in every commercial business, fixes his eye with incessant stare. But a lot of yellow visaged, sober minded, rice eating pagans entered the field in competition with the best machinery of the Anglo-Saxon, and that portion of the Anglo-Saxon race which holds the most skilful tools, and triumphed by a cheaper production. Poor Anglo-Saxon! Wonderful pagan! The two hundred and twelve thousand Letters Patent granted by the United States, for "improvement in machinery," and "labor saving devices," go for naught; all the cunning work of Yankee brains is only extravagance before these stolid looking, almond eyed marvels of industry. So the statesmen of the United States, after due deliberation imposed by conservative parliamentary rules, decreed that American should not be the land of the free or the home of the industrious. They denied the traditions of the country, and scoffed at its treaty obligations, and put on the records of a great Republic, a doctrine which makes every despot of the world thankful for the existence of the last Congress. It was said these Chinese were filthy and immoral. The tenement houses of the large cities would teach them, every hour, new lessons in the utter degradation of human life; and a territory organized under the laws of the Federal government, could show them a large population openly practising polygamy. However, behind these "statesmen," stood the people, the press, and the pulpit. Fortunately for the country, for its honor criminally trifled with, the Executive stood like a rock, and this infamous wave of bigotry and wrong, broke at its base, and scattered in froth and foam. To Congress the business is a comedy, to the people an insult, to history an example of foolish legislation, and to China it is a precedent for casting out merchant and missionary, those "foreign devils" who have been reluctantly admitted to their ports. Few cases show so well the veto power in our system of government. It may at times be abused. It certainly has also its splendid uses.

W. N. A.

We have spoken elsewhere of the predominance of political literature at the South. In these papers* we see the new departure, the South resurgent. These are the banners of a thin, but strong skirmish line, which is clearing the way for the great conquest over nature which it is possible for the South to make, and which she will make. It is indeed a pity that these facts, so gathered and set forth in these papers could not be cast in the form of bomb shells, and be dropped with unerring aim into every farm house of the South, so that the flying fragments should tear up and shatter forever, old ideas and habits which keep men poor. Gratitude is due to politicians who serve the country well, but the highest honor is due to those men who stand above merchant, and trader and politician, in meeting the real needs of this desolate country, Whitney once unlocked the wealth of the South with a cotton gin. But the doors are again closed, and there is pressing need of men who can reveal new wealth. It is knowledge and the power born of knowledge, which is needed peremptorily at the South. Here above all places, should be the man who can make two blades of grass grow where one grew before. If the interests of our people, black and white, could be committed unreservedly to the men who are gathering and distributing this valuable agricultural information, there would be the most remarkable, unequaled progress in material wealth during the next few years.

---

*Southern Planter and Farmer, Richmond, Va., Monthly Journal of the State Agricultural Society, Richmond, Va.
Soil tests of fertilizers, State of Georgia. Report of the Commissioner of Agriculture, Richmond, Va.

The Kansas papers report, according to the Norfolk Virginian, that "Hundreds of negroes are flocking thither from the far South, under the impression that the long looked for 'forty acres and a mule' to each of them can be had in that State. The delusion is fostered by railroad ticket sharpers, who induce the ignorant negroes to part with their small properties to raise money for a third-class ticket to the promised land."

The negro is the victim of an ignorance that is not his fault, and to remedy which very little has been done during the fifteen years since emancipation.

The country suffers much, but he suffers more from the mental darkness in which numberless pitfalls await him.

The "Work of Half a Generation among the Freedmen of the United States," an address by Rev. M. E. Strieby, Secretary of the American Missionary Association, is a pamphlet well worth reading. It can be obtained at 56 Reade street, N. Y. City.

Dr. Strieby states facts which will surprise most, even of those who have watched the workings of emancipation. He is fair; he admits Southern testimony freely, and finds ground for hope in his careful and able review of the work of half a generation. It should be read throughout the land.

The January, February and March subscriptions to the "Workman" were larger than ever.

More than the usual number of letters of appreciation have been received.

We publish two of them. Every dollar sent as a subscription is a help to the Hampton work, and in return secures reliable information upon a most important social problem.

"It gives me pleasure to renew my subscription to the "Southern Workman." I think the paper is doing good, both in the ideas it promulgates and in the stimulus it gives the colored man.

Please find enclosed one dollar,
Yours sincerely,
(Rev.) Addison P. Foster.

I am very much obliged to you for letting me know my subscription had run out, instead of stopping the paper, for I think the paper is more and more interesting, and the items of interest about the Indian scholars are highly gratifying and also amusing. What an unlimited amount of good Hampton is doing to the two races, and to the third through those two.

I must apologize for taking any of your time, but I felt I wanted to show my sympathy and love for your work by a word.

Yours in Christain love and prayer,
H. W. Ruggles.

In a recent letter from Honolulu, we have the following account which shows that the genus "tramp" has touched the shores of that Earthly Paradise, the Hawiian Islands.

"We have tramps who are worse than Chinamen; the latter had, in the district of Honolulu, increased to 1,299 in the year 1878. Somebody on the (California) Coast has sent here a company of tramps on a labor contract, and some of them refuse to work. They have already committed depredations as you will notice in the papers which I send.

"I was in the garden one day when a man of some twenty-five years, well dressed, came to me and asked for work, could wait on table etc.; said he was of German, origin from Philadelphia. I had no work, but gave him a note to B——, which he did not deliver. On leaving, he asked me to give him a pair of pants.

"Some days later, one windy day, he came up the back stairs and appeared at the door. I opened the door and went out, closing it after me. He asked if my Chinaman could make him a cup of tea. Akam was in the kitchen when the tramp passed. I went into the house and brought him some bread and butter which he refused, but wanted tea, said he was sick. I gave him a cup of tea and made some inquiries. How long had he been here? Some two weeks. Did he come in a certain vessel? Yes. Did he know the two men who were taken up for entering the Queen's Hospital at midnight? Rather reticent, but said he came in the same ship, but they came on contract and he was on his own hook. I since have learned that he had stowed himself away in the vessel. I said it was better for strangers to bring letters from persons known here. I doubt not he designed to take the bearings of the house. Had my Chinaman not been on hand he might have used more freedom."

In the death of Mr. Charles Kimball of Lowell, Mass., the Hampton Institute has lost a valued friend. He was constantly serving it and was tireless in his efforts to extend the knowledge of it, and to increase its resources. We have found few such allies in the past ten years.

The Secretary of War and Senators Kirkwood and Allison of Iowa, visited Hampton Institute recently, for the purpose especially of observing the Indian experiment at the school. They spent a day in examining its various aspects, and expressed much satisfaction with its success. Secretary McCrary has visited the school before. He, and Senator Allison and Senator Kirkwood, the War Governor of Iowa, and Chairman of the Committee on Indian Affairs in the last Congress, are good friends of both races represented in the school, and made stirring speeches to the students admonishing them to improve their opportunities and help each other in the great work before them, as the pioneers of their peoples in their progress to a higher civilization.

SOME MENTAL CHARACTERISTICS OF THE NEGRO,

AND AN INQUIRY AS TO WHAT INTELLECTUAL DIET IS AT PRESENT BEST SUITED TO HIM.

Perhaps the most marked characteristic of the negro, which was developed during this first year or two of his freedom, was his intense looging for book learning. Time may have smoothed, to some extent, the wire edge of his intellectual appetite; but it is still surprisingly keen, and in it may be found strong grounds for anticipating a bright future for the race. Yet this very appetite of the negro is a huge difficulty in the way of educating him, for it is so much stronger than his power to digest. He swallows facts with astonishing rapidity, but assimilates them very slowly. To provide a mental diet that will at all satisfy his appetite, and not cause indigestion, is a difficult problem. This tendency to mental dyspepsia is due to the years of slavery suffered; for those years of slavery were years of mental starvation, in point of fact, and by force of law. It is unfair to expect to find in the negro mind any other set of conditions than those which follow a long period of starvation. In restoring shipwrecked persons, who have nearly starved physically, it is necessary to feed them at first only small quantities of such food as can be digested easily. If they be permitted to eat as much as they please, and as they please, their gorgings will weaken, not nourish them. The parallel between the intellectual condition of the lately emancipated negro, and the physical condition of the half-starved sailor, is most striking; and unfavorable results will attend the unlimited, unguided indulgence of the appetite of either. In both cases the strongest opposition to the necessary moderation comes from those most to be benefited by its exercise; and the advocates of such moderation are denounced as foes, and have all manner of selfish, miserable motives attributed to them. Hungry men are not much inclined to logic; the impulse of the sailor is to devour the heartiest food within reach; and the impulse of the colored student is to reach at once for the higher branches of intellectual effort, and regard as wasted the time spent in elementary studies.

It is no fault of the colored people of this generation that they are mentally dyspeptic; but rather their misfortune in having had intellectual starvation fall to the lot of their ancestors. It is their rare privilege to have the chance of leaving to their children sounder organs than they themselves inherited. The object of all gymnastic training is to obtain physical strength, and the object of all book training is to get mental strength. No man can strengthen his physical muscles, with dumb-bells on which he cannot get a grip; neither can we develop our mental muscles, so to speak, by struggling with matters beyond our grasp. Simple as this is, it is one of the most difficult things to make colored students believe. That there is some "royal road to learning" seems part of the faith that has been born in them; and it can only be shaken by months and months of training. No man can reach an upper story of a high building by jumping at it from the ground; if he ever reach it, it must be step by step. If he do reach an upper story, and look down at the ground he started from, he will have more respect for the steps than when he began his journey.

Everyone who has reached middle life, knows that what he learned at school was only the beginning of his education. The amount of knowledge anybody takes from school is only a ridiculously small part of what may be learned, and the condition of a graduate's mind is of far more importance than the number of facts in its possession. If the receptive powers have been alone cultivated, if he has only had dumped into his memory a certain number of facts, he leaves school with a mind like a brick—so long, so wide, so thick, so hard—but with no capacity for future growth. Such kind of mental culture is no more education, than a woodpile is a frame dwelling. To utterly neglect the receptive faculties would be almost as bad as to cultivate them alone: but as they are naturally the strongest part of the colored student's mind, they need less attention than his active or reasoning faculties. Facts for the mind's mill to grind upon may be obtained at almost any period of life; but unless a man be taught in youth how to run his mental machinery, its product will never amount to much. In other words, to teach a student how to think is more important than the number of facts presented. If the millstones cannot move, sand or stones may as well be thrown in the hopper, as wheat or barley. If these premises be true, it follows that the best mental food for the negro in his present condition, are such studies as will most exercise his reasoning powers, and force him to work from generalities to particulars. It is obvious that the subject matter of his lessons is of less importance than the way in which they are taught. For example, in parsing the sentence "Cats eat," a student should be made to understand that the ex-

pression is correct, not because the verb "eat" happens to have the same number and person as the noun "eats," but because "all verbs must agree with their subjects in number and person," and that this is a particular instance of that general law: in other words, that whatever is true of a whole class is true of every individual of which the class is composed. There is no denying that this process is tedious to the teacher, and at first irksome and incomprehensible to the scholar; but it is worth the trouble, if only a small percentage of the class are made to understand that a conclusion requires two premises, and that the human mind can act as well as be acted upon.

Another drawback to the good mental digestion of the negro is the short time the majority of the race can afford to give to their education. They are like hungry travelers in the dining saloon of a railway depot, where the train stops only "ten minutes for refreshments." "Eat and run," they must; it is a matter of necessity; they have no choice. Nevertheless, both traveler and student should select such edibles as are most nourishing and most easily digested. A traveler who wastes his ten minutes in struggling with a bowl of scalding soup, is no more improvident than a student who plunges into the study of astronomy before he has mastered Common Fractions. What the majority of colored students learn, they must learn quickly; and the question with everyone should be, not what he would most like to learn, but what, of the things he has time to learn, will benefit him most. Very few colored people have the pecuniary ability to buy the enjoyment of that schoolsstic calm, which is as necessary for good mental digestion, as the "quiet half hour" after a seven-course dinner.

Three great obstacles are in the way of educating the colored people (so far as book learning goes,) and they are as follows: First, the dyspeptic haste with which their studies must be pursued. Second, their voracious appetites for learning. Third, the weak state of their mental digestion, arising from the intellectual starvation of their ancestors. Time will remove all these difficulties, but at present they exist, and cannot be surmounted by shutting our eyes to them. T. T. N.

FRETS.

A dictionary, as a steady literary diet, can hardly be recommended; but a little, taken occasionally, will sharpen anybody's vocabulary. Custom has so clouded many of our simple words that their real meaning is lost to sight; but turning the leaves of a dictionary will dispel these clouds and often lead to unexpected discoveries. The verb "to fret" is a case in point. Custom has made us regard the word as meaning something disagreeable—as a synonym for "to be cross." This popular notion, like many others, contains a grain of truth and a bushel of chaff. Webster says that it means "to wear away by friction," a definition broad enough to cover all possible uses of the word. In nine cases out of ten, however, when we use the word, we mean "to wear ourselves out by friction against unnecessary trifles." If this definition be correct, it is not presumptuous to say that fretting is more than folly; if not a disease, it is a crime: for it needs no profound argument to prove, that abusing the organisms that have been given us to use, is a crime.

To slightly alter the words of the old song, "If a man be thrown into a bramble bush, and scratch out both his eyes," we pity him as a victim of circumstances: but if he throw himself therein, his wounds will awaken no sympathy, and he is apt to be called a fool.

To describe frets as persons always throwing themselves into metaphorical bramble bushes, is no particular strain upon the language, and brings out clearly the real meaning of "wearing away by friction." A man who frets, wears himself out unnecessarily against the sharp corners of life; while a well balanced man steers clear of all obstacles that he can, and those that he cannot, he goes through or over. If he cannot wear them away, he is careful not to let them wear him away. He always uses the verb "to fret" in the active voice, leaving the passive voice for fools or frets.

Idleness is the dam of many mangy whelps, but the most useless, ugly, one of all is fretfulness. It is hydra-headed; lopping off a head will not kill it; the only way to get rid of it is to starve it out by plenty of hard work, and a hearty will to do the work. A man in dead earnest about anything, has no time to rub himself against the trifles on which fretfulness feeds, and pays no more attention to them than a drowning man does to gnats on the water's surface. No man can any more do his best if he fret, than a boy can whistle and drink cider.

Regarding fretfulness as a disease, there is this peculiarity about it: that although evidently painful, people afflicted with it seem to enjoy the pain. Well packed with truth is the old satire on a hypochondriac, who replied to an inquiry concerning his health, "Pretty wretchedly, thank you." It may be classed among the preventable diseases, for no sane man knowingly gives himself pain; if pain comes to him, he meets it manfully and tries to thrust it from him; but a fretful man clasps every atom of irritation to his bosom, and coddles it with a self-abnegation worthy of a Juggernaut worshiper.

Like weak lungs or feeble digestion, this disease can be handed down from father to son; and parents who indulge in fretfulness are doubly detestable; for they not only poison the waters of the present, but of the future. To poison a pond is bad enough, but to poison the springs whereby a river is fed, is worse.

Fretting is like jealousy, in that it often makes the food on which it feeds, and changes little molehills of annoyance into mighty mountains of misery. Indeed, more people fret on account of what is not, than on account of what is. To enumerate all the things people fret about would be an endless task; but it is astonishing how many people fret because they are not somebody else. "Oh, if I were only so and so, I would be perfectly happy!" is the speech or thought of many a fool. The chances are hundreds to one, that if such metamorphosis were possible, retransformation would be prayed for in less than a week. It is physically certain that no living man has a greater burden than he can bear; and that to every back is fitted a burdan, whether the back be clad in silks and satins, or cotton and corduroy.

In this practical age, usefulness is the standard to which almost everything is referred. "What is the use of it?" is about the first question asked concerning any new or old thing discussed. Measuring fretting by this standard, the result is a minus quantity, less than nothing. No physical use comes of fretting, for it is a steady drawback on any real work a man has to do; nor is there any mental use, for the mind of a fretting man is like a wheel whose axle is not fitted to its centre, and which jolts, and squeaks, and wears itself away at every revolution. It is clear there is nothing useful, and assuredly, there is nothing beautiful about fretting. It is neither calm nor storm: it is simple irritation,—a perpetual pimple on the moral countenance.

Worry is not work, no matter how many people may act as if it were: a horse that champs his bit, crouches in the shafts, paws the air, and shies out of the road, worries a great deal, but works very little. Many a man goes about his work just as the champing, pawing horse: he flatters himself he is working desperately hard, but all the desperation lies in the way he is wearing himself out.

Serious things, like the thrust of a bayonet or the bite of a rattlesnake, do not make a man fret; but such a trifle as the buzzing of a mosquito, or the frayed edge of a ragged collar, is the miserable, contemptible basis of attacks of fretfulness.

A story is told that one of the penances of the pilgrims of the Middle Ages was to wear peas in their shoes, and that some who believed in the letter more than in the spirit of the penance, boiled the peas before putting them into their shoes. With us pilgrims of the nineteenth century, the case is different: we have our choice whether we wear the peas or not; but frets insist on filling their shoes with the most flinty kind of peas the country affords, and set their unhappy faces sternly against having them boiled. It is a strange taste, but some people prefer wormwood to cane-sugar, and all we can do is to wonder at their taste.

A fret is entitled to no sympathy, and, as a rule, gets none; that is, although we can pity a man cursed with fretfulness, we cannot sympathize with what makes him fret, exactly as we can pity a man for being a drunkard, but not for his being drunk.

As before said, a fret really enjoys fretting, and there is no more uncomfortable companion than a person with a pet grievance. If a man has any real grievance, he busies himself redressing it, or having it redressed: but a fret does nothing of tha kind; he takes his grievance round with him, and pours it out into every ear that will listen. Such people always get tha disguised or undisguised contempt of their auditors. Of all bores in all boredom, the greatest is one who always leads his grievance round with him by a string, as a lady does a pet lap-dog. Respect for tha dogs alone prevents saying, that tha rule of valuation of lap-dogs and pet grievances seems tha same—the more diminutive,—the more highly esteemed.

It is a quaint fancy to associate some color with different conditions of mind; and tha common consent blue is associated with fretfulness: not the deep, glorious blue of a June sky, but the inflamed, sickly hlue, that marks the locality of a bruise.

To all in search of health, wealth, or long life, this advice is good—DON'T FRET!

T. T. B.

DURING the recent discussion of the hill to restrict Chinese immigmtion, in the Sennte, Senator Bruce was called to the chair by Vice President Wheeler. This is the first time in the history of the Govarnment that a colored man has presided over the U. S. Senate.

On the Farm.

HINTS FOR WORK.

From the American Agriculturist.

Lay plans for the Year without delay. The forehanded man works to great advantage. He loses no time; everything is done at the proper moment.

Hired men are now engaged to begin work April 1st. The season usually consists of 8 or 9 months, leaving the men idle about one quarter of the year. It is well for employers to consider if they can not better afford to give steady employment. The work is work to be done at all seasons if sought for.

The change of Weather often exposes men working in the open air to great risks. To keep the feet dry is very necessary. A well-drained barnyard is one preventive of wet feet and wearing rubber boots wherever water or mud is to be encountered, is another. The latter will serve in all cases.

Horses feet should be well cared for in the slushy condition of the roads. When brought in from work, horses should be well rubbed down with a piece of blanket and the feet and legs thoroughly dried. The friction will remove the chilling effect of the cold slush; but if this is left upon the feet, the skin may become diseased and cracked heels or foot fever result from the carelessness.

A Caution.—Buy no fertilizers without knowing precisely what they consist of. Peruvian Guano, and other reliable fertilizers, when genuine, always have a brand upon the bags, with a statement of their analysis. Special manures are sold by responsible dealers, according to known formulas, which should be studied by the purchaser, that he may know what he is getting and how to use it.

Calves.—A calf that is infested with vermin, may be known by its rough coat covered with ticks. The young animals should be freed from these pests at once. A mixture of lard and sulphur rubbed along the spine and on the brisket will be effective; and a dose of a tablespoonful of sulphur and molasses, once a day for a week, will help greatly to drive away lice and prevent disease.

Sheep.—A few one-ounce doses of a mixture of equal parts of sulphur and cream of tartar will relieve the irritation of the skin common in the early spring and the loss of much wool by rubbing. Ewes should have dry and clean pens and yards. Abundant litter is no remedy for a wet floor; a dry board is better than a foot of damp straw for a bed.

Lambs.—Early lambs may be pushed forward by giving them a little fresh cow's milk. They will soon learn to drink this from a pan. The milk should be given warm from a fresh cow, a quarter of a pint to a meal. Do not overfeed any young animal; that retards, instead of assisting growth.

Swine.—Separate breeding sows from other pigs and provide them with a warm dry pen, bedded with leaves or cut straw and furnished with a rail fastened 8 inches from the floor and from the wall to prevent the young pigs from being crushed. It is well to give the sow half a pint of raw linseed-oil a few days before farrowing and immediately after; this may prevent her from destroying the pigs.

Poultry.—Unless great cleanliness is observed, the poultry-houses will become offensive and unwholesome in the damp and warmer weather. Clean often and sprinkle with plaster and coal ashes, or dig up the earthern floor and freshen it. If lice or fleas abound, apply grease or kerosene oil to the perches: it will spread from these to the fowls. Provide warm, sheltered nesting places for the early setting hens and a glass covered coop for the chicks. Feed young chicks little, but often.

Tools.—Every implement needs overhauling and many will require repairing. This is the last opportunity of getting things "to rights" before they will be needed. Sharpen and polish up the tools, clean the machines and oil them thoroughly: look well for missing bolts; change round for square headed bolts and put everything in working order.

Handy things to have: A box of copper rivets and burs, a coil of stout copper wire a few dozen mixed screws, an assortment of carriage bolts, an awl and a few wax ends, a bottle of harness dressing, a pound or two of assorted wrought nails, a few loose links for broken chains, half a dozen brass knobs for cow's horns, a small anvil, a box of axle grease (a mixture of black lead and palm oil is the best,) a quart can of sperm oil for machines, 5 gallons of crude petroleum, a small supply of simple medicines and a medicine born,—all these and a closet to keep them in, will be found valuable in the saving of time, money and irritation, when an occasion of pressing need comes during the busy season.

SHEEP-HUSBANDRY, APPLE AND FIG RAISING.

The February number of the "Planter and Farmer" published at Richmond, Va., is as bright and spicy as ever.

We quote from two of its correspondents.

"My experience is, that a couple of acres planted with good apple trees, when of size to bear well, will pay ten-fold more than any other crop; but the land must be good, or made so, after setting the trees. They can be set out as late as the first of April, but it had better be done in November or February, cultivating and improving the land regularly; nothing will pay better.

And as to sheep, no stock of any other kind will pay like sheep, provided you can keep the *comminists from them.* Dogs are easily managed without the aid of law. Allow each man to be "monarch of his own domain," is all of law that is needed. Let any man make the experiment who has never tried it, and lay out some of his spare cash, if he has it, or borrow it if he can get it, in sheep; manage them according to the experience of others or the dictates of common sense, and mark what a per cent. they yield upon the outlay. Almost in every case it will be found that the lambs and wool will more than pay for the flock, with little expense. What other stock can be made to pay one hundred per cent. income? And then there is the home-made flannel, and the warm mittens, and socks, nubias, etc., for winter use, and occasionally fresh lamb in summer; your money meanwhile, yielding perhaps one hundred per cent.

Then, I say, plant out fruit trees and cultivate them; buy sheep and take care of them, for they certainly will pay.

Caroline county, Va. W. W. KAY.

Although a semi-tropical fruit, yet too great a heat prevents fruit bearing; while, our summer days, being longer, we have more hours of sunshine, and as a consequence, just the climate for the production of the fig.

Its cultivation in our colder climes is no experiment, for large crops are raised in and about Washington, Baltimore, Philadelphia and elsewhere. General Worthington, of Ohio, after several years of experience, says of the fig tree:

"It is quick grown, suits our climate admirably, is easily protected, is a sure bearer, and very prolific. The trees begin to bear when two years old, and when four or five they produce from the same area, with less labor, a larger and more certain crop than either potatoes or tomatoes. I like them best fresh from the tree, and often breakfast on them. The demand by the family is very great. This fall I had a cart-load of dried figs from an area of less than four square rods. The fig tree is eminently *the* fruit for the cottager and villager, and when its merits and adaptability to our climate become known, it will be as regularly grown for family use all over the Ohio valley as either the potato or tomato." And what is true of that State is true of the whole North.

It is true a slight winter protection is needed for our winter weather; but this small attention is more than atoned for, in the fact that the fig has no insect anemies, and the wood no blight, and we *do* have "a heap" of trouble with some of our fruits from these sources.

An experienced cultivator says, "There are few trees, with so little trouble in their cultivation, that bear so abundantly or yield so much for so little care as the fig."

The general cultivation of this fruit would be not only a comfort and a benefaction to our people, but would be a source of wealth. To this end, I will take pleasure in sending to any address my paper on "The Fig," which tells how to grow, how to protect, how to dry figs, etc.

LETTERS FROM HAMPTON GRADUATES.

FROM OUR GRADUATE IN AFRICA, "MURRY-MEN AND PURROW DEVILS."—A SAD STRUGGLE—TEACHING TOGETHER—PLEASANT EXPERIENCES—A SOUTHERN LADY'S REPORT OF TWO HAMPTON GRADUATES' SCHOOL.

It is sometime since we have heard from our missionary graduate, and the following letter will be read with intereet by those to whom it is addressed, and other friends.

MENDI MISSION, NEAR FREETOWN,
SIERRA LEONE, WEST AFRICA,
January 7th, 1879.

To the Hampton Graduates:

My dear Friends and Schoolmates:

One year, three months and fourteen days ngo to-day I sailed from New York (in the Barque Jasper) for the land known to us as tbe land of darkness. We reached tbe harbor of Sierra Leone, Nov. 19th, efter n voyage of fifty-seven days. We went ashore on the 20th and remained in Freetown ten days, after which we came to the place of our labor. Since thet time, I have been working among the henighted sons of Ham. When we first got on the field I was stationed at Good Hope, the ether station, and had a more homelike situntion than what I now have. The older people there were raised in Freetown, und therefore are more civilized than these among whom I now labor. People here have most all the country ways and ideas. They practice all kinds of vices, and have many gods. I have never as yet seen any of their gods of wood, but I have seen the bugabug which they have as gods. When they are going to make their farm they must get a bugabug house (which is only a rough pile of earth heaped up by the little hugs called bugabug) and place that in one corner of the farm and make a shelter over it, else they will not have any rice, they say. They must also cook n large pot of rice and fish and place it in one corner for the devil, to make the devil pleased, and he will mind tbeir farina and give them pleaty of rice. And when this rice is ripe, they must cut a large bunch and bang it up for the devil before tbey can use any for themselves. One can go over the rice farms and around the farm-house, and see these fine hunches of rice hanging there, waiting for the devil to come after them.

There are many other thiags about the ways and habits of the country which I would be glad to tell you, but will leave tbem till another time. The thought of writing to many of my old schoolmates came to my mind this morning before day, while I was on my bed. My thoughts are often drawn Hampton-ward, and as I think of her, my Alma Mater, I also think of those deer ones that used to make things plensant for me, both teachers and scholars. It makes me sad to think that since I left many have fallen. Yet when I look back and think that tbey are gone from me, and can no more come to me, I know that I can see them again. I can go to them if they cannot come to me; and while I know that earth has that number less, I believe that heaven has that number more. We have many to die around us day after day, and week after week; they are departing. You may see a man here walking around seeming well, to-day, and to-morrow you may see the sod put upon that same man. When I look about me, and see that my life is so changed, and that I em in Africa instead of the United States, I can but look up and say, how wonderful is thy hand, O Lord! Did I think two years ago that I should ever he among these people? But God knew. Any one may look at the idea of going out as a missionary and think it is a small job; but be is quite mistaken. The word missionary means some thing more then we are able to understnnd before we heve gone. Many persons start out as missioneries who at the first call willingly say, "Here am I, send me, send me;" and when they have fully gotten on the field, and begin to find out the meaning of the word missionary, they are as willing to say "Here nm I, send me, send me, me," as they were before, and more so; but that "Send me, send me," will be to "send me back." I am afraid that many who say "send me" don't know what they are saying. Africa needs missionaries—indeed she does; and I am glad when I hear of any one coming as such, but let him that comes have the work at heart. Many have been out here who came to say that "I was a missionary to Africa," or some other parts, but I think the land would have been bettered by their having stayed away. Let us take the matter to God and be sure He says go. If He says go, tben go, for He will go with you. Many of us say "I want to be a missionery; I want to go to Africa, or some other beathen land to work for Christ," and we have hundreds of missionary duties at our very door daily, end we overlook them, looking eway off to some far land. I tell you dear friends, a missionnry life is everything but a happy one. You have ten thousand things to discourage you, while you don't heve one to encourage you. It is a life of sowing and not of reaping. And many times when you have sown the seeds, and think thet they are taking root, you see something, as it were, pulling up the sown seed. You go and re-plant, and you will soon see something else destroying the seeds. Our greatest destroyers are the murry-men or wise men of Africa end the purrow devils. The murry-men tesch the people all the heathen habits of the country, end they get large pay, therefore they work hard to make the people believe in charms and medicines which they make and sell. They will take a piece of cloth, and sew it together, wax it over and sell it to some poor man for about $3.00, and tell him to keep this about his body, and it will keep away sickness, or give him good luck. And really it is not worth one straw. The purrow devils are those who disguise themselves and go around the country. They have a place of meeting they call the purrow bush. They take all the little boys they can get and carry them to this bush and keep them there till they are quite large, and then their people have to pay a large sum to get them out. While they are in there they are taught all the vices of the country. The murry-men and purrow devils know that if the country became civilized they could not get their living so easily as they now do; so it is their object to keep the country in darkness as long a they can. Aad anything they can do to keep the missionary work from spreading they will do. After a missionary has gotten on the field and sees all these things aad a thousand others, the only hope he has is that the Lord has said that "my word shall not return unto me void." Don't think dear schoolmates that I write this to discourage you and to keep you from coming to Africa or going to some other dark land, I do not; but I want you to consider well your calling before you say "send me." Africa needs help. She is calling for help every day, and I should he more than glad to have some of my schoolmates on the field to help us in the march. We need more men—hut men of the right kind, not such as will work for the praise of men, but those who will work for Christ and his kingdom. I do pray that the time will soon come when all the mission stations in the sunny land of Africa shall have such men to work them. While we are in Ameries and hear of Africa and read about her we cannot have any idea about the land. God has made this land to suit the people here and they only can enjoy life here. They say that "this is not white man country, this country no suit white man, and white man country no fit for Africen man." And I agree with them that this is not the white man country, for the white man comes herc to get rich; he stays here a few years, and drys np as it were, and is soon gone to his mother earth. I have seen the soda put upon many a trader, and yet the come for the sake of riches. These traders are a curse to Africa, they bring rum and sell it to the natives. Africa needs to be opened up to trade, but not such as is carried on here now. There are many valuable things here which might be shipped to some civilized country and made good use of. Then she needs to exchange these things for such things as tools and furniture, clothing and such like. You will see a farmer going to his farm with his tools which are a cutlass and a hoe. The cutlass is not any more than a large knife, and the hoe is about as wide as my two fingers. These he makes his farm with, and works with all the year till harvest time, and when his rice is ready to cut (this being most they raise, rice and Cassadn) he has a small knife not as large as a good-sized pocket knife, the blade is about half an inch wide end two inches long. He cuts his whole crop of rice with this by cntting one head at a time. They don't cut it as we do wheat, but only cut the heeds off. A man who has a large farm will hire men to to help him cut, and gets a drummer to play the drum, and they work by the music, singing, and making a loud noise as the people used to do in America at their old time corn shuckings. He pays each man one shilling a day, in our money twenty-four cents. The women also have a hand in this; they follow the men who are cutting and clep their hands and cry out "that am the man." I don't know whether they get any pay or not, as they don't value woman labor here much. I don't think they do. They don't think that the women do much, yet they make most of the farms for the men. The men may help cut the farm, and the women will plant the rice and keep it clean till time for harvest. While the rice needs cleaning you may go through e cbntry town, and you will hardly see six women, while the men are plentiful. The women are all on their farms, hard at work and the men are setting at home doing nothing. I was talking to one of the men about the African man wanting so many wives and he said that if a man had plenty wife he can make big farm and have plenty rice, but if man no got wife plenty, he no make rice plenty, except he can hire. Thus you see that the wives are the slaves of the country. A man came to see me the other day, and brought four of his wives with him; he has only five but by some means he failed to bring all of them. She, I guessed was left to take care till he returned. So all the men try to get as many wives es they can, the more wives the more honor they have. They buy them from $3.75 up to $19.00 and, sometimes, the old people come and give them their daughters for wives.

Now, dear schoolmates, I have written you a long letter, and every one who reads this, I shall expect to write to me. I would like to write to each one of you, but you know that it would take all my time to do it, and all my money to mail the letters. So I thought the best way would be for me to write you all a long letter, and have it put in the "Workman," and then each of you could write me. I shall not have time and room to tell you all I want to in this, but after you have written me then I will write again. If I owe any one a letter, they must consider it paid when they read this. We are having it quite cool here for African; the Thermometer has stood between 62° and 64° for about twelve days, *i. e.* in the morning, and that is cool for Africa. The natives say it is cold too much. You can see them getting to the fire as if snow was three feet deep. Now dear schoolmates, I must stop. But must first ask you to pray for me, I need the prayers of all praying people. May the Lord bless each one of you, is the prayer of your lonely schoolmate. Write soon to, yours in Christ,

ACKREL E. WHITE.

THE sad etory of destitution and losing etruggle of ignornnce with adverse eireumstnnces, told in the following letter, is indeed "enough to bring tears to the eyes," and indieetes the kind of work to be done in many parts of the South. To do thie work as far as lies in their power, these graduate teachers are bravely trying, and the simple faith with which they sometimes nsk for help in it, is the result of former evidenees of the sympathy of northern friende. Barrels of partly worn but very uecful clothing have been distributed from time to time among such needy ones, grently to tbeir help and encourngement.

MARYLAND, *Jan.* 1879.

Gen. Armstrong—Dear Sir:

Knowing that you are interested in the work of the Hampton graduates, I write to give yon an idea of mine.

I am now teaching school near the village of P., in Prince George Co., Md. On learning my business the examiner asked me where I was educated. I told him at the Hampton Institute near Fortress Monroe, and then he inquired who was the Principal of that school. my reply was Gen. Armstrong, Then he said "I have heard of that school before," and absented himself. On returning he handed me the aames of three trustees and their address and a letter for the same, directing me to see them at once. The letter was one of advice to the trustees, advising them to appoint me as their teacher, and they did so accordingly. Taking my appointment to the examiner (as he requested me) I expected to have to stand a rigid examination, but the examiner only asked to see my diploma; on showing that, he gave me my certificate, requested me to open school at once, and added, "It ought to have been opened two weeks ago, but I will make no reduction in your salery for the quarter."

I opened scbool the 17th of September, with eighteen scholars. They seemed very anxious to learn and attended school very regularly for a while, but as soon as the weather began to get cold the attendance became to be very small, and continued to get small until I only had an attendance of eight. I did not know the real cause then, but by going around to tell the parents to send their children to school, I found out the main cause: General, believe me! every family I went to, brought tears to my eyes. There were tbe poor little children without clothes enough to hide their naked skin, nor shoes to keep the frost from biting their feet, and their parents a very little better off. They asked me was there any way for me to help them. I told them I would try to do something for them.

If there is any way thet you can help these poor little children, either yourself or point me out to somebody thnt will, please do it. The colored people about here are very much bebind, all on account of being poor managers. Most of them have been working ever since the war on the land of their former masters, and are now so much entangled in debt with them, that they have a mortgage on everything they bave, and consequently they work from year to year without accnmulating a cent. In my next letter I will try to tell you something about the different denominations and the babits nnd manners of the people about here, whicb I suppose will be an item of interest.

Yours truly, B.

——, VA., *Dec.* 8, 1878.

My dear Miss H:

It has been six long weeks since I received your nice letter.

We have a good school, numbering a hundred end six—nearly ell of them are present every day too, quite a difference in our positions this winter and those of last. I never taught children that love to come to school any better and they are very willing and anxious to learn. I took in my second monthly report Saturday. Every Friday we have the children speak and allow them to ask their parents in to hear them speak; they seem pleased at that. We speak some times too. I have attended the Teachers' Institute. It was much more pleasant for us this year than last, there was not any distinction made, and the Institute was conducted with more intereat. A great many ways of teaching Reading, Arithmetic and Grammar were explained. Several lectures were delivered on teaching, one particularly amusing and interesting hy Dr. Ruffner. The Institute lasted three days. Col. Parker's method for teaching beginners to read was repeatedly mentioned. I was proud that it was not entirely new to me for S. and I find it quite useful in our School. We have some nice charts (which are hers,) that help considerably in drawing, or rather keep us from displaying our ignorance of that art. I aboold like no much to see the boys since they are in uniform, it must have taken work to get them all ready. I would like to see those Indian girls too—for I've never seen one. Yes, Miss H., I think S. and I are quite fortunate to have schools—such good ones too—and right together. Coles teaches in this Co. too. I would recommend some of the vacancies to some of our students who have not schools, but the salaries at the country schools have been so much reduced that it would not pay any one to come from any distance for only the *promise* of that small amount.

I guess you had a nice time "Thanksgiving—I had a very nice time, teaching on that day, and had a visit from the Supt. whicb was very unexpected to us. I guess be meant it should be a surprise. Our children did real well which made us more proud of them than ever. He praised the children, then turned to us and told us that there would be no difficulty for us to retain our places next winter for a nine months term.

Hoping you a Merry Christmas and a happy New Year, I am

Yours fondly, L.

A SOUTHERN LADY who is interested in progress of the colored people, sends the following, which we welcome to our columns.

HARRISONBURG VA., *March* 13*th*, 1879.

Gen. Armstrong:

If your columns are not too much crowded this month, will you find room for the hasty notice of the school in which two of your graduates are doing such good service. As it is only the primary school, their influence is not as much felt as it deserves to be. I wish time and opportunity would allow me to speak more fully of the real good I believe your young teachers are doing, but think even a few words of encouragement will be gratefully received.

Many thauks for the paper whicb is always a welcome visitor and handed after perusal to some appreciative colored neighbors.

The school is in charge of Miss Sarah Smoot and of Miss Lucy Simms, Hampton graduates, now working in Harrisonburg. They have about fifty pupils under their care ranging from five to twelve years and their exhibition of arithmetic, reading, recitations of select poems and other exercises so well known to to those accustomed to teach the young "idea how to shoot" would have done credit to children of much more advanced age.

To see children scarcely high enough to reach the blackboard, multiplying 5,987,549,703 by 9,873,654, or dividing 899,404,443 by 659,783, was an astonishing sight to one who six months ago saw the same children begin the "musical melody of the multiplication table," and now go through the whole of it to the pretty tune which makes even dry numbers and figures attractive.

The famous "Cherge of the Light Brigade" was given new lustre, at least in the eyes of the admiring teachers and parents by the manner in which it was declaimed by little Miss Nannie ——. The patriotic sacrifice of "Arnold Winkleried" was repeated by an urchin scarcely able to "say such big words," but who, in a voice of *perhaps small* thunder, repeated "Make way for Liberty" &c. Dialogues and charades, tableaux, singing in chorus, &c., concluded the exercises which all must acknowledge do credit to the efforts of the young teachers. We wish them God-speed in their efforts to teach lessons of honesty, bumenity, truth end progress to their little pupils, and think they have certainly begun, at least, to walk in the right direction, and hope they will go on and learn to be indeed "true followers of that which is good," and be clothed with true wisdom.

I remain, respectfully,

N. G. DAINGERFIELD.

RECORD OF INDIAN PROGRESS.

While the Government pays for the basement of "Marquand Cottege," and the Principal felt justified in saying, "Go ahead." The Indian youths were all assembled, and, through an interpreter it was announced that share of attention, and the lesson was finished by illustrating the uses of differently shaped hammers. A jollier set never left a classroom than they, as they tinned their hats, atance. Four or five, owing to certain temporary conditions have been a burden to me, bnt tbe rest bave pushed ahead zealously. Any one who is inclined to stand listlessly,

RECORD OF INDIAN PROGRESS.

While the Government pays for the board and general living expenses of the Dakota Indians here, the Hampton Institute, relying on Northern aid, has undertaken, for the first year at least, to expend more than two dollars for every one dollar received from the Government.

It has finished and furnished two new corridors in Virginia Hall, containing twenty rooms, for Indian girls, at a cost of $2,000; erected a boys' "cottage," containing fifty rooms, with furniture, costing about forty dollars apiece, at an expense of $10,000, and needs $6,000 for a suitable workshop for the Indian and colored boys. This is needed at once.

To the wide-spread appeal for aid in this work, the response has been a surprise.

Aside from what about ten people have given, the returns have been very small. The few who have given generously have lifted us into high hope for the future. Our Indian students are in comfortable rooms, which for many years, we trust, will be filled with red men's children seeking the knowledge that shall fit them to work for their race.

Two-thirds of the contributions have come from Eastern Massachusetts.

Fifteen hundred dollars are wanting to meet the entire cost of buildings for Indian boys and girls—an outlay to be made once for all.

Next is $6,000 for the workshop where trades will be taught.

It was gratifying to receive, a few days ago, a letter from the boys of a well known town in Connecticut, who "have met together to form a society to raise money sufficient ($200) to pay for a room in the Indians' Dormitory to be built at the Hampton Institute. We are boys from fourteen to twenty years of age. Some are in business and some in school, and all are from the Sunday-schools of the city. We hope to increase our members to fifty, and are quite sure of forty boys."

We take the liberty of publishing the following letter, hoping that it may stimulate other societies to do likewise:

THOMASTON, CONN., *Feb*, 27, 1879.

Gen. S. C. Armstrong,
Hampton, Va.,

Dear Sir:—

Some of the ladies of our Ladies' Miss'y Society are feeling, of late, a special interest in the work for the *Indians*, and wish to vote an appropriation, if they can do so wisely. Hence, they have asked me to make inquiry as to your work at Hampton.

My impression is that the Government aids you, perhaps to the full extent of your need. If, however, it should be that the aid of the churches is still required for any part of the work, be so kind as to let me know.

Also, if you have any printed matter showing methods and promise of the work for the Indian pupils, please have the goodness to enclose it, and oblige,

Yours very truly,
H. C. HITCHCOCK,
Pastor Cong. Church,
Thomaston, Conn.

OUR INDIAN TRAINING SHOP.

The shop boys are divided into four detachments of ten each and each company works two hours daily, under the direction of Mr. George B Starkweather, lately of Hartford, Conn., reports as follows:

An experience of nearly a fortnight in the Indian department, enables me to give the following account of the progress and attainments of the boys under my charge, since the "new departure" in mechanical instruction here.

The observation of my future scholars, which was enjoined as my first duty, showed me at a glance that they were human, and that a knowledge of human nature with its needs and impulses, must be the key to the situation. What sober-visaged mortals they were! They would pass one by without lifting an eye, and looked as solemn as if on their way to the burial of "the last of the Mohicans."

The scalping-knives and tomahawks that were their inseparable companions in the primary geography pictures, were missing, but I did see pocket-knives in their hands, just such as I used to covet and barter for, when a New England school boy. Now I maintain that whoever truly appreciates the merits of a jack-knife possesses mechanical genius, either latent or active.

Sufficient unoccupied room was found in the basement of "Marquand Cottage," and the Principal felt justified in saying, "Go ahead." The Indian youths were all assembled, and, through an interpreter it was announced that a general workshop was to be opened for their especial benefit, and each was asked to express his wish as to the material in which he should work, whether in wood, iron or what? So few of them seemed to take any interest at all in the movement, or to care for learning my of the occupations of civilized life, that I began to have misgivings.

I had bought a dozen cast iron hammers and some cheap nails, trusting to bits and blocks about the new building for something to use them on.

The first day of Spring all were summoned over to learn the rules of the place, though the shop was not more than half ready. Two days later, at sunrise a class of ten stood at the door, ready for their first lesson. They solemnly followed me in, hung up their hats, donned their new aprons, and took their places on one side of a long bench. I faced them on the other side and my work began in earnest. It must be remembered that "yes" and "no," "good" and "bad," are the only words that can be spoken to them with absolute certainty that they will understand.

AN EASTER ALLEGORY. (*See page*, 38.)

All stood curiously attentive, with hammers in hand, awaiting developments. "Which is the good one?" I asked, holding a piece of board before them with the points of two nails inserted, ready for driving. Both were straight, and seeing no difference, they chose at random. Having taken sides in the matter, they watched intently for the result. One nail, of course, went smugly to its place, while the other split the block. A shout of triumph went up from the winning side, while the others were given an opportunity to investigate the mystery. The maneuver was repeated, and all but one or two guessed right. Then, with two or three blocks and nails each, they were left to make the trial for themselves. One hit his fingers, and his neighbor missed his aim, losing his hammer, another bent or broke his nail, or a fourth split his block, while the next achieved success; all this with great laughter. Then a left handed effort was proposed, which provoked new bursts of merriment. They succeeded, however, quite as well with one hand as the other.

This exercise was followed by drawing nails and the uses of the different kinds were then shown. Wrought and galvanized nails, large and small ones, those designed for horse-shoeing, brads, tacks, etc., all came in for their share of attention, and the lesson was finished by illustrating the uses of differently shaped hammers. A jollier set never left a class-room than they, as they tipped their hats, with a hearty "good morn."

Lack of material for the next day's work forced me to change my plans, so I called for volunteers with the plane and the saw. They tried their hands at tool sharpening, and even tool-making. Bench-hooks, honestone blocks, gauges, mallets, wooden squares, etc., were the productions of succeeding days, for I needed many of these and had duplicates of but few. Articles made by one's own hand always possess a peculiar value. There are scores of things yet wanting, but as far as possible, they will be made in the shop, and by these incipient geniuses. They are thus left largely to work out their own problem. This has its advantages, as the object ought to be: to fit them for their probable after-life, and show them that Jack-at-a-pinch can successfully engage in business without the latest inventions.

They had no idea of the use of the square, or of laying off their work before beginning it, so I set them, nearly all, to making squares, bits of flooring boards and lath being the most available materials. Nicely finished ones were brought to me for approval, but the application of the true square generally brought out the weak points of their instruments very unexpectedly. Dressing on alternate sides till the lath was nearly all cut off, proved a far more effectual way of practically impressing upon them the exactness of a right angle than any words through an interpreter could have been. The necessary revisw of their first lesson was had about the third day, when the fate of many a promising box was sealed by the faulty position of nails. Several were almost discouraged, when, after hours of painstaking, some unlooked-for deformity would present itself, but hope revived upon seeing the magic power of the rasp, sandpaper, putty and paint to hide such defects. I mean eventually to show them that the best work needs none of these appliances—that "whitewash" wherever used is applied to cover blemishes.

I set a number at mortise and tenon work, but I soon perceived that they were not enthusiastic over it, as they could plainly see that their work was not to be utilized, so I gained my point by setting them to chiseling boxes out of blocks, for their own private uses. My aim has been to keep each one busy and interested at *something*, and I have failed in no instance. Four or five, owing to certain temporary conditions have been a burden to me, but the rest have pushed ahead zealously. Any one who is inclined to stand listlessly, without designs of his own to carry out, and too indifferent to apply for employment, is supplied by me, when I am too busy to find other work for him, with some tool that is in need of a good handle just then. Over-production in this branch, is checked by the working of the law of "the survival of the fittest." "Good"—which is always used in a comparative sense—is my commendation when it can be honestly given. I am ever on the alert for the discouraged ones, and it is pleasing to watch their countenances light up as their difficulties vanish.

Some new feature is added to the shop almost every day, and the stock of novelties will not soon be exhausted. The working of tin, leather, iron and glass is gradually being brought to their notice. As with a cheap patent instrument, I cut this latter flinty substance at pleasure, their admiration is profound. One brings out a tin-type of himself and wants a glass cut for it. Then, hesitatingly, shows a picture of the girl he left behind him, to have it similarly protected. I let them try their hands at everything I reasonably can. I frequently have to play the part of surgeon and bind up a bleeding finger, trim ragged knuckles—lacerated by saw teeth, or extract slivers: they endure such operations unflinchingly, and return to their labors undaunted.

It fairly does one good to see the great beads of sweat stand out on their swarthy forebeads, while the cheerful spirit that pervades "Polytechnic School" is truly admirable. "Jesus Loves Even Me," was caught up and whistled by the whole class the other day, while later the familiar tune of "Awake my soul, stretch every nerve," may have been a spur to the stripling polishing up his bow, as well as to one who was making strenuous efforts to say the multiplication table in English. "John Brown," and the plantation melodies are attempted, while the question, "Who will care for mother now?" did not prevent one promising young Sioux from neatly dressing up the corners of his box. "The Sweet By and By" is a favorite tune with several. One boy, to air his English sang, "Nearer my God to *Me*," with great gusto.

"How are you going to manage to get those fellows *into* your shop?" was queried at first, but how to get them *out* is my dilemma. The Institute bell rings for noon, the shop gong warns them that the two hours are up, and yet I have to shake some to apprize them of the fact. Saturday was left as a free day, with open shop, just to see their tastes and preferences. An average of *twenty* thronged the place till sundown. Half a dozen little fellows, deemed too young to join the classes, hung wistfully about the door and were invited to enter. Hammers, nails, tin half-dollars and laths made them supremely happy for the day. The only act of rudeness yet noticed, was, when a large fellow not finding a spare apron, stripped one of these amateurs, and told him, I suppose, that small boys had no business there. The little brave came to me for redress. I took him by the arm, and, leading him where nice new ones were locked up, offered him one, but as the big tears came streaming down his enraged face, I saw that I had made the matter worse, and made the offender restore the apron. The Indian sense of justice was appeased, and the boy was soon happy.

The tools and material all have to be kept out of sight, and asked for when needed; not that there is danger of their being stolen, but rather, misapplied. Everyone of them can see a bow and arrow imbedded in a four-inch oak plank, and many have not yet learned to see anything else in such lumber.

One of the Dakotas, whose line of duties excluded him from our classes, came in the other day and said he needed a shelf of certain dimensions, for his toilet articles. I told him where there was one he might have, but his countenance fell, as he said "I wanted to to make it myself."

I am confirmed in my belief that the valley of the Connecticut may yet be rivalled by the regions of the Yellowstone, in the matter of mechanical skill, if the latter section has be allowed a fair chance. Not one of my classes can be called stupid, and the average do as well as New England youths would, reared in the far West. In nailing their first blocks, they exhibited taste and design in a majority of cases. Two or three could be fitted for mathematical instrument makers, as was the immortal Watt, and; possibly, like him, invent a new motor. I had hoped to find room in this sketch for a brief description of some of the buds of promise but it must be deferred.

G. B. S.

FORT BERTHOLD, D., *Feb.* 3, '79.

Capt. Pratt:—

I know that it is all right now. I hear how my son is doing, but it is hard to bear to not see my son for so long a time. I see that the white men who come here are wise, so I sent my son away that he may learn to be like them. So my son is away off and I am here alone, but I did it.

fully satisfied, from our own observation and practical experience in the field of labor, that board and have been made a separate lesson in writing, spelling and pronunciation. We from an unwieldy bit of timber four inches thick is suggestive of their ancestors, the

them. So my son is away off and I am here alone, but I did it.

My son helped me cut wood and hay, and by it we lived well, so I sent my son away to learn more work so that he can buy wagons and stoves and we will live well through him.

Wherever I go hunting I only find white men and their work. There is nothing now for an *Indian* to live on, so I want my son to be a white man and sent him away. It is all right. My son is now in the midst of good works and my heart is glad. I see his picture where he has on white man's clothes which contain many places to put money in pockets, and I know that you "hold my son well for me."

Capt. Pratt, I know God did this work. It is not your work or mine. God did it for us.

No more. SKUNKS-HEAD.

AN INDIAN WOMAN'S LETTER.

The following is an extract from a letter from an Indian woman, a teacher among the Omaha Indians, to some friends in Philadelphia. The original is exceedingly well done and could not easily be surpassed by an educated white woman.

After an interesting account of a Christmas tree supplied by the friends to whom she was writing, she says:

"Yonder is a man in a faded blanket with nothing striking about him but his tall and vigorous form. He has killed many enemies in battle. He is ever ready, at the risk of his life, to defend the weak and helpless. He never hesitates to rebuke the vices of his people even though he bring down their anger on his head; and yet underneath that stern exterior is as true and loving a heart as ever beat. When a little grandson of his died, 'he wept and would not be comforted.' I have singled him out from the rest because I know him so well, and not because he is the only one. There are others like him, more or less, and when I see them I think to myself, if they have become what they are, amid all their disadvantages, what would they not be with the religion of Christ to help them? Oh! you do not know how hard the work is out here. They have all lost confidence in your people. The good that Christ's followers can do is counteracted by the behavior of your Government toward them. They look on the white people as all alike. How can they believe in the good will and good faith among you when your Government, pretending good faith and good-will, and pretending to ratify it by solemn treaties, breaks them at pleasure, taking their lands from them and driving them hither and thither? Some of the more intelligent among them have thrown aside their own customs as foolish, but refuse to have anything to do with the white man's religion. They have said to me, 'The white men speak fair words to us, but they treat us as dogs, and we have not a spot we can call our own or where we feel safe.' Wa-je-pa, one of my father's band, once said to a minister at my house, 'We Indians *know* there is a God. We have always known it. He made us and gave us this land. We pray to Him in our hearts always, and not outwardly, as you do. We pray to Him when we lie down at night and when we rise in the morning. We pray to Him to bless us in whatever we do, whether it be in our daily rounds or when we go forth to battle. He has power to send us good or evil, and it is right, for we are His. But as for this book you talk about so much, and God's son, whom you say came into this world, we know nothing of them. Our ancestors never told us about them, and many of us do not care to have anything to do with your religion.'

"I am coming more and more to the conclusion that the surest and almost the only way of reaching the parent is through the children. Almost the only comforts they have in their lives consist in their children. For them they are willing to lay aside their arms and take up the plow and mower, all unused as they are to labor. For them they are willing to pass over injuries, lest the wrath of the government be aroused and their children slain. For the sake of their children they are willing to break up their nationality, their tribal relations, and all that they hold dear, to become citizens. Said one man to me, 'I wish that I had had the advantages in my youth which you have. I could then have had a chance to become something other than I am, and could have helped my people; I am now helpless and ignorant, but I shall die content if my children after me live better than I have done."

"SUSETTE LA FLESCHE."

LETTER FROM A CHAPLAIN.

FORT GIBSON, I. T., *Feb.* 4, 1879.

Capt. Henry Romeyn, U. S. A.,

Hampton, Va.,

Dear Sir:—

Your esteemed favor of the 20th ultimo came duly to hand, and I hasten a reply, in part, at least.

Words are inadequate to express the interest we have in all that great work of enlightening, civilizing and evangelizing the Indian Tribes of our country.

For more than thirty years past we have been fully satisfied, from our own observation and practical experience in the field of labor, that the INDIANS ARE SUSCEPTIBLE of education, and motives to work, able to develop and make progress in all that which constitutes *true civilization.* And from the very beginning of our labors, as Missionaries of the American Board of Commissioners for Foreign Missions, among the Sioux or Dakota Indians, in 1848, while we taught them letters and to read the Word of God, and learned their language and preached to them the gospel in their own tongue, we labored to establish among them schools, for the instruction of the children, and, especially, Manuel Labor Boarding Schools.

Very early, it seemed essential to adopt some plan by which the children and youth (the hope of any people and of the Church of the living God) might, for the time being, be taken out from the associations of the ignorant, idle and dissolute at home, and be fed, clothed and taught, to read not only, but to work with their own hands in self-support. As a beginning, and, I may say, the first practical illustration of of the feasibility of this plan among the Sioux, we took three boys and three girls (with the consent of their parents) into our own family, taught them to speak and read the English language, and to work and to have certain responsibilities, duties and privileges; just as any white children are educated and trained in the States.

Had we *then* been able, from our scanty support, to have fed, clothed and taught them, we might, even then, as readily have obtained a hundred fold more pupils. Afterward, Rev. S. R. Riggs of the Dakota Mission, on opening a new station of the Board at Hazlewood, thirty miles below Lac-qui-parle, on the the Minnesota River, opened a Manual Labor Boarding School, such as I described above, only on a larger scale, and with a special allowance by the Board for the purpose, as an important part of missionary work, and a work of great promise everyway.

Out of those small beginnings there has been a wonderful growth, especially among all those Sioux or Dakota Indians who, with their families, were interested in those labors. The privilege I had only a few years since, by the authority of the United States Government (the Indians themselves unanimously acquiescing therein,) of erecting and opening a Manual Labor Boarding School at the Lisseton Agency, D. T., for the Lisseton and Wahpeton bands of Sioux, on their (Lake Traverse) Reservation, I regard as one of the most interesting events of my life and labors.

Very truly yours,

M. N. ADAMS, *Chaplain, U. S. A.*

INCIDENTS OF INDIAN LIFE AT HAMPTON.

METHODS OF TEACHING. THE THREE R'S. NUMBER LESSONS. LANGUAGE LESSONS. THE WORKSHOP. EFFECTS OF SUCCESS. A MALLET THE MAKING OF HIM. RELIGIOUS TRAINING. THE FIRST COMMUNION. A TOUCHING END SCENE.

The letters and anxious messages of inquiry—some of which are given in another column, from the parents and friends of the Indian students at Hampton, are so like what any civilized father and mother would write concerning the child far away at school, that one cannot read them without a sympathetic thrill and a feeling that all the world is kin, and parental hearts are very much the same whatever the color of the skin under which they throb. For the sake of these anxious parents who have sent their sons and daughters so far to find the white man's road, and for the interest of the many friends who are watching the Indian experiment at Hampton with sympathy, we give a rather more detailed account than we have heretofore given, of the methods of training employed, and the progress and condition of the students.

A WALK THROUGH THE CLASS-ROOMS.

Of the sixty-seven Indians in the school at present, the seventeen from St. Augustine (Cheyennes, Kiowas and an Arapahoe) with four of the later arrivals from mission schools in Dakota, form the most advanced Indian class. Two more of the Dakotas were admitted to the regular preparatory class of the school, and one, the interpreter, and a Cherokee from the Wichita Mission in Indian Territory were able to enter the Junior class.

The remaining forty-two from Dakota Territory divide quite evenly into two sections, according to advancement and for convenience of handling. The St. Augustine class is similarly divided, and, both work and study being arranged on the basis of this classification, each of the four sections has its two hours of industrial training a day, a pleasant and healthful alternation with school confinement.

The great desideratum is English, spoken, read and written, and this is made the chief aim even in connection with the lessons in elementary arithmetic and geography which with the elements of vocal music make up their studies.

If we walk through their class rooms of a morning, we shall find the St. Augustines busy with their Third readers. The new words of the day's portion are on the blackboard and have been made a separate lesson in writing, spelling and pronunciation. We smile to hear the heroes taming their tongues to tell us how the naughty boy pulled the poor cat's tail, but the only doors into the royal domain of the English language seem to be measured for children at present, and so the six foot pilgrims must stoop. Some of them, however, can read with pleasure the simplest paragraphs of the Southern Workman,—a short Indian item or letter, for instance, without much help. Constant drill in phonetics is found very essential, especially for those who were oldest when they began. The Indian gutturals do not open the mouth and give the free play of muscle that clear cut English requires, and many of its sounds are wanting altogether in some of the dialects. Their natural shyness and reserve are also obstacles in the way of their learning to talk. As for their writing, we shall be shown their copy-books, "Spencerian method," of which they have filled nearly three, with very marked improvement. Some, however, could write handsomely when they came.

The Dakotas' class-room next door, we find filled with not quite so well disciplined a set, but all seem interested and wide awake. Here also, and especially, language lessons are made prominent. If we stay long enough, we shall see one teacher giving a reading lesson from the blackboard. A short column of simple words is taught until they can be read at sight, or written at hearing. Then they are asked to write them in a sentence and read it from their slates. This is a favorite exercise. It is varied with similar ones from the Harpers' excellent little primary readers. We shall see another class practising writing according to Col. Parker's method, on ruled slates. And we shall hear the "talking class," naturally not the most quiet, but getting quite enthusiastic sometimes over the story of a picture which they repeat after their teacher or recite themselves, aided by now and then a word or gesture. They are taught chiefly from pictures and objects, to make sentences and put them together.

In arithmetic, the St. Augustines are of course ahead, though not far advanced. The multiplication table in a foreign language is not a trifle, but some have mastered it. A teacher from Col. Parker's training school in Quincy, Mass., is giving the beginners number lessons, teaching the addition, subtraction and multiplication table by the use of blocks. If there *is* a royal road to arithmetic, this is probably that highway. Geography all are very fond of and make great progress in. It is taught with an iron dissecting map of the United States, and a board of clay on which the ambitious world architect may mould continents at will, or practise on islands, peninsulas and capes. To name all the states and territories and reconstruct a dissected Union from chaos is a simple pastime for any one of the sixty-seven, while rivers, mountains, capitals and chief cities are reeled off and described with a surprising celerity. One school period of forty minutes is devoted to singing and light gymnastics, and, on two evenings of the week, they are taught to sing by note from the blackboard, catching the idea of the notes much more readily than one might expect. I heard them on the second evening, and was surprised to find that they had learned the natural scale, singing it up and down and by intervals of thirds, and beating the time for a simple air, with few mistakes. A few have had some instruction before coming here.

THE WORKSHOP.

A full account of this interesting branch of Indian training is given in another column. The shop is but a makeshift until the new one is finished with its Corliss engine and full appointments. The very simplicity of its arrangements is, however, a lesson to the student upon what can be done with a little, and they are quite sufficient for his first 'prentice efforts. The benches are used by eager workers from hour to hour, and the flush of first successes seems as exciting here as in wider fields. "See this mallet," said Mr. Starkweather, showing me a neat wooden one with the maker's name duly inscribed, "That was the making of that fellow. He had been rather listless and almost gave up half a dozen times, but when he found that his augur had gone through straight, and the handle fitted, and he had really made a mallet, he was like another man. He straightened right up, and now he would go at any work I could offer him. But it comes hard when one has been working two or three days on a piece of work—a table, perhaps,—and has got the legs and the top and the sides all ready, and then splits the top in putting it together, as one of them did the other day. Once in a while, I see one clap on his hat and pull it down hard, and out he goes through the door without a word. Then I know something is spoiled; but he comes back, and I give him a word of encouragement and tell him how to mend matters." They exhibit, on the whole, a remarkable taste and aptness for mechanical work, and the patience with which some of them will labor for days to chip out a cane or bow from an unwieldy bit of timber four inches thick, is suggestive of their ancestors, the arrow-makers of the stone age.

THE FIRST COMMUNION.

Religious instruction has been quietly but carefully carried on among them ever since they came to Hampton. Several of the Dakotas were already communicants in the Episcopal mission churches at their stations. The good work done among the Cheyennes and Kiowas in St. Augustine, had not been fruitless, and some of them had evidently been Christianized as well as civilized there. But it was thought best to be careful and watchful before calling them to a consecration which they might not yet sufficiently comprehend, and all were placed in Bible classes for such religious instruction as they could receive. As has been explained before, Rev. Mr. Gravatt of St. Paul's church in Hampton took charge of those whose home relations naturally connected them with the Episcopal church. Prayer-meetings were started among them by Mr. Gravatt, Mr. Denison the chaplain of the Normal School, and Mr. Robbins whose charge of the young men in school and out give him opportunities which he has improved, of acquiring a strong personal influence over them for good. No one, I think, could go into these prayer-meetings without being impressed with the devout earnestness of the prayers, though in unknown tongues, and all felt it but a natural and simple result when a few weeks ago, eleven desired to be received into the company of believers. Two, one of the Dakotas, and a Cheyenne, were baptized in St. Paul's church and the rest, Cheyennes and Kiowas, in Bethesda chapel, the church of the school.

In St. Paul's church, the Dakota prayer-book was used for the benefit of the latest comer. In the school church, the service was made of the simplest possible form. It was a touching scene when these nine young men rose together to consecrate themselves to the Good Shepherd who had sought them so far in their wilderness. Face and eye, no less than the spoken word, showed perfect comprehension and response, as, taking the hand of each in turn, the pastor asked "——, my dear brother, do you take God to be your Father? Do you take the Lord Jesus Christ to be your Savior? Do you take His people, to your people? And do you take His Bible to be your book?" Each was then baptized in the name of the Father, Son and Spirit, and no heart I think could have joined in that first communion without a new, glad sense of the common bond that makes the whole world brethren, the whole church one in Christ. H. W. L.

SCHOLARSHIP LETTERS.

Our readers' interest warrants us, we believe, in giving them a few more specimens of the letters written yearly by the Hampton students to the friends whose contributions of scholarships ($70 a year) enable the poorest, deserving student to enjoy the advantages of the school while honorably working out his own expenses of board and clothing.

The first letter gives a simple and graphic picture of summer life at Hampton last season, when ninety students—including the Indians—remained to work and prepare for the next school year.

Dear Friend:—

I have been here two terms, and now that I am entering my third term, I know you will expect me to write you a better letter than I have written you in my Junior and Middle terms. I thought when I was a Junior, if I ever got to be a Senior, it would be so grand and nice, and that I would know so much; but now that I am a Senior, I find that I know comparatively nothing and I feel more like a Junior now than I did then. But I will try and write you something. I spent my vacation here (Hampton) working all summer. I knew that if I went home I would not be able to come back, so the General gave me work here for which I was very thankful. There were four girls and an Indian, to help do the same work that I did. We had quite a large family, about seventy, including Indians, that stayed here all winter, some to work on the farm, others to work in the knitting-room, and some to cook, wash, iron, and do general housework. The rising bell rang at five (except Sundays when it rang at six,) and as soon as we were dressed, we would go down and see that our tables were ready for breakfast, cut up the bread, place it on plates ready to take in, pour out the coffee, put in the milk and sugar, dish up the meat, fish or beans, arrange our cups on trays near the coffee urns, and see that everything was on each table. By this time the breakfast bell had rung. We waited on the table while the students were eating. After they were through we had prayers. Then we ate our breakfast, cleaned off our tables, brought all the dishes into the dish-room where they were washed,

and cleaned up the dining-room. Then we set the tables for dinner. After seeing everything in nice order, our duties upstairs were awaiting us. First to sweep and dust our corridors; the dusting took more time than the sweeping, there being so much wood-work round them. One of us would clean the writing and reading-room, see that there was ink in the ink-wells, and water the flowers there belonging to the different girls. Another would sweep and dust the parlor. Then we cleaned our own rooms. We had quite a number of visitors here in the summer, and they would always ask to see our rooms. So we said smong ourselves we would see how nice we could keep them. Just as soon as we had finished our rooms, we would be called down stairs to prepare the vegetables for dinner. We then clesred up sll the trash that we made, and saw that everything was on the table that belonged there. Wo dished up dinner as we did breakfast. After dinner we washed the dishes, cleaned up the dining-room, put the dishes in their places, snd set the table for supper. On every Monday, Wednesday and Friday, we had nineteen dozen small fish to cleau for breakfast. Tuesday and Thursday afternoons, we would have to wash and iron our clothes. Saturday we would spend in general house-clesning, such as scrubbing, washing windows, etc. Immediately after supper, we would go up stairs into the chapel for prayers. After prsyers we would wash the dishes and set the table for breakfast, and then we were through with our work for the day. Sometimes we would go to our rooms, and sew or do anything we liked with the rest of the time till the bell rang.

The Indians had their study-hour in the girls' study-hall every evening during summer. A number of boys and girls would take it by turns snd help Mr. Robbins teach them how to talk. We taught them from different objects. We would take a vegetshle or fruit of some kind with the stem and leaves to it, and deserihe the stem, leaves and fruit to them, telling them to say, "This is the stem, these are the leaves, this is the fruit, etc." They seemed eager to learn, and made rapid progress. After you told them anything once, they scarcely ever forgot it. I would try them very often, by asking them what I had told them the evening before, and they would tell me, heing very careful to get each word as I had said it.

On Sundays, after we had finished our morning's work, the hell would ring for Sunday-school. After Sunday-school, dinner. After dinner, we spent the afternoon in reading, and sometimes we went to church, but we were allowed to go very seldom to Hampton.

I sm getting along tolerably well, I think, with my studies.

Desr friend, this may be the last time I will have the opportunity of writing to you again, but do not think thst I will ever forget all your kindness to me. I feel that I owe you more than I can ever repay.

Thanking you for all your kindness, I remain, Yours truly, A.

Dear Friend:

I feel that I sm under much obligation write to you once more. Our people at the South are poor and helpless. We are trying to raise our standard; how shall we do it; or can we do it without help? We cannot. We are like a hand of pilgrims, wandering through the dark hours of ignorance, looking for better times, which I hope, by doing all we can, God will grant to us in the future. Having been going to school to some of the teachers from this school, and seeing the difference in them and other people, learning that this was the plsce to pull off the old garment, snd pnt on the new, I wondered to myself if there were any such chsnce for me. The reply was yes; if I would come to this school, do what was right and as I would be bidden to do, there was the ssme chsnce for me as for those that gave me my first introduction to this school. I then commenced preparing to come here. Owing to my poor chance in life, that was not much. I got somewhat ready after a while. I left my home, as I may ssy, covered with the shadow of ignorance, and arrived here Dec. 4th, 1876. I entered the preparstory clss, and I saw at the end of the term, I had made soue improvement. When vacation came, I asked Mr. Howe if he would keep me on the farm all the summer; he said he would do so. At the heginning of the next term, I entered the Junior clsss, which I passed through last term, receiving good instructions from these kind teachers, and learning something new every day. At the close of the term, I was promoted to the middle class which I am now in.

Having been opened here a knitting room that extends its righthand and all of its tressnres towsrds the poor, I asked the principal if he would give me a job in there for the summer. Finally I succeeded in getting the job. I went to work in June and learned to think what a nice and pleasant plsce I had for the summer. Indeed it was; only sometimes my machine would get ont of order, or the ysrn would be bad; then it was very troublesome indeed.

I have met with kindness on all sides since I have been here. I know no way in the world to express the gratitude I am in debt for it.

My mind often wanders back home, about the people there, knowing what a bad condition they sre in, it makes me very anxions to get through here, and return to my people. I expect to do all that I can to uphuild and elevate our rsce. I do think if we all go out from herc with that intention, and practice what we preach, God will grant to us in the future what we are looking for.

Yours respectfully, G.

As we go to press, the Normal School is receiving a visit from Bishop Hare, bishop of all the Indians in the North West in the charge of the Episcopal church missions. The Bishop was welcomed especially by the Dakota Indians many of whom knew his face well. After looking through their classes and workshop and cottage, listening to their singing, and that of the other students, and speaking a few kind words of encouragement and advice to all, he held a short service of prayer in English and Dakota with the Indians snd all who could be present. The familliar hymns "Blessed Jesus" and "Rock of Ages" were sung in the Dakota language, and the Lord's Prayer snd Apostles' creed repeated in both. Bishop Hare told them he should see their parents soon and tell them how well they are doing. His visits here and there, will be no doubt, a great comfort to these widely separated parents and children, and seem to draw Dakota and Virginia nearer together.

Mr. J. C. Robbins who has heretofore been the recorder of the Incidents of Indian Life at Hampton, has left for a short trip to Europe. He went for his health, being somewhat worn by his exertions here, and we hope will soon return, refreshed and strengthened, to his Indian boys who miss him greatly as do his other friend.

NEWS OF THE MONTH.

FOREIGN

THE British are threatened with another war in Burmah.

ADVICES from Cape Town, state that the Zulus were then inactive. The only fresh fighting which was reported resulted in the capture of some cattle.

A LONDON journal says a private letter from a high Indian officer states that the people of Cashmere are dying of famine like flies, and that at the present rate of mortality the province will be nearly depopulated by the end of the year.

GREAT excitement was produced in the German Reichstag by Herr Liebknecht referring to the possibility of a Republic being established in Germany. The President threatened to deprive the member of his right of speech.

LONDON, March 13.-The marriage of the Duke of Connaught to Princess Louise Margaret of Prussia took place to-day at St. George's Chapel at Windsor, with all the ceremony of state befitting the high position of the royal bride and bridegroom, in the presence of Her Majesty Queen Victoria, the Prince and Princess of Wales, and royal and distinguished visitors. The Princess was born on the 25th of July, 1860. She is the daughter of the "Red Prince" Frederick Karl, brother of the Emperor Wilhelm, a Field Marshal in the German army. Prince Arthur, the Duke of Conaought, was born on May 1, 1850, and is the sixth child of Queen Victoria.

IN the valley of the River Theiss in Hungary was situated a beautiful city, of upwards of 75,000 inhabitants, called Szegedin. This place—one of the busiest in the Austrian Empire, being a manufacturing town—was protected from a possible overflow of the river by three large dams. On the night of March 11th, after a severe test from a long continued storm, during which time every effort was made to make the protection more secure, the last dam suddenly gave way and the water rushed down into the streets at such a rate that in one hour and thirty minutes the whole city was completely inundated. Everything was swept before the mighty torrent; 8,700 houses were crushed and carried away as though they had been of glass; only two hundred and sixty buildings were left standing at daybreak. The heart-reading cries of those who were unable to escape could be heard above the roar of the swelling tide, hundreds of persons were crushed by the falling ruins or drowned in the mad current; 5,000 are supposed to have been lost.

The work of relieving the suffering of the distressed people is being promptly done. Great sympathy is felt for the poor unfortunates.

DOMESTIC

THE remains of the late Bayard Taylor, U. S. minister to Germany, were buried at Kennett Square, Pa., Saturday, Mch. 10th.

THE late Deacon Asa Otis of New London, Conn., has left nearly three-quarters of a million to different religious societies, colleges, and charitable institutions.

OWING to the decline in Louisiana State bonds, several of the New Orleans Banks have closed their doors. The National Banks are reported as in a healthy condition.

PHILADELPHIA, March 13.—At the annual commencement of the Women's Medical College to-day, the degree of Doctor of Medicine was conferred on twenty female graduates from various States.

THERE are in the south 1,579,097 negro children of school age. Of this number the schools reaches 600,000. The Aid Society of the Methodist Episcopal Church has disbursed $71,595.40 in its eleven years of existence for the education of the negroes.

MRS. Phoebe A. Stodart has received a verdict for $5,000 from the New York Central and Hudson River Railway for injuries substained by being thrown from a train which suddenly and without warning started as she was about to get on.

IN Brooklyn Mrs. Wilhelmiaa Horn died on Feb. 14, two weeks after eating some uncooked ham, having manifested all the symptoms of trichinosis. Mr. and Mrs. Greifeldt, who lived with her, also ate of the ham, and all were taken sick a few days afterward. They recovered, and on Monday of last week Mr. Greifeldt was able to go to his business. On Wednesday he was suddenly taken ill and died in a short time. A post mortem examination was made in the presence of the coroaor, and the verdict was that death resulted from embolism of pulmonary arteries, due to trichinosis.

POLITICAL

THE forty-fifth Congress expired at noon on the 4th inst. Two of the appropriation hills failed to pass, viz.: the Army, the Legislative, Executive and Judicial. The points of disagreement were the clauses abolishing the jurors' test oath and the United States Election Law.—Two all-night sessions were held, and both Houses sat on Sunday, the 2d inst. The Brazilian mail subsidy proposition was rejected on the 30th ult., and the Yellow Fever Bill was tabled in the House on the 1st inst. The President vetoed the Chinese Immigration Bill, and the House sustained the veto, less than two-thirds voting to pass the hill the second time. The vote was 109 to 95. The Census Bill as amended by the House, passed the Senate on the 3d. The committee who investigated the connection of Senator Matthews with the Louisiana count made a report exonerating him. The President, on the 4th, issued a proclamation convening Congress in extra session on the 18th inst. The new House will consist of 146 Democrats, 128 Republicans, and 13 Greenbackers, of whom seven are said to have Democratic proclivities and six Republican.

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable, &c., &c.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST Prize over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,833	Singer Machines
1871	181,260	" "
1872	219,758	" "
1873	232,444	" "
1874	241,679	" "
1875	249,852	" "
1876	262,316	" "
1877	282,813	" "
1878	356,432	" "

Many of the manufacturers of other machines: refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

THE RIGHTS OF THE BODY.

BY REV. S. R. CALTHROP.

Man has body, mind, heart, conscience, and soul. All are mutually dependent upon each other; if one of them suffer, all the others suffer with it; men is dwerfed and incomplete, unless be is fully developed in all five.

As my speciel subject, I maintain thet physical well-being, health of body, is therefore necessary not only to the complete development of Humen Nature, but elso to e happy end harmonious development of each one of the other four great divisions of Humen Nature; or in other words, I assert that the body has something to do with the mind, heart, conscience, and soul of man, not merely with all these together, but elso with each of them seperately.

First, then, I shall speek on the mutuel dependence of the faculties.

Now, although it is not possible that eny faculty should act without moving any of the rest at all; nevertheless, since a comperetive separetion of the faculties is bnt too common, let us glence through the history of the past, and mark any notable instances of such separation; and if we find thet a one-sided development has always proved a failure, we shell begin to see the folly of trying such experiments over egain, especially as they would heve to he made upon living humen beings, upon the young children of the rising generetion, who cannot resent our folly, but whose deformed natures will be living proofs of our mistakes as educetors, when the experiment tried for the thousand end first time fails yet again, as it always has done, and always will do to the world's end, while Human Nature remains the same.

Let us then take a few examples as illustrations of the idea which we ere now considering.

Let us then first supposc that the devotional element in man acts elone. The experiment has elready been tried. Many e hermit in lonely cell or rocky cavern, has ent himself off from the society of men, from action, duty and love, in order that he mny be devout without hindrance. How meny such men heve poured out their souls upon the ground, on larren or desert rock, souls which might bave watered thousands with tbe dew of heaven, end all because they made one fatal life-mistake, —tbey thought tbet to pray always, meant to he alweys saying prayers.

You have heerd perheps of Saint Simeon Stylites, who lived in Syria four hundred years after Christ. Wishing to be very holy, be left the convent in which be was a monk, and lived for nine years nnder the open sky on the top of a piller only three feet in circumference. Not feeling then noer enough to beeven, he mounted a pillar sixty feet high, and lived upon it day and night for thirty years, preaching daily to crowds of people who flocked to hear him. When he at last died, the people of Antioch received his body into their city, and called him their petron saint Simeon Stylites, Saint Simeon of the Pillar.

Who could he more devout then Saint Simeon Stylites lifted all his life upon his lofty pillar, absorbed in contempletion, ecstasy, remorse and prayer? Let the poet speek for him.

"Bethink thee, Lord? while Thou and all the saints
Enjoy themselves in heaven, and men on earth
Honse in the shade of comfortable roofs,
Sit with their wives by fires, eat wholesome food
And wear warm clothes, and even beasts have stalls,
I, 'twixt the spring and downfall of the light
Bow down one thousand and two hundred times
To Christ, the Virgin Mother and the Saints:
Or in the night, after a little sleep,
I wake, the chill stare sparkle; I am wet
With drenching dews, or stiff with crackling frost,
I wear an undressed goatskin on my neck,
And in my weak, lean arms I lift the Cross,
And strive and wrestle with Thee till I die.
O mercy, mercy, wash away my sin!"

A mournful spectacle. Devotion excited to madness, while mind, heart, and conscience, all are dumb, and the poor weak body only bears the heavy hurdens which the tyrannous soul heeps upon it!

Devotion, then, needs *conscience*. Conscience tells a man thet he must act as well as pray. Devotion mekes the great act of prayer. Conscience works out into the actual of every-dey life, the ideal of which devotion has conceived. Will then devotion and conscience be sufficient for e noble manhood? Devotion and conscience elone developed, have oft-times, in the days thet ere past, formed some stern old grand inquisitor, pagan Saul breathing out threetenings, persecnting the church, or Puritan burner of witches, tortnring the life ont of humen sinews hecause he ought. The grand inquisitor's devotion and conscience told him thet he ought to edvance the holy faith hy every engine in his power, and therefore, as be considered that the rack, the thumb-screws, the rope, the fire end the feggot were the best possible engines, he used the same to the utmost of his ahility; and thought, elas for humanity! thet he was doing God service.

The grand inquisitor had devotion, he had conscience, he probebly elso had nerves of iron; but be could not possibly heve had a *heart*. Devotion, then, end conscience need a loving, humen heert. Will these three be sufficient? The picture grows fairer, we begin to feel less pain when we turn away from the stern, dark portraits which frown so grimly in the picture gallery of history, and look upon thet feir and gentle face upturned in prayer. The face of a young mother. Here is devotion deepest, here is conscience most exacting, here is love most tender.

"What fount
Of deep, strong, deathless love,
Like that within a mother's heart?"

You have seen her clasp her darling to that heert,

"Her breast the pillow of his infancy.
While to the fullness of her heart's glad heaving
His fair cheek rose and fell."

You have seen her—still more saintly picture—in sorrow,

"Keeping watch beside him
Till the last pale star had set,
And morn all blushing, as in triumph, rose,
On her dim, wearied eye."

What gentler, truer, more angelic guardian on earth for the tender life committed to her care? And yet it slips eway hetween her hands upraised to heeven. Devotion does not save him, conscience warns not of the unknown duty, even e mother's love is powerless to teke the piece of a little more knowledge of the laws thet govern thet frail body for life or death.

Rest in peace, soul sainted and dear! The tears thon didst once shed are wiped eway forever.

But for true motherhood, for ell full womanhood and manhood, we must seek broader development. We must train elso the *intellect*. Devotion says, Worship; the Mind adds, The Lord thy God. The Conscience seys, Do right; the Intellect shows what is right. The Heert seys, Love thy fellow men; the Intellect tells the right way of loving them. Piety and cherity! these are glorious! these are the two engels from Heaven which prompt us to help our brothers who need our help; but intellect must show us the way to do it. To teke e single instance. Piety end cherity cannot show us how to drain and ventilate and rebuild the tenements of New York. No; every spade, every sew, every hammer employed in thet most righteous undertaking must he directed hy intellect, hy science. Piety and cherity may prompt, hut intellect must guide.

I know full well that many a heert, guided only by secred instincts of loving, acts out the law of right without any conscious questioning of the intellect; that a thousand tender feet carry the gospel of Christ elong the elleys of New York and London, or along the corridors of the Crimeen hospital, hut there also the beed must aid the heert. The noble beart, the Christien love of Florence Nightingale took her to those eastern shores; this made the voice tender and the hand gentle. But whoever reads the account of what she did, will see that besides these, wit and wisdom, ability to see what ought to be done, intellect, reason in short, was necessary in order to make a Florence Nightingale possible, together with an exhaustless fund of hodily endurance end fortitude.

Thus, then, we find that devotion, conscience, heart, and intellect are all necessary to each other in the harmonious development of Human Nature. Will they be found sufficient for a perfect life?

Put together a strong soul, a tender conscience, a woman's heert, and a men's intellect, and we have surely one of the best types of the modern mind. Will these four noble parts of Human Nature be sufficient for the task of living?

I had a friend, a minister—and none the worse for that, let me tell you—a noble, beentiful soul; a highly cultiveted mind, a heart full of devotion to God and his country, and of sympathy for his fellow men. He wanted to be en army cheplain—it was during the civil war. His heart and his conscience said Go, and be went.

But the first long march the regiment had to make—it was twenty-three miles, on a summor dey—how fer do you suppose his poor legs could carry his greet heart end conscience—his beeutiful soul? Just one mile—one poor little mile—and then he set down—he could have wept, hut he could go not a step farther. He bad to go home and give up the noble work to which heart and conscience bad called bim. And all because he had not cultiveted his body to carry his soul.

Intellect, then, needs *body*.

Come, then, end let us huild a Men. A calm, silent devotion, a conscience pure and reverent, a heart manful and true, en intellect clear and keen, a freme of steel, —with these will we dower onr bero, end call bim Washington!

From me Washington needs no eulogy. Freo America is at once his eulogy and his monument! But let me ask you, Whet would Washington's qualities of mind and heert heve evailed his country, nnless the manly strength, the frame of iron had been edded? A good men he might heve been, a patriot he surely would bave been; hut the Fether of his Country, never! The soul that trusted in God, the conscience that felt the omnipotence of justice and right, the beert that beat for bis country elone, tbe mind that thought out her freedom, was uphorne hy the body that knew no fetigue, by the nerves thet knew not bow to tremble.

Washington had to endure physicel fetigue enough to have killed three ordinary men. And how well did bis youth prepare him for a life of protracted toil. Hear his biograpber Irving. "He was a self-disciplinnrian in physical as well as mental metters, end practised himself in all kinds of athletic exercises, such as running, leaping, pitching quoits, and tossing bars. His frame even in infancy hed heen large and powerful, and be now excelled most of his pleymetes in contests of agility and strength. As a proof of his muscular power, a place is still pointed out et Fredericksburg, neer the lower ferry, where, when a boy, he threw a stone across the river. In horsemanship, too, he already excelled, and was ready to hack, and able to menege, the most fiery steed. Traditional anecdotes still remein of bis achievements in this respect." It is said that he could jump twenty-three feet forword end heckward, and no one in Virginia could heat him.

It is needless to sey thet I do not mean to exalt the body at the expense of the higher faculties. I only meintain that tho rest are incomplete without the physical element; in which indeed ell the other powers dwell, and hy means of which they are more or less clearly manifested. There mey, of course, be vast physical energy without any corresponding development of mind or soul, as any blacksmith or prize fighter could tell us. And further, there mey he a cheracter, in which some of the higher qualities mey exist in great perfection, coupled, too, with mighty force of body, and yet the cherecter may he incomplete.

It remeins for us to ask, How far does American education fulfil the wants of Humen Nature, and wherein does it disregard them? The title of my Lecture tells plainly enough, where I think that the great deficiency is found; e deficiency which reacts upon both mind and morals, and often utterly defeats the best efforts of clergyman and teechers. I assert, then, thet, in America, the body is almost entirely neglected. Thirty thousand clergyman, from as many pulpits, edvocate the claims of the conscience and the soul. A bundred thousand teachers ere husied throughont the length end breedth of the lend in training the intellect, while a man could almost count on his fingers the number of those engeged in training the body.

The intellectual training which the masses receive, is the highest glory of American education. If I wanted a stranger to helieve thet the Millennium was not far off, I would take him to some of those grand Ward Schools in New York, where able heads are trained by the thousend. When I myself entered them, I was literally astonished. When I looked at the teachers who instructed thet throng of young souls, I could not help saying to myself, Ah! dear friends, it would do yon good to know what I feel just now. I can feel the very blessing of God descending on yonr labors, just as if I could see it with mine eyes. What piety has been at work here, in the construction of this system of edncation! What inspired energy was needed to work it ont! What charity is necessary to carry it on! Many a teacher saw I there, unknown, may-he, to all the world, carrying on her work with noble zeal and earnestness to which the quick

young brains nround liere ehundant testimony. When I saw them, I hlessed them in my heart, I magnified mine office, and said to myself, I, too, am a teacher.

letter of the law of Skitzland were carried out! But it is absolutely certain that this is in effect the law of nature, which does not act, it is true, all in a moment;

Once, then, establish a community of interest on any one subject with young men, and you open to yourself a door, by which all good may enter. Na-

young brains around bore abundant testimony. When I saw them, I blessed them in my heart, I magnified mine office, and said to myself, I, too, am a teacher.

I spent four or five days doing little else than going through these truly wonderful schools. I stayed more than three hours in one of them, wondering at all I saw, admiring the stately order, the unbroken discipline of the whole arrangements, and the wonderful quickness and intelligence of the scholars. That same evening I went to see a friend, whose daughter, a child of thirteen, was at one of the ward schools. I examined her in algebra, and found that the little girl of thirteen could hold her own with many of a larger growth. Did she go to school to-day? asked I. No, was the answer, she has not been for some time, as she was beginning to get quite a serious curvature of the spine, so now she goes regularly to a gymnastic doctor.

I almost feel ashamed to criticize such noble institutions as the schools of New York; but truth compels me to do this. Hitherto, little has been done to train the bodies of the tens of thousands who are educated there. All that is done is excellent, is wonderful, but fearful drawbacks come into play, in the shape of physical weakness, and positive malformation of body.

Some time ago, I read a tale which related that a certain gentleman was, once on a time, digging a deep hole in his garden. He had, as I myself had in my younger days, a perfect passion for digging holes, for the mere pleasure of doing it: but the hole which he was now digging was by far the deepest he had ever attempted. At last he became perfectly fascinated, carried away by his pursuit, and actually had his dinner let down to him by a bucket. Well, he dug on late and early, when just as he was plunging his spade with great energy for a new dig, he penetrated right through, and fell down, down to the centre of the earth.

To his astonishment he landed upon the top of a coach which was passing at the time, and soon found himself perfectly at home, and began to enter into conversation with the passenger opposite to him, a very gentlemanly looking man enveloped entirely in a black cloak. He soon found out that the country into which his lot had fallen was a very strange one. Its peculiarities were thus stated by his gentlemanly fellow-passenger: "Ours, Sir," he said, "is called the country of Skitzland. All the Skitzlenders are born with all their limbs and features perfect; but when they arrive at a certain age, all their limbs and features which have not been used drop off, leaving only the bones behind. It is rather dark this evening, or you would have seen this more plainly. Look forward there at our coachman; he consists simply of a stomach and hands, these being the only things he has ever used. Those two whom you see chatting together are brothers in misfortune; one is a clergyman, the other a lawyer; they have neither of them got any legs at all, though each of them possesses a finely developed understanding; and you cannot help remarking what a massive jaw the lawyer has got. Yonder is Mr. ——, the celebrated millionaire, he is just raising his hat; you see he has lost all the top part of his head, indeed he has little of his head left, except the hump of acquisitiveness and the faculty of arithmetical calculation. There are two ladies, members of the fashionable world, their case is very pitiable; they consist of nothing whatever but a pair of eyes and a bundle of nerves. There are two members of the mercantile world; they are munching some sandwiches, you see, but it is merely for the sake of keeping up appearances; as I can assure you, from my own personal knowledge, that they have no digestive organs whatever. As for myself, I am a schoolmaster. I have been a hard student all my life, at school and at college, and moreover I have had a natural sympathy with my fellow-men, and so I am blessed with a brain and heart entire. But see here." And he lifted up his cloak, and lo! underneath, a skeleton, save just here! "See, here are the limbs I never used, and therefore they have deserted me. All the solace I now have consists in teaching the young children to avoid a similar doom. I sometimes show them what I have shown you. I labor hard to convince them that most assuredly the same misfortune will befall them which has happened to me and to all the grown-up inhabitants; but even then, I grieve to say, I cannot always succeed. Many believe that they will be lucky enough to escape, and some of the grown-up inhabitants pad themselves, and so cheat the poor children into the belief that they are all right, though all the older ones know better. You will now perceive the reason why all the gentlemen you see wear such tight pantaloons, they pretend that it is fashionable, but in reality it is to prevent their false legs from tumbling out. Surely my case is miserable enough; my only hope consists in the idea of educating the rising generation to do better. No doubt it is easy to persuade them to do so in the country from which you come, but I assure you," added he with a heartfelt sigh, "that it is sometimes very hard to do so here. Nearly all of us, here, have lost something of our bodies. Some have no head, some no legs, some no heart, and so on; and our Aristocracy, the governing body, consists of the few individuals who have used all their faculties, and therefore now possess them all."

At this moment a dreadful earthquake broke out, and an extemporo volcano shot the gentleman who had listened to this interesting narration right up to the crust of the earth again, and by a strange and fortunate chance, shot him up into the very hole which he had been digging, and he discovered himself lying down at the bottom of the hole, feeling just as if he had awakened from a dream; and to his surprise, heard distinctly the voice of his wife crying out from the top, "Come, come, dear, you're very late, and supper is getting quite cold!"

The name of the country of Skitzland, translated into the vulgar tongue, is the planet earth, and America is one of the portions thereof. If we were to look round in a circuit of a hundred miles, how many of the Skitzland aristocracy should we find, think you? What a dropping off of limbs and features there would be, if the letter of the law of Skitzland were carried out! But it is absolutely certain that this is in effect the law of nature, which does not act, it is true, all in a moment; but which slowly and surely tends to this. The Hindoo ties up an arm, for years together, as a penance, thinking thereby he does Brahma service; the limb with fatal sureness withers away, and rots. The prisoner in solitary confinement has his mind and faculties bound, fettered and tied, and by a law as fixed as that which keeps the stars in their places, the said prisoner's mind grows weaker, feebler, less sane, day by day. School children are confined six long hours in a close schoolroom, sitting in one unvarying posture, their lungs breathing corrupted air, no single limb moving as it ought to move, not the faintest shadow of attention being paid to heart, lungs, digestive organs, legs or arms, all these being bound down, and tied as it were; and so, by the stern edict of heaven, which, when man was placed upon earth, decreed that the faculties unused should weaken and fail, we see around us thousands of unhealthy children whose brains are developed at the expense of their bodies; the ultimate consequence of which will be, deterioration of brain as well as body.

What is the remedy for all this? In large crowded cities, gymnastic training, regularly pursued *as a study*, is the only thing which seems possible to be done, and most certainly will be useful wherever it is introduced. But there is a different method of physical education, which can be followed either alone or with gymnastics, either in the country, or in towns, where playground can be had obtained. This is the method which I have always followed myself, namely, the regular pursuit of health and strength by all manner of manly sports and games. I myself learnt to play and love these games at school and at college. I once gave them nearly four years' trial in a school of my own, and every day convinces me more and more of their beneficial results.

I cannot tell how much physical weakness, how much moral evil we batted and bowled, and shinned away from our door; but I do know that we batted and bowled away indolence, and listlessness, and doing nothing, which I believe is the Devil's greatest engine; and I also know that the enthusiasm of young people in these games never dies out, their enjoyment never flags, for these games supply the want of youthful nature, and keep their thoughts from straying to forbidden ground.

Now we are very apt to despise what is known as the sporting world, and the men who belong to it are, in this country at least, generally believed to be bad men. But see how pernaciously this world will persist in coming up to the surface wherever a community of men may be. You may try as rigorously as you will to put down, or, rather, *squeeze* this heinous tendency out of Human Nature, but you will always fail, and the reason of your failure will be that you are trying to drive out Nature with a pitchfork, and she of course will perpetually keep coming coming back. So we say of this world, the sporting world, so liable to abuse, and so outrageously abused, what is true of all the worlds, and that is, that it would be well for mankind, if they were to bestow a little thought upon the demands of this, as well as of the other worlds; and not be content to ignore wholly a thing the value of which they do not understand. Now the sporting world has witnessed, does witness, and will forever witness, for a fact in Human Nature, which no amount of pressure will ever squeeze out of Human Nature, and that is, the necessity which human beings have for amusement, and for open air exercise, not exercise merely, but hearty, joyous, bloodstirring exercise, with a good amount of pleasant emulation in it.

This is what cricket and hooting, battledore and archery, shinney and skating, fishing, hunting, shooting, and all honest out-door sports, mean, namely, that there is a natural joyousness in human beings; and thus Nature, by means of the sporting world, by means of a great number of very imperfect, undignified, and sometimes quite disreputable mouth-pieces, is perpetually striving to say something deserving of far nobler and clearer utterance; something which statesman, lawgivers, preachers, and educators would do well to lay to heart. My children, Nature says, are not intended to be made working machines; they have capacities for joy, for free action, for doing some pleasant thing for the mere sake of doing it, without any regard to gain or profit, whether it be of money or anything else; and by obeying my laws, they will find riches which they never sought for, will obtain gifts they never asked.

The preponderance of the animal, the bodily element, produces fast young men; and fast young men, and boys tending to become such, are the problem of society, the terror of the peace-loving, money-making world, and the scandal of the Educator, who himself feels well enough his own impotence in dealing with them.

I have seen many an Educator who has felt that he ought to get at these young rebellious forces, but who does not know the way, despairingly wonders why he cannot do so. Friend! I would say, no man can influence another, unless he has something akin to him. What do you think gives these blacklegs, men of not a tithe of your force and talent, such power over them? Why, it is community of nature, interests in common. But what interests have you in common with a fast young man? You know nothing that he knows, you admire nothing that he admires; and until you do really get a community of interest with him, you will be wide asunder as the poles, and the fast young men will remain, as he has hitherto remained, the one disgraceful problem which modern education cannot solve.

If a teacher wishes to influence the wild boys among his scholars, or if a clergyman wishes to gain their souls, let him join with them in some manly game, and let him be sure that whatever true manhood he has will stand him in good stead, and nothing else: that real vital religion, real nobleness of character will hold its own in the cricket-field or the row-boat, as well as elsewhere.

Once, then, establish a community of interest on any one subject with young men, and you open to yourself a door, by which all good may enter. Nature, dear friends, makes nothing in vain, and it is of such infinite importance that strength of limb, readiness of eye and hand, physical vigor in short, should be transmitted from generation to generation, that she keeps producing fast young men, in spite of the thousand excesses which they commit, and will do so, until the ablest and wisest human minds take the matter in hand, and see to it that this part of Human Nature has its proper and legitimate food, guided by mind, thought, and reverence, instead of being allowed to run riot in all manner of wantonness.

Again, I know that there are some who object to these games, to this free use of our physical powers, on the ground of possible danger to life and limb. To these I would say that the danger is little or nothing to the daring and courageous. The fellow that is afraid of the ball, is scarcely ever hurt. He defends himself with eye and hand. The coward is the one most likely to get hurt. I think that there is just enough risk in these games to engender a manly contempt for pain, and a bold handling of a danger. If the cricket or hass ball were a soft affair, it would be a game for babies not boys. The good that these manly games do, should not be confined to a small class, but should be diffused among the whole community, for the out door world has something to say to all of us. It rouses the scholar from his desk, shakes him, and tells him that much study is a weariness of the flesh, and that the fields are alive with song. Out then he must come, and leave his musty books.

It comes to the business men in the crowded city, and babbles of green fields, nudges Mr. Sparrowgrass with its elbow, and tells him to take Mrs. S. and the children into the country.

It comes to Mr. Fuzziwig at Christmas time, and tells him to let the young men in his shop have a jolly time of it, put by their work, listen to the fiddle, and join the dance.

This same spirit came to the ancient Greek in drama, dance and game, and with him was set to music, and consecrated to the gods, to Apollo the ever young, to Pallas the wise, to Bacchus the joy-giver.

It came to the stern old Roman with his Saturnalia, when, for once in all the year, the slave and the plebeian might speak their minds without fear.

It came to the dark-eyed Hebrew with his feasts of tabernacles, his feast of the harvest and the vintage, and over his joyance a sacred shadow rested, as of One who was over these things, who both made and consecrated the joy.

It is certain that the planet upon which God has placed us, is absolutely well fitted for the development of the human race. The more science investigates, the more wonderful seems the fitting of Human Nature to the world in which it is placed. The more refined a man becomes, the more delicate his insight into Nature, the more satisfied, the more overjoyed is he with her exhaustless charms. It is only our sin, our folly, our ignorance, which perpetually befool us, and rob us of our inheritance.

When the great coming race, prophesied of so long, shall at last inhabit the earth, they shall see no more glorious stars, no finer atmosphere, than we do to-day; the moon shall pour forth no more silver from her bounteous horn; the sun shall lavish his golden beams no more freely than he does to-day. But yet the whole world shall be unimeginably brighter and more beautiful to that crowning race. And why? Because their natures shall be in tune with the outward universe; their bodies shall be perpetual sources of joy to them; and their souls shall be awake to knowledge, truth and love.

Put together the fragments of men that we have among us to-day,—the physical joy in existence of the western hunter, the intellectual keenness of the men of science, the love of Nature of the artist or poet, the love for each little bird and insect of the naturalist, the justice of a Washington, the love for God and men of a Florence Nightingale, and then we gain some glimpses of the men of the future whom God has willed shall possess the planet at last. For assuredly the race is safe, though nations or individuals may fail or perish. Safe, because God has not built the planet in vain; safe, because his long patience shall have its full satisfaction at the last. How shall these things be? God will give his blessing to human labor directed by truth and love.

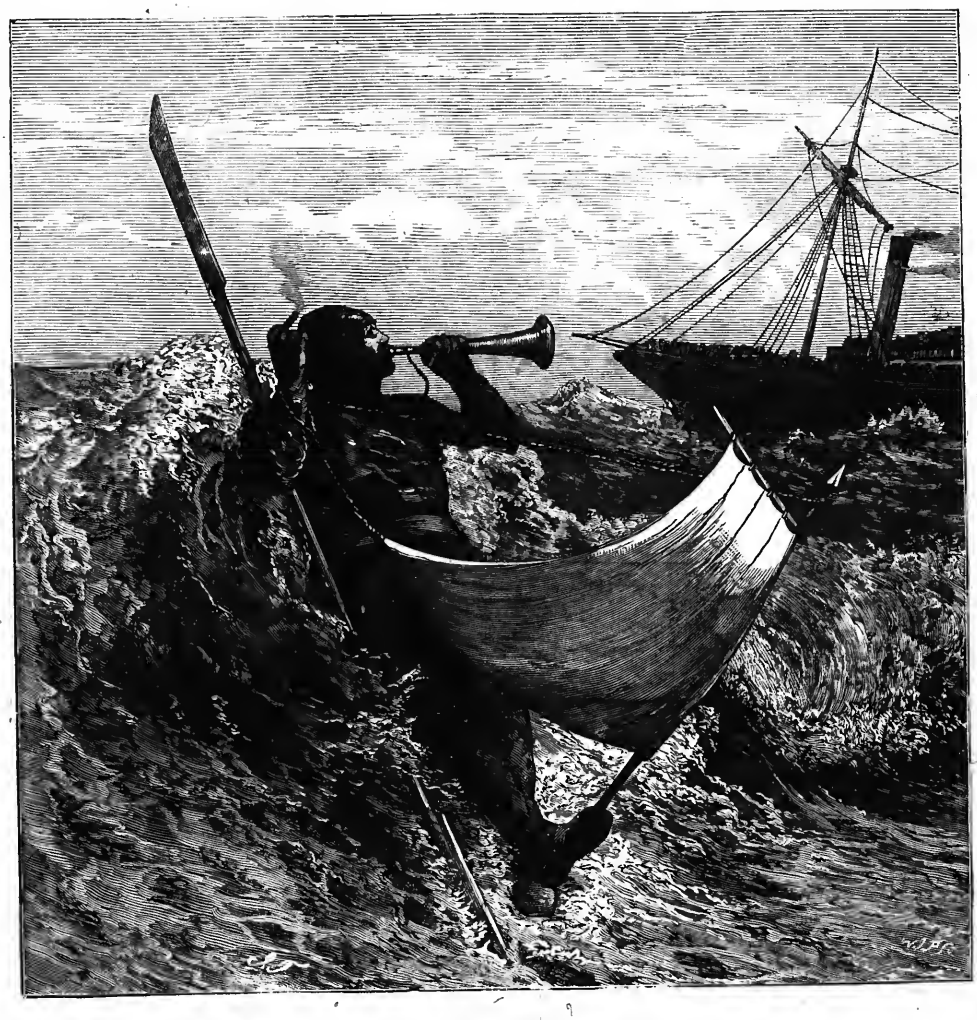
See to it then, teachers and parents, that young Human Nature has its due. See to it that conscience and the soul have their rightful sway, that intellect and sweet human affection walk hand in hand. And lastly, see to it, that these young bodies have their due. Learn for yourselves numberless manly sports and games, and resolutely continue to teach them and practise them yourselves in the midst of your scholars. Love open air and exercises first yourselves; this love will be contagious, and will communicate itself to those around you. No atom of true dignity will be lost, while a priceless fund of good humor will be gained for yourself, and a mutual good feeling will be established forever between you and your scholars. Do this, and we shall no longer hear of schoolmasters becoming old men before they are forty; but the schoolmaster will be known as the youngest looking, healthiest and happiest man in the district.

Upon us, my friends, as parents and teachers, this great, this sadly neglected duty devolves. We are to see to it that young limbs and lungs have their rights; we must make men understand that it will be a sin against God, if they do not have their rights; a sin, whose punishment is as certain as the law of gravitation. And more, it must be our task to make men understand the inevitable blessing which is sure to descend upon the keeping of God's commandments written upon the body.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. VIII. HAMPTON, VA., MAY, 1879. NO. 5



PAUL BOYTON.

PAUL BOYTON.

Through the kindness of Messrs. Harper Bros. we give our readers a look, this month, at Paul Boyton the inventor of the curious life-saving swimming suit represented in the picture. In this suit, he swam and paddled across the boisterous English Channel a year ago, to the astonishment of the world, and in it he has paddled down the principal and most dangerous rivers of Europe, and is now swimming and paddling down the Mississippi, starting from Oil City, Pa., and swimming down the Ohio first to its junction with the greater river. Adventurous and dangerous it is, for though he is in no fear of drowning, there is danger from cold and exhaustion, and while his invention may be the means of saving many from shipwreck by supporting them in the waves till picked up by boats or passing vessels, only the strongest of nerve and muscle and vital force, could make it such a "home on the ocean wave" as it is to Paul Boyton.

We take the following from the *N. Y. Herald* of April 28th.

NEW ORLEANS, *April* 27, 1879.

"After eighty days of herculean struggle Captain Paul Boyton has finished his voyage of 2,342 miles, and landed in this city at thirteen minutes past six o'clock this afternoon.

The last run was his longest time in the water on the trip. He started from Baton Rouge at eight o'clock yesterday morning, a large crowd witnessing his departure. The day was rough and the river full of whirlpools. His depleted condition would not allow him to make much speed, and after a few hours out he had a most terrible experience. Owing to the roughness of the day, the volunteer guard boats were afraid to venture out, and as the captain wearily plied his paddle, waterspouts began to form on the river surface and surge by at a tremendous speed. The horror of the situation cannot be described. Boyton exerted himself manfully to save himself from being drawn from the water by the suck, and had two or three narrow escapes. Finally, his little provision boat "Baby Mine" was caught in a whirlpool and drawn under water. It was only after a fight that the famous craft was rescued, minus half her contents. As night drew on a heavy fog settled on the Mississippi, and sometimes the government lights could not be discerned, and the lonely swimmer had no means of guiding himself except by keeping the current. Several times he ran into the high mud banks by mistake.

"Boyton landed at the foot of Canal Street amid the ringing of bells and blowing of whistles, and so great was the crowd that it took the whole available force of river police to effect a landing. Boyton was placed in a carriage and driven to the City Hotel, where a consultation of doctors was held. After an examination the result was given as follows:—Temperature, 88; respiration, 18; pulse, 75. The Captain is a mere skeleton of the strong built man who started from Oil City full of life and vigor. He has lost about twenty pounds since the start. Letters of congratulation pour in to him from all parts of the world. Boyton has fallen into a sound sleep, which the doctors say will last twenty hours."

TIME FLIES.

BY LAURA SANFORD.

Time flies:

gested that I should think of *lemonade* when I wish to recall her name; so, in future days in thinking about my trip to Europe, I will remember the Lemon *aid* I had during my voy-

D. B. Warner of Liberia was the most sensible African he had ever met, or used words to that effect. We sought an introduction: the letter which we publish

we might lose no detail of the scene. As we rowed, we told our colored oarsmen, Hampton students, over again the story of Sumter, and they in turn sang the plaintive song of

TIME FLIES.

BY LAURA SANFORD.

Time flies:
But with what wings?
With wings of butterflies—
To joy it clings,
Now here, now there.—Who sighs
For joy, finds joy, and dies.

Time flies:
But with what wings?
With wings of bees it flies—
Who works and sings
In rich content all day,
Will hear rich gold away.

Time flies:
But with what wings?
With wings of birds to skies
Where sunlight flings
Wide open heaven's door;
Life! light! who cares for more?

Time flies:
But with what wings?
With angel wings it tries
To lift low things
Up from the heavy sod,
Up from earth's grief to God!

CORRESPONDENCE.

A two months' trip to Europe does not give much margin for letter writing, but our contributor, Mr. Robbins, has been industrious enough to send us the following, which will be read with interest by his many friends. The amusing adventure he relates at the outset, will suggest similar experiences to some other travelers, doubtless:—

HOTEL NEW YORK ET LONDRES,
PLACE DU HAVRE,
PARIS, *March* 30, 1879.

My Dear General:—

If you and my friends at Hampton knew the trouble I had in getting this paper, I am certain that they would all value the letter. I started out from my hotel quite confident that I could make myself understood in so simple a thing as asking for a place to buy paper and envelopes. The first one I met was a policeman, and I forgot all my French and only said, "paper and envelopes." Well, after some jabbering, he stepped into my hotel and called out one of the waiters; it did not help matters, as the waiter thought that I wanted a cab; thinking it might attract a crowd, I thought a minute, then said, "*Rien du tout, Monsieur, rien du tout.*" I did not wish or intend to give up, as I rather enjoyed it; so I went into a store and said what I thought sounded like the French for paper; this man thought that I wanted cigars. Then thinking of my Indian signs, I made the sign for envelopes; he opened a drawer and produced kid gloves: finally despairing of being able to interpret my wants, he sent for a girl who lives across the road and can speak a little English. When she came I told her what I wanted, and she told the man, and we all laughed; he had none, but gave me the card of a man who keeps stationery. I went up and down the Avenue, looking for the place, but I have not found it yet. However, I made myself understood before I gave it up, and got this paper at another place.

March 8th, Saturday. At 4:25 the steamship Ethiopia turned her prow toward the ocean, and I began my trip over the briny deep. There were twelve cabin passengers. As we steamed down the harbor, I went to the organ and played several of Mr. Sankey's hymns; this attracted a Scotch woman who came to hear the music. In a short conversation with her, she told me that she had lived in Brooklyn, N. Y., for several years; is now on her way home, Paisley, Scotland; and if she likes it, she may stay there; to her, "nothing can compare with Brooklyn and the star-spangled banner."

Tuesday, Mar. 11th. Kept my cabin all day and felt miserable: people talk about the delights of Europe—they apparently forget that three thousand miles of the Atlantic roll between America and that delectable land. I would give half of my passage money to stand at this moment on one side or the other of this great ocean, and I would prefer the American side, as I know nothing of sight of the other.

The sea was quite rough to-day. I noticed it more when in bed than out of it; to keep in bed was about the same as trying to sleep on the slope of a Gothic roof with the head pointing toward one gable and the feet toward the other.

Monday, March 17th. I had the courage to ask the Scotchwoman to tell me her name. It is Mrs. Lemon. She is too sweet to have such a sour name; although she eats a great deal of candy (peppermint drops). I believe that hers is natural sweetness. She kindly suggested that I should think of *lemonade* when I wish to recall her name; so, in future days in thinking about my trip to Europe, I will remember the Lemon *aid* I had during my voyage. Let every one contemplating a voyage be sure to carry a good lemon; I believe in their virtue: the trouble with mine was, it was too *sweet*.

Wednesday, March 19th. Saw land around us this morning. The hills of Scotland presented a most magnificent sight; a thick fog rested over and upon the summits. When I first saw them, I thought that it was a great storm cloud rising above the horizon, so dimly were they outlined by the prevailing fog. We reached Greenock at noon, and after our baggage had been inspected we took the cars for Glasgow. This country looked beautiful, mantled with its dazzling white snow; everything vile seemed hidden: heavenly purity would hide earth's sins. The stone walls look like beaten foot-paths, as they are seen in the distance, winding over the hillsides. On reaching Glasgow I took the cars at once for Edinburgh. In buying my ticket to Edinburgh, the ticket-master made a mistake and gave me 3d class instead of 2d class. I did not notice it until the train was about to start; but when I saw that a cushion was the only difference in the cars, and considered how much more expensive the 2d is than the 3d, I was glad that I went 3d class. Reaching Edinburgh, I went to a hotel on Princess St., opposite the Scott Monument.
